MOORE'S RURAL NEW-YORKER

AGRICULTURE HORTICULTURE RURAL LIFE EXCELSIOR LITERATURE SCIENCE ARTS & CRAFTS

TWO DOLLARS A YEAR.

"PROGRESS AND IMPROVEMENT."

[SINGLE NO. FOUR CENTS.]

VOL. X. NO. 1.]

ROCHESTER, N. Y.,—FOR THE WEEK ENDING SATURDAY, JANUARY 1, 1859.

[WHOLE NO. 469.]

MOORE'S RURAL NEW-YORKER,

AN ORIGINAL WEEKLY

AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,
WITH AN ABLE CORPS OF ASSISTANT EDITORS

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, Carefulness and Variety of Contents, and unique and beautiful in Appearance. Its Conductor devotes his personal attention to the supervision of its various departments, and earnestly labors to render the RURAL an eminently Reliable Guide on all the important Practical, Scientific and other Subjects intimately connected with the business of those whose interests it so ably advocates. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate and beautiful Engravings, than any other Journal—rendering it the most complete AGRICULTURAL, LITERARY AND FAMILY JOURNAL in America.

All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.
For Terms and other particulars, see last page

TENTH VOLUME—INTRODUCTORY.

In entering upon the labors of a new year and volume, the first duty incumbent upon us, and which we discharge with alacrity, is to tender profound and grateful acknowledgments to thousands of ardent and substantial friends of the RURAL NEW-YORKER—to all who have in any manner contributed to its marked success and prosperity, and thereby enabled us to present the Tenth Volume in attire so tasteful and becoming, with Contents so diversified and valuable. This duty performed, allow us to speak briefly of the Past and Present, and allude to the probable Future of this Journal.

The Tenth Birth-Day of the RURAL NEW-YORKER is, to us, an eventful and long looked-for period—one fraught with far more than common interest in many respects, and which awakens emotions and reminiscences of no ordinary character. On such an occasion a brief retrospective glance at the early history and progress of the paper is appropriate, if not expected—and therefore we indite what followeth. When the first number was issued, scarcely any one believed such a journal as we proposed could be established upon a permanent basis. Many wished it success—some boldly and generously lent their aid to the enterprise—but the almost unanimous sentiment was that the People and the Country were not prepared to appreciate and sustain a weekly of the character announced, and hence the achievement of success, even after we should have expended much time, labor and money, was pronounced an impossibility. This was the general and often openly-expressed opinion of the great majority, while the best friends of the cause of Rural Improvement entertained similar views, though their kindness and sympathy induced different speech and action. The truth is that we were considered, if not voted, a visionary and enthusiast, and more than one well-meaning friend confidentially intimated that the result would be in accordance with the trite adage, "a fool and his money are soon parted." Yet, strange to say, we judged differently, and were always sanguine of (aye, determined to achieve) success, eventually—the only question being one of time and the contingencies of circumstances, for we believed that right intentions, well-directed industry and energetic perseverance would accomplish more and greater wonders than the most subtle arts of the necromancer. True, we did not expect to succeed in a week, month or year, but that years of patient, earnest and untiring labor would be necessary to accomplish our object. Hence it was that when told we must fail—that we had commenced the paper ten years in advance of the period for such an enterprise—we replied that, if life and health were spared, partial success would crown our efforts in three years, and in ten the RURAL NEW-YORKER would have a circulation of Fifty Thousand! This prediction was of course pronounced the height of absurdity—but how has it been fulfilled? What is the result? Months and years of hard labor followed—the trials and struggles of which will never be forgotten, though we forbear recounting them in these pages,—and year after year the paper grew in favor, circulation and influence. And now we enter upon the Tenth Year and Volume with a bona fide addition of over Fifty Thousand—the RURAL having attained, during the nine years of its publication, a circulation far exceeding that of any other Agricultural or similar journal in the World!

In reviewing the past history of the RURAL, we might perhaps be permitted such latitude as to speak somewhat definitely of matters connected therewith, yet will not obtrude upon the reader any special details of business or personal experience. Suffice it, that during the nine years past our best endeavors have been devoted to the promotion of the cause espoused—that we have labored zealously and constantly, regardless of personal ease, pleasure or recreation,—in order to furnish a journal which should excel in all the essentials of a combined AGRICULTURAL, HORTICULTURAL, LITERARY AND FAMILY NEWSPAPER. That we have not failed is manifested by its present enviable position and wide popularity. Though errors may have been committed in its pages, we trust the RURAL has thus far accomplished its mission worthily—has performed its duty to readers and the public in an honest, independent, straight-forward manner. It has called things by their right names, and frequently exposed and condemned the hums and speculations by which sharpers sought to deplete the Rural Population—and, while keeping pace with the progressive spirit of the age, has at the same time been sufficiently conservative to avoid endorsing the visionary schemes so often commended. Of course we have not expected to please all, but sought to do right whoever might feel aggrieved, without special regard to consequences—and we shall be very likely to pursue a similar course in future. Hosts of friends have joined our standard,—and are now nobly aiding the RURAL all over the land. But its success has produced rivals and enemies also—and a host of imitators, though many of the latter are extinguished. Wishing well to all cotemporaries who labor for the good of the cause, however, the RURAL will continue to pursue the tenor of its way—striving only to excel in advancing true "Progress and Improvement."

In presenting the initial number of Volume X, and addressing a larger parish of readers than ever before, we cordially greet the numerous friends who have already renewed their fellowship with the RURAL, and heartily welcome the thousands who now, for the first time, take it to their firesides. Whether residents of Country or City—located in the East or West, the North or the South,—we trust they will find it, ever and always, interesting, instructive, pure and entertaining—an appropriate and valuable, and ere long highly esteemed weekly visitor to their hearts and homes. As we have said on a similar occasion, our honest endeavor will be to return subscribers far more than "value received" for their investments—to furnish an eminently instructive, Entertaining and Valuable journal—such an one as will enhance the interests and promote the welfare of Individuals, Families and Community. Our earnest desire has ever been to make it an independent, reliable and useful RURAL, LITERARY AND FAMILY NEWSPAPER—correct in its teachings on Practical Subjects, instructive and entertaining to members of the Family Circle, and of high moral tone.—Such is our platform for the year and volume upon which we now enter—and, wishing all our readers a thrice "Happy New Year," we cease promises and commence performances.

PAYING FARMING.

Will it Pay?

To make farming pay should be the great object of the farmer. It is his profession—his business—by which he earns his livelihood—the means to feed, clothe and educate his children. By it he gains not only the necessities—just sufficient to keep soul and body together—but the comforts, the luxuries and the elegancies of life—the means to purchase books and papers, and the time to educate, enlarge and adorn his mind. By farming, too, he gains goods and money to bestow on the poor and needy—to feed the hungry and clothe the naked, or else he must be deprived of this, the greatest privilege accorded to man by Him who declared it was "more blessed to give than to receive." Therefore, it is not strange that the farmer should be anxious to make everything which he undertakes pay. It is not surprising that the first question, on proposing anything new, should be, "Will it pay?" It is reasonable and right.

It Won't Pay.

"It won't pay!" is an exclamation we often hear, and it is intended as an answer to the previous question. We have no objection to its use, for if a thing won't pay, the sooner we make the discovery, and the quicker we spread the information, the better. But we fear it is often used without proper reflection—rashly. Everything new that promises to be of advantage, that comes decently recommended, or with the least show of reason for its claims, deserves a fair test—a regular jury trial—and after the evidences on all sides have been examined, if the jury cannot agree, on account of the conflicting state of the evidence, it is entitled, in common justice, to another trial. But, if the evi-

dence is clear against its claims, then "away with it!"—proclaim upon the house-tops, or rather, in a more modern and effectual way, through the Agricultural Press, that it will not pay.

We doubt, however, whether there is a paying crop now cultivated, or a system of culture now generally approved, that has not at some time been condemned by the many as unprofitable. Indeed, a new candidate for the favor of the agricultural world, like a candidate for political favor, must receive many hard knocks, whether deserved or not. Jethro Tull wrote, in 1740, that he could remember the time when, if a farmer was advised to sow clover, the almost invariable reply would be, "gentlemen might sow it if they pleased, but farmers must take care and pay their rent." Now, clover is a great aid to the farmer in making his rent and his living, the world over. We often hear a remark, somewhat similar, now, that such a course may be well enough for gentlemen farmers, but they will not pay the practical farmer, who works for a business and a living. These remarks, doubtless, are often just, but they are sometimes made inconsiderately, as a few years experience proves.

The lessons of experience in Agriculture are necessarily slow. Nature gives us but one lesson,—one series of experiments each year. Still, much can be done by practical men to elicit truth, and something we are now doing. Let the wheat be sifted from the chaff, but in the anxiety to get rid of the chaff, be careful not to lose the grain, for this won't pay.

Does it Pay?

We will suggest another important question, which farmers might ask themselves more frequently than they do, with great advantage. It is more important, we think, than the question previously considered, and it has no definite answer, and this answer is all important. It is simply, "Does it pay?" To aid any of our readers who may for the first time make up their minds to ask this question in a sensible, practical way, we will give a lesson or two, showing the manner in which it should be done.

Does it pay to take down and put up bars from three hundred and sixty-five to a thousand times every year, when in the time wasted at this work during one season, I could make a gate that would last a score of years, to say nothing of having teams standing, doing nothing, to see me make a mule of myself, at work at the bars? Then, how often they are left down, for it does seem as if some folks could never learn to put up bars.

Does it pay me to rake and scratch over so much ground for such small crops, when some farmers I know of get much larger products from less land and less labor? Wouldn't it pay better to plow deeper, manure heavier, cultivate cleaner, and get the same produce from one-half the quantity of land? I have thought that as I have the land, I might as well cultivate it all with my present help, but does it pay? Had I not better lay a part of it down to grass, which will not require much labor, and what I pretend to cultivate, do far more thoroughly?

Does it pay to let those sheep and cattle get so miserably poor in the fall, by depending on that dry and frozen pasture for sustenance, eating up the very roots, in a vain endeavor to appease their hunger? Wouldn't I gain by commencing to feed earlier, and so have them in better condition when winter sets in? I have always been taught to economize feed, for we don't know how long and severe the winter may be; but there is no use of starving animals in the fall, for fear they will have to go short before spring—a contingency which may never arise, and which, perhaps, I can provide against in some better way. That is something like the plan of the miser, who denies himself the comforts of life from his hoarded millions, for fear that some time in the future he will come to poverty. So he brings upon himself now the evil which he so much dreads in the future. A plan, certainly, that don't pay.

Does it pay to leave those loose boards hanging on the barn, flapping about with the wind, so that the horses can't sleep? And those open spaces between the boards, and the holes where some of them are broken, how much cold, and wind, and snow passes through them, and how the cattle and horses have to eat to keep warm? Several of the stones are gone from the foundation wall, and the wind has a fine sweep under the floor. I guess it will pay to patch them up immediately, though it should have been done before.

Does it pay to raise half a ton or so of hay to the acre, in that young orchard of mine? The trees look stunted, and make but little growth. They cost the cash, besides the trouble of setting; and more than that, I want the fruit.

Every thinking man will find occasion, almost every day, to ask himself the important question, "Does it pay?" That these inquiries may be often asked and properly answered, is our most earnest desire, and we hope to be instrumental, during the year just commencing, in aiding our readers to arrive at correct conclusions.

FIRST PREMIUM FARM HOUSE.

The accompanying design was prepared to supply the wants of a large and increasing class of farmers, whose well-to-do circumstances, and the demands of social life which their growing children make, prompt them to replace the "old house" by a more commodious, convenient and beautiful building. A tasteful home, spacious enough to accommodate the entire family with due regard to the separate duties of life and the requisite individual privacy, and to offer that wide hospitality which so charms us in the country, is a better investment than bank stock or fertile acres. If it does nothing more than keep the children beneath the home roof, and make their associations of home pleasant, and their enjoyments pure, it will be an incalculable blessing to them, while at the same time it will prove a source of serene joy to sweeten the declining years of the parents. In this house there are no apartments for show, merely, but all are arranged with reference to economy of labor, where the mistress of the house has rarely any other assistance than her own daughters can render.

PLAN OF PRINCIPAL FLOOR.

A. Living Room,	15 by 18.
B. Parlor,	15 " 18.
C. Kitchen,	12 " 12.
D. Bed Room,	12 " 12.
E. Children's Bed Room,	9 " 12.
F. Back Kitchen,	11 " 16.
G. Dairy,	7 " 8.
H. Pantry,	5 " 9.
I. Wood House,	13 " 22.
K. Hall,	6 " 15.
L. Alcove,	6 " 8.
M. M. Veranda.	6 " 8.
N. N. Closets.	

The plan shows a broad veranda on the entrance front, extending so that its roof forms the top of the bay-window, giving access to a narrow hall, which seems roomy enough, as the staircase is in a recess at the further end. There is also space for a cloak closet under the stairs. The hall gives access to the three principal rooms; a parlor on the left, a living-room on the right, which may also be used as a dining-room, which has a bay-window, and an alcove showing through an arched opening, fitted up with book shelves on each side. The shelves should have glazed doors down to the usual height of wainscoting, and below, closets for news-

papers, specimens in natural history, &c. If both sides are not needed for books, one side can be fitted up with an ottoman-seat, or lounge, thus affording a cosy nook for reading or study.

PLAN OF CHAMBERS.

A. Bed Room,	15 by 15.
B. Bed Room,	15 " 18.
C. Bed Room,	12 " 15.
D. Bed Room,	12 " 18.
E. Bed Room,	11 " 14.
F. Bed Room,	12 " 22.
G. Hall,	7 " 8.
H. Dressing Room,	7 " 8.
J. Bath Room,	6 " 9.
L. L. Closets.	

In the rear of the alcove is the kitchen, which has a china-closet, a pantry, and a door leading to the back stairs. A bed-room communicates with the kitchen, having a closet and a smaller bed-room for children beyond, which also has a closet. In case but one of the bed-rooms is needed, the other can be used for a library, when a door from the hall could be made.

A back-kitchen is provided in the wing, having doors to the dairy, cellar, wood-shed and veranda.

The chamber plan supplies four large bed-rooms in the main house, one of them having a window seat, formed by a projecting closet, and another, a dressing-room with closets. A bath-room is placed above the hall, lighted by a small octagonal window, or by an enameled door. Two large sleeping-rooms are shown over the back-kitchen and the wood-shed. A similar amount of accommodation can also be furnished in the attic, if necessary.

The house can be built either of wood, brick or stone; but in either case, the verge-boards, verandas, &c., should be made durable and plain. All ornamentation beyond what is strictly characteristic and suggestive of country simplicity, has no place upon it. We have endeavored in our perspective to give it an unpretending, rural aspect, with enough of dignity to mark it as the residence of a family of refinement and taste. If built of wood, in a plain but thorough manner, it could be erected in most parts of the country for about two thousand dollars. The remaining details of construction are such as are familiar to most persons, and especially to masons and carpenters, and need not be discussed here.

OUR PREMIUM PLANS FOR FARM HOUSES.

In connection with the preceding excellent Plan for a Farm House, by GEO. B. RAND, of St. Johnsville, N. Y., we give the Report of the Committee who made the examinations and awards in accordance with our offer for the best three Designs for Farm Houses, as follows:

Premiums for Farm Houses.—1st, for the best plan of a Farm House, with ground plans, elevations, &c., drawn to a scale, and with all necessary information as to cost, manner of construction, &c., we will give a premium of TWENTY-FIVE DOLLARS. 2d, For the second best plan, furnished as above, TWENTY DOLLARS. 3d, For the third, FIFTEEN DOLLARS.

Though their final report appears later than was anticipated, the Committee (consisting of Messrs. JAMES VICK, WILLARD HODGES and WILLIAM T. KENNEDY, Jr.,) have apparently discharged their arduous duty in a very competent, and we doubt not impartial, manner. Other gentlemen were appointed on the Committee, but could not conveniently give the matter proper attention, as they resided some distance from Rochester. The following is the Report of the Committee.

The Committee appointed to examine the plans of Houses presented in competition for the "Rural Premiums," have performed the duty assigned them to the best of their ability, and have given the subject all the attention consistent with their other duties, and all, perhaps, that was required. They found twenty designs that, in the main, conformed to the conditions of the offer, and to these they gave especial thought and time. Some of these were not calculated for farm houses, being too expensive for the generality of this class, while others, though beautiful cottages, suitable for village and suburban residences, were too small to furnish the accommodations required in a good farm house. Other plans, though not particularly objectionable, and in some respects very deserving, possess no particular merit above ordinary buildings to entitle them to a premium. In many we find some desirable features we would commend, while the value of the plan is marred by some inconvenient arrangement, such as placing the kitchen a long way from the dining room and connected with it by a long and dark passage.

After full consideration the committee award the First Premium to GEORGE B. RAND, of St. Johnsville, Vermont; the Second to H. B. HAUT, of Rush, N. Y., and the Third to Wm. S. EDGAR, of Jacksonville, Illinois.

Other plans are worthy of especial commendation, particularly the Italian Cottage of C. B. RYDER of Pike, N. Y.; the Farm House of S. W. SACKETT of Catharine, N. Y.; the residence of ISAAC CLIMENT of Halfmoon, N. Y.; the Mechanic's House of SILAS NEWCOMB, of Pike, N. Y., and a design for a Mechanic's or Laborer's Home, by LAWRENCE B. YALK, Architect, of New York City. We might mention others well deserving of notice, and also give in detail the reasons for the awards we have made, but as the plans will probably be published in the RURAL, they will speak for themselves, and all readers can then judge of the ability and impartiality with which we have performed the duty assigned us.

JAMES VICK, in behalf of Com.

[The Report of the Committee on Barns has been received and will be given in two or three weeks, in connection with the Plan to which they have awarded the first premium.]

BLACK QUARTER, OR QUARTER EVIL.

EDS. RURAL:—Reading the inquiries and remarks in a recent issue of the New-Yorker on the disease called Black Quarter or Quarter Evil—in relation to cause, prevention, and cure—the thought occurred to me that I might say a few words that might do some good as a preventive, although it is nothing new, and will only help to substantiate the evidence of others.

Some eight or nine years ago I first saw this disease, and for five years saw more or less of it. This malady seems to have three times in the year in which it prevails the most—although young stock, that are in high condition, I think, are liable to it at any time—but April, June and August are the months that I saw it most. My experience is this:—The disease commenced among my father's stock in August—weather hot and showery—feed very abundant. All that was done to prevent was change of pasture, feeding plenty of salt with brimstone and saltpetre. Lost some eight or ten head of the best stock, under two years old. The next year it commenced about the same time, and two died. Procured a steamer, and bled all stock under two years old—no more died, nor were any additional attacked. Next year, in April, one was attacked with it—bled all again, also again in August. The two following years, bled in April and August. Lost no more cattle, although our neighbors that did not bleed, suffered from its ravages. This has made me firm in the belief that bleeding is a preventive, and if I were raising stock now, I should bleed and give good feed, rather than to scrimp for fear of the malady. Think it is almost impossible to cure after the swelling is large, and none possible when it is seated internally. Have seen them die within three hours after being so attacked; would not be bloated in the least; flesh would look as clean and nice as though butchered, but intestines, lungs, &c., would be black and frothy. Never saved the life of but one, and that was the last year ever had attacked with it. We followed Mr. YODART's plan as near as we could. Noticed it by the animal not eating his mess, and kicking slightly, as though his foot itched. Examined his leg, and found a slight swelling in the thin part of the leg above the gambrel joint—enough, however, to give the cracking noise. Commenced operations immediately—sawed his life, but he lost the shell of his hoof. Fatted, and killed it in the fall.

As farmers cannot always be with their stock to watch them—and if discovered, scarcely yet have the remedies at hand, or patience to doctor them, it is best—I think an ounce of prevention is worth a pound of cure. Every one that has a common fleam lancet, or sharp pocket knife, and pluck enough to use them, has the preventive; and bleeding does no hurt, but good. Some think cutting the tail or an ear will do, but I think it should always be done in the neck, and the blood be caught in a measure, so as to ascertain the amount

taken, which should depend on age, size, and condition of the animal.

Those that are thin of flesh, are liable to it if put on good feed—have seen those quite thin, but with nice glossy coats of hair, denoting a start in the world, die as well as those more fleshy.

There may be seasons when this terrible malady will not prevail at all; but, as a safe guard, I would bleed, and if the disease once made its appearance among my stock, I should certainly do so. It is less trouble and expense than feeding drugs, and I think more reliable. What makes me think so, I never knew an animal die with it that had been bled, while the reverse was the characteristic of those that were not.

BLEED.

Ruffalo, N. Y., 1858.

FAST CORN HUSKING.

MESSRS. EDS.:—On reading the account of those fast corn huskers in the December numbers of the RURAL, I feel more and more convinced that some men are made for one thing, and some for another, and I shall hereafter conclude that corn husking is not my forte. It is with humility I say it. To be sure we manage out here to husk 35 or 40 bushels, by working hard, but the "men of Lyons" have cast us entirely into the shade. We shall say that we raise large crops of corn, 160 or 175 bushels of ears of corn, but at husking we will give up. Now I do not intend to be skeptical, but to tell the truth, I don't quite swallow these big stories. I think that when a man husks his 75 or 80 bushels in a day, it is much as the old farmer said of his buckwheat crop,—"he did not think that the measure was quite so full." Who, that has sat in a country store at the "Corners," but has heard just such stories?—but I did not believe, that, as the old woman said, "they would print lies." These lazy farmers who meet at the store on a rainy day, always have a story to tell, and each will try to excel the other. We hear them tell of mowing $2\frac{1}{2}$ or 4 acres of stout grass per day, of chopping 6 or 7, or even 8 cords of wood, and of cradling 4 acres of heavy grain in a half day. Now the fact of the matter, as far as I am acquainted, is, that those who do such big day's works, do not work every day. They are men who will work well for one day, and then take the rest of the week to boast of it at the "Corners." I never heard of a good, steady farmer, who did any of these big day's works. They work to accomplish some better object than to gain the reputation of being "awful smart." But the "men of Lyons" need not feel too pompous over their work; for we have men out here who will (to take their word for it) beat that. I know a man who is sickly, and lays by every winter, who has husked 95 bushels and drew it to the crib—and of another who husked 110 bushels on the hill—but they are not men whom we would hire for a day's work. They always slight their work, and cannot be depended on for more than one day at that, and are generally poor and shiftless, and depend on their *slow neighbors* for the necessities of life during the winter. It is a fine thing for us to talk of these *smart men*, who do so much in a day—but I would much prefer to hear of the amount done in a week, a month, a year, or a series of years, and then we should see that the *slow farmers* are the *fast ones*, and have the story all on their side. Our profession does not admit of this fast work, and he who works so fast generally slights it.

SOLON.

Geneva, Mich., 1858.

HEAVY FLEECES.

MESSRS. EDS.:—Having lately seen several articles in the RURAL on great yields of wool from different flocks of sheep, I wish to make mention, through the same channel, of a pair of Merino bucks of my own raising, sheared the 20th of May last. One was one year old, and the other, one year less eight days.

Weight of carcass, 208 lbs.
Weight of wool in dirt, 25 "
Weight of wool thoroughly cleaned, 12 "

Considering the size of the sheep, I call this a good yield of pure wool, and, in fact, is not this the only true test for heavy fleeces? The clean wool is the only part of the fleece of any intrinsic value, and all food consumed in the production of oil, except sufficient to give the wool a soft and glossy appearance, and protect its outer ends from the storm, is worse than thrown away. It causes a large demand upon the stomach of the sheep by way of digestion, as well as upon the hay-mow for fodder, while the substance of the food that should go to the support of the flesh and fleece of the animal oozes out through the skin in an oil of no value, except as a lodgment for dirt and filth by which to take in green-horns. I am of the opinion that an over-abundance of oil must be at the expense of wool—at least I have never met a sheep combining these properties in a high degree. If any reader of the RURAL has beaten or equaled this proportion of pure wool to the mutton, I would like to hear from him; for I would like to buy a buck of that man to cross my flock with, providing his flock is comparatively good in other respects.

AARON Y. BAKER.

Urbana, Steuben Co., N. Y., 1858.

DRAINING PAYS.

MESSRS. EDS.:—Very much was I alarmed on reading H. T. B.'s Anti-DRAINING article in the RURAL. For a number of years I have looked at draining and drained land; but was a long while in commencing such an expensive operation. However, after reading many articles from the pen of the "Father of Tile-Draining" here, and I believe on this side of the Atlantic, and also contrasting the crops on drained and undrained land, I concluded it was a sure and safe investment to tile drain my farm. Latterly I went at it in good earnest, for a farmer of moderate means, and before I have taken a crop from my drained land, (with the exception of my garden and a little more,) out came H. T. B., telling that "draining, if gone extensively into, would not only ruin the individual, but bankrupt the nation." It made me scratch my head—thinking \$600 already expended might be lost. I went right at my file of Agricultural papers to read over all I could find about draining, but could only find two who ever hesitated on the benefits derived from it; one of these was a Prof., and the other a Judge, who agreed

that "it was imprudent to expend \$35 an acre in draining in Seneca Co., when land in Illinois could be bought for \$1 25 per acre." Immediately follows our pattern drainer's reply; and I concluded it was safer to believe him whom I know than those I had never seen.

I write this, my first article for publication, to let folks know that I feel better than at the first reading of H. T. B.'s letter. My draining don't cost much over one-third of what H. T. B. estimates it. My only fear was, I was making it cost too little, by putting my drains 40 feet apart,—but I am making them nearly a foot deeper than many do, and hope they may answer every purpose.

In reading Mr. J. J.'s reply to H. T. B., he says "every prudent man will drain ten or twenty acres, and wait until the excess of crops will repay the cost." This will suit my purse exactly, but don't accord with my plans. I have been fully convinced, by reading and observation, that draining is the most profitable investment farmers ever made in this county, and I intend borrowing \$500 in the spring and going more extensively into it. I have not seen anything that should discourage me so far.

SENECA COUNTY FARMER.

Seneca Co., N. Y., Dec., 1858.

Inquiries and Answers.

OAK SHINGLES.—Some three years since, a gentleman residing in Michigan, while on a visit to my house, informed me that the people there were covering their best houses with oak shingles—that they preferred them to the best pine—that they made an elegant looking roof, and would last forever—this latter rather doubtful. If this be so, and as I have no reason to doubt the integrity of my informant, we have a good deal of excellent shingle timber this side of Allegany, and I wish some of your numerous correspondents would please inform me if oak shingles are manufactured the same as others.—MARTIN SMITH, Wheatland, N. Y., 1858.

REMARKS.—Will not some of our numerous correspondents in Michigan answer the inquiries of Mr. S., through the RURAL?

A COW MILKER.—I enclose to you an advertisement of a patent *Cow Milker*. I am about buying a cow, and not being a farmer, (having been brought up in the city,) I do not know how to milk, and being a subscriber to your valuable journal, I wish to know from you if the article advertised is a desirable one to use in every respect or not? It is a tube (said to be silver), about the size of a straw, in which is a piston that runs thro' and projects half an inch, having a smooth rounded end to prevent hurting the teat on entering, after which the piston is drawn out, and being slightly wound for suction, it starts the milk. It has attached to it a piece of silk, fastened round the tube near the bottom, not unlike in shape to a teacup, and near the upper edge is a strip of rubber to hold it round the teat.—WINONA, Minnesota, Dec., 1858.

REMARKS.—We have seen a good many *Patent Milkers*, but not one that we considered worth a dime. Although hundreds and perhaps thousands have been sold in this State, we don't believe one is now in use. It is very easy for those who have the machines and rights to make a *selling* exhibition by obtaining a free milking cow, and applying the machine before an admiring crowd.

CONSTRUCTION OF TUBES.—Will you, or some of your correspondents, inform me through the RURAL how to construct a filter for rain water, on a cheap scale, for culinary purposes.—C. G., Oxford Co., Canada, West.

REMARKS.—There are various ways for making filters, but the principle is the same in all. The simplest way is to procure a new barrel, with straight staves. Make a strong partition in the centre, lengthwise, with holes in the bottom to allow the water to pass from one side of the partition to the other. Prepare the filtering material in the following manner:—Burn good, hard wood until burnt to a coal, then extinguish the fire with water, and break up the charcoal thus prepared into pieces about the size of small peas. Mix with this washed gravel about the same size. Fill one side of the partition with this preparation, packing it in pretty compact, until within six or eight inches of the top. This space is left for pouring in the water, when it will slowly filter through and u. s. in the other side of the partition nicely filtered. For removing it from the barrel a common beer-cock may be used. With this information any ingenious person may construct a filter to answer the purpose in many different ways. The partition may be put across the barrel, leaving only a foot or so of space at the bottom, and as a general thing this will be found the better way.

GREASE, OR SCRATCHES.—Will you be so kind as to inform me if you know of anything that will cure the scratches. I have tried a number of things, but of no avail, Sloan's Ointment and Condition Powders among the rest. I have a colt, three past, that is troubled with them very much. If you can inform me of a cure, you will greatly oblige a constant reader of your paper.—T. Danette, N. Y., 1858.

REMARKS.—The presence of Scratches, according to PRACTICAL, is a pretty infallible test of negligent grooming. "T." can answer for himself in this respect, and if a lack of care has been the rule, may prevent its appearance hereafter. In its early stages, diet, cleanliness, and ventilation require the attention of the groom. When the heels are swollen and hot, apply a poultice of slippery elm (powdered) $\frac{1}{2}$ pound; fine salt 2 ounces. Mix with hot water, and when cool, spread a portion on cotton cloth and bind. If the horse is fat, a mild cathartic consisting of aloes, 4 drachms; gentian, 2 drachms; ginger, 1 drachm—all powdered—may be administered. If, on the other hand, the horse be poor, use no medicine, but allow a generous diet. Prof. MONROE, of the Royal Veterinary College, recommends the following:—Equal parts of vinegar, linseed oil, and turpentine. Wash the heels with luke warm water and castile soap, and, after wiping dry, apply the mixture.

TO MAKE BUTTER COME.—D., of Allegany, inquires how to make butter come, without "churning two mortal long hours?" If he will adopt my rule, which never fails, his labors will be very much relieved. To a churning of four or five gallons of cream, put in a tablespoonful of saleratus or soda, and less in proportion. Too much injures the solidity of the butter. I have known good solid butter made by putting the cream in a bag, or flour sack, and covering it six or eight inches with dirt—in the morning the butter will be ready to work, minus the butter-milk, but in this case the pigs lose their breakfast.—J. M., Dec. 22, 1858.

Rural Spirit of the Press.

Quite a Flock of Geese.

In a recent issue of the Toledo Blade, we observe the statement that six thousand geese might have been seen at Winchester, on the Bellefontaine road, a few days since, "gobbling up corn preparatory to being sent to the New York market." The Blade remarks:—"The owner had already driven into one car 1,500 of these doomed victims to man's appetite. The goose-drover paid from fifteen to twenty cents each, and calculated to get his money back by the sale of the feathers, so that whatever may be received in New York, where they are sold by weight, for the plucked birds, would be clear profit. The dealer—who must be a speculative Yankee—has agents in almost every farming locality in the West. He must be well posted on the 'goose question.'"

Wool Consumption in England.

FROM A Lecture on the Culture of Sheep by Mr. ROBERT SMITH, delivered in London, and published in the West of England Society's Journal, we make the following extract, which shows conclusively that the great importance of sheep in relation to their wool-bearing properties is daily increasing:—"In 1835 the total estimate of British growth was 108,000,000 pounds, while, in 1857, it has been estimated by Mr. Ashworth at 148,042,782 pounds. Beyond our own growth, the imports of wool from Australia in 1857 amounted to only 245 pounds; whereas in 1855, the latest period up to which the returns extend, the importation was 40,810,137 pounds. In 1838 we received from India 8,721 pounds in 1855 the importation was 4,594,520 lbs. The total importation from all places, in 1855, amounted to 99,800,446 pounds."

Jerusalem Artichokes for Horses.

The Journal d'Agriculture Pratique, (Paris, France), contains an article on artichokes in which the writer says that he has found them of great value as food for horses, and that they supersede the necessity of feeding them oats when difficult to be had. The writer's land was not favorable to the growth of oats, or, rather, his system of rotation excluded this grain almost entirely from the list; and its place in the rotation was not the most favorable one for the production of a good crop.—The trial of artichokes was made, and the horses thrived upon them surprisingly. The yield was larger to the acre than that of any other root. The writer recommends planting every year, instead of relying upon the tubers left in the ground, for the following year's crop. Even on land from which a crop of artichokes had been taken, and that contained, of course, a sufficient amount of seed, the re-planting produced a better crop of larger sized tubers.

Smut in Wheat.

WILLIAM MYRIS writes to the California Red Bluff Beacon, from Pleasant Grove Farm, Tehama Co., that he has been a farmer in California for four years, and has been endeavoring to ascertain the cause of smut in wheat. He threshed out a portion of his seed wheat by a machine and a portion by horses. He kept them separate, and sowed them on the same kind of land. That which was threshed by horses had no smut, while that which was threshed by a machine had considerable. He says he could trace the smut to a furrow where the machine grain was sown, the other being perfectly free from smut, both being clean seed when sown. From this fact Mr. M. has deduced the following theory:—The bruised kernels have not vitality enough in them to mature the grain, but enough to produce a stalk and head, and the grain blasts or smuts. So confident is he of the truth of his assertions that he thinks if farmers would thresh their seed wheat with a flail, or with horses "two years would not elapse before the cry of smut in wheat will be no more heard in our land."

Valuable Fertilizing Compost.

MR. WALRATH, of Canton, St. Lawrence Co., to whom the N. Y. State Ag. Society awarded one of the Farm Premiums in 1858, writes the Country Gentleman that he makes use of a composition of six bushels wood ashes; one bushel of plaster; one bushel of lime; one-fourth bushel of salt; a small quantity of sulphur, pounded bones, &c., on meadows, grain, hops, corn, potatoes, and the garden, as a top-dressing. On grain it is sown broadcast soon after it is up; on meadows as soon as the grass starts, and just before a rain, if practicable. On corn it is applied before and after hoeing, and slightly covered, and in the same manner to garden crops. Its expense is about 20 cents per bushel, and it is used at the rate of two or three bushels per acre on grain and grass lands. Mr. W. states that this composition was used for ten years upon about an acre constantly cultivated, and the result was a constantly increasing annual product. The last grain crop was wheat, thirty bushels per acre; the hay cut in 1858 (clover and timothy,) was two tons the first, and one the second cutting. This has proved a very valuable fertilizer in the hands of Mr. WALRATH, and we recommend its use by farmers generally.

Gross and Net Weight of Cattle.

ACCORDING to the New York Tribune, the ordinary rule of ascertaining the net weight of beef cattle from the live weight on the scales, varies according to quality, size and age, and after all is no rule at all, because it is entirely a matter of agreement between the parties at the time. It also depends upon the locality. In New York, the net weight of the beef in the quarter only is wanted. In Boston, the hide and fat are included, counting those products equal to one-quarter of the beef, or rather, calling the whole five quarters. There the net weight of a fat bullock is estimated at 60 to 65 pounds of each 100 of live weight. In extra fine animals the percentage is higher. In New York, where the hide and fat are left out of the calculation, the bullocks are estimated at 55 to 60 pounds net to each 100 pounds gross; and if the animal is very fine, the estimate runs from 61 to 64 pounds net to each 100 pounds gross. Extraordinary animals sometimes dress 65 or 66 pounds, and even higher, and ordinary lean stock run from 55 down to 47, though not often below 50 pounds, or one-half the live weight at home. The common practice at the West is to weigh fattened cattle, some hours after feeding and a little exercise, and calculate the net weight at 55 pounds per 100 of the live weight.

Agricultural Miscellany.

TO RURAL CORRESPONDENTS.—that is, all who write on Rural topics for the RURAL—we wish to say a few things in commencing a new volume, but have space for only a few words. "And first—In 1858, or as short and pithy as your subject will admit, omitting all circumlocution or talk about the merits of the RURAL, &c. In common parlance, pitch into your subject at once, giving the gist of the discussion, with necessary facts and figures, in as few words and little space as possible. This will enable us to give a larger number of your favors, thus treating upon a greater variety of subjects, in each issue,—giving the clean sheet. Second—Be Plain and Practical; in other words write as sensibly as you talk, without getting on stilts or using big, dictionary words unnecessarily. Thousands of our readers—men of good common sense, sound judgment and large experience—ought to write for us as well as read the RURAL, and could impart much valuable information, but are deterred lest their articles should not be as finished as the productions of a Professor of Belles-Lettres. We trust this mistaken idea—shall we call it false pride?—will be ignored, and that all who desire to do good—to "teach one another"—will communicate any valuable facts or results of useful observation and ripe experience, which they may possess, for the benefit of our widely-extended parish of readers. But, we also must be brief.

ANNUAL MEETINGS OF AG. SOCIETIES.—The Annual Meeting of the United States Ag. Society will be held at Washington on Wednesday, the 12th inst. That of the N. Y. State Ag. Society at the Agricultural Rooms, in Albany, on the second Wednesday (9th) of February ensuing. That of the Monroe Co. Ag. Society at the Court House in Rochester, on the second Wednesday (12th day) of January instant.

As the Annual Meetings of most of the State, County, District and Town Ag. Associations are to be held within a few weeks, we request the Secretaries to furnish us lists of officers elected, with synopsis of other important business transacted, for publication in the RURAL.

FARMERS' HIGH SCHOOL OF PENNSYLVANIA.—This institution is to be opened Feb. 16th. Students must be 16 years of age. Applications for admission of 100 students from the different counties of the State, in proportion to the taxable inhabitants (ratio 5,796) will be received till the 15th inst., and must be made through the officer of County Ag. Societies, or, where such Societies do not exist, or fail to present, by the applicant directly—addressing Wm. G. WARREN, Farm School P. O., Centre, Pa. The charge for tuition, boarding, washing, fuel, light, books, &c., for each session of ten months, is \$100 payable in advance.

OHIO STATE AG. SOCIETY.—The annual meeting of the Ohio State Board of Agriculture was held at Columbus on the 28th ult. The attendance was quite large, three-fourths of the counties being represented. The Board for 1859 is constituted as follows:—Members re-elected—John M. Millikin of Butler, and Alex. Waddle of Clark. Old members who hold over—Dr. N. S. Townsend, of Lorain, Jas. M. Trimble of Highland, Lucian Butties of Franklin, Dr. L. Q. Rawson of Sandusky, and John Reber of Fairfield. New members—D. E. Gardner of Lucas, Wm. De Witt of Cuyahoga, and Chas. W. Potwin of Muskingum. The new Board is organized as follows:—President, Dr. N. S. Townsend, Avon; Treasurer, L. Butties, Columbus; Rec. Secretary, D. E. Gardner, Toledo; Cor. Secretary, J. H. Klippart, Columbus. A resolution locating the State Fair permanently was lost.

ANOTHER WORLD'S FAIR, on a grand scale, is projected to take place in London in the year 1861. It is to be on a similar plan but larger basis than the exhibition of 1851. The Council of the Society of Arts, while considering the subject generally, arrived at the conclusion that two new features ought to be introduced, viz.—music and painting; and that every article be exhibited in classes, and not in nations, as in 1851. New phases of mechanical invention and of the application of scientific and artistic knowledge to industrial purposes have been developed. The catalogue and jury reports of the exhibition of 1851 have proved most valuable European directories, constantly referred to by buyers from all parts of the world; and it is thought the catalogue of another exhibition would present all the features of a timely revival of a work which has proved of more than ordinary use to mercantile men.

NET WEIGHT OF HOGS.—At this season the following table for determining the net by the gross weight of hogs, may be useful to dealers in pork. It is based upon the Kentucky rule—that is, for 100 pounds gross, deduct 25 pounds; for the second 100 pounds, subtract 12 $\frac{1}{2}$ pounds, and for the third 100 pounds deduct 6 $\frac{1}{2}$ pounds. All over 300 pounds is calculated as net:

100 gross will net,	75	200 gross will net	162
105	do	79	205
110	do	83	210
115	do	86	215
120	do	90	220
125	do	93	225
130	do	96	230
135	do	101	235
140	do	105	240
145	do	110	245
150	do	114	250
155	do	118	255
160	do	124	260
165	do	127	265
170	do	131	270
175	do	136	275
180	do	140	280
185	do	144	285
190	do	148	290
195	do	153	295
200	do	158	300

It is said that some of the farmers in Northern Ohio and on the borders of Indiana, have commenced the breeding and raising of deer the same as they do sheep, and they take them to market; hence the plenitude of venison. We question whether it pays.

THE Commissioner of Patents has taken measures to obtain specimens and cuttings of the grapes, figs and olives of the Crimea. Also, to procure detailed information in reference to the drying of figs, raisins and Zante currants, and of the manufacture of olive oil and wine.

HORTICULTURAL

A CONVERSATION ABOUT DWARF PEARS.

Nor long since we had a call from a gentleman who felt a deep interest in the question whether pears can be profitably grown for market on dwarf trees. He had read in the *Horticulturalist* that about the only places where dwarfs flourished were in and about Rochester and Boston, and supposing this to be true was anxious to know the cause, to ascertain whether we practiced any mysterious system of culture, used any chemical preparation that proved a specific for all the ills that dwarf pears are heir to; or whether the Almighty, on the first morn of Creation, had drawn a magic circle around Rochester and Boston, and said of dwarf pear culture, "thus far shall thou go, and no farther." He could not believe in the nonsensical idea that dwarf pears would only succeed where the severity of the winter was modified by large bodies of water,—that Albany and Pittsfield, Massachusetts, were too cold, and Boston just right. He had seen, as we had, living dwarf pear trees in the State of Illinois, in localities where apple trees ten and fifteen years old were killed to the ground by the extreme cold. Without giving our views, we proposed to spend a day among the pear trees growing in this vicinity, in examining them under all conditions—under good and poor culture,—well cared for and entirely neglected—that he might judge for himself of the effects of culture and neglect here, and thus, perhaps, be enabled to form a tolerably correct opinion of the cause of failure in other places.

Thinking that this examination would be of interest to our readers, who cannot walk and talk with us among the growing trees, we sallied forth, armed with paper and pencils, to take drawings and notes of conversation.

Editor.—Here we will take our first lesson. You see a number of ill-shaped neglected trees, suffering and dying. They were planted out two years since, and have not received the least care. The foundation for a house, tells the story. The owner abandoned the trees and the building, and both are going to ruin. This is so plain a case that we will not dwell.

We have now arrived at the place where we purpose to take our second lesson. Here are six dwarf pear trees. When planted eight or nine years ago there were nine in the row, but cattle or disease has destroyed two on one end and one on the other, as the stumps remaining show. The ground, you see, has been entirely neglected. It has not been disturbed by a spade or hoe, and the grass and weeds have grown unmolested. Six of the trees have lived through these hardships, but their stunted and scrubbed appearance, the hard and woody bark, speak too plainly their ill treatment. For the first three years they were tolerably well cultivated, but since that time have been entirely neglected.

Visitor.—I am surprised to see them in as good condition, after the usage you describe, evidence of the truth of which I see before me.

Editor.—We will make a sketch of one of these trees, for the facts will be as interesting and profitable to others as to ourselves.

These miserable peach trees are the remains of a large number planted at the same time as the pear trees. You see they have suffered worse than the pears, and save two or three dead and dying trees and a number of stumps, nothing remains. We will make a drawing of one for comparison.

From this it would be fair to infer that the dwarf pear will endure hard treatment as well as the peach.

Visitor.—I would have expected the pears to suffer most, but it does not appear to be the case. But, how happens it that these trees have been neglected?

Editor.—We will finish our examination, and then I will explain that matter. The quinces you see are a mass of suckers and worthless shoots, and even the currants, that will endure almost anything without complaining, are struggling for life—mere thickets of suckers. We will take a drawing of one of them, just to show how they bear such treatment. It will be valuable to compare with the pear and the peach, for treatment that would destroy this hardy bush must be acknowledged pretty mean.

Now that we have completed our examination, we will walk on, and in a few minutes look at trees that have received a little better treatment; and as you inquired why these were planted and then allowed to suffer and die, I will explain the reason. That fine place the owner designed for his residence, but business requiring his removal, it has been rented ever since.

We are now prepared for another lesson. Here are two dwarf trees, much better than the last, but still not thrifty. The soil is good, and they were, no doubt, well planted on the lawn where you see them standing. All weeds have been kept down, of course, by the tolerably well kept lawn, but they have received no manure, and the grass has been permitted to grow close to their trunks. Almost every year they bear a little fruit, but it is not first rate, nor are the trees one-half the size they would have been under fair treatment. I first observed them in 1848, and they had then been planted several years. It was about this time that the "fire blight" was so terribly destructive, killing thousands of young trees in the nurseries, as well as those planted out in orchards and gardens. These trees, growing in the grass, remained uninjured, and it was from observing them, and perhaps others similarly situated, that the late JAMES H. WATTS argued in the agricultural papers that permitting grass to grow around pear trees would insure a slow growth and prevent the blight. As this shows an improvement over the last, we will take another drawing.

Visitor.—I have heard this theory advanced, but is it been proved? or has there been sufficient evidence on this point to form a guide in practice?

Editor.—I think not. The experience of some cultivators appears to favor the idea that a rapid growth predisposes trees to the blight, while other facts are against it. A few years ago I saw an old standard pear tree, near Lockport, and by no means vigorous, struck with the blight, and so rapid was its progress that the entire head had to be cut away. Last summer, on the Ridge Road, about seven miles from this city, I saw two large *Flemish Beauty* trees, the last in a row, and standing in the poorest place, and the worst cared for of all, dying with the blight, though other and more thrifty trees were not affected. I have grown hundreds, and given the best possible culture, without losing a dozen by blight. This disease is not serious now, in this section of country, at least.

Now we will walk a little further, and look at four trees, growing in a yard in front of a mechanic's cottage. He knows little about trees, but has given them what care he thought necessary. I have noticed them the last four or five years, bearing remarkable crops; a Bartlett, a Virgalieu, and a Louise Bonne de Jersey, giving not less than a bushel each. As I obtained the facts a few days since, I will give them as related to me. Nine years ago last spring they were planted. After planting, clam shells were put around each tree, as people sometimes put them around shrubs and flowers, for ornament. Two years after planting, as the trees did not grow fast enough to suit him, the owner threw a barrow full of manure around each. They have received no manure since, but very frequently during the summer the soap-suds from the wash is thrown around them. The trees are large and shade the ground somewhat, so that the grass is not compact under them, but no particular pains has been taken to prevent its growth. They have never been pruned,—only a limb chopped off, occasionally, as it appeared to be in the way, or to suit the notions of the owner. They are not, therefore, of good form, but an improvement in all respects upon those we have seen before.

Visitor.—The improvement is very apparent, and thus far in our examinations it has seemed to be just in proportion to the improved treatment.

Editor.—The Virgalieu, which is the largest, is about fifteen feet high, the tree you see that has been grafted, was some winter variety, probably *Glout Morceau*, but the owner knowing nothing of winter pears, concluded they were worthless, and top-grafted with the Bartlett. Of the Virgalieu we will take a drawing, to show progress. It is covered with fruit buds, and though not of handsome form, is by no means an unsightly object. In its summer dress of foliage and flowers, or fruit, it is really beautiful. No tree, not even an apple or a maple, would thrive with less care; and the most negligent cultivator would certainly consider as much as this necessary to the growth of any tree.

Visitor.—Reading so often, that the dwarf pear was suited to garden culture only, I was led to suppose that it required careful nursing, and extraordinary treatment every way—that without the greatest horticultural knowledge and skill, and the best of culture, failure was certain; but, really, from the specimens of garden culture I have thus far seen, I certainly would recommend field culture as far superior. No hill of corn or potatoes would grow and produce with such treatment as these trees have received.

Editor.—It is now growing dark, and we must postpone further researches until the morrow. Then we will see the effects of better culture.

NEW GRAPES.

Eds. RURAL.—The simultaneous movement in the production of new fruits, is not a little remarkable. The grape mania, however, appears to have taken the deepest root, and one after another in close succession comes the announcement of "New Grapes," and "thousands of seedlings" coming on. From the results already attained in so brief a period, no one can form even a probable opinion of the finale. One thing we may look for in the fullness of time,—thus far shalt thou go, and no farther. It would be looking for too great results, to expect that we can convert our austere, wild grapes by magic, to the excellence of the *Chasselas* or *Hamburgues*; but we can produce good grapes, in great abundance; and of new and superior varieties continue to be produced, as doubtless they will, we shall soon have an abundant catalogue from which to select grapes, "very good," for general cultivation.

The *Isabella* and *Catawba*, pronounced only a year or two ago to be "peerless of their kind," by some of the leading horticulturists of the age, are now supplanted by nearly a score of rivals; and in consequence of their failure to ripen well north of lat. 41° will soon be numbered with the things that are past, supplanted by hardier, earlier and better varieties, even now in existence, "barrin" the "thousands of seedlings" from which we may expect further improvements.

Among those engaged in producing "New Grapes," count me "in." Now, dear RURAL, would it not be interesting to your readers to have "Reports of Progress," from time to time, from all engaged, and descriptions of the most valuable new grapes, as they come forth? O. T. HOBBS.

Randolph, Crawford Co., Penn., Dec., 1853.

REMARKS.—Certainly,—only let us have reports carefully made, so as to be reliable. Persons are apt to think too well of what they raise, on the principle, we suppose, that "every crow thinks its own young the blackest."

SWEET POTATOES vs. HUBBARD SQUASHES.

Eds. RURAL.—You may be aware that I have some little experience in Pumpkinoology and other domestic comforts of the garden. We bipeds of this northern climate, most of us, regard the sweet potato as one of the greatest luxuries of the root tribe, and well may we esteem it as such, but our short summers totally forbid any attempt at raising them with any hope of success. Consequently, for many years past, I have been much puzzled to find a substitute for that delicious vegetable. But permit me to say, that in my opinion, the *Hubbard Squash* is a very near approach to it in excellence as a substitute; indeed, it may be said to have qualities of usefulness and value far exceeding the sweet potato, when we take into account its long keeping. The *Hubbard Squash* you know, is of a very dark green color, tapering at both ends, weighing from six to twelve pounds, and having a hard acorn shell which cannot be cut with a knife. I find a light hatchet is just the thing for cleaving them apart. This hard, strong shell gives them a decided advantage over most other squashes for their long keeping, and they are not easily bruised. Their bearing habits, also, are very fair. From five hills I raised about forty-five squashes this season, and they furnished me for about six weeks, up to the present time, so good a substitute for sweet potatoes, that we have neither bought nor desired the foreign potato since we commenced using them. Messrs. Editors, on the whole I think it is the end of all controversy on the subject of a good squash.

H. N. LANOWORTHY.
Greece, N. Y., Dec. 4, 1853.

GRAPES.—We are indebted to S. N. HOLMES, Esq., of Syracuse, for a lot of fine grapes in excellent condition.

MANY articles from correspondents, and answers to inquiries are unavoidably postponed.

Inquiries and Answers.

GROWING VINES FROM SINGLE EYES.—Will you be so kind as to inform me through the RURAL how to raise native grape vines from single eyes, in a hot-bed? JOHN LOWE, Fayetteville, Onon. Co., N. Y., 1853.

REMARKS.—Native grape vines, if the wood is sufficiently ripe and strong, may be grown from single eyes, by taking a bud with about half an inch of wood on each side of it, and inserting it in a pot filled with a mixture of leaf mould and sand, covering the bud about half an inch, pressing the earth firmly about it, and plunging the pot in the soil of a hot-bed, with a bottom-heat of 70° or 75°. If the wood is small, the eyes should be root grafted, leaving at least two inches of wood below the eye, for connecting with the root. These grafts must receive the same treatment as single eyes.

A LARGE LEMON TREE.—Being a reader of your most valuable paper, the RURAL, and finding it a true source of knowledge and information, I would ask, through it, for information regarding a Lemon Tree which I have. It is five years old, measures three and one-half inches around the body, and is between six and seven feet high. It is now growing very thrifty. It would grow, and I let it. It is of no use to me, as it is only a trouble, yet I would save it, for it is not often such a thrifty one is found. I wish to know when and how it can be made to bear fruit; whether to be budded or grafted in the spring, or at any time, and where can the scions be found? I will sell the tree to any one who wants it. What is the price of such trees? Please answer through the RURAL.—M. E. B., Castle, Dec., 1853.

REMARKS.—To make your lemon tree bear and produce good fruit, it should be grafted in March. You had better send it to some green-house if convenient, and let the gardener perform the operation, and take care of it until the scion grows. Or, if you wish to do it yourself, you must apply to some gardener or nurseryman to procure the scion for you. If your lemon tree had been grafted when young, and was now full of fruit, it would be valuable. In its present condition, we fear you will hardly find a purchaser.

SAVING BEDDING PLANTS THROUGH THE WINTER.—How can *Verbena*, *Petunias*, and other Bedding Plants be preserved through the winter, for out-of-door use, without a green-house?—A LOVER OF FLOWERS, Windsor, Broome Co., N. Y., 1853.

REMARKS.—*Verbenas*, *Petunias*, and many other varieties of half-hardy bedding-out plants, are extremely difficult to preserve (except in the hands of a professional gardener) through our long winters, without the aid of a green-house. We would recommend A LOVER OF FLOWERS to have a small pit dug some two or three feet deep, and construct a drain leading from it, for the purpose of carrying off any water which might find its way there. Board the sides and bottom, leaving a space of several inches between the bottom of the pit and the floor. Then place the plants in the pit, and cover the top with hot-bed sash. Bank up the outside of the pit with soil thrown out, then cover the sashes with boards, and place over the whole, for a final covering, a sufficient covering of straw or long stable litter, to exclude the frost, and on every fine, mild day, remove the covering entirely for an hour or two, so that the plants may be fully exposed to the influence of the sun and air, being careful to cover again as soon as there is the least appearance of frost. If this is not specially attended to, the plants will die off from dampness. After the plants are placed in the pit, water should be entirely withheld until they commence growing in spring. In this manner we have frequently kept plants in a perfect state of health during the severest winters. If this cannot be accomplished, you had better remove your plants to a cool and dry part of the cellar, where they should be kept as dry as possible until spring, when they may be brought forward and attended to, to fit them for bedding-out.

CAULIFLOWER, &c.—I have been an attentive reader of your excellent paper for the last two years, and now feel as though I could not keep house without it. It was first sent to me as a New Year's present, and a valued one it was. My husband, though a minister, and not engaged in agricultural pursuits, became attached to the RURAL, considered it indispensable, and at the close of the year subscribed for another volume; and now that is about to close, and as we want another more than ever, I have introduced it to some of my neighbors, who think well of it, and I am endeavoring to get up a club. But, what I wanted to write, particularly, is a few inquiries about *Cauliflowers*. Do they need to be started in a hot bed? What kind of soil is best adapted to them? How prepared for the table? One of your correspondents, writing of his cauliflowers, spoke of their being bleached. Is there any particular process of bleaching? Will you, or some of your numerous correspondents, answer the above inquiries, and oblige—M. E. P.—"Parsonage," Lorain Co., Ohio.

REMARKS.—It is well to start cauliflower plants in a hot-bed where convenient, but not absolutely necessary. Make a nice mellow bed in a warm, sandy soil, on the south side of a fence or building, or make a temporary shelter from the cold north or west winds, with boards, and sow the seeds in shallow drills, as early as the bed can be got ready in the spring. We have grown as good cauliflower from plants raised in this way as any other. A few plants can be started in a shallow box, in the house, in March, and as soon as the weather becomes mild enough, they may be set out of doors in some sheltered place to harden, before planting, and these will come to perfection earlier than those started in the open air.

Any good garden soil will answer for cauliflowers. In very dry summers they sometimes suffer from drouth, unless watered. Soap-suds is excellent for this purpose. The bleaching is done by simply bending the long leaves over the flower, to protect it from the sun. Even this is not generally necessary, for the leaves protect the flower sufficiently, except in rare cases. When the flower is observed to be exposed, it can be done in a second.

It is cooked by boiling, or steaming is better, having care not to break the head, or flower, too much. Served with drawn butter or gravy.

MEETING OF FRUIT GROWERS.—The Annual Meeting of the Fruit Growers' Society of Western New York will be held in Rochester, January 5th, at 10 o'clock in the forenoon. After the election of officers for the ensuing year various questions interesting to Fruit Growers will be discussed. We shall give a full report of everything of interest.

MAKING SAUSAGES.

Eds. RURAL.—Having experimented for a term of years, we think we have perfected a rule that will never fail to make sausages of the finest flavor. Pass your meat, (without freezing,) through your meat cutter, put it into a kettle, and place it on a stove or over a moderate fire. Off with your coat, roll up your sleeves, go into it with both hands, and stir it, being careful not to let it cook or burn on the bottom, while the second person adds the following:—For 10 lbs. meat, 3 large tablespoons of salt, 5 of sage; 2 of summer savory; 2 of black pepper, 1 teaspoonful of saltpetre, pulverized or dissolved; 1/2 lb. sugar. Stir until the seasoning is thoroughly incorporated with the meat, then pack in deep earthen dishes or tin pans. Set away to cool. The next day, or soon after, warm lard so that it will spread with a case knife and make a coating over the meat and it will keep any reasonable length of time fresh and sweet. Should you wish to preserve any until warm weather, take fine brown paper, cut it little larger than the surface of your dish, wet it on one side with the white of an egg, lay it on egg side down, pressing it gently with the hand, letting the edge come over the edge of the dish which will soon adhere and exclude all air. Keep it in a cool, dry place. Readers, try it. J. W. COLLINS.
Solus, Dec., 1853.

THE PILLARS OF DOMESTIC COMFORT.

The Cook, the Housemaid, and the Landress are the Pillars on which our domestic comforts rest.—RURAL.

CHEERED and elated by the above compliment, so generously proffered, we take new courage in doing our duty. Indeed we always find something in the RURAL that does us good. With especial interest we always read communications from the laboring classes of society—the Clerks, the Mechanics, the Farmers' Sons and Daughters. We never thought, however, of looking for anything from the pen of a servant girl, or a washerwoman, but since they are acknowledged the "Pillars" of "domestic comfort," we hope we may hereafter hear from some of them through the RURAL.—Landress, or washerwoman, is our own chosen appellation,—and we claim to honor the calling, for we are a good-natured, honest-hearted, thorough-going washerwoman, besides possessing some skill in various other branches of female labor. (We hope the editor will pardon our boasting, since he is guilty of inspiring us with so much vanity.)

How light the heart, when the setting sun
Tells the washerwoman her toil is done,
For she feels she has not lived in vain,
Though her daily bread be her only gain.

We will now roll our sleeves down, put on a tidy apron, and, by permission, cross the threshold of the RURAL Sanctum, and in preparation for the approaching holidays, will wash and mend all the stockings, aye, and stretch them, too, large enough to hold a fat turkey, for we can calculate almost to a certainty on the return of our ancient friend SANTA CLAUS with his cornucopia dispensing choice bits to the worthy. May the Ed. get a bountiful share. CLARA.
Rocky Dell, Dec. 14, 1853.

BREAD FROM GROWN WHEAT.—In looking over our corner of the RURAL, I find an inquiry for making bread of grown wheat. For the benefit of H. L. N., of Sherburne, N. Y., I send you my mode of setting the yeast. To 1 teacup of milk add 3 of boiling water; 2 tablespoonfuls of butter; 1 of sugar; soda size of a bean, or such matter, set in kettle of warm water, stir every fifteen minutes. If kept in a regular temperature it will rise in 4 1/2 hours. How to mix it comes next. Pare one quart of potatoes, boil till done, turn off the water into a pan of new milk, then wash the potatoes, put them in the milk, add a little shortening and salt—be sure to mix it well—let it stand one hour then mould the loaves and let stand 15 or 20 minutes—bake one hour.

Will some of your correspondents send a recipe for a good chicken pie and oblige—A FARMER'S WIFE, Inverness, Liv. Co., N. Y., 1853.

PICKED-UP DINNERS.—I want to know the best recipe for preventing "picked-up dinners," on washing-day. We have usually fifty-two washing-days in the course of the year, and each washing-day we are subject to that horror of the week—"picked-up dinners." Cold meat, cold potatoes, bits of dry bread, no pie, no pudding—the very thought of it spoils a week's enjoyment. I wonder if JENNY, MOLLY, ANNA, AGNES, SYLVIA, &c., have "picked-up dinners" on washing-day? If not, I hope they have accommodations for a boarder.—MARK, December, 1853.

AN INQUIRY—FRIED CAKES.—Will you permit me to ask some of your lady correspondents (through the RURAL) how to print flannel for embroidery. I have tried every way I can think of—all to no purpose. If any one can inform me, I will try and help them make a pan of Fried Cake after mother's rule, which is:—One egg; 1 cup sugar; 1 cup buttermilk; 3 tablespoonfuls lard; 1 teaspoonful saleratus—season to your taste and mix quite hard.—T. B., Fox Lake, Wis., 1853.

BREAD PIE.—As apples are quite scarce this winter, and crackers not being on hand at all times, I thought this recipe would do well. Soak light bread with hot water—have it rather thin—add a piece of butter while hot; have your crust on your pie tin and spread on about as thick as for apple pie. For common sized plate, sprinkle on one teaspoon tartaric acid and two-thirds teacup of sugar. Season with nutmeg, add the top crust and bake gently.—T. STORMS, Clarendon, N. Y., 1853.

TO TAKE GREASE OUT OF CLOTH.—Make a mixture composed of an ounce of liquid ammonia, and four ounces of alcohol, to which must be added an equal quantity of water. There is no better preparation than this.

Written for Moore's Rural New-Yorker. MY LOST LOVE.

BY JENNY A. STONE.

Through the leafy woods, my love and I,
In the joyous spring-time hours,
Went roaming with light and careless feet
O'er a carpet of moss and flowers.
We danced to the music of the birds
And the whisper of the breeze,
Chiming together and floating down
From the tops of the giant trees.

Where a silver stream and a mossy bank
Embraced 'neath the arching shade,
We sat and silent we sat and gazed
At the pictures the sunlight made;
And my love bowed down where, through the leaves,
The sunbeams fell in showers,
Till his bright curls gleamed in the emerald moss
Like a garland of golden flowers.

"Bring me here when I die," he said,
"Where the maple flings its shade,
On a calm, bright Autumn morning,
I would fain to my rest be laid,
While friends should gather round my lay,
And the Chaplain read the prayer,
And the hymn go floating, floating up
Through the dim and hazy air."

"Why should you talk of death?" I cried,
"Why should you talk of death?
The sweet south winds are blowing now,
There is life in their every breath.
Would it be sweet to leave me here,
In the beaten path alone?
Wait my beloved, wait for me,
Could I live if thou wert gone?"

We roamed through the woods in the Summer's
prime,
When the earth was faint with heat,
And the dim and mossy pathway
We pressed with our burning feet,
Heavily, heavily beat my heart,
Struck with a nameless fear,
Thinking only of coffin and shroud—
Of the sweeping pall and bier.

"The maple guards the spot," he said,
"And the moss is fresh and bright,
And the azure flowers are springing now
In the summer's warmth and light."
But I watched the flush on his wasted cheek
As he stooped to raise a flower,
I could not look in his starry eyes
As I thought of that heavy hour.

I am treading the path on an autumn day,
And I strive to fold my hands,
But they will go reaching, reaching out,
Scorning their feeble bands,
Striving to clasp those other hands
That shall never meet them more—
I had prayed to go to the grave with him,
But he left me at the door.

Here is the maple and the stream,
And the grave is 'neath the moss,
Covered with red and yellow leaves
That the winds of autumn toss.
And dust will gather on his brow
And his floating curls of gold,
And the folded hands and starry eyes
Rest calmly beneath the mold.

And winter will follow the autumn days,
And spring will brighten the earth,
And summer will come with life and light
To give to the flowers birth.
But what could they bring to bless my heart,
If no life to my love they bore—
I could sit in the forest beside his grave
With the winter for evermore.

Hadley, Mich., 1858.

Written for Moore's Rural New-Yorker. PLAIN TALKS TO AMERICAN WOMEN.—No. I.

BY MRS. M. P. A. CROZIER.

When the Lord God pronounced a blessing upon
the first marriage in Eden, the benediction fell
upon the institution for all time; and though pro-
fanely touched by many hands that would have
dared to overthrow it, this ark of the family cove-
nant still rests beneath the cherubim in God's
moral tabernacle, glorified by the Shekinah that
then first rested upon it—it still remains the
foundation of every true home.

Divine in its ordination, sacred in its designs,
and perpetual in its obligations, what then should
marriage be? What is that mysterious bond that
shall so unite the interests and sympathies of two
parties that no power but Death can separate—
yes, which shall even bind still the inanimate heart
in the cold grave to the throbbing one in the bosom
of the living, and interlock its bright links with
the hope of immortality? Love, yes, love; not a
passional affection that might delirium with the
natural decay of beauty, but a deep, spiritual love,
the outgushing of souls—of souls attracted to
each other by real worth and a perception of con-
geniality; not a union based upon wealth of gold—
this is uncertain, often transient—but upon wealth
of humanity; this is enduring.

Were all marriages such marriages, the domestic
temple of earth would be a fair, beautiful structure,
towering toward Heaven in its majesty, its corner-
stones pillars of strength, its adornments the pictures
and statuary of beautiful lives, and through whose
aisles might ever swell the triumphant echoing of
angel harpings!

Yes, the institution of marriage in its purity,
bears the impress of the hand that ordained it, and
in so far as it is perverted by sensuality, in so far
as its holiness is disregarded, and it becomes only
a commercial tie to bind together mere material
interests, so far does it lose its perfection of beauty,
so far are blotted out the impressions of its divinity.
So long and so extensively have these evils pre-
vailed, that society is burdened with the conse-
quences. Complete domestic happiness has become
almost a myth. Poets may dream of it, philosophers
reason upon it, but the reality, if existing, would
seem to be confined to some few isolated cases,
where immorality and selfishness have no detestable
divorces for trifling causes have become common

events, as though no divine authority had said in
vindication of the perpetual obligation of the mar-
riage covenant, "from the beginning it was not
so." Licentiousness prevails, and unblushingly
commends itself to public notice, under the sacred
garb of liberty and love. Children unnumbered
are cast upon society orphaned from birth, and in
after years fill up the ranks of crime.

Let, then, each lover of purity—let every woman
whose heart goes out after the beautiful and the
true in life, and aches because of the falseness and
degradation of society—let all, pained because of
the domestic hearths unsanctified by love aim to
surround the sanctuary of her own home with
genial influences that shall radiate into society,
leading many to feel that there is such a thing as
true marriage, and that its author is the All-Wise
God. Let every unmarried woman who hopes to
become the presiding genius of a home, aim to be-
come the most noble being possible, that she may
well fulfill that destiny, realizing that
"Life is real, life is earnest."

Wifehood is a relation so beautiful, maternity a
condition so sacred, that no one should assume
them without endeavoring to ascertain and fulfill
the laws of their perfection, yet thousands rush
into them precipitately, at the instance of a sudden
fancy, or with the idea—most prominent in many
minds—of being supported. Perhaps society,
which has so restricted the number of respectable
employments for women that multitudes have no
other way of obtaining a comfortable livelihood,
is more culpable for this evil, than these hapless
victims themselves—victims, indeed, for how little
do such persons commonly realize of that spiritual-
ity of marriage which lightens its cares, and causes
its responsibilities to become delightful duties, per-
formed at the promptings of the holiest of motives.
The children born to them are regarded as necessary
burdens, loved to some extent, because love of
offspring is an instinct of woman's nature; but
how far short do they come of that full inheritance
of maternal love which should be the birth-right of
every child! Before these evils can be wholly
eradicated, then, there must be a change in popular
sentiment—which change is, we believe, beginning
to be wrought—which shall render it respectable
for women to engage in other employments than
those which have, heretofore, to any great extent,
been open to her, and some of which, by the pro-
gress of the arts, have now become hardly able to
afford her a pittance. There are many avenues to
competence which woman might safely and beauti-
fully tread, and which would render her independ-
ent of matrimony as a means of support. But let
her be educated in the idea that she is capable of
self-dependence, and throw open to her the gates,
and we may hope that the flowers in the pathway
of science and art, will yield their fragrance at the
pressure of lighter footsteps than are wont to call
forth their aroma, and the laurel wreath grace
purer brows than those which often, in the past,
have worn its greenness.

SECRET OF BEAUTY.

The editor of *Life Illustrated*, in commenting
on Bayard Taylor's description of the unusual
beauty of the Polish women, discloses the secret
of their good looks as follows:

"Now it is perfectly natural for all women to be
beautiful. If they are not so the fault lies in their
birth or training, or in both. An organism which
is perfectly healthy in all its parts will be harmo-
niously developed, and, whether male or female, it
will be perfectly beautiful. Hence there can be no
true beauty without health, and there can be no
permanent health in the future man or woman
unless the child is properly cared for. We would
therefore respectfully remind American mothers
that, in Poland, a period of childhood is recognized.
There, girls do not jump from infancy to young
ladyhood. They are not sent from the cradle di-
rectly to the parlor, to dress, sit still, and look
pretty. No, they are treated as children should
be. During childhood, which extends through a
period of several years, they are plainly and loosely
dressed, and allowed to run, romp, and play in the
open air. They take in sunshine as does the flower.
They are not loaded down, girded about, and op-
pressed every way with countless frills and super-
abundant founces, so as to be admired for their
much clothing. Nor are they rendered delicate
and dyspeptic by continual stuffing with candies
and sweet cakes, as are the majority of American
children. Plain, simple food, free and various
exercise, and abundant sunshine, during the whole
period of childhood, are the secrets of beauty in
after life."

CHILDHOOD.—Happy season! No clouds over-
shadow the youthful brow; the child glances not
at to-morrow; in the present is the embodiment
of all its aspirations and hopes. As the bee
gathers honey from every opening flower, so the
little child gathers pleasures from every passing
event. The trials in after years seem as nothing
in comparison with their own petty annoyances
and grievances, which, for a while, throw a gloom
over their little sports until dispelled by the sun-
shine of an experienced guide. Children, like
flowers, thrive and flourish in a genial atmosphere.
As the heavy gale will crush the tiny blossoms, so
will harsh words compel the sensitive nature to
shrink within itself, thus destroying the fresh out-
bursts of childish enthusiasm; for it is from the
pure originality of the expression of a child that
we obtain the inner workings of the youthful mind,
which is easily moulded for good or evil, according
to the influences by which it is surrounded.

Ah, little ones, seek not enjoyment alone, but
mingle "wisdom with mirth."

A BEAUTIFUL THOUGHT.—When I gaze into the
stars, they look down upon me with pity from their
serene spaces, like eyes glistening with tears, over
the little lot of man. Thousands of generations, all
as noisy as our own, have been swallowed up by
time, and there remains no record of them any
more; yet Arcturus and Orion, Sirius and the
Pleiades, are still shining in their courses, clear
and young as when the shepherd first noted them
from the plain of Shinar. What shadows we are,
and what shadows we pursue!—*The Mas. Cyclopedia.*

One always receiving, never giving, is like the
stagnant pool, in which whatever remains corrupts.

Choice Miscellany.

Written for Moore's Rural New-Yorker. FAREWELL TO THE OLD YEAR.

Old, weary, time-worn year—farewell!
Thy days are past—
Thou'rt like a dream, or passing spell,
Whose magic murmurs round me swell,
But cannot last.

Thy mighty arm is nerveless now—
Thy power has fled;
Forever o'er thy pallid brow
The tide of life has ceased to flow,
And thou art dead!

But, oh, couldst thou thy record give
To dwellers here;
Methinks 'twould be to all who live—
Who life's dark tempest still survive—
A tale of fear.

Successful warning it would prove
To erring man;
True wisdom it would bid him love,
And place his treasures far above
This life's brief span.

How many wren's hearts have bled
'Neath thy sad reign;
Long cherished hopes have blighted fled,
And pleasures gay, that withering sped,
Come not again.

Yet still in viewing thy career,
With joy we see
Bright, sunny spots of bliss appear,
And in our hearts, for many a year,
We'll cherish thee.

Somerset, N. Y., 1858.

W. C. W.

Written for Moore's Rural New-Yorker. RANDOM JOTTINGS.—No. I.

Masses. Ens.—Had just completed my weekly
"feast of reason" and laid aside that appetizer to
mental luxuries, our RURAL, when an idea struck
me—don't be alarmed, it is not likely to prove
fatal, although we must admit it was a singular
occurrence in more than one respect—that BAR-
LEYCORN, JR., Esq., could in no better manner in-
scribe his humble title upon the scroll of fame than
by appearing in the columns so frequently graced
with the productions of FLOWHANDLE, CHUN-
DASHER, and other of

—"The immortal names
That were not born to die."

The start was pleasant and the motion agreeable,
but ere we were aware, our pen—never noted for
steadiness or regularity of movement—got the bits
in her teeth and ran away. Little damage result-
ed, if we speak not concerning the utter ruin of a
few sheets of foolscap—and here we are. It is for you
to decide whether we shall spare brief space amid
the worthies of the printed page, or send us sky-
ward with all the other glories that end in smoke.
Aim High.

A LITTLE anecdote relating to the "god-like
DANIEL" came under our eye in print the other
day, which has furnished us much "food for reflec-
tion." It is said that when he graduated he turned
to his classmates and, holding out his diploma,
remarked:—"Boys, if I am ever to be of any note
in the world I must win it, this will never make
a great or good man of me." True, every word.
A "degree," though conferred by all the colleges
in the land, will neither make one "more nor less
than man." Often, very often, those possessed of
a fee simple in the shape of a cognominal affix are
more noted for leaden weight than for the gravity
which learning contributes—more worshipped for
depth of pocket than for depth of thought. Each
individual works out for himself the problem of
destiny—every man is the architect of his own
fortune. This truth being conceded, how neces-
sary that those just setting out upon their life-vo-
yage should have a compass, the polar star to which
it is invariably pointing being an ennobling, in-
spiring purpose. It is a well-known fact that as
much depends upon the direction and elevation of a
park of artillery in projecting a ball, as upon the
weight and expansive power of the powder employ-
ed. So with our mental guns, charge them to the
muzzle with grape and canister, if they be badly
aimed, the broadside is worse than useless—we,
receiving the force of the recoil, alone can speak of
the power contained. The world has thousands of
aimless men. We meet with them everywhere—
every current of life is bearing them away to
oblivion, not a sail set, their barks rudderless.
Young man, have an aim in life, and let that aim
be high. Webster's words had a concealed purpose
—after years and after labors evolved it. This pur-
pose, the child of his thought, was what gave vigor
and directness to action—it breathed into his
efforts the reality of life, and clothed his being with
the mantle of immortality.

Saturday Night.

There is a good, wholesome sound in that word
—Saturday. At its mention the strife and turmoil,
the warring and jarring of busy life sink back
amid shade and gloom, giving preference to quiet
and repose. Its antipodes—Monday—is the
period for putting on the armor, the time for en-
toring the conflict—Saturday we doff the panoply
of war, wipe the dust from our hearts and the stain
of battle from our being, ready to cry Peace!
Peace! Some one (we think it was that gorgeous
word-painter, B. F. TAYLOR,) has written "what
blessed things they are, and what would the world
do without them? Those breathing moments in
the tramping march of life; those little twilights
in the broad and garish glare of noon, when pale
yesterdays look beautiful through the shadows,
and faces, 'changed' long ago, smile sweetly again
in the dusk; when one remembers 'the old folks
at home,' and the old-fashioned fire, and the old
arm-chair, and the little brother that died, and the
little sister that was 'translated.' Saturday Nights
make people human; set their hearts to beating
softly, as they used to do before the world turned
them into war drums, and jarred them to pieces
with tattoos."

Saturday Night it is fitting to give free rein to
memory, letting her guide whither she will. Under
her supervision the paths of childhood are visited
—the many patterings of little feet fall upon once
more youthful ears—the sports of boyish days are
being re-enacted—smiles, happy and careless,
wreath the countenance—but, anon, the vision
changes, the days of round-abouts, and marbles,
and school, are past—these have given place to
our "first frock-coat," the stern game of life, and
we are students in the great college of the world.
Now we see the boy enlarged, just attempting to
put on the dignity of manhood, just assuming
responsibilities; the little compact of which he
was once a citizen have become individualized and
each doubtless glories in being or becoming a
"Pillar of the Republic." Brightness tinges the
future—the stage of action is before him, and
amid all the ups and downs of the player will come
Saturday Night with its fancies, its dreams, its as-
pirations and its hopes—may these possess a radi-
ance at once enlightening and vivifying!

"Nine Years Old."

"WELL, what can be written of a life so brief
as this?" Alas, when the passing years are spoken
of as allied to humanity, little—very little.—
SHAKESPEARE (in whose mirror all men may gaze
and find the true reflection of their own counte-
nances,) devotes to this period but few brief lines:

— "At first, the infant,
Mewling and puking in the nurse's arms;
And then, the whining school-boy, with his satchel,
And shining morning face, creeping like a snail
Unwillingly to school."

But we were thinking of "Nine Years" as the
lapse of time since the initial number of the RURAL
visited a farm fire-side in the Empire State. We
liked the appearance of the stranger, bade him
enter, got acquainted, gave a special invitation for
weekly visits, and from that day to the present it
has guided our home. "The RURAL" was prolix
and final title when first we looked upon its face—
as the years wore on it so grew in family affection
that it became a child by adoption, and is "Our
RURAL" to-day. And what shall we write of the
RURAL at "Nine Years Old?" What shall our pen
set down concerning its lessons of experience to
tillers of the soil?—what of its careful teachings
to devotees at the shrine of Pomona?—what of its
instructions to those who would solve life's enigma

"In these stars of earth—these golden flowers?"
Shall we estimate the freight of loving words and
kindly thoughts it has weekly borne to the fifty
thousand households that watch for its coming?
Is ours the labor to demonstrate, mathematically,
the instilling of pure, lofty thought, and the pro-
motion of prompt, decisive, beneficent action that
is the result of its efforts throughout the length
and breadth of the land? There are myriads who
deem themselves the banner-bearers of the RURAL;
myriads whose warm hearts are enlisted in its
support and whose strong hands will bear it on to
victory!

The "Nine Years" cruise of the RURAL has
been full of achievement. The "Tenth Annual
Voyage" around the World is marked upon its
"clearance papers" for January 1st, 1859, yet, ere
the anchor is weighed, the sail set to the mast, we
wish it open seas, prosperous winds, and to the
"man at the helm," all the returns for which
mariners on the "Ocean of Literature" may pray
—health, and that wealth which is the parent of
Happiness and Content.

JOHN BARLEYCORN, JR.

W. N. Y., 1858.

YOUTH AND AGE.—Why was I so happy then?
I consider well, and nothing is sensibly changed
in my condition. I possess, as I did then, health,
and my daily bread; the only difference is, that I
am now responsible for myself! As a child I ac-
cepted life when it came; another cared for and
provided for me. As long as I fulfilled my present
duties I was at peace within, and left the future to
the prudence of my father! My destiny was a
ship, in the direction of which I had no share, and
in which I sailed as a common passenger. There
was the whole secret of childhood's happy securi-
ty. Since then, worldly wisdom has deprived me
of it. When my lot was entrusted to my own
and sole keeping, I thought to make myself master
of it by means of a long insight into the future; I
have filled the present hour with anxieties by oc-
cupying my thoughts with the future; I have put
my judgment in the place of Providence, and the
happy child is changed into the anxious man.—
Emile Souvestre.

CHARACTER.—The differences of character are
never more distinctly seen than in times when
men are surrounded by difficulties and misfor-
tunes. There are some who, when disappointed by
the failure of an undertaking from which they
had expected great things, make up their minds at
once to exert themselves no longer against what
they call fate, as if thereby they could avenge
themselves upon fate; others grow desponding
and hopeless; but a third class of men will rouse
themselves just at such moments, and say to them-
selves, "The more difficult it is to attain my ends,
the more honorable it will be;" and this is a maxim
which every one should impress upon himself as
a law. Some of those who are guided by it, prose-
cute their plans with obstinacy, and perish; others,
who are more practical men, if they have failed in
one way, will try in another.

CHARITY.

THE secret that doth make a flower a flower.
So frames it that to bloom is to be sweet;
And to receive to give.
No soil so sterile, and no living lot
So poor, but it hath somewhat still to spare
In bounteous odors. Charitable they
Who, by their having more or less, so have
That less is more than need, and more is less
Than the great heart's good-will.—*(Dobell.)*

THE FAMILY.—If parental duties were worthily
observed, from the family circle the emanations of
filial piety would spread and diffuse themselves
through all the departments of society, improve
the peace, order and happiness of all families, com-
munities and nations, and powerfully tend to the
regeneration of the world.—*Dick.*

Too much is seldom enough. Pumping after
your bucket is full prevents its keeping so.

Written for Moore's Rural New-Yorker. THE LIGHT OF HEAVEN.

AND I saw no temple therein: for the Lord God
Almighty and the Lamb are the temple of it.
And the city had no need of the sun, neither of the
moon to shine in it; for the glory of God did lighten it,
and the Lamb is the light thereof. And the nations of
them which are saved shall walk in the light of it—
Rev. xxi.—23, 24, 24.

BRIGHTLY gleams a holy radiance
Round that undecor'd land,
Where immortal hopes are anchored,
And innumeral joys expand.
And that radiance, pure and heavenly,
All undimmed by earthly blight,
Is the shadow of His glory—
His the Fountain of all light.

Darkness flees away before him—
Sun and stars no more can shine—
And the angels who adore him,
Bow beneath those rays divine.
And through all the glorious city,
His is undivided might;
He is power, and life, and glory,
He the temple and the light.

Light of Heaven! yet meek and lowly,
Once the paths of earth he trod;
Lived and died a martyr holy,
Both a Saviour and a God!
Died, that we might to His Kingdom,
Filled with joy and peace, come in;
And for this—the love he bore us—
Lose our sorrow and our sin.

Yet He looked on us in mercy,
For He knew the way was drear;
And—oh, blest and loving kindness—
Gave a hope for every fear;
And to guide us on our passage,
O'er the changing sea of life—
For He knew His stormy waters
Were with death and danger rife—
And to lead us through the valley,
Clothed in shadows and in night,
Gave us tokens of His presence,
Gave us gladness, gave us light.

Golden harps His praise attuning,
Sing His vondrous love to man;
Countless millions glad are shouting
God Al-mighty and the Lamb!
The redeemed of every nation
"Walk in light" with the 144,000,
And the shining hosts cry glory,
God Almighty and the Lamb!

Hastings, Osw. Co., N. Y., 1858.

ROSELIA.

Written for Moore's Rural New-Yorker. THE ATTAINMENT OF HAPPINESS.

THE acquirement of knowledge, or the acquisition of
wealth, a means, not an end—

"Tis not all of life to live
Nor all of death to die."

THERE must have been an end and a design for
which men were called into existence and endowed
with such noble faculties, far more worthy of
attainment than the simple gratification of the
selfish desires which rule the mind while it is
dwelling out from under the influence of a religious
life. It is clearly evident to the close observer that
the great aim of mankind, however situated, is to
obtain happiness, and the means, employed to
arrive at this aim of their hopes, vary according
to the circumstances and condition in which we
find ourselves placed. Accordingly, we find some
pursuing, with activity, the means to acquire
wealth, as being the great desideratum of life, while
others are induced to devote their energies to the
accumulation of knowledge, of literature, as being
most worthy to engage in. While both, when
rightly pursued, may prove a blessing to their
possessors, yet when they become the fixed object
of our attainments for selfish purposes, they too
often prove a curse. Daily observation show, most
conclusively, that however highly gifted, or
however well stored the mind may be with the
attainments of science; or however well filled the
coffers of the opulent, man is still dependent not
only upon a Higher Power but even upon his fellow
man, for many of the enjoyments with which his
life is cheered. When men are disposed to shut
themselves up in a world of their own, as it were,
growing either miserly of their gold or their attain-
ments in wisdom, their minds become narrow,
sordid, and exceeding selfish, and hence reap the
reward of unhappiness. But when these objects
are pursued as a means to benefit others as well
as ourselves—when the hand is ever ready to relieve
the distressed, or to raise a fallen brother, and the
heart to feel for them, scattering of our abundance
or of the smaller store—either of wealth or learn-
ing—to those who need the aid and support of
their fellows, the income of peace that fills the
heart affords us a happiness that is enduring. Oc-
casions wherein we have thus parted with our
accumulations and acquisitions prove, when in
after years we take a retrospect of our lives, bright
spots scattered here and there along the path of
life. Thus will the truth which our Saviour de-
clared be fulfilled in our experience, that "it is
more blessed to give than to receive," and then we
feel and realize that these acquisitions may be-
come a means of aiding us in arriving at the great
end and aim of the desires of man. Then, too,
will the mind behold the necessity for laying aside
and striving to overcome the selfish promptings
of the heart, and as it becomes willing to live so as to
impart good to others as well as to receive it for
itself, it will, in proportion, be qualified to realize
whence those blessings come, and thus be enabled
to progress by attention to these better prompt-
ings,—to be gradually prepared not only to enjoy
pure happiness here, but when the final summons,
which all must sooner or later obey, shall be heard,
to cheerfully follow the call, having the assurance
that all will be well with it in "that bourne from
whence no traveler returns."
J. J. C.
Meadon, N. Y., 1858.

God reaches us good things by our hands.

EDUCATE THYSELF.

PHYSICALLY, morally and intellectually. Physically,—for unless the encasement of the soul is preserved, such is the intimate relation between the body and the mind that the latter must inevitably suffer. As to the moral education, there was a time when mind needed no cultivation. Its moral purity was perfect. In the primitive days of man's creation, mind, like matter, was a lovely garden, in which the beautiful flowers of innocence and love had a spontaneous growth,—or, if you please, a casket filled with diadems that insured to the possessor wealth as enduring, and beauty as lasting, as duration infinite,—it was a statue, fresh from the Omnipotent Artist's hand,—bearing in every feature the impress of Divinity.

MILTON says, that through envy, Sin desired the fall of Eden's pair. Indeed, it was a state to be envied, and Time led captive Earth's fairest daughter to pay her homage to the tyrant, Sin. Guilt has stripped the luxuriant garden of its fragrant herbage; the beautiful casket is broken by the rebellious hand of disobedience, and that symmetrical statue is marred by the tyrant's relentless power. Thou hast a work to do, O Man! Thou art fallen from thy "high estate." The lovely statue lies crushed at thy feet, and thou art to raise it from the dust. "Have faith, and doubt not," for when the King of all the Earth shall come, clothed in power and majesty, with His holy Angels, then shall the New Jerusalem descend, and man, clothed in immortality, shall go over the river to that land where there is no sin, and where the Lamb is the light thereof.

The mind is capable of moral improvement. In its darkness it is an undeveloped germ, and, like the little seed of the earth, it bears within a hidden flower, which, if filled by the faithful hand of Education, and moistened by the pure waters of Love, may go on expanding in power and capacity, ever approaching, but never arriving at infinite wisdom. We are not able to determine how barren would be the waste—how great the dearth of the mind would be in its fallen state, were it never visited by any refining or elevating influences.

The mind is worthy to be educated, or, why was it made capable of improvement? Would an omniscient being frame anything unworthy of its author? Look upon the earth. Is it not a work worthy of a God? Yes, it is material. Then shall not the mind be a thing of worth, which is immortal? He that studies the workings of his soul admires the formation of its parts in proportion as he understands its ways. Then how infinitely beautiful must it appear to "Him who formed the heart, for He can understand." It is like a book in which each page reveals to the reader some new and thrilling truth. It is a splendid combination of parts, so complete as to far exceed in harmony of action and adaptation to end, any mechanism man can ever produce. Its worth can only be measured with endless duration, and He only knows its worth who understands eternity.

Educate thyself intellectually. The facilities for education are now ample, and no one, however indigent in circumstances, need be deprived of a good education. Although many of the avenues to knowledge are obstructed by the languages, and ancient philosophy and literature are bound up in this formidable difficulty, it is fully met by other considerations. The student is not compelled to fathom all the depths of knowledge for himself, he has the aid of the many researches which have been made by giant minds before him. He has history and biography as examples from which to choose that which he himself will follow. He has the ablest instructors, and printing has placed within his reach a sea of literature. Science and Art have advanced to such a degree of perfection that he need not entertain contracted views of man's power and genius, or the degree to which discovery may be carried, and he has the Bible to direct him to the fountain of all knowledge. Why should not the whole man be educated? There are reasons why. 1st. The purpose of education is often mistaken. Many seem not to think that they are created for any other world than this, and that education is to raise them from the dust of the groveling earth to the heights of a holy heaven.—The young lady who seeks what is termed an education merely for her advancement in the fashionable circle, errs in her purpose. The young man who pursues his college course because his standing in society demands it, errs in his purpose; and those who pass their time in school, merely because others do, err in their purposes, or rather in having none at all. 2d. They have no self-education. Education may be divided into two classes—that which we give ourselves, and that which we receive from other sources. Without the first, the second is nearly impossible. The house must be founded upon the rock, or the floods will overwhelm it, and the fall will be great. A splendid ruin is a useless mind. How many noble intellects have been worse than ruined, because of no self-discipline. BACON says that knowledge is power. If the man is self-educated, learning reigns nobly on such a throne; but give to bad men knowledge, and it is like putting a sword into the hands of a maniac.

Dr. FRANKLIN was a self-made man. Madame TOUSSAND, in her Memoirs of the French Revolution, speaking of him in Paris, says—"The richest embroidered suit was an object of insipidity, and passed unnoticed, while the simple garb of FRANKLIN was the theme of adoration." It was doubtless the mind which made his attire seem beautiful. We always take pleasure in the society of the educated. There is a satisfaction in that conversation which makes us forget the speaker's attire however coarse, and makes the plainest face look handsome.

The self-educated mind is like a monument which stands erect, though it stands alone. Sorrow may plunge it into the furnace of affliction, but, like gold, it comes forth unscathed, seven times purified. Such a mind can only be attained through a just

CERES AND POMONA.

As appropriate to the commencement of a new volume we have chosen the above beautiful and fitting emblem with which to embellish our pages. On the left is Ceres, the daughter of SATURN, and the fabled inventor of Agriculture, who was honored by the ancients as the goddess of Corn. In her left hand is seen the ripened wheat, to denote the realm over which she ruled, and in her right hand she holds the sickle, the only implement used in ancient days to gather the golden grain. The inventive genius of man has destroyed much of the

appreciation of its value, energy and perseverance, firmness and decision. A constant effort is necessary to unite wisdom with discretion, excepting a faithful watch-care over the heart, to pluck out noxious weeds, and plant the beautiful flowers which we may cull from a sinless garden. Educate thyself; for,

"Ignorance is the curse of God,
Knowledge, the wing wherewith we fly to heaven."
JANE E. H.
Teachers' Institute, Geneseo, N. Y., 1868.

HOW TO READ WITH PROFIT.

For the sake of those who are not greatly accustomed to systematic reading, we make some suggestions as to the best mode of reading, so as to gain the highest advantage from the books you peruse.

1. Ascertain the aim of the author. You will thus know what to expect from his book, and may save much time, which might otherwise be spent in looking for what you could not find. An attentive reading of the title page, preface, and table of contents, will enable you to judge pretty accurately what the author is about. Some facts, too, which float only among intelligent men, will aid you greatly in these matters.

2. Read *wakefully and attentively*, and with a determination to comprehend thoroughly the book you are perusing. Read neither credulously nor skeptically, but candidly; endeavoring to go to the root of the matter, if possible. One hour of such reading is worth a week of the superficial reading which is so common.

3. Read with a *good dictionary at your elbow*, and consult it freely whenever you meet a word you are not sure you understand. Webster and Worcester are the best in general use. We use Webster. Never pass an important word without mastering its meaning in the work you are reading. In this way you will soon gain a good stock of words for your own use, while you are learning the meaning of the book you are reading.

4. After reading a chapter, close the book and try to recall, and state briefly in your own language, the substance of the chapter, in the order the author pursues. This is one of the most profitable exercises. It will show you just how much you have gained by reading. If you cannot do this, just read the chapter again. The second reading will probably do you some good. The first reading has been of little use to you, if you are unable to state what the main thoughts are.

5. If the book is your own—but not, if it is a borrowed one—you may mark with a pencil the most important thoughts. You will thus remember them more easily, and can refer to them more readily.

Adopting these suggestions, you will read slowly, but what you read will become *yours*. It will stir up your own thoughts, and probably develop your mental power as healthfully as any other discipline you can have.—Ohio Farmer.

A WORD TO PARENTS WHO HAVE CHILDREN AT SCHOOL.—If parents do not feel sufficient interest in the education and training of their children—in their moral and physical, as well as in their intellectual culture—to visit the schools, see the progress of the pupils, encourage the teachers in their arduous and difficult labors, and thus assist both teacher and pupil, how can they reasonably expect the scholar or teacher to feel or manifest a desire for progress and improvement, so sadly neglected by those who should feel and exhibit the liveliest interest in the culture of their offspring? The teacher we know has many duties devolving upon him, and because he discharges them faithfully, the parent is not excused from his duty. Parents, if you have not visited your school recently, do so immediately, and you will, we are sure, find the hour well and pleasantly spent.

DESIGN OF EDUCATION.—The real object of education is to give children resources that will endure as long as life endures; habits that time will ameliorate, not destroy; occupations that will render sickness tolerable, solitude pleasant, age venerable, life more dignified and useful, and death less terrible.—Sidney Smith.

poetry of Agriculture. The shepherd's crook is seen no more, and the sweet notes of his well-tuned pipe float no more on the evening breeze. The unsightly cradle and the ponderous reaping machine have taken the place of the poetical sickle, which, in our childish days we were wont to see men and maidens wield so gracefully, and wave with joy, as they shouted the "harvest home." Poetry falls before utility, and while we love the beautiful of the past, we rejoice in present goo and future progress. On the right, sits POMONA, the goddess of Fruit

The Reviewer.

THE NEW AMERICAN CYCLOPEDIA: A Popular Dictionary of General Knowledge. Edited by GEORGE RIPLEY and CHAS. A. DANA. Vol. IV. (Brownson-Chartres.) New York: D. Appleton & Co.

THIS volume has been examined with great interest. Its 766 pages contain 2,800 articles—biographical, scientific, historical, religious, military, geographical, political, &c.—including impartial and ably written accounts of several eminent American statesmen, such as BUCHANAN, CARR and CALHOUN. The articles on countries are full and admirable—that on Canada occupying nearly seventeen pages, and being very correct. California and the Carolinas are admirably sketched. Of cities, accounts are given of Brussels, Calcutta, Cairo, Cadiz, Cawnpore, and others. Most of the important Capes, from Cape North to Cape Horn, are given, with much other geographical information. The articles on Cavalry and Cannon—as well as those on the battles of Buena Vista, Cerro Gordo, Chapultepec, &c.—are very complete and will interest all military men. Among the biographies are those of Brownson, Bryant, Dr. Buckland, Lady Bulwer, Calvo, Burke, Burns, Bishop Burnet, Carlyle, Charles Buller, Count Cavour, Ole Bull, the Bulwers, Carnot, Canning, Canova, Canrobert, Lord Byron, Lady Byron, Adm. Byron, Alice and Phoebe Cary, Lord Castlereagh, M. de Chambord, and many more, embracing persons of every kind and description who have achieved either fame or notoriety. There are also biographies of many sovereigns, embracing condensed histories of the countries they ruled. All the Charles of Germany, France, England and Sweden, and several Catharines, are sketched, as well as some of the most noted Romans—such as Brutus, Cassius, the Catos, the first Caesar, Cataline, and others. The scientific and miscellaneous articles are numerous, and many of them very complete and valuable—such as Budding, Caloric, Calomel, Canal, Capital Punishment, Catcombs, Censorship of the Press, Cardinal, Chartism, Carpentry, &c.

The whole volume is most creditable to the editors, whose labors in supervising and arranging such a Herculean work must be most arduous and difficult. The ability and impartiality they have thus far exhibited is worthy of special notice and commendation—for, though engaged in other literary pursuits, and possessing very decided opinions on most subjects, the first four volumes of the Cyclopædia are wonderful for their accuracy and impartiality—clearness, brevity, and reliability being the apparent objects of writers and editors. The publishers are also performing their task creditably; and we are pleased to learn that this Cyclopædia is no longer an experiment, but an established success—the subscription having already reached 12,000, which will no doubt be greatly augmented before the publication of another volume. D. M. Dewey is agent for Rochester and vicinity.

HISTORY OF THE REIGN OF PHILIP THE SECOND, KING OF SPAIN. By Wm. H. FARRIS. Member of the Royal Academy of History at Madrid, &c. &c. Volume III. Boston: Phillips, Sampson & Co.

THIS is another of those standard historical volumes which we have before commended to our readers. The present volume contains five steel engravings of DON JOHN and ANNE OF AUSTRIA, from original paintings in the Royal Museum at Madrid and in the Palace of the Pardo. The type and paper in this volume is all we can desire in a library edition, but we do hope that good, substantial calf, or even sheep will soon become popular among publishers and purchasers of standard books. Mustin is well enough for a book that is only good to be read once and thrown away—or perhaps not good to be read at all—but such a book as this should be handed down from father to son through half a dozen generations. Time and association would greatly increase its value, as one owner after another passed away, until it would become invaluable to its possessor. For sale by DEWEY.

NOTES FROM PLYMOUTH PULPIT: A Collection of Memorable Passages from the Discourses of Rev. HENRY WARD BEECHER. By AUGUSTA MOORE. New York: Derby & Jackson.

THIS is a book of 300 pages, and contains about the same number of striking passages from sermons preached by Mr. BEECHER during 1856 and '57. These notes were made from memory by a member of the Plymouth church, and, as the celebrated Divine, whose words or ideas are given, did not see either the manuscript or the proof, he cannot be held to a very strict account for what the work contains. Still, no one can fail to discover the living words, the biting satire and burning thoughts of BEECHER in most of the notes. Some of the logic is lame, and the theology taught in a few passages many a Sabbath school scholar could successfully combat. On the whole, however, it is a book well calculated to arouse the Pharisees of the present day to a sense of their duty to God and their fellow men. For sale by DEWEY.

and Fruit Trees. From frost and blight and all evil, she preserved the fruits of the garden. In her hand she holds the horn of plenty, and scatters upon the earth its rich treasures—the luscious Peach, the melting Pear, the Melon and the Grape—gifts worthy of a goddess. It was a poetical idea, this belief in a protector of Fruit and Trees—a beautiful goddess, with sleepless eyes. But, we have learned the unpoetical lesson, that only by labor, and skill, and unceasing watchfulness, can we obtain the rich fruits of the earth.

THE STRATFORD GALLERY; or, The Shakespeare Sisterhood: Comprising forty-five Ideal Portraits, described by HENRIETTA LEE PALMER. Illustrated with fine engravings on steel, from designs by eminent hands. New York: D. Appleton & Co.—1859.

THIS is a charming Gift-Book—even superior to what we anticipated on announcing it favorably, after examining a specimen sheet and portrait, a few weeks since. In the language of an able contemporary, "we have had various and elaborate commentaries on SHAKESPEARE, but this elegant book is a picturesque presentation of a woman's idea of the women of the great dramatist. Freshness and beauty are not the only or the chief attractions of the portraits. They are the idea that the drama develop,—but it requires genius to seize, concentrate and exhibit the conceptions of such a master, and this is happily done in the work before us." The Gallery is rich externally, as well as internally. The binding—antique morocco, gilt—is elegant, while the paper, typography, &c., comprise all that is requisite to render the volume a superb gift-book and permanent ornament. All admirers of the great poet and dramatist will appreciate this work, and we trust many of them will become its possessors. Sold in Rochester by DEWEY.

SELF-MADE MEN. By CHAS. C. B. SEYMOUR. New York: Harper & Brothers.

IN a neat volume of nearly 600 pages we have brief, graphic and interesting sketches of sixty persons who have "achieved greatness" or attained eminence in various walks of life, mainly by their own industry, perseverance and energy. The subject of the work is admirable, but the author has no obvious principle of classification, and his idea of a "self-made man" is apparently more comprehensive than is generally understood by the term. He has, nevertheless, furnished a large number of excellent biographies of representative men, which will prove instructive and encouraging to those who make their way to success and honor, unaided by what are regarded by some not over-wise people as "adverse circumstances of birth and fortune." The subjects are taken from both America and Europe, and several of them are living examples of what may be accomplished by persistent labor, study and correct conduct—such as LIEUT. MAURY, ELIHU BURBITT, HANS CHRISTIAN ANDERSEN, CHAS. DICKENS, and others. Portraits accompany several of the biographies. We commend the work, and especially to young men. Sold by DEWEY.

THE PILGRIM'S PROGRESS from this World to that which is to Come. Delivered under the similitude of a Dream. By JOHN BUNYAN. With twenty illustrations, drawn by Geo. Thomas and engraved by W. L. Thomas. New York: Robert Carter & Brothers—1859.

YES, reader, the veritable Pilgrim's Progress of our and your youth—the work which we read attentively long before we comprehended the beautiful allegory. And we suppose it is in far better style, though we fancy the illustrations, large and beautiful as they are, do not equal those which were gazed upon and studied in our early boyhood. Be that as it may, the present edition is beautiful and altogether commendable, and as it is in gift-book style we trust thousands of copies will be presented during the Holidays. Sold by COLE & ADAMS.

THE MODERN COOK: A Practical Guide to the Culinary Art in all its Branches—comprising, in addition to English Cookery, the most approved and recherche systems of French, Italian and German Cookery; adapted as well for the Largest Establishments as for the use of Private Families. By CHAS. ELME FRASCAZZI. From the Ninth London Edition, carefully revised and considerably enlarged. With sixty-two illustrations. Philadelphia: T. B. Peterson & Bros.

SUCH is the comprehensive title of a large royal octavo volume of nearly 600 pages, which evidently comprises the whole science of cookery so far as it can be imparted in print. Of its merits, however, we cannot speak authoritatively. It is "got up" in superior style, and appears to be a dictionary of the whole Gastronomic Art. For sale by DEWEY.

FUTURE LIFE; or, Scenes in Another World. By GEORGE WOOD, author of "Peter Schlemihl in America," "Modern Pilgrims," etc. New York: Derby & Jackson.—1858.

THOSE who had the satisfaction of perusing the previous volumes issued by this author, will need no other incentive to the possession of this last production of his pen, than the mere announcement of its issue by the press. We observe the same ingenious fancy and satirical skill which characterizes his former works. DEWEY has it for sale.

META GRAY; or, What Makes Home Happy. By M. J. MCINTOSH, author of "Aunt Kitty's Tales," etc. New York: D. Appleton & Co.—1858.

A LITTLE volume of 200 pages, beautifully written, and indicating good, sound doctrines. "Better is a dinner of herbs where Love is, than a stalled ox and hatred therewith," is a text from which the authoress has furnished a sermon instructive to the old and interesting to the young. For sale by DEWEY.

YOUNG RURALIST.

VEGETABLE PHYSIOLOGY.

Means. Ede.—Will you please enlighten me on some curious and to me important questions:

- 1st. What is the best method of preserving the grape vine and cherry trees from the rose-bug?
- 2d. Why can more milk be obtained from a cow when milked fast than at a slow rate?
- 3d. Is the season of sunset preferred for watering plants to any other part of the day, and why?
- 4th. What are the joints of cornstalks for, and why are they thicker near the bottom than near the top?
- 5th. Does the sap of trees descend in autumn?
- 6th. Does the sap of wheat ascend in the aperture of the centre of the stalk, or near the surface?
- 7th. Will a post last longer placed in the ground, bottom upwards, than the natural way, and why?

FRANK.

REMARKS.—1st. It is not easy to point out the best method of protecting grape vines and cherry trees from the ravages of the rose-bug, but the sides of whale-oil soap, thrown upon the plants by a syringe, or in any good way, will destroy these voracious insects.

2d. The rapid or quick milking of a cow will not produce more milk than a slower milking. The rapid is more likely to lessen the yield; but the other may be so slow as not to be economical.—Both are to be avoided. To do the work gently, so as not to irritate the cow, and quickly, so as not to put her out of patience, or waste time, is the best.

3d. There is not any special reason for delaying the watering of plants till sunset. Some have preferred this time, because the evaporation then is slower, and the watering will prove more effective when the intense heat of the day is diminished. This time is chosen too, from its convenience, because the pressing occupations of the day are ended. If we would learn a lesson from Divine Providence, we shall at once see that less rain falls at sunset than in other parts of the day, and that Divine Wisdom has not selected any particular hours for sending the rain on its own errand. But we must remember that when nature waters the earth and growing plants, the curtains of the heavens are drawn over the sun. This teaches us the only important point to be remembered, and that is, not to water plants when the sun is brightly shining upon them.

4th. The joints of corn-stalks are for strengthening the stem, that they may bear up their abundant fruit for maturity; and they are thicker and larger towards the root for the same end, as the lower must bear the pressure of the whole plant above. These joints are common in most culmiferous plants, and in abundance in the cane, raton, &c.—Did "FRANK" ever think why the body of a tree, or shrub, thistle, burdock, &c., is larger towards the root?

5th. The sap ascends from the roots to the leaves in the soft, woody part, and is there modified by heat and light; this then descends in the vessels of the soft, inner part of the bark to the places it is fitted and designed to nourish or to be deposited in. As vegetation advances to maturity, less sap ascends because less is needed; there is not a descent of sap for the winter. As the centre of a wheat-stalk is a cavity, the sap does not ascend in this empty cylinder, but in the body of the stem, probably near the middle. Assimilation goes on, till in a regular process the vegetative action for the season is completed. The leaves become filled with earthy and vegetable matter, and by thickening and stiffening produce by the action of wind that rustling sound which is in August held to be the sure approach of autumn, the time of the fall of leaves.

7th. It is maintained by many that a post, placed inverted in the ground, will be more durable than in the direct position. Let the inquirer try the experiment, and satisfy himself. Let him place six posts, in each of the two ways, direct and inverted, in the same soil and exposed, as near as may be, to the same action of water, and the elements generally. The object is worthy of the labor. Let him record the kind of wood, its different sizes, as from the outside or inside of a tree, and as having the same sap-wood or heart-wood; the time and the circumstances. He can then ascertain a result which will be satisfactory. With the wrong end in the ground, he may find the post to last forever, because he has tried it.

PUNCTUALITY.—This is one of the most beautiful traits in one's character, and not only adds to a person's estimation in the minds of others, but is ever a source of great advantage to one possessing it. Those unaccustomed to be punctual, and to perform their duties with promptness, are forever in the drag. By their tardiness at the commencement of the day, they are just so much behind all during it; which, taken in connection with the accumulation of losses from the force of the habit during the day, results at the close of it, in the loss of much precious time; and if continued through life, in the frustrating of many plans, and the blighting of many fond hopes, and too frequently, is a clog to the progress of many who are dependent upon the exertions and instructions of these tardy ones, for means, and ability, and occasion to perform promptly the duties of life. It is particularly desirable and essential that the young who are now forming habits for life, should cultivate Punctuality, as one of the noblest and most promotive traits of character, and one of the first among the graces which adorn a well ordered life.

STREP vs. STRIP.—Which is spelled correctly. According to WEBSTER the latter (Strip) is correct. But the former way is almost invariably used by writers.—YOUNG RURALIST, Leeland, Minn.

REMARKS.—As WEBSTER is the authority generally acknowledged in this country, and followed in other respects, we know of no reason for an exception in this case.

No life can be well ended that has not been well spent; and what life has been well spent that has had no purpose—that has accomplished no object—that has realized no hope.

TO CORRESPONDENTS AND READERS.

M. M. Clyde, N. Y.—The Bee-Hive you mention may "work to a charm" in the manner indicated by your epistle—and we hope it does—but it is a patented article, and can be advertised in the *RURAL* only in the Department devoted to such matters. Price, twenty-five cents per line. If the inventor will give—"without money and without price"—the use of it to the people, we will—if it proves as represented—be pleased to give it a genuine *RURAL* start upon the road to Fame at precisely the same terms.

Geo. P. Alton, N. Y.—Mr. Phelps has already paid his respects to the gentleman mentioned in your communication, and we do not realize the necessity of again opening a war which can only result in words.

Wm. G. W., South Cairo, Greene Co., N. Y.—The discovery you claim to have made may be very valuable—it certainly is if your statements relative thereto are correct—but, if you want to make money by the sale of the knowledge possessed, you must come in proper manner. The advertising department of the *RURAL* is specially devoted to the interests of those who have valuable wares to dispose of, and you can obtain publicity through its aid if you see fit.

S. C. R., Paris, Starks Co., Ohio.—Would be pleased to publish your article, were the subject treated not so local to its character. Giving your communication would open the columns of the *RURAL* to similar effusions, of which the land speculators of the country would be eager to take advantage, and we could not tell whether we were giving notoriety to real, bona fide towns and villages, or to paper cities, the creations of distempered imaginations.

—We cannot undertake to return rejected articles. The best way is for writers to preserve copies.

—We do not wish to engage additional contributors at present, and especially inexperienced writers.

—For Contents of this Number, list of New Advertisements, &c., see first column of next page.

MOORE'S RURAL NEW-YORKER NEWS DEPARTMENT.

ROCHESTER, N. Y., JANUARY 1, 1859.

A New Year's Greeting.

FRIENDS OF THE *RURAL*!—Kind, substantial and numerous—we present you No. 1 of Vol. X with a joyous greeting, and a heart-overflowing with gratitude for the manner in which you have for years, and more especially of late, encouraged and appreciated our efforts to excel in a peculiar and important sphere of Journalism. We greet you, in the far East and further West, and from Canada to the Gulf, with a cordial New Year's salutation,—and, in addition to wishing you Happiness and Prosperity, shall endeavor, during the year upon which we now enter, to aid you in securing and augmenting those blessings. Wishes are of little avail, but faith and works are all-powerful; and as our faith is strong, and works earnest, sincere, and we true well-directed, it is hoped the object of our aspirations and labors will be accomplished. Our aim is to render Individuals, Families and Community Wiser, Happier and more Prosperous—and the World better for having published the *RURAL NEW-YORKER*.

You, Reader, may have observed some improvement in the Appearance, and perhaps also in the Contents, of this number of the *RURAL*, compared with its predecessors. Good judges pronounce it a marked step in advance, and say it looks vastly like adhering to our text—"this practical demonstration in the line of 'Progress and Improvement.'" In this opinion we think all will concur. Certain it is that we have spared neither labor nor expense in endeavors to render the *RURAL* presentable in any society or mansion, in Town or Country, so far as style and externals are concerned, and think it will compare favorably with most journals, not excepting those emanating from New York, Philadelphia and Boston. We do not, however, depend upon style or appearance; nor shall we allow our "good looks" to interfere with or retard our usefulness. On the contrary, we shall strive to make the *RURAL* more interesting and valuable than ever before—to render it a firm friend and sincere adviser of all who seek its pages for either instruction or entertainment.

That we have amply redeemed our promises thus far is too manifest to require comment or argument—for enough is already apparent to prove that we have made a greater improvement in this than in any other one, two or three volumes. And we trust the readers of the *RURAL* will very generally respond to our efforts by introducing the paper to the notice and support of their friends and acquaintances, near and distant. Indeed, hosts of agents have already secured and forwarded far larger lists than ever before, and we are confident that, with this number to exhibit as a specimen, almost any reader can easily form a club in his or her neighborhood. That our circulation will be largely increased this year is already manifest; but we intend to furnish a paper which shall merit a subscription of 100,000—aye, one exceeding that of the famous "account book," or any "flag," or "star-spangled banner" in the Union. And if the readers of the *RURAL*, one and all—those who appreciate its merits, and can judge discriminatingly in regard to its value and usefulness, compared with the trashy, love-and-murder story-telling sheets, or second-hand reprints of metropolitan dailies—will devote a little attention and influence in the right direction, the object may soon be accomplished. How many Agents, Subscribers, casual readers, and even borrowers, will do us and community the favor of devoting a little *kindly action* in accordance with this suggestion?

—See Terms, Special Notices, &c., on next and last pages.

This Number is not, in some respects, what we intended, having been "got up" in haste and amid many difficulties—such as can only be appreciated by those who have had the vexatious experience of changing type and fixtures, obtaining original designs, &c., in a brief period. Though we expect to improve upon it in future, we will not, on reflection, make any apology.

Congressional Proceedings.

SENATE.—Mr. Doolittle, of Wis., offered a resolution, which was adopted, calling for the letters between the President of Nicaragua and Com. Paulding, if there are any such in the Navy Department. On motion of Mr. Seward, the Secretary of War was requested to inform the Senate if any land in New York harbor can be had for revenue purposes. Mr. Davis, of Miss., offered a resolution, which was adopted, calling on the Secretary of War for information respecting the rights of British subjects in Oregon.

Mr. Clay, of Ala., submitted a resolution, which was adopted, calling on the President for the correspondence between the Mexican Government, Mr. Forsyth, and the State Department, and such other matters as will elucidate the complications which resulted in suspension of diplomacy.

Mr. Hunter, of Va., submitted a resolution, which was adopted, requesting the P. M. General to inform the Senate what changes of the postal laws are necessary to render the Department self-sustaining.

Mr. Stuart, of Mich., attempted to bring up the Agricultural College Bill. Messrs. Fitzpatrick, of Ala., Iverson, of Ga., and Bright, of Ind., objected, and the Senate refused to take up the bill, by yeas 28, yeas 20.

The Senate Post Office Committee will shortly bring forward a proposition abolishing the franking privilege, and allowing the payment of no more than sea postage for ocean mail service.

The Pacific Railroad has been viewed in all the routes proposed, and has elicited much discussion during the week.

Bills Passed.—To advance Hiram Powers \$2,000 for statutory; to allow \$80 per month pension to the widows of old soldiers; making appropriations for the improvement of St. Clair Flats; Military Academy appropriation.

Horse.—On motion of Mr. Phelps, of Mo., the House went into Committee on the bill for the payment of the Invalid and other pensions, appropriating \$852,000 therefor.

The Military Academy bill, appropriating nearly \$185,000, was next taken up, and after much discussion, the bill was laid aside to be reported upon.

The House went into the Committee of the Whole on the Soldiers' Pension bill. A number of amendments were offered, debated and rejected. The enacting clause of the bill was then stricken out by six majority. This had the effect, as was intended, to terminate further proceedings thereon in Committee, and to bring the bill into the House. The Speaker, in reply to a question, said if the House concur in the recommendation of the Committee to strike out the enacting clause, the bill by this would be defeated. The question was decided in the negative—75 against 127.

Mr. Savage, of Tenn., offered a substitute for the bill proposing pensions to all who served sixty days or more, or were engaged in the actual war of 1812, or during that period. The benefits of the act are extended to the marine corps. In the event of the death of a pensioner, his widow is to receive the pension during her natural life. The pensions are graduated as follows:—For 1 month's service and upwards, \$36; for 6 months and upwards, and not 12 months, \$75; for 60 days and upwards, not exceeding 6 months, \$50 per annum. Agreed to—132 against 61.

Bills Passed.—Soldiers of the War of 1812 Pension bill; the Invalid Pension and West Point appropriation bill.

Washington Matters.

AN editorial in the *States*, on the 24th ult., asserts that Juarez's envoy here is authorized to offer concessions, which will amaze the country, on condition that Buchanan will recognize the faction of Juarez as being the legitimate Government of Mexico. Among the concessions which the *States* is permitted to mention, is one giving a direct transit between Texas and the Gulf of California. Another guaranty is, freedom of trade, and the settlement of pecuniary difficulties on terms most favorable to the United States.

It is said that Senor Tassare, the Spanish Minister, officially informs Mr. Cass that the difficulty between the Spanish authorities and those of Tampico is settled, but letters from a commercial house at Tampico contain a reverse statement, and further say that as soon the weather will permit, the Spanish fleet will concentrate on the whole coast from Laguna to Tampico, thus confirming previous advices.

The Secretary of War has asked Congress for nearly \$400,000 to pay the Florida volunteers, called into service by Gen. Harney and Col. Loomis, during the years 1857-8.

Among the many bills introduced in the House on the 24th ult., was one by Mr. Branch, of N. C., appropriating \$1,000,000 to enable the President to conclude with Spain a treaty of amity and for the settlement of all differences, including the cession of Cuba, to be used by him if he thinks fit, in advance of the ratification of such treaty by the Senate. If the payment is required, and there is not that much money in the Treasury, the President is authorized to borrow it. The bill was referred to the Committee on Foreign Relations.

The observance of the Christmas holidays has put a check upon the manufacture of news. Congress has adjourned until the 4th of January, thus taking twelve days out of the short session, with over 300 bills before them. The salaries, however, go on as usual, amounting to about \$200,000 for the period of adjournment.

DORA DEANE AND MAGGIE MILLER.—A notice of this new work by Mrs. Mary J. Holmes is necessarily deferred, but we cannot refrain from saying that it is worthy of the head and heart of the author. It comprises two distinct novels in one volume of some 400 pages (handsomely issued by Saxton.) The thousands of Mrs. H.'s admirers among our readers will be delighted with dear, devoted DORA and dashing MAGGIE.

A SLIGHT CALL.—The New York City Comptroller's tax budget was sent to the Common Council on the evening of the 30th ult. It calls for the small sum of \$8,000,000, to pay city government expenses for the ensuing year.

Political Intelligence.

The following are the official figures on the State ticket, as finally announced by the Board of State Canvassers:

For Governor—Morgan, 247,958; Parker, 230,513; Burrows, 60,580; Smith, 5,470.

Lieutenant Governor—Campbell, 220,834; Taylor, 229,797; Benton, 62,336; Beers, 2,139.

Canal Commissioner—Gardner, 249,933; Piper, 229,848; Thompson, 59,919; Harrington, 1,801.

State Prison Inspector—Everest, 222,398; Donnelly, 203,361; Russell, 52,000; Filer, 1,960.

On Constitutional Convention—Yes, 135,266; no, 144,526.

Gen. Wm. O. Butler, of Kentucky, declines the democratic nomination for Governor of that State.

In Iowa, the official vote for Congressmen gives the Republicans 600 majority in the first district, and 2,739 in the second. Nearly 50,000 votes were cast in each district.

The lower Indian House, on the 21st ult., refused to pass the Senatorial Election Bill over the veto of the Governor—Yeas 49, nays 48—two less than a constitutional majority. The Legislature, on the 22d ult., P. M., by a concurrent resolution, elected Henry S. Lane and William M. McCarty U. S. Senators, in the place of Senators Bright and Fitch, the former till 1863, and the latter till 1861.

In the Georgia Legislature the following act was passed and approved by the Governor:—To repeal all laws and parts of laws authorizing lotteries in the State of Georgia, &c.

§ 1. The General Assembly of the State of Georgia do enact that from and after the 1st day of June, 1860, all laws and parts of laws, authorizing lotteries in this State, or the vending of lottery tickets, be and the same are hereby repealed.

Important from Mexico.

The latest intelligence from Mexico locates the several aspirants of place and power in that unhappy country thus:—President Juarez, at Vera Cruz, is awaiting the receipt of duties from vessels lately arrived, for the funds with which to move his forces against the city of Mexico. ZULOAGA still firmly relies on the Viscount GABRIEL's promises of European intervention in his favor, but is greatly harassed for want of funds. The clergy recently loaned him their obligations for \$700,000; but of this \$200,000 had to be used in refunding a forced loan, temporarily made from the merchants a few days before, and of the remaining \$500,000 he could only realize \$250,000—the money lenders exacting these enormous terms, which he was forced to accept. VIDUAÑA is at Monterey, reorganizing his forces and awaiting additional troops from Tamaulipas, when he will move on San Luis.

Gen. ARTEAGA is on the road from Queretaro to Guanajuato with 1,500 men, to cut off the communication between Miramon and the Capital, and should it be necessary, will march to the Puente Calderon to Degollado's assistance. ALARIN, Constitutional Governor of the State of Puebla, is in the plains of Apam with 2,000 men, and with Gen. CAMANO, who has arrived at Matamor de Izucar with 3,000 men from the south, will soon make an attack on the city of Puebla. General BLANCO, in the south of Michoacan, has a strong force, as have also Generals HUERTES and SABAS IZURDUE, in the Bahia.

Statements from authoritative channels lead to the conviction that the present difficulties with Spain are in course of satisfactory arrangement.

HAVANA NEWS.—The steamer Cahawba arrived at New Orleans on the 24th ult., with Havana dates of the 20th. The President's Message had shocked the Cuban authorities, and produced a general sensation. The Spanish Mexican imbroglio is settled. Gen. GARZA, of Tampico, having refunded all the moneys obtained from Spanish subjects, by way of forced loans, and the present Government of Mexico having acceded to all the demands made by Spain. The Spanish flag was saluted with twenty-one guns, from the forts of Tampico. The Spanish frigates Teroliana and Isabelle, arrived with over 2,000 soldiers from Spain.

MORE FILLIBUSTERISM.—The Washington correspondent of the N. Y. Post, under date 22d ult., says:—There is reason to believe that two or three more vessels have left, or are about leaving, our shores with fillibusters. It is said the President has taken measures to have them stopped before leaving, or have them intercepted upon the seas.

On the 23d ult., the Government received a dispatch from New Orleans, giving a few particulars relative to another fillibuster expedition from that port against Nicaragua. The federal officers will be forthwith instructed to redouble their vigilance to suppress it.

LARGE SHIPMENTS OF OATS.—During the past week there have been shipped from Boston and New York, to New Orleans and Mobile, between 50,000 and 60,000 bushels of oats. Probably a large proportion of those sent to New Orleans will be sent up the river. Oats are selling at St. Louis at 75c.; New Orleans, 70c.; Mobile, 75c.; Boston, 60c.55.

FATAL STEAMBOAT DISASTER.—The steamboat Aubrey met with an accident a few miles above St. Louis, on the night of the 20th ult., by which four or five lives were lost. The boat ran on the wreck of a sunken steamer, bursting the steam pipe, which caused a panic among the deck passengers, who rushed on mass into the yawl, upset it, and several were drowned. Names unknown.

WAKING UP.—The sleep in which the Atlantic Telegraph has been indulging for several months, was disturbed on the 21st ult., by De SANXT, the celebrated (?) electrician, who reports "well marked currents from Valencia, but nothing intelligible." There is a remarkable singularity between De SANXT's reports and the "marked currents" received out there "in the woods" at Trinity Bay.

COTTON MOVEMENT.—The New York Times, of the 23d ult., says the movement of cotton is growing large and interesting. The exports this week reach 111,000 bales, equal to an Exchange on Europe of nearly six million dollars. And as the receipts at the ports are 551,000 bales ahead of last year, there is more talk of a crop of 8,500,000 bales.

News Paragraphs.

The Government of Holland have decreed that the ports in all the islands of Java, Sumatra, Borneo, &c., shall be open to the trade of the world from the 1st day of May, 1859.

BEAVERS, which were once so much valued for their furs, and were hunted almost to extermination, are increasing in Canada, and are quite plenty within ten miles of Toronto.

According to the N. Y. Tribune there are now lying in the Atlantic Dock Basin, Brooklyn, twenty canal boats loaded with 42,000 bushels of potatoes. They sell at \$1.25 per barrel.

The total gold coinage of the United States, including bars, for the fiscal year ending June 30, 1858, amounted to \$52,889,800.29. The silver coinage for the same period, amounted to \$8,238,286.77. The number of cents coined was 23,400,000.

The result of the assay of gold from the Cherry River mines, received at New York from Leavenworth, Kansas, shows that, with the exception of a few small lots from Georgia, it is the finest gold ever received from any part of North America. Its value after melting is \$20.06 per ounce—fineness, 970 1/2 thousandths.

The San Francisco Chronicle estimates the cost of the Fraser river gold fever to citizens of California, at \$13,650,000, against returns of about \$100,000 in gold dust, saying nothing about the lives lost, hopes wrecked, and energies paralyzed by repeated disappointments—the bones bleaching along the banks of the Fraser, or reposing in the depths of the ocean, while the tearful eyes of mothers, sisters, and wives, grow weary with vain watchings for the return of those whom they may never see again.

The State Department at Washington has received information to the effect that the American claims against Chili, in connection with the vessels Macedonian and Franklin, will shortly be satisfied. In the case of the latter vessel the claim amounts to \$250,000.

From the Pacific Side.

The steamship Quaker City, with San Francisco dates to the 6th ult., arrived at New Orleans on the 23d. The Golden Gate, which left San Francisco on the 6th for New York, had \$1,000,000 in treasure for New York, and \$338,000 for England. The news by steamer is unimportant.

By the Overland Mail which arrived at St. Louis on the 23d ult., we get the following items:

The Pitt River Indians had massacred several whites.

The mines in Southern Oregon are yielding largely, and new discoveries were being made.

Gen. Harney had revoked the order forbidding settlers from locating in the Walla Walla Country.

The treaty between the U. S. and Nisqually Indians establishes perpetual peace—provides for reciprocal assistance in the event of war with other parties, and agrees that all future misunderstandings shall be settled by the Representative Chiefs in friendly council.

Direct trade has been opened between Puget's Sound and China.

The passengers by the Overland Mail report a severe shock of an earthquake between San Francisco and San Jose. The roads were in bad order, owing to heavy rains, and there was more or less snow from Apache Canon to the Missouri. One severe sand storm was encountered on the Colorado.

The Governor of British Columbia has issued proclamations making a grant to the Hudson Bay Company, organizing a colonial government, legalizing previous acts, and adopting the laws of England.

There was much excitement at San Joaquin, owing to the finding of diamonds, rubies and opals there.

The proceeds of the shipments of November are \$4,525,000. Deposits in the mint for November, \$1,250,000.

One hundred and seventy whalers had arrived at Honolulu with an average catch of 612 barrels of oil.

Old World Intelligence.

During the past week three ocean steamers have arrived at New York, and from their files we glean the following interesting news matter:

A peculiar quiet is observable in Enghland at the present time—the only feature of note is the extreme probability that a new Atlantic Cable will be laid. Application to the Government for a guarantee of 4 1/2 per cent. has been made, and from the favor with which the proposition is received, there is little doubt but it will be granted.

Some portions of Ireland are in a state of alarm because of the discovery of a Secret Society, having for its end and aim the invasion of the "Gem of the Seas," by an American force. Quite a number of arrests have been made.

From France we learn that the Government had decided on allowing the appeal of M. de MONTALEMBERT to come before the Superior Court.

The *Moniteur* officially declares that the dispute as to the relations between France and Austria, caused by the newspaper discussions, is by no means justified.

France had concluded a treaty with Japan, similar to that made by England.

The meeting of the French Legislature has been postponed to February.

The Spanish Expedition to Mexico, it is now said, will be on a larger scale than heretofore supposed.

From China we learn that Lord ELGIN's negotiations at Shanghai were satisfactory. Commissioner Reed had not returned from Japan. The Emperor of Japan was reported dead. Canton quiet.

The De Remond Australian mail, Melbourne, Oct. 15, reached Suez with \$130,000 in gold. Trade quiet. Large shipments of gold to England.

The Bombay mail brings the Queen's proclamation, which was read throughout India on Nov. 1. Its terms are liberal. It guarantees to protect religious freedom on terms of all existing treaties and rights, and offers a general amnesty to all the murderers of the British, providing a submission is made by the rebels before the first of January.

The News Condenser.

—Albert Pike, of Arkansas, is dead.

—Every eighth man in Massachusetts is a shoemaker.

—The Mercantile Library of St. Louis contains about 14,000 volumes.

—A Ladies' Skating Club has been formed in Lancaster, N. Y.

—Ex-Governor Slade is lying dangerously ill at his home in Vermont.

—Further news from Mexico shows a more hopeless anarchy than ever.

—Photographic etching has finally been discovered by Mr. Fox Talbot.

—Petitions for a National Bankrupt Law are in circulation in Maine.

—Boston has 218 shoe houses, doing a business of \$49,000,000 annually.

—The present population of San Francisco is estimated at 75,000 or 80,000.

—Several earthquakes have occurred in Portugal, and caused great damage.

—At Needham, Wis., on the 8th ult., the thermometer stood 84 degrees below zero.

—It is said that 300 buildings are now in process of erection in Brooklyn, N. Y.

—A thousand divorce cases are pending in the several counties in Indiana.

—The last return of the army shows that Austria can bring in the field 427,000 men.

—The various branches of the State Bank of Indiana will issue notes on the 1st inst.

—It is stated that there are 1,000 adult believers in Spiritualism in Kent Co., Mich.

—A premium of \$100 was offered for seats in the last overland stage from California.

—Since October 17th, 40 fugitive slaves have passed through Albany for Canada.

—The Indiana Legislature has passed an act repealing the liquor law of that State.

—The public debt of the consolidated city of Philadelphia amounts to \$20,000,000.

—There are 729 convicts in the Ohio Penitentiary, being 17 more than there are cells.

—Of the "Echo" negroes, 200 have been landed in Monrovia; 71 died on the passage.

—Nearly 800 stone and brick houses have been erected in Montreal during the last 13 months.

—Under the liquor law, in New York, 20,000 or more civil complaints have already been made.

—Hon. Frederik Nash, Chief Justice of the Supreme Court of North Carolina, died on the 7th inst.

—The aggregate value of the Salmon fisheries of Ireland, is said to exceed \$1,500,000 per annum.

—The Associated Press of the State of New York pays \$100,000 a year for its telegraph news alone.

—Very sickly are the Wisconsin papers. The Daily Wisconsin prophesies the death of 50 with a year.

—The crew of the slave Echo have been committed to jail at Charleston to await their trial in April next.

—The Hartford (Ct.) people are talking of buying a steam fire engine, and employing a paid fire department.

—Lord Lyons, who is to succeed Lord Napier as British minister at Washington, is of American descent.

—The Philadelphiaans are to have two more steam fire engines, five companies being the contractors therefor.

—The Oskaloosa (Iowa) Herald of the 19th ult. says a mail coach left there the day before with six sprightly oxen.

—Some of the Lynn (Mass.) shoe manufacturers are now making to order large quantities of ladies' skating boots.

—In Canada, parcels are conveyed in the mail—prepaid at 30 cents for one lb. or less; 60 cents for not over two lbs.

—Brooklyn is the third or fourth city in the United States in point of population—being computed at 220,000.

—Los Angeles (Cal.) papers record the product of Don Luis Sainseyan's vineyard this year at 45,000 gallons.

—Cranberries were selling during the past week in St. Louis at \$5.50 a \$9 per barrel, and in Cincinnati at \$9 a \$11.

—Coating candles, making their surface as hard as sperm at a trifling additional cost, is a valuable new invention.

—The President has determined to send Commodore Stewart's name to the Senate for restoration to the active service list.

—A bill has been introduced into the Legislature of Arkansas prohibiting the sale of patent medicines within the State.

—The expenses of the New York militia, called out to protect the Quarantine Grounds, have already reached the sum of \$50,000.

—The Comptroller's estimate of the Taxes of N. Y. city, for 1859, amounts to nearly \$8,000,000. Of this \$1,800,000 is for State Tax.

—The Boston people are preparing to harvest their lee crop. The lee is now about seven inches thick upon the ponds in that vicinity.

—The orange crop of Louisiana this season is very large, and the crop is selling from plantations at from six to eight dollars per thousand.

—Chickens were sold in the market at Cincinnati, Ohio, last Friday, at ten cents per pair, and good sized turkeys at twenty-five cents each.

—In the Chicago Post-Office mails are received daily from twenty railroads. Thirty-five hundred mails, the Press says, are made up every day.

—Suits have been brought against some of the stockholders of the Collins Steamship Company, as individuals, for debts due to the company.

—A dandy lately appeared in Iowa with legs so attenuated that the authorities had him arrested because he had no visible means of support.

—The receipts of the American Tract Society, notwithstanding the recent difficulty concerning its management, have fallen off but \$16,000.

—During the past five years there have been constructed in California 4,405 miles of artificial canals for gold washing, at a cost of \$12,000,000.

—The Island of Jamaica has been lately visited by several severe tempests, by which considerably property has been injured and crops destroyed.

—The Pacific telegraph line from St. Louis to Lexington, Mo., was completed on Tuesday week. It will be in operation to Kansas city next week.

THE ROSE BUSH.

FROM THE GERMAN.

A child sleeps under the rose-bush fair,
The dewy blossoms perfume the air;
Sweetly it rests, and on dream-wing flies
To play with the angels in Paradise.
And the years glide by.

A maiden stands by the rose-bush fair,
The dewy blossoms perfume the air;
She presses her hand to her throbbing breast,
With love's first wonderful rapture blest,
And the years glide by.

A mother kneels by the rose-bush fair,
Soft sigh the leaves in the evening air;
Sorrowing thoughts of the past arise,
And tears of anguish bedim her eyes,
And the years glide by.

Naked and alone stands the rose bush fair,
Whirled are the leaves in autumn air;
Withered and dead they fall to the ground,
And silently cover a new made mound,
And the years glide by.

Story Teller

Entered according to act of Congress, in the year 1853, by
D. D. MOORE, in the Office of the Clerk of the District
Court for the Northern District of New York.

ALICE AND ADELAIDE;

OR,

THE TRUE AND THE FALSE.

BY MRS. MARY J. HOLMES.

Chapter I.—New Year's Eve.

In the parlors below all was elegant, princely and grand. Rare flowers, in vases rarer still, sent through the rooms a fragrant odor, bringing back as it were the summer glory which had faded in the autumn light, and died 'neath the chill December's breath. Fresco paintings gleamed from the ceiling, costly pictures adorned the walls; carpets, which seemed to the eye like a mossy bed inland with roses, covered the floors, while over all the gas-light fell, making a scene of brilliant beauty such as was seldom witnessed in the staid city of —, where our story opens.

'Twas the night of ALICE WARREN's first presentation to that portion of the world known everywhere as "fashionable society," and now in her tasteful dressing-room above she stands before her mirror, bending low her graceful head while her lady-mother places among her flowing curls one more tiny bud, and then pronounces the toilet complete. Very, very beautiful was ALICE WARREN, with her fair young face, her waving hair, and lustrous eyes of blue, which had looked on the suns of only sixteen summers, and which now shone with more than their wonted brightness, as, smoothing down the folds of her elegant lace dress, she glanced again at the mirror opposite, and then turned towards her mother just as a movement in the hall without attracted the attention of both. — 'Twas a slow, uncertain foot-fall, and darting forward, ALICE cried, "Tis father,—come to see just how I look on this my sixteenth birth-night."

"Not to see you, my child, the dotting father answered; and in the tones of his voice there was a wail of sorrow, as if the struggle of seventeen long years were not yet fully over. And well might HUGO WARREN's voice be tuned to a note of sadness—for to him the world was one dark, dreary night, and the gold so many coveted would have been freely given could he but once have looked upon the face of his only child, who, bounding to his side, parted the snow-white hair from off her forehead, and laying his hand upon her head, asked him "to feel if she were not beautiful."

Slowly—tenderly—caressingly the hand of him who could not see, moved over the shining hair, touched the glowing cheek, the snowy neck and rounded arms of the graceful little figure which stood before him, then dashing a tear away, the blind man made her answer, "Yes, beautiful my ALICE must be, if she is, as they tell me, like her mother," and the sightless eyes turned instinctively towards the mother, who, coming to his side, replied, "ALICE is like me as I was when last you saw my face—but I have changed since then—there are lines of silver in my hair, and lines of time upon my face."

The blind man shook his head. The picture of the fond, girl-wife, who, in his hour of bitter agony, had whispered in his ear, "I will be sun-light moon-light, star-light,—everything to you, my husband," had never changed to him—for faithfully and well that promise had been kept, and 'twas better far, perhaps, that he could not see the shadows on that face,—shadows which foretold a darker hour than any he had ever known,—an hour when the sun-light of her love would set forever. But no such forebodings were around him now. He held his wife and daughter both within his arms, and holding them there thus, he even forgot that he was blind.

"Did you invite ADELAIDE?" ALICE asked at last, and Mr. WARREN replied, "Yes, but 'tis doubtful whether she will come. She is very proud, her father says, and does not wish to put herself in a position to be slighted."

"Oh, father," answered ALICE, "ADELAIDE HUNTINGTON does not know me. I could not slight her because she is comparatively poor, and if she comes, I'll treat her like a royal princess," and over ALICE WARREN's face there stole a bright, deep flush, as she thought how attentive she would be to the daughter of her father's "confidential clerk."

Meantime, in a distant part of the city, in a dwelling far more humble than that of HUGO WARREN, another family group were assembled, father, mother, daughter, — all, save old Aunt Peggy, who, thankful for a home which saved her from the almshouse, performed willingly a menial's part, bearing patiently the whims of the mother and the caprices of the daughter, the latter of

whom proved a most tyrannical and exacting mistress. Tall, dignified, and rather aristocratic in her bearing, was ADELAIDE HUNTINGTON. Handsome, too, and agreeable she was called by those who failed to see the treachery hidden in her large, dark eyes, or the constant effort she made to seem what she was not. To be noticed by those whose position in life was far above her own was her aim, and when the invited ALICE WARREN extended to her family an invitation to be present at her birthday party, her delight was unbounded. "She should go, of course, and her father would go with her. She should have a new dress, too,—her father would give her the money,—he could,—he must," and he did, sighing deeply as he placed it in her hand and thought from whom it came. The dress was purchased, and though 'twas only a handsome muslin it well became the queenly form of the beautiful ADELAIDE, who, on that New Year's Eve, stood before her father, seeking from him a word of commendation, and asking if "he did not think she would overshadow the diminutive ALICE?"

"I don't see why there should be this difference between us," she continued, as her father made no answer. "Here I must be poor all my life while she will be rich, unless Mr. WARREN chances to fail."

"Which he will do ere three days are passed," dropped involuntarily from the lips of Mr. HUNTINGTON.

Then, with wild, startled look he grasped his daughter's arm, exclaiming, "Forget what I just said—breathe not a word of it to any one, for Heaven knows I'd help it if I could. But 'tis too late,—too late."

'Twas in vain that ADELAIDE and her mother sought an explanation of these strange words. Mr. HUNTINGTON would make them no reply, and in almost unbroken silence he accompanied his daughter to the house of Mr. WARREN.

Very kindly did ALICE welcome the young girl, striving in various ways to relieve her from the embarrassment she would naturally feel at finding herself among so many strangers. And ADELAIDE was ill at ease, for the spirit of jealous envy which had ever a home in her heart whispered to her of slight and insult where none had been intended; whispered, too, that her muslin dress, which at home with her mother and Aunt Peggy to admire had been so beautiful, was naught compared with the soft, flowing robes of ALICE WARREN, whose polite attentions she construed into a kind of patronizing pity exceedingly annoying to one of her proud nature. Then, as she remembered her father's words, she thought, "We may be equals yet. I wonder what he meant? I mean to ask him again," and passing through the crowded apartments she came to the little ante-room, where all the evening her father had been sitting,—a hard, dark look upon his face and his eyes bent on the floor, as if for him that festive scene possessed no interest.

"Father," she said, but he made her no reply; he did not even know that she was standing at his side. Far back through the "long ago" his thoughts were straying,—back to the New Year's Eve when penniless, friendless and alone he had come to the city, asking employment from one whose hair was not then white as now,—whose eyes were not then dimmed in darkness, but looked kindly down on him, as the wealthy merchant said, "I will give you work so long as you do well."

HUGO WARREN was older than WILLIAM HUNTINGTON by many years, and his station in life had ever been different, but far over the mountain side the same Sabbath bell had once called them both to the house of God—the same tall tree on the river bank bore on its bark their names—the same blue sky had bent above their childhood's home, and for this reason he had given him a helping hand, aiding him step by step until now he was the confidential clerk,—the one trusted above all others—for the helpless man when the darkness first came upon him had lain his hand on WILLIAM's head, saying, as he did so, "I trust you, WILLIAM, with my all, and as you hope for Heaven, deal not falsely with the blind."

"Deal not falsely with the blind!" How those words, spoken seventeen years before, rang in WILLIAM HUNTINGTON's ears as he sat there, thinking of the past, until the great drops of perspiration gathered thickly around his lips and dropped upon the floor. He had betrayed his trust,—nay, more, he had ruined the white-haired man who had been so kind to him, and ere three days were passed his sin would find him out. Heavy bank notes must be paid, and in his employer's coffers there was naught with which to pay them. The gambling table had been his ruin. Gradually had he gone down, meaning always to replace what he had taken, and oftentimes doing so; but fortune had deserted him at last, and rather than meet the rebuking glance of those sightless eyes, when the truth should all be known, he had resolved to go away. He had asked for a holiday on the morrow, and ere the first New Year's sun was set, he would be an outcast—a wanderer on the earth. Of all this, then, he was thinking, when ADELAIDE came to his side.

The sound of her voice aroused him at last, and starting up he exclaimed, "It's time we were at home. The atmosphere of these rooms is stifling. Get your things at once."

Rather unwillingly ADELAIDE obeyed, and ten minutes later she was saying good night to ALICE and her mother, both of whom expressed their surprise that she should go so soon, as did also Mr. WARREN.

"I meant to have talked with you more," he said, as he stood within the hall with Mr. HUNTINGTON, who, grasping his hand, looked earnestly into the face which for all time to come would haunt him as the face of one whom he had greatly wronged.

Another moment and he was gone, while on the hand he had just released there lay a large, round drop, and the blind man, brushing it away, knew not that 'twas a tear.

Four o'clock, and all is still around the house where but a few hours since mirth and revelry were reigning. Flushed with excitement and the flattery her youthful beauty had called forth, ALICE WARREN had sought her pillow, and in the world of dreamland is living over again the incidents of

her sixteenth birth-day party. The blind man, too, is sleeping, and in his dreams, as he always does, he sees again the forms of those he loves, but he does not see the storm-cloud hovering near, nor yet the crouching figure which, across the way, is looking towards his window and bidding him farewell.

Mr. HUNTINGTON had accompanied ADELAIDE to his door and then, making some trivial excuse, had gone from his home forever, leaving his wife to watch and wait as she had often done before. Slowly waned the December night, and just as the morn was breaking—the morn of the bright New Year—a train sped on its way to the westward, bearing among its passengers one who fled from justice, leaving to his wife and daughter grief and shame, while to the blind man there was left darkness, ruin, and death.

Chapter II.—The House of Mourning.

The third day came and passed, and as the twilight shadows fell upon the city, ALICE and her mother pushed back the heavy damask curtain which shaded the window of their pleasant sitting-room, and looked anxiously down the street for one who seldom tarried long. An hour went by; another, and another still, and then he came,—but far more helpless than when he left them in the morning. The blinded eyes were red with tears,—the stately form was bent with grief,—the strong man was crushed with the blow which had fallen so suddenly upon him. He was ruined—hopelessly, irretrievably ruined, and in all the wide world there was naught he could call his save the loved ones who soothed him now, as one had done before when a mighty sorrow overshadowed him.

As best he could he told them of the fraud which for many years had been imposed upon him—told them how he had trusted and been betrayed by one whom he would not that the officers should follow—he would not have him brought back to a felon's cell. "Would do no good," he said, "and 'twould save the wife and daughter from more disgrace," and so WILLIAM HUNTINGTON was suffered to roam at large, while in the home he had desolated there was heartfelt mourning made and bitter tears shed—the blind man groping often through the familiar rooms which would soon be his no longer—the daughter stifling her own grief to soothe her father's sorrow and minister to her mother's wants.

As has before been hinted, Mrs. WARREN was far from being strong, and the news of the failure burst upon her with an overwhelming power, prostrating her at once, so that ere two weeks were passed the blind man forgot his ruined fortune—forgot everything, save the prayer that she, the wife of his bosom, the light of his eyes, the mother of his child, might live.

But "He who doeth all things well," had not decreed it thus, and she, who had been reared in the lap of luxury, was never to know the pinching wants of poverty—never to know what 'twas to be hungry, and cold, and poor. All this was reserved for the gentle ALICE, who, younger and stronger, too, could bear the trial better. And so, as day after day went by, the blind man kneeling at her side felt what he could not see—felt the death shadows come creeping in—felt how the pillow was deepening on her cheek—knew that she was going from him fast—knew, alas, that she must die, and one bright, beautiful morning, when the thoughtless passers by, pointing to the house, said, one to another, "He has lost everything," he, from the inmost depths of his bleeding heart, unconsciously made answer, "Lost everything,—lost everything," while ALICE, the motherless, bowed her head in anguish, half wishing she, too, were blind, so she could not see what was written on the still, white face which lay upon the pillow.

Suddenly the deep stillness of the room was broken by the sound of tramping footsteps in the hall below, and, lifting up her head, ALICE said, "Who is it, father, say?" but Mr. WARREN did not answer. He knew who it was and wherefore they had come, and, going out to meet them, he stood upon the stairs, tall and erect, like some giant oak which the lightning stroke had smitten, but not destroyed.

"I know your errand," he said, "I expected you here this, but come with me and then say if you will leave me alone a little longer," and turning he led the way, followed by those men, who ne'er forgot that picture of the pale, dead wife, the frightened, weeping child, and the blind man standing by with outstretched arm to shield them from all harm.

The Sheriff was a man of kindly feelings, and lifting his hat reverentially, he said, "We did not know of this, or we would not have come," and, motioning to his companions, he left the room, walking with subdued footsteps down the stairs, through the hall, out into the open air. And when the sun went down, not an article had been disturbed in HUGO WARREN's home, for Sheriff, creditors, lawyers,—all stood back in awe of the mighty potentate who had entered that house before them, and leered upon its choicest treasure—the white-haired, blind man's wife.

Chapter III.—The Brown House in the Hollow.

Nearly a year has glided by since we left the blind man weeping over his unburied dead, and our story leads us now to the handsome rural town of Oakland, which is nestled among the New England hills, and owes much of its prosperity and rapid growth to the untiring energy of its wealthiest citizen,—its one "aristocrat," as the villagers persisted in calling RICHARD HOWLAND, the gentleman from Boston, who came to Oakland a few years ago, giving to business a new impetus, and infusing new life into its quiet, matter-of-fact people, who in time looked up to him as the great man of the place. He it was who built the factory, bought the mills, and owned the largest store and shoe-shop in the town, furnishing employment to hundreds of the poor, many of whom moved into the village, renting of him the comfortable tenements which he had erected for that purpose.

Very beautiful, indeed, was RICHARD HOWLAND's home, overlooking, as it did, the town, and the surrounding country, and the passer by stopped often to admire its winding walks, its musical fountains, its grassy plate, graceful evergreens and wealth of flowers, the latter of which were the especial pride of the stately Miss ELIXON, the maiden sister, who

kept that handsome house, for RICHARD HOWLAND had no wife. Many there were, both blonde and brunette, who, in the exceeding kindness of their hearts, would willingly have borne that relation to him, but their disinterestedness was not appreciated, and on the night when first we introduced him to our readers, he was still unmarried, and in his pleasant sitting-room, with his sister at his side, and every possible comfort at his command, he wonders how any one can think he is not happy. The chill December wind which howls among the naked branches of the maples, or sighs through the drooping cedar boughs, cannot find entrance there. The blinds are closely shut,—the heavy curtains sweep the floor,—the fire burns brightly in the grate, casting fantastic shadows on the wall, and with his favorite paper in his hand, (the RURAL, it may be,) he almost forgets that in the world without there is such a thing as poverty or pain. Neither does he see the fragile form toiling through the darkness up the street, and pausing at his gate. But he does hear the ringing of the door-bell, and his ear catches the sound of some one in the hall, asking to see him.

"I wish I could be alone for one evening," he said, and with a slight frown of impatience upon his brow, he awaited the approach of his visitor.

'Twas a delicate young female, and her dress of black showed that sorrow had thus early come to her.

"Are you Mr. HOWLAND?" she said, and her mournful eyes of blue sought the face of the young man, who involuntarily arose and offered her a seat.

Her errand was soon told. She had come to rent his *cheap tenement*,—the brown house in the hollow, which she had heard was vacant, and she wished him to furnish her with work—"she could make both shirts and vests tolerably well, and she would try so hard to pay the rent!"

The stranger paused, and Miss ELIXON, who had been watching her with mingled feelings of curiosity and interest, saw that the long eye-lashes were moist with tears. Mr. HOWLAND saw it, too, and marvelling that one so young and timid should come to him alone, he said,—"Little girl, have you no friends—no one on whom to depend, save yourself?"

Very beseechingly the little hands were clasped together, and the tear on the eye-lashes now dropped upon the cheek, for the little girl, as Mr. HOWLAND had called her, mistook his meaning,—fancied he was thinking of *security, payment*, and all those dreadful words whose definition she was fast learning to understand.

"I have a father," she said, and ere she had time for more, the plain spoken Miss ELIXON asked,— "Why didn't he come himself, and not send you, who seems so much a child?"

There was reproach in the question, and the young girl felt it keenly—felt that her father was censured, and turning towards Miss ELIXON, she answered, "Alas, lady, my father couldn't find the way—he never even saw my face—he couldn't see my mother when she died. Oh, he's blind, he's blind," and the voice, which at first had merely trembled, was choked with bitter sobs.

'Twas enough. The hearts of both brother and sister were touched, and the brown house in the hollow—nay, any house which RICHARD HOWLAND rented, was at that orphan girl's command. But he was a man of few words, and so he merely told her she could have both tenement and work, while his sister thought how she would make that blind man and his child her especial care.

[As this is a story of absorbing interest, and excellent moral, the reader will thank us for giving it, though continued (contrary to our usual custom) through several numbers.—Ed.]

Wit and Humor.

KNICKERBOOKER GOSSIP.

Heas is a pretty fellow, who would "lay violent hands upon a woman," and she a Muse. But we can prove by more than a thousand "pieces of poetry" from our "Balaam" basket that, after all, he is more than half right. He says:

How very absurd is half the stuff
Called "Poetry," now-a-days!
The "stanza," and "epics," and "odes" are enough
To put every lover of rhyme in a huff,
And 'e'en old hens with their "lays."

One asks but a "cave" in some "forest dell,"
"Away from the cold world's strife;"

Now the woods in fine weather are all very well,
But give them a six weeks' "rainy spell,"
And he'd soon "cave in" in his "forest dell,"
And be sick enough of the life.

One loves (how he loves) the glittering foam
"And the mad waves' angry strife;"
But take the young genius who wrote that "pome,"
"Where the billows dash and the sea birds roam,"
And he'd give all he had to be safe at home,
And stay there the rest of his life!

Repentance.—Coleridge was a remarkably awkward horseman, so much so as generally to attract attention. He was one day riding on the turnpike road in the county of Durham, when a wag approaching him, noticed his peculiarity, and mistaking his man, thought the rider a fine subject for a little sport, and, as he drew near, he thus accosted Mr. C.:

"I say, young man, did you meet a tailor on the road?"

"Yes," replied Mr. C., who was never at a loss for a rejoinder, "I did; and he told me if I went a little further I should meet his goose!"

The assailant was struck dumb, while the traveler jogged on.

Pretty Good.—Uncle Bill Fidd was a drover from Vermont. Being exposed to all kinds of weather, his complexion suffered somewhat; but at best he was none of the whitest. Stopping at a public house, a man of notoriously bad character thought, as Uncle Bill came in, he would make him the butt of a joke, and, as the black face of the weather-beaten man appeared in the door, he exclaimed:—"Morey on us, how dark it grows!" Uncle Bill, surveying him from head to foot, coolly replied:—"Yes, sir—your character and my complexion are enough to darken any room."

YOUTH'S CORNER.

For Moore's Rural New-Yorker.

SCRIPTURAL ENIGMA.

Consisting of proper names with their significations.
I am composed of 43 letters.
My 8, 13, 23, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100, 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 141, 142, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 202, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 215, 216, 217, 218, 219, 220, 221, 222, 223, 224, 225, 226, 227, 228, 229, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838,

MOORE'S RURAL NEW-YORKER

AGRICULTURE EXCELSIOR LITERATURE SCIENCE ARTS

TWO DOLLARS A YEAR.)

"PROGRESS AND IMPROVEMENT."

[SINGLE NO. FOUR CENTS.]

VOL. X. NO. 2.]

ROCHESTER, N. Y.,—FOR THE WEEK ENDING SATURDAY, JANUARY 8, 1859.

{WHOLE NO. 470.

MOORE'S RURAL NEW-YORKER,
AN ORIGINAL WEEKLY
AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,
WITH AN ABLE CORPS OF ASSISTANT EDITORS

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, Usefulness and Variety of Contents, and unique and beautiful in Appearance. Its Conductor devotes his personal attention to the supervision of its various departments, and earnestly labors to render the RURAL an eminently Reliable Guide on all the important Practical, Scientific and other Subjects intimately connected with the business of those whose interests it zealously advocates. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate and beautiful Engravings, than any other Journal,—rendering it the most complete AGRICULTURAL, LITERARY AND FAMILY JOURNAL in America.

All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.
For Terms and other particulars, see last page.

THE TIME TO THINK AND PLAN.

Winter is peculiarly a season of leisure with the farmer—especially in the North, where the earth is frost-bound from three to four months—but may be so occupied as to redound greatly to the mental improvement of himself and his family, and also to the improvement of his estate. The time-honored adage which saith "in time of peace prepare for war" is as applicable to individuals and communities as it is to governments and nations, and the wise cultivator will, during peaceful Winter, make proper calculations and preparations for the active operations—the so-to-speak practical warfare—of the ensuing Spring and Summer. There are many matters which may properly and profitably occupy his attention, aside from superintending the education of his children, caring for domestic animals, and the incidental winter business of the farm. With the foresight of an experienced commander he should consider and mature, while at leisure and in winter quarters, the general if not detailed plan of the approaching season's campaign—thus carefully preparing his plans in regard to this or that operation, and being enabled to bring his forces into action at the earliest practicable moment, as well as to increase the same whenever necessary to secure completion and success. He should thoroughly understand his position and condition—whether the season's labors have been properly rewarded, and if not, the causes of failure, so that he may be enabled to profit by past experience. If a change of crops, or system of operations, is imperative to advantageous, profitable farming, the question as to what shall be done should receive mature consideration and induce estimates founded upon unmistakable facts and figures. Every change is not an improvement, but such an one would be likely to prove for the better. And when any particular course of action is adopted, let it be entered upon with vigor and determination—for in many cases this gives a prestige which insures success. Many an important victory (in rural as well as battle-field) has been achieved by careful planning, followed by prompt and energetic action, which would have proved a defeat had the mental labor of inception been omitted. Indeed, the farmer has as much need of and use for *mind* and *thought*, in proportion to his sphere of operations, as has the warrior, statesman, or professional man—and the idea that there is no necessity for mental ability, study, or training in the pursuit of Agriculture is one of the absurdities of the dark ages (while its prevalence at the present day proves that the darkness of the past obscures much of the so-called light of this age of progress.)

But we are digressing from our purpose in the outset, which was (after speaking of the season for Thinking and Planning,) to suggest or enumerate several matters worthy of consideration and ciphering during the leisure of winter. We will mention these as they occur to our mind, without special regard to the order of their enumeration.

Among the most important requisites to easy and profitable cultivation are proper Tools, Implements and Machinery. It is well at this season to carefully examine the stock on hand, (which, we take it for granted, is carefully sheltered, and thus protected from the decay and dilapidation caused by exposure to alternate storm and sunshine,) note what will be wanted, and ascertain the best kinds, as well as price and where obtain-

ble. It is generally the most profitable to procure the best of the labor-saving machines in use, as they are most reliable, and save most time and trouble in the various operations of cultivating, seeding, harvesting, &c. If there are any doubts in regard to the successful operation of any implement, however, it should be taken on trial or warranty only. See to this matter of implements, reader, and not only ascertain what you will be likely to want, but where you can best supply that want at the proper season.

Now is the time to make your calculations as to Rotation of Crops, a matter sadly neglected by many farmers who are considered wise beyond their practice. Decide what you will do with this and that field—(a map or plot of your farm, with each lot numbered, will be a paying investment, if you have none already)—after considering what has been grown heretofore, and what can most profitably be produced in future without an undue exhaustion of the elements of fertility.

The subject of Manures and Fertilizers is vitally important to many of our readers and should be carefully considered. Those who have not sufficient on or near their own farms, will of course be under the necessity of purchasing elsewhere, or dispensing with fertilizers. If any are procured from abroad it is well to ascertain their comparative value, as well as to understand their preparation for, and adaptation and application to the soil to be cultivated. The right principle is to so feed the soil that, notwithstanding the crops produced, its strength and fertility shall annually be augmented rather than diminished. How this can best be done is a question for each cultivator to determine for himself, taking the quality of his soil, location, and other circumstances into the calculation.

Deep Tillage and Underdraining are not only profitable in most localities, but (as a consequence) becoming somewhat popular—though we fear more in theory than practice. Would it not be well for those whose farms might be enriched by these processes, to thoroughly inform themselves during the present winter, and act (so far as consistent,) in accordance with the knowledge acquired? A little experimenting will not cost much, and may result in great advantage. "Prove all things," &c.

The Improvement of Stock is a matter of great importance, yet so proverbially (and we had almost said criminally,) neglected in many localities as to lead to the conclusion that farmers cannot, or do not, read, think and figure for themselves. Though it is nearly as easy and cheap to produce an animal worth \$100 as it is to raise one which will sell for only or less than half that amount, the great mass of farmers (?) still persist in using scrub sires, rather than pay the paltry sum of one, five, or ten dollars for the services of a superior animal. If "what is worth doing at all is worth doing well," is a correct maxim, it applies to the breeding and care of domestic animals—a branch in which there is abundant room for well doing, for on many farms any change would result in improvement.

The Improvement of the Homestead is a good subject for consideration and planning at the present time. The repairing and making of fences, the planting of fruit and ornamental trees and shrubbery, the erection or repair of buildings, and like items which tend to render the homestead what it should be, are matters worthy of present thought, and action in the not distant future. To say nothing of the profit of such investments—in convenience and enhancement of the value of any farm—they pay in tending to render home attractive and happy to the young, who might otherwise become wanderers and outcasts.

But our suggestions are becoming numerous, if not tedious, and perchance are unnecessary to any of our readers—except borrowers of their reading—and, though we might make many additions, the above must suffice for the present. The subject is a fruitful one, and as it is far from being exhausted at this brief sitting, we may recur to it ere long. Meantime we trust these hastily penned hints will incite many who should do so, to THINK and PLAN in regard to future operations during the season of leisure they are now enjoying.

Composition to Stop Leakage.

A CORRESPONDENT of the *Lynn News* gives a recipe for a cheap composition with which leaks in roofs may be effectually stopped. Having a leaky "L," he says:—"I made a composition of four pounds of resin, one pint linseed oil, and one ounce red lead, applied it hot with a brush to the part where the 'L' was joined to the main house. It has never leaked since. I then recommended the composition to my neighbor, who had a dormer window which leaked badly. He applied it, and the leak stopped. I made my water-cask tight by this composition, and have recommended it for chimneys, windows, etc., and it has always proved a cure for a leak."

AGRICULTURAL BOOKS AND EXPERIMENTS.

We have a host of books on Agriculture, many, perhaps all, containing useful information, yet we sometimes throw down one of these works exclaiming "farmers are not much to blame for entertaining a prejudice against book farming." Perhaps we resolve to show them up with all their faults, as the only means of improving our Agricultural Literature. A celebrated divine who once conducted an Agricultural Journal, and who, no doubt, often had the same feelings, lately remarked "American Agricultural Literature suffers for want of just criticism." And it is too true. The Agricultural Press, we fear, in this respect, is at fault, and we have often resolved upon a reform. But at the outset we find, even in the worst books, many great truths, and we fear to say aught that may prevent the circulation of the good because it is mixed with evil. The greater part may be borrowed or stolen from some previous writer, the little that is original may be unreliable, or evidently untrue, but we spare the evil for the sake of the good, and in this we have the example of Him who cannot err, who would have spared even Sodom for the sake of the righteous. Then, we console ourselves with the thought that the farmers of this country are a thinking as well as a reading class, men of good common sense, eminently capable of sifting the chaff from the wheat, and in no danger of swallowing indiscriminately the good and the bad.

When speaking of Agricultural Colleges, in a late number, we stated the great want was competent professors, without which College organizations and buildings were worthless. We are equally destitute of competent agricultural book-writers. Who, in all this land, is competent to give us a good and reliable work on practical agriculture? not theories that have been proved a thousand times—nor visionary ideas that never will be proved—but a book giving the teachings of experience, the results of well-tried experiments, teaching truth in a manner not to be gainsayed. A life-time and a fortune might be well spent in the accumulation of facts for such a book, but when accomplished it would be a blessing to the country and the world, and place the author's name on the roll of fame, away out of sight of the journeyman book-makers who manufacture books to suit their employers, the publishers.

Perhaps it is better that we make poor books than none, only we fear these inferior things discourage the necessary effort for something better; for if a poor book that costs about nothing will sell, who can expect a man to spend his energies, talents and means—the best years of his life—in gathering materials for a good book, when the public taste seems fully satisfied with an article that costs so little.

The best part of our Agricultural Literature is to be found in the Agricultural Journals—in the communications of farmers. Here we have simple facts—truths which nature utters in her own unmistakable language. It is to be regretted that these experiments are not always made with such care as to give in all cases a "certain sound," and it is to call especial attention to the importance of careful experiments that we now allude to the subject. It is the duty of every farmer to gain all the light he can, and to let that light shine. In no way can valuable knowledge be gained so well as in watching with an eager eye the results of different systems of culture, different manures, crops, &c., while the Agricultural Journals furnish the best means for presenting the facts to the world.

The following extract from *Farmer's Letters*, written by ARTHUR YOUNG, in 1768, is as important and truthful now as it was when penned, nearly a hundred years ago:—"The publication of experiments, really made, faithfully related, and sufficiently authenticated, is of great and important consequence to the public good. But the very reverse is the case of these books which are published under the title of General Treatises and Systems, comprehending more soils, articles of culture, &c., than any one man can experimentally have a knowledge of; consisting of the most heterogeneous parts, purloined out of former books on the same subjects, without a common knowledge to discover the good from the bad. It has been said several times, and with very great justice, that what we want is a *Book of Experiments*. If any practical husbandman, who occupies a farm, would only keep an exact register of all his business, such a collection would form, as far as it extended, a complete set of experiments. What we have are the author's reflections, instead of that which enabled him to reflect; and from which we might draw very different conclusions. The *Experiment is Truth itself*: the author's conclusions, matter of opinion which we may either agree to or reject, according to our private notions."

The facts are truth—inferences and conclusions may be true or false. Let us then, have the facts, no matter what they teach—even should they overturn some of our most cherished notions.

UNDERDRAINING.

In a recent article I undertook to show when it would do to ditch, and when it would not. I recommended moderation, not total abstinence; but I feared as sinners generally do whom the parsons persist in putting on one side or the other, and, of course, on the wrong side.

I gave my excellent friend JOHN JONSSON, a special license to ditch, hoping to make it all smooth in that quarter, but he is not to be bought off so—he is after me first of all.

My strictures were written under the impression that the advocates of draining had not considered, at least, had not stated with sufficient distinctness, the limitations and qualifications that belong to this subject.

I assume that there is a large class of lands that do not need draining at all—as for instance, sandy and gravelly soils, and, indeed, all soils that have a porous or "leaky" subsoil.

Second, I assume that there is at present a very large class of lands of inferior quality of soil, remote from market, and which, to drain them thoroughly, would require an outlay which it would not be prudent to incur. This class of lands, though drained, would still be inferior grain lands, and they answer very well for grass without underdraining. If there is such a class of lands of large extent, to which our modern draining theories do not apply, I suggest, with all modesty, it would look well in those essays that have stirred the matter up so industriously, to stop the course of their improvements long enough to make the exception. One-third of the habitable globe is worthy of brief mention even by world-wide reformers like us. I assumed, from experience, that this class of lands would bear grass profitably without underdraining. I have owned such lands and occupied them for grazing purposes for many years, and I have always made them pay. Mr. DAVID McWETHER, of Wethersfield, second to no man in Wyoming Co., as a thoughtful and successful farmer, agrees with me entirely in this matter. Mr. NEWMAN, of New Hudson, Allegany Co., a very successful farmer, who made his money by dairying on the clay hills, scouts as folly the idea of underdraining them. Nineteen out of twenty of our practical men will assent to the same proposition. You may underdrain one of these hard-pan farms thoroughly, (that is, run the drains near enough to draw the water from the whole extent,) and no man in the universe will buy it and pay charges. This ought to be sufficient—but I will fortify these opinions by the testimony of a gentleman of great intelligence, extensive knowledge and wide experience. He says:—"It is true, I think, that the hard-pan hills of Cattaraugus will not at present pay for underdraining, although I think they would pay well for surface draining; that is, drains from seven inches to one foot deep, not parallel up the hills, but slanting across them, with as easy a descent as possible. I have seen many thousands of wet hills drained in this way, the aquatic grass, rushes and all, soon dying out, and fine nutritious grasses, and even white clover, taking their place, making the hills keep one-half more stock of either sheep or cattle, and keeping them in much better condition, with much less mortality, especially amongst the sheep. A still better plan to drain those wet hills, I think, would be to plow and scrape the ditches three feet and over in width, spreading the earth on the grass, and in this way the ditches would not get trodden shut by cattle. Some may think there would be a waste of land by these large ditches, but I have no doubt the earth spread on the land would make it produce much more than if small ditches were constructed."

See Mr. JOHN JONSSON's response to H. T. B. in *RURAL NEW-YORKER*, Nov. 20, 1858. My respects to W. B. P. If I should conclude to go to the tropics, there is no man I would sooner go with than my friend W. B. P.—provided always and expressly, that the dreaded "Sorghum" should not invade our retreat. If it should, why then, we must take to bear skins and the poles. But if our going depends upon the contingency of selling drained "hard-pan land" for the cost of the improvements, &c., I fear we are still likely to be kept a long time away from the sunny South.

One correspondent from Niagara takes it hard because I made it cost \$45 per acre to drain effectually the land referred to. I cannot accommodate him otherwise than by altering my estimate to \$100 per acre, which I consider nearer the real cost. I know as well as he does that shallow draining in loose soil can be made for less than my estimate, especially when the work is half done—but I have drained hard-pan land, and I know the cost—it is bad digging when it is wet, and it is bad digging when it is dry. Drains should be always three feet deep to have them draw strong, and well-filled up with small stones. Not only should the stones for the water-course be judi-

ciously placed but a large amount of "chinking" should be done. Whoever lets out a ditch to be dug and stoned by the lowest bidder, and leaves him to himself, is a man of strong faith.

I never could believe that tile in strong, tenacious clay would drain a great distance, but tile would seem to be more sure against the mice. I have put in tile, and then filled in with small stones.

Conversing with an intelligent farmer in the "Southern Tier," he said, "we have plenty of land that you can't make dry without ditching every four feet,—no, not then; for I will show you ponds of water standing right over good stone drains." Our Niagara friend may count the cost of draining this land for himself.

I will only observe further that gentlemen will please not assume that I am opposed to ditching. I am opposed to ditching some sorts of land.

H. T. B.

A GOOD FARM GATE.

Messrs. EDS.—In a late number of the *RURAL* a correspondent inquired for the best mode of constructing a farm gate, and having seen no response thereto, I venture to forward my plan. I prefer a double gate, which I think the cheapest in the long run, as they are so light a child can manage them, and the weight being on two posts instead of one, they are less liable to sag and rack, thus being more durable. The mode of construction is plainly shown in the above sketch. The heel pieces, *a a*, are 3 by 4 inch joist. Toes, boards same as slats. I take boards, say 9 or 10 inches wide, and slit through the middle for slats, toes, and braces. Set the slats in the heel flush, or, if preferred, mortice and tenon through the centre. The detached brace *b*, shows the method of insertion. The jam board *c*, I put on this side of the left gate projecting two inches for the toe of the right gate to strike against. This forms an aperture for the end of the bolt or slide *d*, which, slid in, fastens the gate. To fasten the left gate, I put a post in the ground just under the toe.

So low as not to interfere with anything passing over it, place two brackets on the gate for the bolt to play through, and a staple in the post for the end of the bolt to enter. Most any kind of hinge will answer, but the best are made of $\frac{3}{4}$ or $\frac{1}{2}$ round iron, with thread cut on as shown in the drawing. These of the right size to follow a bit tight, will hold any gate, and should the gate sag, it is easily remedied, by screwing in the top hinges or screwing out the bottom ones. The plan is so simple that any man with the least gunpoint and a few tools, can build a pair in a few hours. If one gate only is required, I should have the toe piece 2 by 3 inches, and by putting the hinges in the corner of the post, the gate will open both ways equally well. West Bloomfield, N. J., 1859. E. WILLIAMS.

A HAND FLOW.

Messrs. EDS.—Most vegetables are greatly benefited by having the ground stirred frequently around them. Hoeing is a tedious operation both for time and patience.

I give a drawing of a small shovel plow with a wheel set in the beam, which can be pushed like a wheel barrow. Where loosening the soil is the object, it is a very expeditious machine. The beam is made by screwing together pieces of hard wood boards. The wheel should have a "broad tread"

to prevent cutting in. A large cultivator tooth does tolerably well for a shovel. It works well for boy-power, by tying a drag rope to the end of the beam. With this a garden can be gone over in less than a fourth of the time required to hoe it, the same time may be given on different days with so much greater result, as the plowing is nearly as good as hoeing each time. A. W. A.
Shakopee, Minn., 1888.

PROFITABLE FARMING.

EDS. RURAL:—In reading a communication from "A Young Farmer," of Niagara Co., I am led back to your "Hints on Farm Improvement," Aug. 28th, 1888. Too much cannot be said to encourage a disposition on the part of farmers to improve the symmetry of their farms, not only for the pecuniary benefit and satisfaction on it affords them, but also for the tendency it has of creating on the part of children of farmers, a satisfaction with, and even an admiration of, the homes of their parents. I believe a vast amount of good can be done for agriculture—in time to come—simply by farmers demonstrating to their children, that profit and pleasure can be derived from its pursuit.

In forming the basis of profitable farming, it seems requisite that every available means should be made use of whereby to increase the manure heap, but I believe the source from which manure can be most cheaply drawn—and chiefly for the use of the farm, if the farm is mostly tillable—may be found in the pursuit of some general system of culture, covering the whole farm. I mistrust that what would be considered profitable farming by one, might not by another. I consider the farmer, as a farmer, responsible for all the land under his harge. (I assume to speak of such land as the better part of farms in Western New York, and that it is mainly tillable.) Although he produces yearly, on a few acres, a large yield of corn, or any other grain, or crop,—or has reared, during a succession of years, a herd of fine animals, or all stock kept upon the farm may look sleek and fat,—this, it seems to me, is no proof of the profitability of his farming operations.

Profitable, or even paying, farming, must pay all the expenses attending the business. Interest on, or rent for the land—interest on the capital invested in stock, and implements—pay the "wear and tear"—also for all labor, whether hired or performed by the farmer himself. To do this requires a lookout on all sides. A system of general economy must be practiced. Farmers owning farms, paid for, many times make a good show, but their farming will not stand the test of figures. Out of debt, their income exceeds their expenses, and they are prospering, mainly by the aid of their farm, not by their farming.

You say divide the farm into fields proportionate to the amount of manure made in a year, &c. I don't like the idea of having the amount of manure made in a year, determine the size of my fields—I would rather make the size of my fields determine, mainly, the size of the manure heap. I would adopt a system, or rotation of crops covering the entire tillable part of the farm. Permanent grass land can be used to sustain that part in the rotation. Begin by dividing the farm into fields, corresponding in number with the number of crops in the rotation—allowing some small enclosures near the buildings for convenience—making it a rule to support no more fences than are needed, and have those complete. A good gate, or more, if necessary, to each field. I am not satisfied whether five or six enclosures would be best, but, fearing it would not conveniently allow sufficient for pasture, say six. However, I have a poor opinion of a crop of grass the third year after seeding. Have three fields in grass and three for tillage—pasturing two grass fields and mowing one. I would make it a rule to feed upon the farm what grows on three-fourths of the whole area, and unless the remaining fourth would bring twelve or fifteen per cent. more sold than fed, would include that for feeding also. From so much feeding of animals I should expect a large quantity of valuable manure. In spring apply the manure, generally, to the field longest in grass, and prepare for corn. Take the field last in corn for either of several crops. Now, however, as potatoes are in good demand, I would use field mentioned for corn for potatoes and cattle roots, (have acres of them,) and make corn the second tillage crop, applying the manure then. The third crop should be of sown grain, or such as will admit of seeding the land with a mixture of clover and timothy. Fourth crop for hay. Fifth and sixth for pasture which brings it around for tillage again.

Such a system, properly carried out, would involve considerable expense, and require the exercise of close interest and industry on the part of the farmer. I can conceive of no other way of making farming profitable on high-priced tillable land than to thoroughly apply some general system, whereby all the land is brought under. If the application is thorough, every laboring man and every laboring animal made to perform his part properly—a place provided for everything, and everything kept in place, as near as may be, I believe the result will show at least some profit.

Pavilion, Gen. Co., N. Y. J. W. CHADDOCK.

THE WINTER IN MINNESOTA.

AWAY up here in Northland the Frost-King reigns supreme. Clear, cold and frosty days are followed by clearer, colder, and frostier nights—the sun rises clear and apparently warm in the morning, shines clearly all day and sets the same, but the snow does not give in the least—does not thaw a bit, though it does affect things considerably as is shown when it goes down, for then you will hear the twigs of the trees snap, and a nail will occasionally give away with a musket-like crack. A few mornings ago the mercury was down to thirty-two degrees below zero, and it has not been above for several days. Good fires and good sleighing are the order of the day now—there are two drawbacks to the latter, however, we haven't got the sleighs or girls.

I suppose you think from reading the above that it is cold here, and perhaps you have begun to shiver and shake, and are exclaiming to yourself, "I'm glad I am not there," but when I tell you

that I have worked out doors all day when it was forty degrees below, you will perhaps think we have a peculiar kind of cold here. I am not going to deny its being cold, very cold, but the air is so perfectly pure and dry that the same degree of cold does not affect a person here one-quarter as much as it does in the seaboard States. And then we are not troubled with the terribly cold winds sweeping over the prairies, as our more southern neighbors are, our winters are usually very still. I have suffered more from the cold, in a raw, chilly wind, with the mercury ten degrees above zero, in the East, than I ever did here when it was ten degrees below.

There is one peculiarity of our climate that surprises many, that is, our not having so much snow as they do further south. There is not so much snow here now as there is at St. Anthony, fifty miles further south, and we rarely have more than eight or ten inches on the ground—there is now about six. The first snow falls usually about the middle of November, and by the first of December there is generally good sleighing. In December the cold weather comes on in earnest, but the Minnesotian puts on extra shirts instead of overcoats, and moccasins instead of boots, and "goes ahead." If it gets very cold, he is careful to keep his ears covered, his hands in mittens, and to rub his nose once in a while. If the weather is cold, there is no ague in it, and he won't grumble except at the hard times. In March the snow begins to melt, and by the tenth of April, if not sooner, is all gone, and he can go to plowing as "the winter is over and gone, too." If the winters are cold, our climate is the healthiest in the world—we have no fever and ague, and consumption and coughs are almost unknown.

Princeton, Minn., 1888. HORACE M. ATKINS.

MAD ITCH.

MESSRS. EDS.:—Having read, in the RURAL of Dec. 11th, that a disease called the "Mad Itch," had made its appearance among the cattle of California, I thought I would notify you of the appearance of a similar disease, (if not the same,) which attacked the stock of WILDMAN BENNETT, Esq., of Bronson, Branch Co., in the month of October last, and which deprived him of eight valuable cows in the short space of seven days. Sabbath evening, the 19th, two cows were observed to be ailing, and upon examining them closely, one was found to be considerably swollen about the throat, and was supposed to be suffering from the bite of a rattlesnake. Remedies were applied accordingly, but without affording relief. Nothing unusual was observed about the other, except an appearance of great restlessness, and a constant rubbing of the nose against the fences or whatever came in her way. Both cows were found dead the following morning, and at night of the same day, two more were taken, while being driven from pasture, with violent itching about the nose and head, which they rubbed until the skin was in many places completely destroyed. Indeed, one of them destroyed her eyes in her violent efforts for relief. These two died the following morning. The remaining four were attacked in the same manner, and all died within the week ending October 26th. Another cow, belonging to OSCAR NICHOLES, which had pastured with Mr. B.'s, but which was taken from the pasture some days previous to the first attack, was found dead during the same week, making nine cows in seven days. An ox owned by a neighbor of Mr. B.'s, died the following week of the same disease. The disease was never known before about here, and there have been no other cases. They were in great pain and badly bloated, especially about the head and neck, before death. Every remedy that could be heard of was tried, but of no avail. If yourself or readers can give any information respecting the disease, or any remedy, the information would be thankfully received.

Coldwater, Branch Co., Mich., Dec., 1888. C. P.

THE APIARY—WINTERING BEES.

EDS. RURAL:—Your correspondent, T. L., of Chautauque county, asks information on this subject. He attributes his difficulties to the variability of the climate, chiefly. I think his location is not worse than ours in that respect, as winter and summer, fall and spring, get so much mixed here as anywhere on this round ball of ours. In other words, ours seems to be the chosen battle ground where the contending elements contest their rights to supremacy, and, from September to July, it seems a rough-and-tumble affair, neither party uppermost long enough to gain any advantage. I have kept bees nearly forty years—began by bringing home a swarm from the woods. From this one I have at times had one hundred on hand, and am now wintering over thirty. I have had especial bad luck in three ways. First, by allowing the snow to pack so tight at the entrances as to smother them,—prevention, keep the snow away,—brush out the dead bees two or three times during winter, so they may not block up the passage; or make air-holes near the upper part of the hive, or all of these. Sometimes their breath congeals at the entrance, so as to smother them; look to it. Second, by appropriating the heaviest and richest to my own use, and saving the light ones to winter—remedy very apparent, reverse action; never save any but the very best. Third, by using thin boards for hives, subjecting them to every change. Never use boards of less than 1½ or 1¾ inches thick, and let them be well made.

I let my bees stand singly, or in rows under shelter, and they come out and go in at pleasure, and do not, on an average, lose over five per cent. by winter-killing or starvation. Though this is not a flush country for honey, and this year not a new swarm made enough to winter on, I cannot boast of big yields of honey, but am probably \$2,000 better off for that swarm cut out of a tree, when a lad.

BENJ. SUMMERS.

Vermilion, Erie Co., O., 1888.

GROWING ONIONS.—I noticed a piece in the RURAL in regard to growing onions, and would say to any one who wishes to raise large onions, sow them as soon as the frost is out of the ground. I sowed mine last spring when the snow was nearly two feet deep in some parts of the garden, and my onions, in the fall, were nearly as large as a common tea saucer.—RURAL FARMER.

GROWING CORN.

In the report of the Agricultural Discussions at Syracuse, during the State Fair, the question of deep or shallow plowing was much debated. Some advocated shallow—others deep plowing. The writer favored shallow plowing when green-sward was plowed in for the crop, if upon light land. The practice in his neighborhood has been successful, and larger crops have been thus raised than when the soil has been turned under to the depth of seven or eight inches. Lately he has turned under a clover ley as late in the spring as possible. If the manure that is to be applied upon the crop can be put on and spread in the fall so much the better. For the next crop deeper plowing is invariably used. On a sandy soil shallow cultivation is preferable, while upon a tenacious one deep tillage is the only condition of success.

Many advocate plowing clayey soils in fall for the purpose of making them more friable. It may well be doubted whether a tenacious soil is materially benefited by fall cultivation. By those who have carefully examined or experimented on the subject, a different conclusion has been arrived at. The best time to stir a tenacious soil to affect a permanent amelioration is in the summer. Let any man prove I am wrong if he can.—P.

Inquiries and Answers.

BEANS FOR SHEEP.—Wishing for information, and not knowing of any source more reliable, I have resort to the columns of the RURAL. I want to feed a flock of ewes some grain, and having understood that oats were injurious to them, I would like to be informed by you, or some of your correspondents, whether beans are injurious or not?—A SUBSCRIBER, Darton, N. Y., 1888.

Will some of the correspondents of the RURAL, possessing the desired information, please impart?

WATER RAMS.—I noticed in the RURAL some comments on the *Hydravio Ram*. I wish to make a few inquiries. 1st. Where are they to be obtained? 2d. What will be the cost of one which will raise the water twenty-five feet, two and a half feet fall.—J. H. K., Castleton, N. Y., 1888.

WATER RAMS can be obtained of all the implement dealers here and elsewhere. The price is \$10, \$15, and \$18, according to size. The smallest will elevate water as high as the largest, but the quantity raised in a given time will be less. If you have plenty of water at the spring, and wish a good supply at the barn and house, one of the two larger sizes will suit you best.

TAMARAC FOR POSTS.—I wish to inquire if the American Tamarac or Larch is a durable timber for fence posts, as I suppose some of your readers have proved the timber? Is steeping posts in common salt brine a benefit sufficient to pay cost? Is white cedar durable for posts?—J. W. D., Bedford, Ohio, 1888.

THE Tamarac is a very good timber and makes excellent posts. We know of a fence with these posts, now standing, over twenty years old. We doubt whether soaking in brine would pay for the trouble. Dipping the ends in hot tar is the best cheap preservative we know of. White Cedar posts are pretty durable, but of course not equal to the Red. If any of our readers can give us the facts and figures on this question, from experience, we hope they will do so.

CRIB-BITING.—If you will give me your opinion of the cause of crib-biting in horses, and the cure thereof, if you know of any, you will oblige—J. F. T., Varysburg, Wyo. Co., N. Y., 1888.

CRIBBING, or crib-biting, is a habit, or vice, and can only be corrected by the use of such appliances as will prevent the horse from indulging in it. YOWATT recommends a muzzle, with bars across the bottom sufficiently wide to enable the animal to pick up his grain or pull his hay, but not to grasp the edge of the manger. When such an apparatus is worn for a considerable time, the horse may become tired of attempting what he cannot accomplish, and forget the habit. Dr. DADD recommends that common bar soap be rubbed on the edge and outside of the crib, renewing it whenever necessary.

CATARRH IN SHEEP.—Being considerably interested in sheep rearing, I wish to make some inquiry in reference to a disease among sheep, and more particularly the coarse breeds, called the *snuffles* or *snuffles*. Myself and brother have between three and four hundred fine-wooled sheep—the Merinos—and a few of the coarser. I have noticed that out of twelve of the coarse breeds there are more affected with the disease spoken of—or a continual discharge of a thick mucus substance from the nose—than among the whole number of the Merinos. Will you, or some of your numerous correspondents, please inform me why this disease is more prevalent among the coarse than the fine-wooled breeds—and what is the cause and cure—and very much obliged.—T. W. H., *Halls Corners, Ont. Co., N. Y.*

THE statement of T. W. H., that his coarse-breed sheep are more affected with catarrh than are the Merinos, has been noticed and commented upon by writers on Sheep Husbandry. RANDALL says that high-bred English mutton sheep, in this country, are apt to exhibit more or less of it after every sudden change of the weather. The best course to pursue is to prevent its appearance by care. Good, comfortable, but well ventilated shelters, constantly accessible to the sheep, at this period of the year, with sufficient food, regularly given, is generally all the safe-guard required.

HEATING WATER EXPEDITIOUSLY.—Having lived several years in Western New York and not having heard there of any more expeditious way of heating water for scalding hogs than the old way of heating in kettles, I think it would be of great value to the farmers of that section to know of the following manner which I have seen tried and know it is more economical, and avoids all danger of being scalded by dipping and carrying hot water. Fill your scalding tub as full as you wish with cold water, and then heat it by means of a heated cast-iron—which will be more handy to be in such a shape that you can attach a piece of trace chain to it. A small fire built on the ground, of refuse wood, will be sufficient to heat an iron of 25 lbs., twice, much quicker than the amount of water could be heated in a kettle, and after the water is once made hot and used, it may be made to boil by once heating and submerging the iron. Try it.—H. W., Bloomington, Ill., 1888.

Rural Spirit of the Press.

Agriculture in France.

In a period of sixty years, or from 1789 to 1849, says the Paris correspondent of the *National Intelligencer*, the extent of waste land in France has been reduced by four millions nine hundred and forty thousand acres, and of forest two millions four hundred and seventy thousand acres, while cultivated or plowed land has been increased by three millions seven hundred and forty thousand acres; pastures two millions four hundred and seventy thousand, and vineyards by one million two hundred and thirty five thousand. The culture of wheat has increased fifty per cent., artificial pasturage has trebled, and the growth of vegetables advanced from two hundred and fifty thousand to five millions acres. The cultivation of rye has diminished twelve per cent. The produce of silk is quintupled; sugar has been introduced, and wine has doubled. In 1789 the mean wages of a farm hand were nineteen cents per day; at present they are thirty cents. The profits of farming have doubled; still France is half a century behind England in agricultural skill and prosperity.

Winter Quarters for Sheep.

In a recent issue of the *Ohio Cultivator*, S. LAKE, of Canton, an extensive sheep-breeder, relates the manner in which he divides and arranges his flock when going into winter quarters, as follows:—"Our breeding ewes are selected and in a flock by themselves. This week they be subdivided into flocks of not over fifty, and with each flock will be put a buck—selecting of course the best bucks, and the ewes with reference to the bucks. Next our last spring lambs are divided into flocks with reference to age, sex and condition—never over one hundred together, usually about eighty. Next is what we call our stock sheep, not under one nor over three years old.—This flock will also be subdivided according to age and condition when we commence feeding. The sheep are now in their respective stables at night, and will soon be fed regularly. One of the most important items in the management of sheep, is to have them go into winter quarters in good healthy condition. By paying strict attention to this, we have not of late years lost over one or two per cent during the year."

Horses and Stables.

THE *Scientific American* says that blindness is very common among horses in cities, and attributes it to their confinement in dark stables, and shading their eyes with harness blinders. Upon these premises it argues that the first should be abolished, and that all stables should be dry, roomy structures, provided with windows to afford abundant light, and should be frequently whitewashed. The horse is a native of dry, sunny regions, and requires to be kept dry and warm in order to attain to the greatest perfection. Close and confined stables, just like those which are so common, are the frequent cause of that violent disease called glanders. A few years since, great ravages were committed among the cavalry horses of France by this disease, but it is now almost unknown in that country. This result has been brought about by simply making larger stables, doubling the size of stalls, and securing good ventilation. In proportion to their bulk, horses need more fresh air than men, in order to perform the functions of respiration, yet they are commonly crouched up in narrow stalls, which are not large enough to keep a dormouse's lungs at work.

To Make Good Winter Butter.

At the annual meeting of the Jefferson Co. Ag. Society, at Watertown, N. Y., a tub of superior winter-made butter was exhibited by Mr. DANIEL PARKER, of that town, for which a premium was awarded by the discretionary committee. "The butter," says the *Northern Journal*, "was quite as yellow as much of the fall-made sent to market, and the flavor so fine that we obtained of Mr. P. the mode of manufacture. He states that as soon as he has finished milking, the pails of milk are set into kettles of boiling water, where they are allowed to remain thirty minutes, then the milk is strained into pans and allowed to stand until the cream is ready to be taken off, which will depend upon the temperature of the room in which it is set. Before churning, the cream must be kept in a warm room at least twelve hours; then it will require churning less than an hour. He washes his butter immediately after taking it out of the churn, and at the same time salts it. His cows had been fed on clover hay, without grain or roots, for six weeks previous to the time of making this sample. Butter made in this way is perfectly sweet, of a good color, and will bring from two to four cents per pound more in market, than that manufactured in the ordinary way. It is worthy the attention of farmers."

Foot-Rot in Sheep.

JAMES ALEXANDER, of Hawley, Eng., furnishes the London *Agricultural Gazette* with the following mode of treatment for this disease:—"Weigh equal quantities of verdigris, gunpowder, and finely powdered blue vitriol; add as much vinegar and sweet oil in equal proportions as will make a rather thick paste; keep it carefully covered in a jar or pot, so as to exclude the air effectually, otherwise the strength of the paste will be in a great measure destroyed, and the same good will not result from the use of it. Be very careful to cut away all decayed and ragged parts of the hoof without making it bleed, if possible. If suppuration has taken place, carefully clean away all fetid matter and with a piece of rag or sponge, a little wetted in warm water, wipe the affected parts as dry as can be; then apply the paste and rub it in gently, without causing the blood to run, if you can, as I have found that the less irritation is caused the quicker will be the cure. If the disease be obstinate, a dose of salts will expedite the cure. The dressing must be repeated pretty frequently at first and then at longer intervals, according as the disease seems to require it. When the dressing is done the sheep should be kept on dry ground, for a few hours at least, to give the diseased parts time to absorb the strength of the paste before coming in contact with wet or dirt, which would at first greatly diminish its good effects."

Agricultural Miscellany.

WINTER MEETINGS OF AGRICULTURAL SOCIETIES.—During the present month most of the State, County and Town Agricultural Societies will hold their *Winter Meetings*, for the election of officers and the transaction of other business for the present year. Now we would urge all farmers, and particularly those who think the business of their Society has been mismanaged, to attend these Annual Meetings, and do all they can for the election of the very best men for officers and committeemen. Those who attend and act to the best of their ability for the good of the Society, do their duty; and if wrong is done, either ignorantly or designedly, those who stay away are responsible, and should be the last to grumble. But, with a coolness that would surprise an iceberg, as a general thing, those who never raise a hand to give their Society the right direction, are the first and last to find fault with its proceedings.

Another thing we have noticed which operates against these Societies, and that is the unwillingness of the best men to take office of trust and responsibility. We know that neither pay nor thanks is to be expected, for the most faithful and laborious discharge of duty, and that censure will be meted out with a most liberal hand on every convenient and inconvenient opportunity; but the man good and true, must be willing to endure and suffer for the general good. The consciousness of having performed well and faithfully the duties assigned by their fellow-farmers, will be sufficient reward. We hope, therefore, that all will go to these meetings, prepared to yield their own feelings, and to bear all the responsibilities, and discharge all the duties that their associates, in their assembled wisdom may place upon them.

EXPERIENCE IN DRAINING.—J. K. WALKER, of Springfield, Vt., gives in the *New England Farmer* his experience in draining "a piece of wet, cold and unproductive land." The drains were cut three and a half feet deep, and the bottoms constructed of stone, like an ordinary culvert, then filled with cobble stones to one foot of the surface; upon these stones, shavings or evergreen boughs were placed, to prevent the dirt from filling the interstices, then covered with dirt, reserving the sod for the barn-yard.

The result is given as follows:—"The piece drained contained a little less than four acres. Last year it was mowed, and produced but two loads of poor, sour hay and brakes, hardly worth cutting, but it was an average crop for the land. This spring the land was dry, and we were enabled to work it early in the season. We plowed under about twenty-five ox-cart loads of barn-yard manure to the acre, and planted with corn the 15th day of May. The ground was dry and in good condition for receiving the seed, while many pieces considered 'dry land' were much too wet. The corn was planted three and a half feet apart each way, hoed twice, and received a top-dressing of plaster and ashes. It was cut up the 10th and 11th of September, when it was found ripe and sound. We husked from the piece 440 bushels of ears, all merchantable corn."

My neighbors concur with me in opinion that this crop is worth more than the aggregate crops that the land has produced for the last fifteen years. It is now in a condition to produce abundantly for a series of years without any extra outlay. This crop has paid me the whole expense of underdraining."

GUANO DISCOVERIES.—A correspondent of the *New York Tribune*, writing from Washington, says:—"It is known here that further large and valuable deposits of guano have been discovered in the Pacific Ocean, and formally taken possession of by the citizens of the United States, and that they have been recognized under the act of Congress passed in 1856. Among these islands are Malden's, Arthur's, Howland's, and Christmas; and at one of them there is said to be a land-locked harbor in a lagoon, six miles broad by twelve miles long, which is entered from a bay outside, where ships can safely anchor in seven to ten fathoms of water. Almost the entire surface of this island, more than forty miles long and fifteen broad, is reported to be covered with guano from one to ten feet deep. Especially is this so for many miles in extent around the lagoon, where hundreds of ships can lie and thousands of boats work at once in loading them."

CATTLE TRANSPORTATION—LIABILITIES OF RAILROADS.—A decision has just been rendered by Judge Drummond, in the United States Circuit Court at Chicago, upon a claim made for damages by Ford vs. Illinois Central Railroad Company. The plaintiff shipped 100 head of cattle at Urbana, Ill., under a contract for their delivery at Detroit in 30 hours. They were detained at Michigan City, on the Michigan Central road, 12 hours, and 12 hours more at Marshall. On arriving at Detroit four of them were dead, and the owner claimed that the remaining 96 had suffered a material depreciation. Judgment was rendered for the plaintiff for \$1,250.

ORNAMENTAL BORDERS.—REV. MR. PALMER, in an address at the Lebanon Town Fair, among other good things, said, "some farmers are accustomed to encircle each lot with a wreath composed (in part or in the whole) of raspberry and blackberry bushes; docks of various kinds; thistles, both Canada and common; elder bushes, both red and white; thorn bushes, yellow top, white weed, &c. This may be in keeping with their taste, yet affords little profit, except it may be to furnish seeds to stock their whole farm in a short time."

ILLINOIS STATE HORTICULTURAL SOCIETY.—The Horticulturalists of Illinois met at Springfield in December, and organized a State Horticultural Society. The officers are C. B. OVERMAN, of Bloomington, President; WILLIAM YATES, of Tamarac, Vice-President; O. B. GALDSHA, of Lisbon, Corresponding Secretary; SAMUEL EDWARDS, of Lamoille, Recording Secretary, and ARTHUR BRYANT, of Princeton, Treasurer.

HORTICULTURAL

A CONVERSATION ABOUT DWARF PEARS.

NUMBER TWO.

Editor.—We will renew our examination, and, to do so, we must take a walk of about a mile and a half east of the city. There we will find some trees of my own planting. The soil is of a yellow sandy loam, known in this part of the country as a chestnut loam. In the spring of 1852, I planted fifty dwarf pear trees, of different varieties. About half a dozen of this number were three years old, ten four and five years old, and the balance two year old trees. You see them standing in two rows, each side of a wide path through the center of the garden. There is now little difference in the size, although those that were the largest when planted are the heaviest, thickest in the trunk, but those that were two years old when planted are of the best form.

Visitor.—Would you argue, then, from this example, that there is no advantage in planting trees older than two years?

Editor.—As a general thing, I would prefer planting trees not older than two years, that is for setting out in orchards, &c., and if I wished to make a most perfect tree I would even prefer to plant at one year from the bud, for a tree taken at that age can be made, by proper treatment, to assume any form desired. But, if I had a new place without fruit, I would procure, if possible, a few bearing trees on the quince root. One of the trees five years old, a *Virgalieu*, bore, the first year it was planted, sixty-three fine pears, of extra size, color and flavor, and I exhibited them all in one basket at the Fall Show of the Genesee Valley Horticultural Society, and there were no finer specimens on exhibition. Another tree, a *Duchesse de Angoulême*, bore about two dozen specimens, and I have never seen them excelled for size, color and general excellence. These were exhibited at the same show, and I afterward gave specimens to Mr. BAERT, who considered them at least equal to any he had ever tasted, and to H. P. NORRIS, President of the Fruit Growers' Society of Western New York, who considered them altogether the finest specimens of this variety he had ever seen or tasted. So much pleased was Mr. P. with them, and such an impression did they make upon him, that even now he is apt to speak of them. These trees, on account of disappointment in fencing and getting the ground ready, were not planted until about the twentieth of May, and were in full bloom when taken up. Yet, not one died, and all would have borne fruit had they been permitted to do so. Of course such a growth of fruit the first year after transplanting prevents a proper growth of wood, and is not a good plan. It was only done as an experiment, and the trees were liberally supplied with liquid manure while perfecting the fruit, or I think it would have dropped off. I would only recommend that a few specimens should be retained the first season, and the second will give a good crop without checking the growth of the tree.

Visitor.—This soil is very light. I had supposed that a heavy soil was best adapted to the pear and the quince.

Editor.—Had I my choice I would prefer a soil a little heavier for the dwarf pear, that is if it was well drained. On such a soil as this it is necessary, I find, to manure pretty freely to obtain a good growth of wood, otherwise the trees will over-bear, while the growth of wood will be quite too small, and the tree will soon assume a stunted and unthrifty appearance. I have known dwarf trees planted on almost clear sand in this county, but in such a situation they make but little growth. My experience is that they will grow in any place here but a swamp or a sand-bank. We will take a drawing of one of these trees, an average specimen, so as to show what the dwarf will make, under ordinary good treatment, in seven years from planting.

Every one of these trees have borne enough to pay for themselves and the care they have received, twice over, and in 1857 fruit from them was exhibited at the State Fair, and obtained the first premium offered for "the best twelve varieties, six of each."

Six or eight of these trees are younger than the others. A few *Bartlett*s on the quince were broken

off by the wind, at the point of union between the quince and pear wood, and some others were injured by unruly cattle that scaled the fence. Their places were filled, in the fall of 1854, by young trees, and as these are now of excellent form, we will take a drawing of one of them, as a model.

Now we will pass further down the avenue, and look at another lot of trees I planted in 1858. They were only one year old when set out, and have been planted six years. They are of better form than the others, remarkably thrifty; indeed, are all that can be desired. The treatment they received was the same as described for the others, but you will notice the soil is a little lower and somewhat heavier. I doubt whether a finer lot of trees of their age can be found anywhere, and yet, since the summer of 1855, they have not received better treatment than any good farmer would give his corn crop. In 1856 these 120 trees, in all, bore a very large crop. The owner had just taken possession of the place, and knowing but little about fruit or trees, and wishing to obtain all the fruit possible, allowed them to over-bear, and the consequence was, in 1857 there was but a small crop of fruit on most of the trees, though a few of them bore well. Yet, with this drawback, the crop sold was 80 bushels, which brought, I am informed, \$120, besides the early varieties eaten by the family. Not one of these trees, that I recollect, was injured by blight. On the right is a square of one hundred peach trees, planted in 1852, and they now are about gone. They have never borne what would be considered two full crops, and in 1857 did not bear a peach, and but very few the past summer. They have not borne as many bushels as the pears, and though I cannot say certainly, do not think half as many. The standard cherries are now fine trees, and the dwarf cherries and apples, all planted the same year, very beautiful bushes, though as yet they have not produced much fruit. In our next journey we will examine some trees that have been longer planted, and are larger and finer.

Visitor.—This certainly is as strange to me as any of the "big stories" that I have read about, or seen ridiculed in some of the papers.

Editor.—The truth should not be concealed because some choose to disbelieve it. The facts, and all the facts that can be obtained are needed on this subject. There has been too much theory, and too much scribbling by those who have never decently cultivated a dwarf pear tree or any other tree in their lives.

Visitor.—It seems to me if they had not borne a pear the increased value of the trees, being now in a healthy, vigorous state, of handsome form, and covered with fruit buds, would well compensate for all the labor bestowed upon them. But, as I am in pursuit of knowledge, I wish to understand what you mean by the "ordinary good culture," which these trees have received.

Editor.—After planting, a good coat of manure was placed over the ground, for some distance around the tree. This remained until late in the summer, when it was forked in, and before severe frost another coat of manure was given, which remained until spring, when that was forked in, and another top-dressing added. This was continued until the spring of 1856, when the place was disposed of, and since that time, a little hoeing up of the weeds, and occasionally, perhaps, a little manure has been the amount of the labor bestowed upon them. I forgot to mention the pruning. While in my possession they were pruned every spring, to obtain a good form, and to increase the growth of wood.

Visitor.—These trees, I observe, stand but eight feet apart. Is that the proper distance?

Editor.—It would be rather close for orchard planting, but you will observe that these trees, standing each side of a wide avenue, although eight feet from each other one way, are more than twelve the other, which affords ample room, at least for the present. Perhaps, however, time will show that ten or twelve feet apart would have been a better distance, for if they continue to grow the next ten years as they have the seven years past, they will be much crowded.

Visitor.—Is it possible that pear trees do as well in other places as here, with the same culture? If so, I see no cause of complaint. But, may they not in other localities require far better culture?

Editor.—A man may struggle against one or two obstacles and conquer, whilst a greater number would overwhelm him. The same is true of a tree. A tree planted in a good, dry, mellow soil, well suited to its growth, will bear neglect better than one planted in cold, wet clay.

The Annual Meeting of the Fruit Growers' Society of Western New York is to be held in this city to-morrow, (Tuesday.) We will give a report of all proceedings of interest next week.

LEAF BLIGHT.—CRACKING OF THE PEAR.

In late numbers of the *RURAL* I have seen several articles on that interesting question, the *Cause of the Cracking of the Pear*, and the *Leaf Blight*. While on a visit, in the month of July last, to a valued friend, the well known Horticulturist, Wm. CROBTON, of Staten Island, our conversation and attention was directed to this subject, and we spent some time in looking into and investigating the cause of the leaf blight in Pear trees. Mr. CROBTON inclined to the opinion that the spots on the leaves (usually called blight) were mainly caused through atmospheric influence, while I was inclined to think it the work of some minute insect, (but neither one of us was very confident in his opinion.) We examined pretty thoroughly the leaves in all their different stages of growth, which indicated the least signs of disease, commencing with those which were fully matured, when we found on the under surface of the majority of leaves which underwent our inspection, small globules of a clear liquid. These, on being punctured with the sharp point of a penknife, caused the liquid to spread, and from the centre of each globule thus dispersed started a very minute insect, exceedingly quick in its movement. From its small size and the want of a lens of sufficient capacity, we were unable at that time to determine anything about its character, but of one fact we had ocular demonstration, that wherever the globules were removed the *epidermis* of that portion of the leaf which they occupied was entirely eaten away; and it also became apparent that where these globules had disappeared of themselves, brown looking blotches appeared in their places, which seemed identical with those known as leaf blight. In our examination of the young and tender shoots where the leaves were but partially developed, which were covered with the same brown looking blotches, we discovered, on stripping these leaves from the stem, numbers of these minute insects starting from their axils. This was the result of our investigations at that time.

Now my own conclusions are simply these—that these minute insects are the primary cause of the disease, from the fact that wherever the *epidermis* of the leaf is eaten away, or becomes in any way injured, decomposition of the part so injured must to a certain extent ensue. Hence, the leaf becomes in a fit state and liable to be attacked at any moment by the parasitic fungus which has been committing such ravages among the finer kinds of our Pears, and which if not immediately checked after it is found to exist, soon spreads nearly over the whole tree. That it is a fungus or mildew, as it is called, I feel pretty certain, for on an examination which I made last summer with Mr. PINNEY, of Brockport, of some Pear trees (*White Doyenne*) belonging to that gentleman, which were thus affected, I became fully convinced that it was as clear a case of mildew as I had ever seen, and Mr. PINNEY was of the same opinion.

Now for the *Remedy*, which I would recommend, and it is one which I have recommended and applied for a number of years past, and always with success, to other kinds of trees and plants for the eradication of mildew in whatever shape. Procure a good water-tight barrel; throw in about a peck of fresh lime and four or five pounds of sulphur; pour over the whole half a dozen pails of boiling water; stir all well together. Then cover over the top of the barrel two or three thicknesses of coarse canvas; let it stand undisturbed for twenty-four hours, and the liquid will be ready for use. Take about a pint of the liquid and throw into a pail of rain-water, stirring it well; take a garden syringe and give the trees a good syringing, and continue the application once, or not more than twice, until the mildew disappears. I do not positively assert that this will eradicate the mildew on Pears, but as I have before stated, I have tried it on almost every other kind of trees thus affected, and always with the utmost success. At any rate, it is worth a trial.

Rochester, N. Y., 1858. W. W.

GROWING CAULIFLOWERS.

Messrs. EDITORS:—I have been interested in the articles you have published on Cauliflowers, and there is no reason why they should not be as common in our gardens as Cabbage, but to grow them in perfection we must start right. The plants can be started as you recommend in your last number, either in a hot-bed or on the south side of a fence or building; but if plants are raised in a hot-bed they come into heading during the heat of summer, and instead of forming a large, compact head, it is small, and splits up into small sprouts. If raised on the south side of a building or fence, the heat and shelter you seek for your plants is also a shelter and harbor for the *fly*, and few will be the plants you will have left for transplanting. The open ground the north side of an open board fence, or the west side of a building or tight board fence is perhaps the best place, out of doors, but the surest and best way is to raise them under a cold frame. If you have not hot-bed sash and frame, a common window sash will do. Make a frame of inch boards, 12 inches high behind and 9 in front; cut notches in the stiles and lower part of the sash, to let the water run off, or when the sun shines it will operate as a lens, and burn your plants. Sow in drills 8 inches apart; when up, air freely, and frequently stir the earth with the fingers. Sow from the 15th to 20th of April; transplant from 20th of May to 1st of June. This is the way I have raised them for the last seven years, and you can tell, Mr. Editor, with what success. The *Early Paris* and *Large Late Lenormand* are the best varieties. The seed is imported.

Rochester, Jan., 1859.

REMARKS.—The above is from one who has raised most excellent Cauliflower, as we have the very best reason to know. We presented him, a good many years ago, with the first *Early Paris Cauliflower* seed brought to this part of the country. The objection to planting in a sheltered position, on account of insects, is good, but a sheltered place is almost absolutely necessary in some localities to produce plants ready to transplant by the middle of May or first of June, unless the cold frame is made use of, as recommended. We hope the time is not far distant when more attention will be given to this truly delicious vegetable, both by amateurs and gardeners.

FLOWER SEEDS.

I NOTICED in a late number of the *RURAL* a communication from R. B. PRESTON, C. W., with the following question:—"Is it really worth while to pay the extra price for seed sold by B. K. BLISS, and are they really more reliable than ordinary seedsmen (of respectability) are in the habit of selling?" Also a call upon correspondents from yourself, to give an account of their success with the seeds named.

Allow me to give "R. B." my experience for the last two seasons. In the first, I purchased my seeds of a Boston company of long standing and "of respectability." One half the lot, and those the choicest kinds, failed to germinate. I cannot think it my fault, for I distributed the seeds among several friends, and they had no better success. Those that did grow were of the most ordinary kind. Last season I purchased of B. K. BLISS, and as I have previously informed your readers, out of twenty or thirty packets not one was a failure. And such beautiful specimens of Pansies, Asters, Stocks, Balsams, &c., had never before been seen in this vicinity. The Asters, particularly, were the admiration of every one. Strangers in passing, frequently stopped to ask for my method of raising such Asters. I could only refer them to my seedsmen.

But, Mr. Editor, it was news to me that the prices charged by Mr. BLISS are "extra." I paid no more for mine than for the worthless trash from Boston, and I have compared his priced Catalogues with all others published in New England, and with THORNTON'S, in New York, and can find no material difference.

Colchester, Vt., 1858.

REMARKS.—The price of flower or any garden seeds is a matter of little consequence. First rate seeds are cheap at almost any price, and poor ones are dear for nothing. Too many of the flower seeds sent out by our commercial seedsmen, we have good reason to know are worthless, and it matters but little whether they grow or not. Our own seeds we have imported from France for many years. Some years ago one of our seedsmen presented us with a collection of seeds, and was surprised that we should inform him that we would not encumber our ground with them. We directed him to a source in Europe where he could obtain such as would do him credit and please his customers, since which time he has kept as good seeds as any in the country. We have seen some sent out by the establishment indicated that did not come up to our standard, but as a general thing we believe they have given the very best satisfaction. Other establishments, for aught we know, may do as well, but there is a lack of enterprise or honor, or something, among our seed-dealers, or they would never send out such trash as the country is flooded with. They should obtain the choicest, and charge accordingly; but many seem content to send out the same old things—single Asters and Lady-slippers, and Love-lies-bleeding, and other trash—from year to year, without the least idea of progress or improvement. Of late years English florists have given particular attention to the improvement of *Hollyhocks* and *Sweet Williams*, and the former is now grown as double and almost as beautiful as the rose, while the latter is so much improved as to seem almost like a new, and is certainly a most lovely flower. Whoever should buy seeds of these at most of the stores, and plant them, expecting to obtain these improved sorts, we fear would be sadly disappointed. Perhaps the fault is partly with the people, who are too apt to purchase cheap things without much inquiry as to the quality. But in this respect seedsmen are far behind the nurserymen. They obtain, by the very first steamer, any thing new or valuable that appears in Europe, regardless of cost; and he who can obtain any desirable plant a season in advance of others considers himself exceedingly fortunate.

HUBBARD SQUARE.—Will you please give us a description of the *Hubbard Squash*, size, color, &c., and where the seeds can be obtained, if possible?—A *RURAL* FRIEND, *Aspley*, N. Y., 1858.

REMARKS.—The questions asked by our correspondent were answered in the *RURAL* of last week. To aid, however, in giving a more correct idea as to its appearance, we give above a drawing of this fine squash, from a specimen now before us.

GROWING RADISHES IN COAL ASHES.—A gentleman of Hamilton, N. Y., writes:—"The soil in this vicinity is altogether unsuited for growing *Radishes*. I however, raised them excellent the past year by sowing the seed in coal ashes. The radish grows vigorously, without injury from the worm."

HORTICULTURE IN OREGON.—From the Oregon Farmer, we see that a State Fruit Growers Society has been established in Oregon. It was organized at Salem, on the 20th of October. One exhibition of fruits presented 26 varieties of apples, 14 of pears, 3 of grapes, and several varieties of plums. There was quite an interesting discussion on apples. The special favorites seemed to be the Red June, Early Harvest, Rambo, Gravenstein, Yellow Newtown Pippin, Wine Sap, White Winter Pearmain and Esopus Spitzenburg. The pears spoken of with most favor was the Bartlett, Seckel, Winter Nelis, Vicar of Winkfield and Easter Beurre.—The officers are; *President*—AMOS HARVEY, of Polk; *Vice President*—I. N. GILBERT; *Secretary*—C. N. TERRY; *Treasurer*—JOSEPH COX, of Marion.

A State Horticulture Society has been organized in Illinois. We will give notes of proceedings in a future number.

PUDDING, CORN BREAD, COLORING RECIPES

EDS. *RURAL*.—We have been subscribers to your paper from its commencement until the present time, and look upon it as one of the necessary appendages of home. The variety of its contents renders it indeed a *Family* paper, and the column devoted to Domestic Economy is particularly interesting to me as a housekeeper. It has contained many useful suggestions that have proved valuable to me, and I could think of no better way to express my thankfulness to my sister contributors than to add my mite to the list of recipes.

I send you one for a pudding which we think is very good. Make a crust in the same manner as for nice short biscuit, with the addition of an egg, regulating the quantity to the size of the family. Roll a portion of the crust to one-fourth of an inch in thickness, line a deep pudding dish with it—have ready some apples pared and sliced, put in a layer of apples, sprinkle on them some fat salt pork chopped fine, add a very little water, and season with sugar and spice as you like an apple pie, then roll a thin layer of crust and lay over, then put in another layer of apple, pork, and season as before, then cover again with crust. Bake in a moderate oven two hours—take it from the oven and dampen the top crust and cover it close to steam fifteen or twenty minutes before carrying to the table.

INDIAN CORN BREAD.—Place a kettle over the fire with four quarts water, and when it is scalding hot, stir in corn meal as thick as you can, conveniently; take it off before boiling and set it away to cool. When it is sufficiently cool, mix in with the hand a pint of rye flour, or wheat canal, and four tablespoonfuls of molasses. I put mine in the oven, previously heated, about three o'clock P. M., and bake fast until it is browned over, then bake very slow, and let stand in until wanted for breakfast. It will generally keep warm through the night, and we think is excellent.

I have noticed requests in the late number of the *RURAL* for some recipes for coloring. I have some called good for coloring scarlet with cochineal. For 6 lbs. cloth, take 4 oz. cochineal, finely powdered; 2 oz. quercitron bark; put 8 oz. chlorid of tin into a brass kettle, water sufficient for the goods, let it come to a boiling heat, put in the goods and let stand 15 minutes, then take out and put in the cochineal and bark, boil 15 minutes, then put in the cloth and stand half an hour. When cool scour in soap suds. It will not change color.

COLORING COTTON RED.—Take 1 lb. peachwood, boil 2 hours, dissolve 6 oz. alum in hot water, put in the goods, let stand 15 minutes, take out the cloth, keep warm an hour or two, and let it remain in over night—rinse in warm water. This will color 2 lbs. cloth.

Leonardsville, Md. Co., N. Y., 1858.

THE ART OF PATCHING.

This operation of patching requires far more skill than does the making of a new garment, and when well executed may save the purchase of many a costly one; the most expensive robe may, by accident, be torn, or spotted, the first day of its wear—and the piece inserted in lieu of the damaged part is a patch. If a figured material, the pattern must be exactly matched; in all cases the insertion must be made without pucker, and the kind of seam must be such as, though strong, will be least apparent—the corners must also be turned with neatness. This is an art that requires teaching. So of darning; much instruction is necessary as to the number of threads to be left by the needle, according to the kind of fabrics, and there is also the kind of thread or yarn most suitable to be determined. Where the article is coarse, the chief attention is directed to expedition, but a costly article of embroidery on muslin can only be well darning with ravelings of a similar muslin. The stocking stitch is neither more difficult nor more tedious than the darn, yet many pairs of stockings are lost for want of knowing it, when a hole happens to be above the shoe. Practice in lace stitches is desirable, particularly for repairing lace of costly description. The deficiency of a single loop, when lace is to be washed, often becomes a large hole during the operation, and the beauty of the lace is destroyed. The shawl-stitch is one which, when employed with ravelings from the shawl itself, can be used to repair the most costly cashmere, without a possibility of discovering the inserted part.—*Cincinnati Gazette*.

BREAD-MAKING.—I think I can improve a little upon "A Young Mexican's" mode of making good bread. Take eight good-sized potatoes, pare and slice them, then boil—when done, mash them fine, and while hot add the same bulk of sifted flour as of potatoes. Add a little cold water and stir to a thick batter, then add a little salt, and when milk-warm stir in one cake of "Hopkin's Yeast Compound" (previously dissolved in a little cold water.) Cover it warm and set by in a warm place until morning—then take this sponge for wetting and proceed to make your dough. When worked sufficient, make loaves, place them in pans, and in a little while they will be light enough to bake. Always sift your flour before using. If you fail to have good bread it will be some mismanagement of your own.

A LOVER OF GOOD BREAD.

TO BONE A TURKEY.—Remove the flesh from the bone with a sharp knife, scraping it downwards, being careful not to cut it to pieces. Begin at the wings, and do not tear or break the skin. Loosen the flesh from the breast, back, and thighs. Draw the skeleton by the neck, from the flesh, then stuff it with a dressing prepared in the same way as for roast turkey. If there are any broken places, sew them up. Bake it about three hours. Serve it up cold.

Written for Moore's Rural New-Yorker.

A PICTURE.

BY ELLEN C. LARK.

Red wreaths of the rarest roses
Climb upward around the door,
And a flower-plat breaks and closes
Stretched sunnily out before.

The gleam of a winding river
Flashes through willows green,
And "arrows of sunset" quiver
Where forests skyward lean.

Dropped first on the far-off mountain,
Gathers a misty veil;
The spray of a wildwood fountain
Plashes o'er lilies pale;

Plashes with a dreamy murmur,
A music felt, not seen,
And low night-sounds of the summer
Break softly in between.

Distant and silent forever,
Out of our mortal ken
Lies the Land beyond the River
Where Death's the passport in;

But over these dark-earth mountains,
Softly as prayerful psalm,
From the waves of that Land's fountains
Droppeth this beauty's balm.

Charlotte Centre, N. Y., 1883.

LETTERS FROM OUR FARM.—No. V.

"Blessings can never die,
Even though they fade."

Blessings on the poet that penned those lines, and their fellows of the sweet poem that found a place in my memory many and many a month ago. For hours I have sat here alone with my thoughts, listening to the ceaseless dropping of the water from the low brown caves where the swallows nested in summer, and looking out at the dull landscape, through heavy banks of fog, that trail along the tops of the hills, and settle heavily into the valley. I have tried to bring back the picture of the green meadow with its fringe of willows, the gleaming river, and the lilies all about on its bosom, that I saw through the screen of morning-glories, a few weeks ago. Though all the meadow and upland is brown and sear, and not a leaf flutters on the bough, yet as plainly as I saw it then do I now see that vision of the freshness and glory of summer. I have but to shut my eyes and the swaying of the green branches, the shimmering of the water, and the whiteness of the lilies are all before me. Nay, I can feel the tremulous touch of the west wind, as it came stealing over leagues of billowy prairie, bearing the delicate breath of a thousand blossoms with it, and the music born of all low, murmurous sounds. Thank God, that when the beauty of this outward world fades upon the vision, its glowing impress remains "among the beautiful pictures that hang on memory's wall."

Winter is upon us. Not with a heavy tread like a mailed man, hurrying storm and tempest about him; but noiselessly creeping over the earth, and stealing like an icy breath into her very heart, till the blood stands still in her myriad veins, and you cannot hear a life-throb. The sun went down one night in an ashen sky, and at dawn the snow lay, trackless, over everything. The peach tree, by the garden gate, was a new created wonder, with every limb piled high with a downy weight; all its roughness covered, and all its stiff boughs strung with snow flowers, as beautiful as those that clustered there last June. The clouds of brown snow-birds dashed into the branches and out again, half frightened at the showers they shook from them. The pines and the cedars were stooping to the ground with the burden that had fallen on them, until, as the sun rose higher, they freed themselves, limb by limb, sliding little avalanches of snow from off their dark green foliage.

The children were in ecstasies of delight, and little KATE, whose blue eyes first opened with the violets last May, clapped her dimpled hands, and drew up her rosy mouth, with many an exclamation of baby wonder. "It is the first snow-fall you have ever seen, little one," said I, musingly, as the tiny fingers locked themselves over mine, and the clear, trustful eyes searched my face for a solution of the mystery, and I looked half pityingly down into the bright, upturned face, as I thought how often, in her after life, our pet would see heavier snows, burying, perhaps, all the joy and sunshine of her world. And yet the snow is not a fitting emblem of our sorrows and bereavements, but rather of the comfort and consolation that comes afterward; for when the flowers are all dead, and the earth desolate and blighted, it falls tenderly in its spotless purity, and hides every stain and seam.

If winter be welcomed as a season of jollity and merry-making in city and town, it is one of deep happiness and enjoyment in the country. All the rest of the year Our Farm is a scene of busy, bustling labor; cheerful, indeed, but often wearisome. But when the winter fairly sets in, all the household settles into a quiet that is more than rest. There is ample time then for thought, and for attention to those charities that make life beautiful. There are the long evenings by the fire, when the circle is complete, and each one brings some treasure to enrich the common store of wisdom or happiness. And there is the ever festive day, the crown and glory of the year, the day of all days, the blessed Christmas.

From the white-haired pilgrim, bowed down by the weight of weary years, to the lisping child with the dew of the morning yet fresh upon its heart, every one keeps a kindly memory of the day on which heaven and earth, the human and the divine, were first closely linked together. The herf of princely domains and the child of the humblest cottage, hear alike at the mother's knee, the wondrous story of the Babe of Bethlehem, and the star

that shone in the east to herald his birth. Ah! what comfort to sad hearts, aching in their human sorrows 'was laid in that lowly manger, away under the skies of Judea. What a radiance has flowed from it into the darkness wherein we vainly groped after God. The stern Protestants, in throwing off Popery, set aside as relics of superstition the feast days of the church, and although in our time we dissent from the vandalism which prompted them to mar the beauty of the grand old cathedrals, yet we have hardly reverence enough for the days of solemn observance, set apart from others by the devout old fathers of the church. I could wish to see the holly and pine twined about every home; to hear, as in Germany, the ballad-singers, with their songs of the nativity, going about the streets, and the full-voiced choirs, making the churches resound with the anthems first sung by angels to the wondering shepherds on Judea's plains; and that from lip to lip should pass the greeting of old, "unto us the Christ is born."

The New Year is a more solemn day on many accounts, and yet it has in it far less of deep religious meaning. Every day of our lives is to us a new day as much as this, and should be as seriously entered upon, but it is well that there should be times when the burden of life should be laid down, and the soul look backward over the way it has come, and forward over what lies before.

As I write the snow is again falling, great, feathery flakes, that cling like stars to everything. Talk of the delicate ARIZ! was ever so dainty a sprite as the spirit of the snow-flake? Robed in garments that vanish at a touch, yet float unsullied through leagues of blue air; born, perchance, from a dew-drop in a rose's bosom, wafted about with a fleecy cloud, sent down in the rain, caught up again by the sunbeam, tossed hither and thither, till the winter prisoned it, gave it a pearly robe, and sent it sailing down again to wear a queenly mantle for the brown earth. Thicker and faster come the flakes, and the meadows are already whitening. If the wind rises at sunset, and piles it into long drifts and mounds, and howls down the chimney, and sweeps the hemlock branches past the window with a moan, then all night long I shall lie awake and listen, and think of ships drifting out on stormy seas, and yawning roofs through which the air creeps searching, and musing thus I shall pray in my own happiness, "God pity the poor, God comfort the wretched."

AMERICAN WOMEN.

AN exchange paper says it is a matter of common observation, that English women belonging to the higher classes unite with their mental accomplishments far greater robustness and strength of physical constitution than are usually found in the females of this country, and all are ready to admit that the human form, in classic antiquity, far exceeded, in perfection of symmetry and vigor, the ordinary development of the present day. Look at the women of our higher circles, with their thin and willowy forms, their pale and sallow faces, their inability to endure the slightest exposure or fatigue. Observe, in all classes, how early the cheek loses its youthful freshness; how common are complaints of "delicate health;" how universal the appearance of fragility. If mothers, instead of compelling their infant offspring to live as prisoners, would allow them to have fresh air and plenty of exercise, there would grow up a generation of women, mentally as well as physically superior to the cadaverous, angular-shaped walking skeletons which now frighten the foreign stranger, and are hastening rapidly to early graves. Upon this subject the New York Express makes some wise suggestions:

"We would advocate, or rather insist upon, the attachment of a gymnasium to every school; and if one were in every house, it would prove an actual saving of more than its cost, in physician's bills, medicines, and nurse's wages. A frolic every day with the 'reclining board' or the 'parallel bars,' would put to flight many juvenile ailments, banish the physic bottles from the shelf, and shed a glow of cheerfulness throughout the household. The benefits that would result to the community and to future generations from such a system are absolutely incalculable. The evils of a hot-bed education, where culture of the mind is attempted, with neglect of physical development, are not so universally recognized as they should be. The old adage—'mens sana in corpore sano'—shows the ancient estimate of the parallel culture of body and brain. The dependence of the integrity of the brain on the health of the body—the need that organ has of rest as well as exertion, ought ever to be borne in mind. Nature should be allowed her bent in harmonizing the employment of the intellect with physical activity, by alternate exercise. And no school deserves patronage where this subject has not due consideration."

IN-DOOR EXERCISES.—Females who are much confined within-doors, often suffer ill-health for the want of exercise. Nature demands it, and health cannot exist without it. The skipping-rope, the dumb-bells, battledore and shuttle-cock, &c., are all aids to the required end. Frequently, however, these exercises are regarded as childish; it is overlooked that from women, as well as from girls, nature demands the fulfilment of the same laws, and there is no time when systematic exercise is more needful to the healthy development of the future woman, than between the ages of fifteen and twenty-one. Ladies who are not above superintending their own household affairs—who look upon the rubbing of a mahogany table and the sweeping of a carpet, as necessary but pleasant helps to the preservation of sound health—are less in need of artificial aids to exercise, than those whose most energetic labors are confined to the performance of a set of quadrilles upon the piano, or an occasional promenade in the walks of fashionable life.—Selected.

NEVER despair of goodness. Men are bad, but have been worse. The badness shall die out; The goodness, like the thistle down, shall float, Bearing a germ beneath its tiny car— A germ predestined to become a tree, To fall on fruitful soil, and on its boughs Bear seed enough to stock the universe.—[Mackay.

Choice Miscellany.

Written for Moore's Rural New-Yorker.

'TIS DARKEST ERE DAWN.

Let the past be past forever,
All its woes forgotten now!
Trensure pleasant scenes, but never
Let by-gone sorrows cloud the brow!
Former sorrows were but warnings
To lead us in the upright way—
The darkest hour comes ere the dawning
Of the brightest summer day!

Lift the heart and press right onward!
Nor brood o'er past or coming woe—
With eye upraised, not brow bent downward—
On in duty's footsteps go!
Foes may gather round thy pathway,
Friends may coldly turn away,
But One there is who'll never desert us
At the dawn of sorrow's day!

One who gave us hands to labor,
Hearts to love and minds to think—
Envy not, then, friend or neighbor,
But from the Empyrean fountain drink!
Drink fresh hopes, and strength, and beauty—
Strength to bear life's darkest hour,
That we, when ended is life's duty,
May rest from labor evermore!

ELOISE.

PLOWHANDLE PAPERS.

MR. PLOWHANDLE'S BROWN HEAP OF HONORS ENDS IN SMOKE.

KARSTAIL COTTAGE, Dec., 1883.

COL. MOORE:—Your kind remarks to my last letter were very well, and I feel all the same thankful to you for them as though they had done me any good. The fact is, my fat was all in the fire afore you sent them, and nothing left of my grand brush heap of honors but the brands and ashes of disappointment. I've had my troubles—I've lost my cattle, had my horses die and my sheep, and the boys steal my nice melons, but I never yet, in all these troubles, had anything take me down as something that happened after I wrote you that letter about being put up for a member of the Legislature to get a bridge over the Toemuddy. I considered myself the same as nominated, and had got the speech all by heart, that I was going to make when the people called me out to accept it. I had made it more nor six times to the oxen when I was plowing. I'd drive them to the end of the land, and then get upon the fence before them, and then I'd say to old Broad, says I, you're JONES, and to old Brindle, you're SMITH, and the stubble and thistle stalks behind us are the people, though they're no great consequence, except to plow in. I tell you I made some tall speeches, and I calculated when they were to be delivered to give Jo. STRUBBS, the man who prints the Spread Eagle, a dollar to put the speech in that paper, with some busting remarks about me and the RURAL. SMITH says a man can get the biggest kind of a character if he only stops the editors pretty well. However, it's all up hoddly with me now.

"SWEETENIN' "

A day or two after I sent you that letter, one evening when I had finished reading the papers, and folded up my spectacles, and turned round to toast my feet at the stove, a little before going to bed, mother (who had been darning stockings all the time on the other side of the stand,) says, looking up from her work, "You had a pretty hard time to-day getting out the logs from the swamp, didn't you, JONN?"

"Well," says I, "it was a pluggy hard job."

"Feel tired, don't you?"

"Hain't been so tired in a year."

"Maybe you'd like a bite before going to bed?"

"It wouldn't be bad," says I, not thinking that there was any cat under the meal, for it's no uncommon thing for her to do just so when I've had a hard day's work.

Pretty soon she came back with a big plate heaped up full of nutcakes, and set them down on the stand beside me. Now, Col., nutcakes are my heart's delight; I like 'em common, very well, but a great, fat, sweetened nutcake, that's been fried a little crisp on the outside, and only just got almost cold, it's a nice pudding, and custard pie, and mince pie all put into one. Golly! I wouldn't swap places with Queen Victoria if I couldn't have sweetened nutcakes once in a while. "Perhaps," says she, "you'd like some of that new cider you fixed the other day."

Says I, "that will be the last step into Eden." It was some cider I'd doctored so as it wouldn't grow any more sour. Anybody may have nice cider all the year if they will only take a little pains.

So she brought in the mug of cider and set it down on the stove-hearth to warm, and put the glass on the stand, and set down to her work again, and she looked so pleased and happy, that I wanted to hug and kiss her, almost as bad as when I used to go sparking.

I ate a nutcake, and then I poured out some cider and drank it. Golly morry! Col., you don't know what real sugared-off-happiness is, till you eat some of my wife's sweetened nutcakes and drink some of my cider. And then I eat some more nutcakes and drank some more cider.

Says I, "FLORA"—that's her girl name, and I always call her by it when I feel uncommonly tender—says I, "FLORA, you never made such good cakes before in your life."

"Well, JONN," says she, "I'm glad you like them."

"Like them," says I, "why," says I, "I'd go twenty miles in a snow storm to see the man that had got so good a wife and so pleasant a home as I have." She kinder sighed and looked up, and says she, "our home has always been a happy one to me when you are in it, JONN." I was just going to say I hoped always to be here, when it popped into my mind what I had been doing. You see the nutcakes and the cider had put everything out of my mind, but my wife and our happy home. She took off her glasses and laid them down on the

stand, and her eyes began to grow moister and moister, and says she, "JONN, I have heard some things to-day that makes me feel very bad."

"No friends dead, I hope."

"No, JONN, no friends dead; but Mrs. STREET-TAN has been here to-day, and says you're going to be nominated for the Assembly." I told her there must be some mistake, for you had never said anything to me about it. Didn't I begin to feel mean?

"Well," says I, "there has been some such talk down at the Corners—but I thought not to say anything about it till after the caucus."

"Ah, JONN! it's a bad sign when a man engages in anything that he's afraid to have his wife know. If I am not to share your confidence as I have always shared it, then I shall be unhappy indeed."

"But I did mean to tell you all about it if I got nominated."

"And then it would have been too late, for I should have felt bad to see you defeated,—the thought of it would bring me misery."

"Why, don't you see, if I get elected you'll be the Hon. Mrs. PLOWHANDLE, and we can go to the Legislature together, and you can see all the great folks, and we shall get invited to dinners and suppers, and all sort of places."

"I've no ambition, my good JONN, to shine as anything beyond the deserving wife of an honest, independent man. We're getting old, JONN, and we have our pleasant home."

"Yes, but then there's the bridge over the Toemuddy."

"It will be a bridge of sighs to me, and groans to you, I fear. No, no, my kind, good JONN, don't let your patriotism deceive you. It's more ambition than anything else, that is taking you away from yourself and from your happy home. Can you ever be more happy than now?"

"Not this side of Paradise."

"Then why not stay?"

I was getting soft fast. "But," says I, "how can I get out of the scrape? I promised to stand it, anyhow."

"Why," says she, "just as easy; go to SMITH and tell him to take your place. He's after the widow MULLIN,—she won't have him; but if he's going to the Legislature she will have him right off. But," says she, putting on her glasses, looking very sad, and taking up her work, "I don't want to do anything to make you unhappy, JONN, and if you think it best, I'll try to be satisfied."

Perhaps, Col., you will think me rather faint-hearted to have a woman rule me so, but I couldn't help it. I gave right up. I don't believe you could have got me away from my nutcakes and cider if you would have made me President. Says I, "FLORA, I'll never leave the home where there is a woman to make such nutcakes, till I am carried out by the neighbors. But," says I, "mother, you don't know what a flock of chickens you destroyed in breaking this egg of my hopes and ambition."

"Better," says she, "break the egg than to have it hatch hawks."

FINALE.

The next day I went over and told SMITH how matters stood, and that he must take my place. Says he, "I can't think of it."

"But you must, though, besides wife says the widow will give right in the moment you're nominated."

"Does she say that?"

"Yes, and women know about such things."

"But if I'm elected, JONN, you must go and help lobby the bridge bill,—can't get along without you."

"Well, I'll see about that."

After all, Col., I do, between you and I, feel rather bad to think all my fine plans have gone to grass. Still, I'm glad to give up to mother. I know she's happy, and it makes me feel happy to know it—but then to have had one of your correspondents so soon after he had come out in your paper get to be an Hon., I feel sorry on your account. I don't suppose I shall write any more, now I have gone back to my native significance—for your readers would take the interest in a man that's down as they did in a rising one. Although by those things I am made a "wider and solidier man," (does not Mr. P. mean a "wiser though a sadder man?") yet, Col., I am ever yours, to command,

JOHN PLOWHANDLE.

LONGFELLOW thus happily describes the gradual coming on of twilight:

Slowly, slowly, up the wall,
Steals the sunshine, steals the shade,
Evening damps begin to fall,
Evening shadows are displayed,
Round me, o'er me, everywhere,
The sky is grand with clouds,
And athwart the evening air
Wheel the swallows home in crowds,
Shafts of sunshine from the West
Paint the dusty windows red,
Darker shadows, deeper rest,
Underneath and overhead,
Darker, darker and more wan
In my breast the shadows fall;
Upward steals the life of man,
As the sunshine from the wall.
From the wall into the sky,
From the roof along the spire;
Ah! the souls of those who die
Are but sunbeams lifted higher.

EVERY MAN'S AUTOBIOGRAPHY.—Every man is actually engaged, day by day, in writing that autobiography which neither time nor eternity will efface. It may be written in high places or in low, in public remembrance or in the honest heart of domestic affection; but we are writing fast, we are writing sure, we are writing for eternity. Happy is he who, through the grace of God assisting him, records such lessons of kindness, truth, and wisdom, that when he is gone he will be held in grateful remembrance; happier still to have one's name written in the Lamb's Book of Life, and when every memorial and monument of his earthly history has perished, he may ascend with the Son of God to honor, glory, and immortality.

RISE IN HONOR.—Infinite toil would not enable you to sweep away a mist; but by ascending a little you may often look over it altogether. So it is with our moral improvement; we wrestle fiercely with a vicious habit, which would have no hold upon us if we ascended into a higher moral atmosphere.

SABBATH MUSINGS.

Written for Moore's Rural New-Yorker.

THE EARLY DEAD.

TO MY FRIEND A*****.

When youth is budding and life's hopes are fair,
How cruel seems the sudden hand of death
To crop these flowers, and fill with desert air
The garden which before had sweetest breath.

Life's wave, white-capped and sparkling in the sun,
Rolls gaily on towards the shore of time;
Too late, alas! those rugged rocks to shun,
And dies while yet in childhood's golden prime.

The morning which so sadly greets the sun,
Who dries the tears night's watchful stars have shed,
On meets with clouds ere half its race is run,
And night shall find it with the Storm King's dead.

But mourn not for the *loved* who pass away
While life is pleasant and its flowers in bloom,
God's home awaits the spirit, though the clay
Returns to dust within the dismal tomb.
Dedham, Mass., 1885.

SABBATH MUSINGS.

"God will bring every work into judgment,—with every secret thing, whether it be good or bad."

When we read such Scripture, how apt are we to think that "good" deeds, such as will be accepted at the last, if they are not those that men call good, are indeed such as seem to us to square with the *Divine Law*. But how sadly are we mistaken right here. Judged by the perfect standard of that law, "there is none righteous, no not one." There is no "goodness" nor "righteousness" in the wide earth, except what the Savior brought! God saw the world lying in wickedness—not in goodness—and brought down a perfect righteousness of his own for sinners to be clothed in, in lieu of the "filthy rags" of their own. An act of ours is good, therefore, only as it is done in the faith of the righteousness of Christ; and "bad," that which is done with a view of obtaining righteousness by keeping the law.

In no single feature do men—the best of men—keep the law, for it requires us to love God with all the heart, and all the soul, &c., and to love our neighbor as ourself—a thing which it is absolutely impossible for fallen nature to do a single moment, to say nothing of a long life. But the law, nevertheless, thunders its condemnation, "cursed is every one that continueth not in all things that are written in the book of the law to do them." This makes a bad case for us. God saw it so, and because of the "great love wherewith he loved us," sent his son to satisfy the law—to pay the penalty which it demanded—to redeem the whole race from under its curse. And this great work was consummated on the cross. It was there "Jesus bled." He was a "ransome for many." "He was made a propitiation for our sins, and not for ours only, but for the sins of the whole world."—And He now calls upon us to look to Him—to believe that he has indeed "borne in his own body the sins of the whole world"—that He has "satisfied the law;" and so believing, to find our safety and our salvation in Him. There is not a man in the wide world so steeped in crime and pollution, who may not this day for himself say, "He has borne the curse of the law" for me. The reception of this truth into his heart is his conversion. *Her be finds his Savior!* In this he learns of God's love to him, a sinner,—for this, he comes to love and serve Him. This it is that brings him back to allegiance to God. This it is that gets him out of bondage to the law and legal duties, and ushers him into that glorious liberty, wherewith Christ makes his people free.

Our "deeds in life" are "good" only as they are done in this faith of the work and righteousness of Christ—faith in the completeness and absolutely independent character of the marvellous redemption which Himself gloriously sought out, and faith in the all-sufficiency of the mantle of His perfect righteousness for the vilest of men through believing.

Empire State, Jan., 1880.

BEARING CROSS.—The Crusaders of old, we are told, used to bear a painted cross upon their shoulders; it is to be feared that many among us take up crosses which sit just so lightly; things of ornament, passports to respectability, a cheap exchange for a struggle we never made, and a crown we never strove for. But let us not deceive ourselves. None ever yet entered into the Kingdom of Heaven without tribulation; not, perhaps, the tribulation of fire, or cross, or rebuke, or blasphemy; but the tribulation of a bowed spirit and of a humble heart; of the flesh crucified to the spirit, and of hard conflicts with the power of darkness; and, therefore, if our religion be of such a pliable and elastic form, as to have cost us neither pains to acquire, nor self-denial to preserve, nor effort to advance, nor struggle to maintain holy and undefiled, we may be assured our place among the ranks of the risen dead will be with that prodigious multitude who were pure in their own eyes, and yet were not washed from their filthiness.—*Rev. Dr. Moore.*

EARLY RELIGIOUS IMPRESSIONS.—It is said that of the missionaries who have gone from Great Britain to the heathen, nineteen-twentieths received their first religious impressions in the nursery or the Sunday School. And of the Evangelical Ministers of England, who are under forty years of age, more than two-thirds became pious in these schools.—*Idem.*

RESPONSIBILITY.—I confess (said a faithful servant of God) that I seldom hear the bell toll for one that is dead, but conscience asks me, "What hast thou done for the saving of that soul before it left the body? There is one more gone into eternity; what didst thou do to prepare him for it? and what testimony must he give to the Judge concerning thee?"—*Baxter.*

THE TRAVELER.

LETTERS FROM A HUNGARIAN.

Introductory.

BERLIN, Prussia, 1858.

DEAR FRIEND MOORE:—"Write me some letters from Hungary," was, I believe, what you wished me to, as we bade each other farewell, and this I agreed to do after reaching my native land—the home of the brave Hungarians. But look at the date—it will tell you that, instead of scrambling amid the vine-clad hills of Hungary, I am snugly seated at my desk in the Capital of Prussia! Well, I must make some explanation. Before I write you about my future destination, I must tarry awhile on the road, and send you a few tridles I have picked up here and there; at the same time telling you the way I traveled.

I will not weary your patience with a description of the scene at the dock, when the booming of cannon announced the departure of friends dear and near, to a distant land, beyond the ocean; nor will I trouble you with a long epistle about the grandeur and sublimity of the boundless ocean on the one hand, and the ludicrous scenes so often enacted on board, when Neptune demanded a surrender of what our little cavity of a stomach contained, to satisfy his own yawning abyss. No—who has not heard of these things? What traveler on the ocean has not already amply described them? Nor had we any "awful" storms, and exciting adventures during our voyage. The entire trip, from the first of July, when we left Sandy Hook, down to the 15th, when we arrived at the haven of Hamburg, was characterized by an almost uniform state of fair weather and good winds; and the only day on which the sea was "rough" and the sky overcast, was the memorable "fifth."—While "Young America" was no doubt celebrating the 5th (the glorious 4th being on Sunday) in good old style, with a burning sun above, we (myself included) were wrapped in shawls and overcoats, and scarcely thought of any such thing as the Declaration of Independence. With a heavy sigh, we, one after another, paid homage to the raging billows, and involuntarily soothed their wrath by the yet undigested contents of our digestive apparatus. Though no tyro in sea-crossing, (ten years ago, when I emigrated to America, I was full eight weeks on the ocean,) I was nevertheless compelled, for one day at least, openly to declare my submission to the nauseous ruler—sea-sickness. I don't know if anybody has ever written on the subject—but if a little practical advice be not out of place, I would here add what seems to be the best preventive. Whatever may be the cause of this evil, it is certain that the close, damp atmosphere below deck very much tends to aggravate it; while a brisk, rapid walk on deck, in the cool, fresh sea-breeze, will not only assist in the digestion of the food, but also counteract the upward movement produced by the rocking of the vessel. Rain or shine, calm or storm, whenever you feel a state of excitement in your stomach, run on deck, exercise your body as does the driver waiting for passengers at the corner of the street on a cold winter's day (and it is generally cold enough when the ship is rocking, tho' it be in the summer season). I speak from the experience of myself and many other passengers; and had I had an oil-cloth coat, I should not have been sea-sick, even on the fifth; but the rain prevented me from being on deck, and so I was soon overpowered by the example set by fellow passengers.

Speaking of the passengers, I cannot help remarking, that if you wish to be in Germany before you reach the German land, take one of the steamers that run every two weeks from New York to Hamburg. They have all German captains and a German crew. The table-d'hôte, mode of serving, &c., is all in due German style; and above all, the passengers are generally of Teutonic descent. The steamer in which I went—the *Saxonia*—was in fact a miniature German town, with a population of about 400, (crew and passengers,) mostly Germans, with only a few Americans, Frenchmen, Poles and Hungarians. Such a steamer is an excellent preparatory school for life in Germany.

As we lay too off Southampton, most of the foreigners, (for so the Americans and English may be called in comparison with the majority,) left us, and in forty hours afterwards we entered the mouth of the Elbe. As we passed the romantic summer residences of the rich Hamburg merchants, the waving of handkerchiefs on the shore, told us of the hospitality of the German, who gladly welcomes the stranger coming from the "land of the free." In Hamburg our trunks were not visited; but on riding past the custom-house, the question was merely asked whether we had anything besides what was for our own personal use; and on our answering "No," the driver was told to "go ahead," and we were soon in the heart of the great commercial city of Germany. Almost the very first thing that attracts the comer from America, is the walking of pedestrians in the middle of the road. People of all classes, rich and poor, ladies as well as gentlemen, may be seen walking alternately on the sidewalk, or in the middle of the street behind a wagon. At first sight this seems strange indeed, in a city like Hamburg. But when you take into consideration the circumstance that the sidewalks are often very narrow, while the "Broadway" is paved with smooth stones, and by no means so full with vehicles as the world-renowned Broadway of your Empire City, you will easily account for the zig-zag walk of pedestrians, now dodging the vehicles on the road—now avoiding the crowd on the narrow trottoir. Were there in Hamburg such a street as Broadway, or even as the business portion of Main and Buffalo streets, in your own "Flour City," it would well nigh be impossible to walk out as the Hamburg pedestrians do. But, as it is, there is no such thing as a "business street" in Hamburg. "It is all business," said a German friend of mine, but not being concentrated in a focus, as in many American cities, the din and rat-

tling of carts and carriages is "few and far between."

I should like to tell you a great many other things about the free German city, Hamburg, but on looking at the date, I see Berlin staring me in the face, and I have been writing enough almost for two letters, without so much as hinting at what I saw in this royal city. But having yet some space left, I will write a few words on German life in Berlin. Here, if anywhere, in the largest city on the Continent, (with the exception of Paris,) the social life of the German may be best realized. While the wealthy aristocrat goes to the Opera or Royal Theatre, the middle and humbler classes assemble together with their families in the numerous "Gardens" all over the city, where, from sundown till midnight, bands of music delight the ear with the most charming pieces. And what does all this cost? Nothing, if you please; all your expenses may not be more than a three-cent piece, for which you get a glass of genuine German *lager beer*. Here the laboring workman may be seen with his family, seated around a little table covered with bread and cheese and the never-failing beer—it is his supper; and how he relishes it here in the open air, surrounded by a happy circle of children, and delighted by the sound of music! Can there be a better recreation after a day's work? Here, again, we behold the merchant, walking up and down in the garden after having been seated, perhaps, all day at the counter or writing-desk. Needs he any better refreshment? The most practical and busy Yankee, I think, will be pleased with this genial life as seen in the German "Volksgarten." But when will he imitate the example in his own republican land? When will he spread the tastes for amusements calculated to cultivate the social feelings, rosy cheeks, and a healthy complexion? Your best concerts don't give such good music, though they give many a headache in the oft ill-ventilated halls. Yes, the German alone understands how to enjoy life—social life.

In my next, which will no doubt hail from Hungary, I will say a few things more about Berlin. Adieu, across the waters, from your friend,

SIMON TUSA.

THE COUNTRY AND PEOPLE OF JAPAN.

A CORRESPONDENT of the London Times, gives the following account of the famous city of Jeddo, in Japan:

"Jeddo, without exception, is one of the finest cities in the world; streets broad and good, and the Castle, which includes nearly the whole centre of the town, built on a slight eminence. There are three walls or enclosures round this quarter. Within the inner, the Tycoon Emperor and heir apparent live.

The houses of the Princes and nobles are palaces, and you may imagine the size when some contain 10,000 followers. They are built in regular order, forming wide streets some 40 yards broad, kept in perfect order; an immense court-yard with trees and gardens, forms the centre of each enclosure, in the midst of which is the house of the owner; the houses containing the followers, servants, stables, &c., form this large enclosure. They are built of one uniform shape. The gateways leading to the court-yard are exceedingly handsome, of massive wood work, ornamented with lacquer and other devices. From the road that leads by the moat to the second wall is one of the finest views I ever recollect seeing—on one side the Gulf of Jeddo, with the high hills rising beyond, while on the other is a portion of the great city of Jeddo with its trees and gardens, picturesque temples, and densely crowded streets, extending as far as the eye can reach towards the interior; then there is a view of the trees and green fields in the distance, far away beyond a thickly built suburb; but the most striking view of all is that close by, the well-kept green banks of the second defence, rising some 70 feet from the broad moat below, with grand old cedars over a hundred years of age growing from its sides. The fine timber, the lay of the ground, the water lilies in the moat, the grandeur, good order and completeness of everything, equal, and in some ways far surpass, anything I have ever seen in Europe or any part of the world.

We made an expedition into the country. The cottages were surrounded with neatly clipped hedges, the private residences as well as the public ones, and in some ways far surpass, anything I have ever seen in Europe or any part of the world.

The Botanical Gardens are very good, and well-cared for; good nurseries of young pines, cedars, and other evergreens."

THE LAND OF CONTRARIES.—In Australia, the north is the hot wind, and the south the cool; the westerly the most unhealthy, and the east the most salubrious; it is summer with the colonists when it is winter at home, and the barometer is considered to rise before bad weather, and to fall before good; the swans are black, and the eagles are white; the mole lays eggs and has a duck's bill; the kangaroo, an animal between the deer and the squirrel, has five claws on his fore paws, three talons on his hind legs, like a bird, and yet he hops on his tail. There is a bird (*me tiphaga*) which has a broom in its mouth instead of a tongue; a fish, one-half belonging to the genus *rara*, and the other that of *equalus*. The cod is found in the river, and the perch in the sea; the valleys are cold, and the mountain tops warm; the nettle is a lofty tree, and the poplar a dwarfish shrub; the cherry grows with stone outside; the fields are fenced with mahogany; the humblest house is fitted up with cedar, and the myrtle plants are burnt for fuel; the trees are without fruit, the flowers without scent, and birds without song.

Wisdom allows nothing to be good, that will not be so forever; no man to be happy, but he that needs no other happiness than what is within himself; no man to be great or powerful, that is not master of himself.—Seneca.

TASSO replied to a proposition that he should take vengeance on a man who had injured him, "I do not wish to deprive him either of his goods, his honor, or his life. I only wish to deprive him of his ill-will."

SCENES IN AND AROUND JERUSALEM.

VALLEY OF JEHOSEPHAT, OR KEDRON.

"SURELY there is no spot on earth like Jerusalem." Here the faithful ABRAHAM, with a confidence that knew no doubt, and a faith that "laughed at impossibilities," raised his hand in obedience to the divine command, to sacrifice his only son—the child of promise and of his old age;—here the son of Jesse tuned his harp—here SOLOMON, "arrayed in all his glory" astonished the world by his magnificence and wisdom. But, a greater than SOLOMON walked its streets, climbed its mountains, and taught His listening disciples under the shade of its ancient olives. The most hallowed memories, the most enchanting recollections spring at the mere mention of JERUSALEM—"name ever dear." "Beautiful for situation, the joy of the whole earth, is Mount Zion—the city of the Great King." Palestine, the land of Prophets, is now attracting universal attention, and its future is the subject of earnest thought and speculation. Many entertain the belief that it will ere long become truly "the joy of the whole earth." Whether their hopes are to be realized or not, we can say

"Glorious things of thee are spoken, Zion, city of our God."

Palestine it is known, is under Turkish rule. A few years ago no Frank, whether Jew or Christian was permitted to make oath in a Mahomedan court of Justice, nor could he own a foot of land. Death was the penalty inflicted on a Mahomedan who should forsake the religion of his fathers.—The late Russian war, and Anglo-French Alliance, have exerted a humanizing effect on the Turkish government. They seem to have discovered the important fact that they are not independent of the European powers; and that they cannot trample with impunity upon the rights of men, nor treat as dogs the citizens of other and better lands. A salutary and wonderful change has been made, and now the Mahomedan may change his religion without danger to life or property, and foreigners are not only permitted to occupy land in Palestine, but by a late *firman* they are invited to come there, or any other portion of the Ottoman empire, and occupy as much land as they may desire, on terms so extremely liberal as to accommodate the poorest, and astonish a Yankee land speculator.

These, and other events which we will not now mention, have directed especial attention to the land of Judea, and its chief city, and to gratify the earnest desire for knowledge on the subject, we design to present our readers with a series of illustrated sketches of scenes in and about Jerusalem. For the engravings we are indebted to JAMES CHALLEN & SON, publishers of the "City of the Great King," a most excellent work, upon which we shall draw largely for the subject matter of these sketches.

CHURCH OF THE HOLY SEPULCHRE.

Over the spot where it was supposed the Savior was buried, a magnificent pile of buildings, known as the Church of the Holy Sepulchre was erected by order of Constantine, and finished and dedicated in 325. This building was destroyed in 614 by the Persian and Jewish army under Chosroes II. Another series of buildings was, however, soon erected on the site of the former, which remained until 989, when they were burned by order of the Arabs. The church was again rebuilt in 1048, but in a much less imposing style than formerly, and in this state it was found by the Crusaders in 1099. It was soon enlarged and beautified. In 1608 the entire pile of building was again doomed to destruction; but phoenix-like rose from its ashes in 1810.

On entering this church the visitor is surprised and mortified to find the whole premises under the charge of a Turkish guard, armed with guns, swords and cowbills, the latter of which they use on the most trivial occasions. Although in this building is represented to be such an aggregation of rites of important events, as to stagger credulity itself, yet no one can enter it without a feeling of reverence. The body of the building is a large rotunda, about ninety-nine feet in diameter, surrounded by an imposing colonnade supporting the

galleries and a lofty dome. It is on a slightly elevated platform, directly beneath the skylight of this dome, that we find the beautiful little marble church containing the alleged tomb in which the Lord of Life lay. It is only about ten feet in breadth, and twenty in length and height. Its appearance is very finely represented in the engraving; that is as it appears under ordinary circumstances, but during festal occasions it is very highly decorated.

THE WALLING PLACE.

THE JEWS in Jerusalem are a down-trodden, mourning people. The words of HAMAN are as true now as they were when uttered at the time NEREMIAH attempted the restoration of the city—"The remnant that are left of the captivity, there in the province, are in great affliction and reproach." They are oppressed not only by their Turkish masters, and by those styling themselves Christians, but even by their own Rabbis. Even at the present time it would cost any Jew in Jerusalem his life to venture into the Church of the Holy Sepulchre, or even within the outer court of his beloved temple. The portion of the Temple wall approached by a narrow lane through what is called the Mogrebin Quarter, is esteemed the most sacred of all places to which they have access, on account of its vicinity to the Holy of Holies, and there they repair every Friday—indeed, in greater or less numbers every day—and weep and pray for the advent of the Messiah.

The place frequented for this purpose, is called the Walling Place, and the engraving shows the disconsolate Jews engaged in this mournful service, which is described by an eye-witness as being affecting even unto tears.

VALLEY OF JEHOSEPHAT, OR KEDRON.

THE valley commencing on the north-west of Jerusalem, in two gentle depressions, and encompassing the city on the north and east, terminating at its junction with another similar valley, is the Kedron of the Bible and Josephus; but is called Jehosaphat by Jews, Christians and Mahomedans. This designation of the valley seems to date far back, but is equally gratuitous and absurd whether due to the mistaken notion that this valley is alluded to by JOEL in his prophecy about the "Valley of the Judgment of God," (*Jehosaphat*), or to the equally mistaken idea that King Jehosaphat was buried in the tomb that now bears his name, for not only is the term a general, instead of a specific one, and the valley far too limited to contain even a ten-thousandth part of "all nations" of JOEL, but we are expressly informed that JEHOSEPHAT was buried in the city of David. The Valley of Jehosaphat, or Kedron, as described in the Bible, is in all probability the great Valley of *Megiddo* or *Armageddon*, the wide plain of Esdras, where so many important battles have been fought by Jews, Assyrians, Turks, Saracens, Franks, &c.

That the Valley of Kedron, was known as *Jehosaphat*, of which we give an engraving, was used as a place of sepulture, according to the repeated declarations of Scripture, the tombs that abound throughout its length and breadth amply testify. Vineyards, fig-yards, and olive-yards, gardens and patches of green, occupy the entire extent. It may have been called *Kedron*, or *Filthy*, which is the meaning of the word, on account of receiving the blood and other effluvia from the Temple. RABBI AKABA says there was a certain cave or cess-pool beneath the altar, whereby filth and uncleanness was carried down into the Valley of Kedron; and the gardeners paid so much money as would purchase a trespass offering, for the privilege of fertilizing their gardens with it.

THAT was a beautiful idea expressed by a Christian lady on her death-bed. In reply to a remark of her brother who was taking leave of her to return to his distant residence, that he should probably never again meet her in the land of the living,—she answered:—"Brother, I trust we shall meet in the land of the living. We are now in the land of the dying."

YOUNG RURALIST.

INTERESTING ARITHMETICAL FACTS.

UNDER this heading "JUVENIS" made some statements which he thought would be useful, and others which, we rather think, were designed to puzzle the boys. The youth, however, must be much sharper now than when JUVENIS was a juvenile, for many have detected the *cach*, while others, like the following, which we give, are after him, rather sharp. We will leave him to fight his own battles:

EDS. RURAL:—"JUVENIS," in the RURAL of Dec. 15th, page 409, would like to know the *rationale* of the following result of figures, viz:—"Any sum multiplied by 5, or divided by 2, by adding a cypher, produces the same result." Well, according to our way of reckoning, if a cypher is joined to the right hand of any number, it increases that number ten times. Now, it is evident if I increase a given number 10 times, and take $\frac{1}{2}$ that product, it is increased 5 times. Hence, the result is the same as though I had multiplied the number directly by 5.

He also wants to know of some of the "Boys," whether figures will "lie," and gives an example which I conclude he wants explained. I will do it my way.—(See ex.) $\frac{1}{2} + \frac{1}{2} + 1 - 5 = 19 - 20$, which lacks 1-20 of making one; or in this case \$600.—But \$80, the amount left after each son received his share, makes up the \$600. Hence \$30 must be 1-20 of the whole sum. Now if \$30 is 1-20, 20-20, or the whole must be 20 times \$30, which is \$600. So you see figures won't lie when placed right. But, when placed as he places them to ascertain the solid contents of a round stick of timber, tub or round cistern, viz:—"If the article to be estimated is tapering, get the dimension of half the height or length," and then work according to his rule, I think figures will "lie."

I would like to sell "JUVENIS" 1,000 solid feet of grain for 1,000 bushels; I should cheat him out of some 200 bushels. Success to "JUVENIS."

Lyme, Ohio, Dec., 1858.

BYRON.

BREAKING STEERS.

MESSRS. EDS.:—In answer to an inquiry from a "Young Farmer," I will give my advice for breaking steers. Prepare a yard, say twenty feet square, board fence, posts outside, and so high that all hope of escape to the animal is at once given up. Having a light wheelbarrow or ratton with a short tip of a lash, in hand, and a few ears of corn in the pocket, or at hand, take the steer alone in the yard and commence making his acquaintance, tap him gently, following him around, and restraining him by degrees. Let the word *whoa* be always distinct, hang the bow on his neck, put it on and off until he is familiar with the article; then introduce a light yoke, that the bow will work easy, and let the other end down. Yoke and unyoke until he is completely subdued, feeding him at intervals, and get his whole attention. No person should be in sight except the trainer. Then, take the near steer and go through same process, except the yoking and unyoking; get him familiar with the bow and yoke, and having him subdued to the word, or by the gentle tapping on the ear with the whip. Now yoke up the pair—bring the near one under the yoke with the whip. Yoke and unyoke, say fifty times.

Keeping him always in reach of the whip, and holding the end of the yoke with your left hand, start him out forward and bring him around you, and under the yoke again, learning him to stop at the word and when the yoke touches his neck. The bow, when taken out, will be placed on his neck, so that he may "carry it around"—bring him around by the motion of the whip, sending him occasionally around the other steer, and always bringing him under the yoke. Steers will generally give up on the first lesson. Learning them to draw is a small matter, commencing with the chain, and loading by degrees, and never overload. The great secret is perseverance and kindness, discarding all harsh means—and his teachings should be followed up from day to day until completely under command. E. N. THOMAS.

THE OLD SCHOOL-HOUSE.

THAT was a neat little house that stood in the quiet vale. Many were the days we played beneath those lofty elms, and gathered flowers from the banks of the sparkling stream that wended its way through margins of moss until it poured its crystal contents into the majestic river. The place where our young ideas were first developed, and where each plastic character was moulding for time and eternity. There we were accustomed to meet from day to day, and have offered to us those cool and refreshing draughts from the Pierian spring. Memory lends her power and

"Calls back the vanished days to rapture given, When Love was bliss, and Beauty formed our heaven; Or dear to youth portrays each childish scene, Those fairy bowers where all in turn have been."

Many, in future years, whose names, perhaps, may be celebrated in history, or named in song for the noble deeds done to their country, may look upon that house as the place where they received the first impulse which urged them onward to future greatness. To those who have become inmates of classic halls, the world will never seem brighter than when they ramble through the green fields with their playfellows, and unravelled the mysteries of their daily task, and shared unservedly their boyish confidence.

Hereafter when called upon to stem the current of life's busy cares, O, may their bark glide as smoothly as did their tiny canoe down the limpid rivulet by the Old School House.

"But if through the course of the years that await me, Some new scene of pleasure should open to view, I will say, while with rapture the thought still late me, O, such were the days which my infancy knew."

MOORE'S RURAL NEW-YORKER

NEWS DEPARTMENT.

ROCHESTER, N. Y., JANUARY 8, 1859.

"RURAL" Progress.—Thanks to its friends all over the land, we are enabled to announce that the receipts on subscription to present volume of the RURAL far exceed those during the corresponding period of any year since its commencement. We bend in grateful acknowledgment of the numerous and substantial favors we are receiving from all quarters, and shall earnestly strive to merit this unexpectedly large appreciation of the RURAL.

Washington Matters.

The President has signed a proclamation ordering a public sale of 4,800,000 acres of land in Wisconsin during April and May, including the alternate sections which belong to government along the Railroad lines. Such of the lands as may not be sold will be subject to private entry.

The statement of the claims of American citizens against Mexico is completed. They amount to nearly \$11,000,000. Other claims are in the course of preparation. The reported revolutionary movements in Cuba have been anticipated by the government here for two months past.

It appears from the official returns from Bremen and Hamburg, two of the most important emigrant ports of Europe, that the number of emigrants thence to the U. S. was 41,840 for the ten months and a half previous to Nov. 15th. This is considerably less than the emigration for the same period in the year previous.

Lord Lyons, according to the latest British advice, will reach Washington about the first of March.

There is a prospect that the House Military Committee will report in favor of a protectorate over a portion of Mexico. The precise limits are not fixed. A large number of Southern members, however, including almost the whole of South Carolina's delegation, will oppose a protectorate, preferring to stand upon the provisions of the existing treaty, which establishes a cordon of military posts on the dividing line of the two countries.

DISPATCHES at the Navy Depot, from Commodore Lalleto, of the Wabash, dated Beirut, Nov. 3d, are received, but they add nothing new to what is already known concerning his investigation of the outrages on American citizens at Jaffa. The Commodore has transmitted all the documents in the case to our Minister at Constantinople, and thinks there will be no delay in obtaining justice.

THE correspondent of the N. Y. Tribune, under date 30th inst., writes that Gov. Medary, of Kansas has made a requisition upon the President for military aid in suppressing the disturbance in the Territory near Fort Scott. The official report relative to the late troubles in Kansas was considered by the Cabinet on Thursday, when it was determined to adopt a course which should bring Montgomery and Brown to speedy justice, and orders for that purpose were immediately dispatched to the Marshal of the Territory.

IMPORTANT dispatches were received on the 2d from the Gulf of Mexico, which led to prolonged consultations between the President, Gen. Cass and Mr. Preston, the Minister to Spain. What is their tenor has not transpired.

FROM a report of the Secretary of the Interior, made to the Senate, it appears that the entire cost of the Government buildings in Washington, including statutory and paintings, has been \$14,709,000.

Political Intelligence.

THE Inauguration ceremonies at Albany on the 1st inst., it is said, passed off with more than usual eclat. Gov. KING, stepping out, welcomed his successor in a very happy manner, while Gov. MORGAN congratulated his Executive forerunner in retiring from the office he had "so honorably filled." Both Houses will convene to-day (Tuesday) at 11 A. M. Lieut. Gov. CAMPBELL presides in the Senate. The Assembly will be called to order by Mr. WILSON, Clerk of the last House, and he will continue to preside until the election of a Speaker. The Oath of Office will be administered to the members by the Secretary of State. After the Assembly shall be organized, by the election of its Officers, the Governor's Message will be communicated to both Houses. The hour at which we go to press compels us to omit further note of proceedings until our next issue.

THE first of January was inauguration day in several other states, beside our own. Governors MONROE of Maine, and BANKS of Massachusetts, re-commenced their official terms with the year.—Governors WISNER of Michigan, BURTON of Delaware, and ELLIS of North Carolina, also enter upon their duties.

Gov. LOWN of Iowa, has refused to call an extra session of the Legislature of that State, which had been demanded on the ground of the necessity of further legislation in aid of the Iowa railroad enterprises and the enactment of relief laws.

THE Legislatures of California and Wisconsin met on the 2d inst. That of Pennsylvania meets to-day, (Tuesday.) Those of Maine, Maryland, Massachusetts and Michigan to-morrow, (Wednesday.) That of Illinois next week Monday. That of New Jersey next week Tuesday. At the coming sessions, U. S. Senators are to be elected in Michigan, Maine, Massachusetts, New Jersey, Minnesota, Illinois, Delaware, Louisiana.

THE Missouri Legislature permanently organized on the 28th ult. by the election of Mr. Coffey, Dem., as Speaker, Mr. Mosely, Clerk of the House, and Mr. Hough, Clerk of the Senate. The Governor's Message says the amount received from the Treasury for the two years ending Oct. 1st, was \$1,361,000, and the expenditures, \$1,132,000. In speaking of railroads, he says: The amount loaned by the State is \$24,950,000, of which bonds have been issued to the amount of \$10,056,000, leaving an amount due of \$5,894,000. The geographical survey is progressing rapidly and disclosing exhaustless quantities of iron, lead, copper and coal. Some additional legislation is suggested in order to harmonize the different interests growing out of the Banking law. As an evidence of the advance of education, the Governor says the number of public school houses has increased from 1,500 to 3,880 and the amount of money raised for building school houses from \$30,000 to \$130,000. The establishment of an agricultural college is urged.

THE Washington correspondent of the *Baltimore American*, says: "It is doubtful if the new Legislature of Minnesota will meet, and hence probable that no election for the successor of Gen. Shields in the Senate will take place. By a strange omission in the Constitution, which was accepted by both parties, no provision was inserted prescribing the tenure of the members of the Legislature, or for fixing the time of its meeting." The Governor, we suppose, can remedy this deficiency but he and the Legislature wear different political complexions, and he is understood to refuse.

All the hot water is not confined to Minnesota, for we hear that our Canvassers at Albany have decided to refuse certificates of election to the six Congressmen from New York city, for the reason that the returns in each case read "For Member of Congress," instead of "For Representative in Congress."

TERRIBLE RAILROAD ACCIDENT.—The telegraph, on the 31st ult., put us in possession of the fact that a dreadful railroad accident had occurred in Georgia, on the Columbus and Macon road, but the statements are so conflicting that we are unable to gain any definite idea as to the destruction of life. The first dispatch stated that "Forty persons were killed and drowned;" the second "a fireman and wood-passer killed, and G. W. SMITH, engineer, had his jaw broken. No passengers killed;" the third that "J. H. MILLER, engineer, the fireman and wood-passer, and Conductor SMALL, were killed, and several of the passengers drowned;" while the fourth gives the names of eight passengers and one train hand killed, in addition to engineer, conductor, &c.,—making fourteen—and further states, "the other bodies have not been recovered." While there is a degree of uncertainty enveloping this melancholy affair, sufficient information has been obtained to give it a fearful pre-eminence among the disasters of this kind that have visited railroad travel in our country.

N. Y. CANAL CONVENTION.—During the past week a Convention of forwarders and others, favorable to the enlargement of the canals, was held at Syracuse. Among the resolutions adopted was one asking the Legislature to enact a law providing for the submission to the people of the question of the authorizing a loan for the full payment of the canal debt existing on the 1st of January, 1859,—and another requiring the passage of a law providing for the publication of the rates of freight on railroads at stated periods, for the equalization of way with through freights, at a pro-rata established by law, with stringent penalties for violation, and a provision forbidding the increase of winter tariff to a rate exceeding 20 per cent. above the lowest rate charged during the season of canal navigation.

Nicaragua Affairs.—Information was received at Washington on the 30th ult., from Nicaragua, which shows that Yrisarri has not been recalled, but that his resignation as Minister to the United States, heretofore tendered, has been accepted. The Central American States are more than ever impressed with the necessity of forming a Confederacy for their mutual protection. It is said to be highly probable that Nicaragua would take no decisive action on the Cass-Yrisarri Treaty, until after the arrival of Sir William Gore Ouseley, whose arrival was daily expected.

The Weather of December, 1858.

WHILE the four months preceding November were exceedingly pleasant, the last months of the year have been quite the reverse, and have given us very little clear and fair weather.

In the first half of December, not one day was clear for one-half of the 24 hours. Indeed, of the 45 daily observations, at 7 A. M. and 2 and 9 P. M., only four were clear. The mean heat was one degree above the average. Rain was enough.

In the last half we had one day clear throughout, the 18th, that very cold day over the northern and north-eastern regions from us, and cold also here. December 16th was also mostly clear; the rest all clouds. Still, we have found the time quite tolerable, and some have said it was pleasant. The average heat was 2.5° above the mean of 21 years, and of the month is towards 2° above the mean.

The canal froze on Dec. 9th and 10th, and has remained in that state through the thawing of the earth's surface two or three times since.

Sleighting has not been in this section in this month, though sleighs have been in use in Auburn for a few days, at Utica for much of the month.—The greatest heat was on the 14th, and was 56°, and on the 31st was 41°; the least heat was 8°, on both the 18th and 25th. The rain of the month was 3.48 inches.

For the Romans, the year was divided by Romulus into ten months, the last of which was December, from *decem*, ten, and *imber*, a shower, storm, or weather, and it meant the tenth division of the weather of the year. Numa soon after added the two months, January and February, so as to bring the reckoning to a nearer accordance with the revolution of the sun.

The sun was farthest south on December 21st, about nine in the evening, and the 21st, of course, was the shortest day.

Another year has gone; to many the record of sad and afflicted days, and to far more, of prosperity and joy. Let it not be said, "We take no note of time," by even one thoughtless heart. Its value is shown by the little God gives us for the present instant, and by the incessant repetition of that second. Let us be wise to-day; then shall we be worthy to receive the greeting of a "Happy New Year."

BUTTER SHIPMENTS TO CALIFORNIA.—The New York *Tribune* states that the shipments of butter made during the month of November ult. for the California market, as specified by the manifest of each vessel, is as follows:—Ocean Telegraph, 856 firkins; Sea Nymph, 318; Moonlight, 843; Alleghany, 1,112; Ivanhoe, 1,339; Industry, 50; Prima Donna, 297; Fearless, 100; Neptune's Favorite, Walter Lord, 387; Herald of the Morning, 75—Total, 6,349 firkins. Unspecified (under the name of merchandise): Ocean Telegraph, 232 firkins; Sea Nymph, 416; Moonlight, 49; Prima Donna, 589; Neptune's Favorite, 284; Walter Lord, 57—making 1,677 firkins. Sum total, 7,926. Calculating each firkin at 100 lbs. net, at 25 cents per lb., makes the cost \$198,150.

THE CITY OF JEDDO, THE CAPITAL OF JAPAN.—The city of Jeddo is said to be, without exception, the largest city in the world. It contains 1,500,000 dwellings, and the unparalleled number of 5,000,000 of people. Some of the streets are nineteen Japanese in length, which is equal to twenty-two English miles. The commerce of Japan is immense, and the sea along their coast is covered with ships. Their vessels are laden in the southern portion of the Empire with rice, tea, saecol, tobacco, silk, cotton, and tropical fruits, all of which find a market in the north, and then return freighted with corn, salt, oil, isinglass and other productions of the north, which find a market in the south.

EXPENDITURES OF THE BRITISH GOVERNMENT.—The total expenditures of the British Government for the year ending 31st of March last, in round numbers, was \$365,000,000, or a million dollars a day. The army expenditure was about \$64,000,000, and that for the navy \$52,000,000; miscellaneous civil expenses, including the dowry of \$1,000,000 to the Princess Royal, \$35,000,000. For the Persian expedition there was paid to the East India Company nearly \$4,000,000; and also to the East India Company, for the war with China, nearly \$3,000,000.

EDUCATION IN FRANCE.—The national appropriations in France for 1859, are, for the war department \$45,000,000 francs, and for primary education in the common schools only 6,000,000 francs. The city of New York alone allows nearly this sum for its public schools, and yet its population is only about 700,000, while France has a population of 36,000,000. The whole sum voted for public education was 20,000,000 francs, of which 14,000,000 are to be devoted to superior education in the colleges of letters, arts and sciences.

MR. VERNON FUND.—The ladies of Honolulu, Hawaiian Islands, have caught the fever and are raising a fund to assist in the purchase of Mount Vernon. They have already raised over two hundred dollars. The Advertiser says:—Go on ladies; the donation will be as acceptable sent from this "bright little isle of our own."

In blue summer ocean far off and alone,
As though raised within sight of the sacred spot
Where rest the remains of the "Father of his Country."

A LAKE ERIE VESSEL IN THE BOSPORUS.—The schooner D. B. Sexton, which sailed from Cleveland on the 29th May last, for London, arrived safely in Constantinople on the 8th of November, after a rough passage up the Mediterranean. The Captain states that he outlasted everything in his career, and was the first of a fleet of one hundred and fifty sail that arrived at that port, and without breaking a rope-yarn or leaking a drop.

DEATH OF A SISTER OF ROBERT BURNS.—Isabella Burns, the youngest sister of the poet, more generally known as Mrs. Begg, died recently at her cottage near Ayr, in her eighty-eighth year.

SEBASTOPOL is still a place of desolation, its numbers of 40,000 having dwindled to 6,000. Many of the inhabitants live in the huts left by the Allies.

News Paragraphs.

THERE are manifest symptoms of revolution again in Italy. Arrests have been made at Pavia and Milan. All the Italian peninsula is full of volcanic political elements, and a grand revolution is certain to take place sooner or later. Constant vigilance and espionage are required to prevent a serious and general outbreak.

A HOUSTON (Texas) letter says that the cotton crop of that State has turned out better than was anticipated; corn is abundant and cheap; the wheat crop was plentiful; a greatly increased quantity of wheat will be sown the coming season; the Chinese sugar cane has proved a decided success; immigration, both foreign and domestic, is pouring into the State; one hundred and fifty miles of railroad will be finished this year; great interest is taken in common school education, etc., etc.

A REVOLUTION is impending in Cuba. A part of the troops are ready to join in the movement, and the authorities are so thoroughly frightened that they are courting the assistance of France. Such is the rumor in New Orleans.

THE two Mexican Presidents are trying to see which can sell out first. Zuloaga (the President in power), is urging the English to come in and establish a Protectorate, while Juarez (the insurgent) has an envoy dining with Gen. Cass and Mr. Buchanan, at Washington and urging them to do the same thing.

GEN. JAMES GADSDEN, formerly U. S. Minister at Mexico, died at Charleston, S. C. on the 28th inst. He was appointed Minister to Mexico in 1853, and negotiated the treaty with the Government of that country, which bears his name. He was about sixty years of age.

ACCORDING to a London paper, the late Robert Owen's sons, David and Richard, are about to establish a school of the Practical Sciences at New Harmony, Indiana.

THE Baltimore Sun says that the trial trip of Ross Winan's cigar-shaped steamer, will be made in about three weeks. She will be propelled by four engines of 1,000 horse-power each.

SENATOR RICE recently stated, in a speech in the Senate, that in 1816 the first effort was made to navigate the lakes. In 1841 the trade reached the aggregate of \$65,000,000; and in 1856 it swelled to the enormous amount of \$608,000,000.

THERE are signs of war in Europe. France is quietly arming; the entire conscription of 1857, 140,000 men, has been called out, and a large force is concentrating on the south-eastern frontier of the Empire. The Italian people are on the verge of revolution, Austria is intriguing with the Pope, and Sardinia, standing between the two Empires, is drilling her armies. However, let whatever will happen, it would only be a change of masters for the Italians. It matters little whether it is France or Austria.

THE delinquent tax list of San Francisco for the past year fills nearly eight pages of the newspapers of that city, and comprises about one-half of the year's assessments. The manuscript copy consisted of two reams of closely written foolscap. This indicates a great revulsion since the fast times of the early gold discoveries.

THE OLD STATE BANK OF INDIANA.—An honest bank; one that lived and died honestly; think of that. By the report of the Commissioners of the Sinking Fund, the old State Bank is credited with a profit to the State of \$2,780,804 39, arising from the stock taken by the State in the old bank; the bonds issued for the stock are provided for; the sum above named is clear profit. It is all safe too; and by law its proceeds are hereafter to be devoted to the school fund. One can hardly help regretting that a bank so remarkable as this is wound up; for it is honestly closed up, without cheating its stockholders, or other people, and note-holders all safe. But, perhaps, it was best that it should live no longer; as, if it had lived, it might have fallen into the sinful ways of other moneyed institutions. Let a monument be raised over the tomb of this institution. "Here lies the shade of a bank that paid all its dues, made a profit for the State, and went to an honorable grave; leaving a successor with a very bad beginning, but with a good example to follow." So says a Western paper.

NEW COUNTERFEITS.—THE BANKS DECEIVED.—A very large quantity of counterfeit \$20 bills on the State Bank of Troy has been circulated in Western cities lately. So well executed is this spurious bill that the most expert detectives have been deceived, and large quantities have been taken by the banks. On the 29th ult., some \$800 was received at the Assorting House, and sent to the Bank Department, where it was examined and pronounced a fraud, although had it not been known that such bills had been circulated, it might have deceived even the Register whose name is on them. On the 30th, \$2,000 was received by the State Bank of Troy with exchanges from Western cities and returned to the agencies in this city and New York. The State Bank of Troy has issued a circular calling in all their \$20's, so that they may be destroyed.

THE PARAGUAY EXPEDITION HEARD FROM.—The New York Herald has correspondence from Pernambuco to the 29th of November.

The steamers Fulton, Lane and Water Witch, of the Paraguay expedition, which had put in there for coal, had left again for their destination.

The Brazilians, as well as foreigners, at Pernambuco, sympathize cordially with the objects of our Government.

A complimentary address had been presented to ex-Consul Clements, of the United States, by trading firms at Pernambuco.

MINISTERIAL RESIGNATION IN CANADA.—The Toronto Globe announces the resignation of Mr. Sciotte, Chief Commissioner of Public Works, and says that the immediate occasion of the step is alleged to be the unwillingness or the inability of the Government to mature a policy, embracing leading questions, in view of the approaching meeting of Parliament. We notice that the telegraph attributes the resignation to a disagreement on the Seat of Government question,—Mr. Sciotte being opposed to the Queen's award in favor of Ottawa.

The News Condenser.

—It is said that the King of Prussia has recovered his health.

—Foreign letter writers say that a revolution in Italy is approaching.

—The New York Fireman have now a permanent fund of \$35,250.

—The whole number of Jews in Europe at the present time is 2,451,178.

—Col. Fremont's Mariposa claim yields from \$1,500 to \$3,000 every week.

—It is said that Mr. Read, our Minister to China, is about to return home.

—The report of the death of Col. Albert Pike, of Arkansas, is contradicted.

—The Chicago, Iowa and Nebraska Railroad is completed to Lisbon, Iowa.

—A sewing machine has been invented to be used in the bottoming of shoes.

—Lola Montez is lecturing in Dublin, Ireland, on America and its people.

—The number of prisoners in the Illinois State Prison on December 1, was 643.

—The London Times speaks of the city of Portland, Me., as a Canadian town.

—The whole number of Indians within our limits is estimated at about 350,000.

—Mr. Spurgeon is expected to be in New York during the May anniversary.

—This aggregate value of furs exported from St. Paul, Minn., this year, is \$161,032.

—An extensive plan is being organized in New York city to send emigrants to Arizona.

—A company of gipsies are said to be encamped within two miles of Norwalk, Ohio.

—Since the first of November, eight persons have been tried, for their lives, in Boston.

—Alex. Cameron, of Chatham, C. W., was killed by a threshing machine, on the 25th ult.

—It is intended to make Commodore Stewart an Admiral, the title to expire with his death.

—Professors Agassiz and Baché highly approve of the project of another Arctic expedition.

—Calro, Ill., which was so terribly drowned last spring, has just been scorched by a large fire.

—The total distance between St. Louis and San Francisco by the new overland route is 2,765 miles.

—The Chicago city prison physician had under his care the past year 100 cases of delirium tremens.

—The San Antonio Ledger says there are six Mexicans living there whose joint ages foot up 618 years.

—The Philadelphia Young Men's Christian Association contemplate the creation of a hall to cost \$150,000.

—The King of Naples is said to have decided that all foreigners employed in his State must be naturalized.

—The wealth of the two great centres—Boston and New York—amounts to eight hundred millions of dollars.

—A woman in Chesterfield county, Va., was burnt to death, lately, by going to bed with a pipe in her mouth.

—The government, since its organization, has paid out up to June 30th, 1858, the sum of \$39,876,087 in pensions.

—During the past year Delaware Co. has furnished the New York market with over half a million pounds of butter.

—Geo. Eustis, Ex-Chief Justice of Louisiana, died at New Orleans on the 23d ult. He was a native Massachusetts.

—Within the last three years the number of unknown persons who have died in New York has averaged 400 per annum.

—Several new and extensive guano deposits have been discovered in the Pacific, and taken possession of by the U. S.

—A hog was exhibited in Newburgh, N. Y., last week which weighed 766 pounds, after being dressed and the head taken off.

—The people of Iceland are moving for an independent government. The project is favored in the Danish Lower Chamber.

—Twenty brides and bridegrooms went out passengers in the Arago, which sailed from New York, on Saturday week.

—A young man of Butler Co., Ohio, has been suddenly stricken entirely dumb, without any apparent previous ailment.

—The Mt. Vernon Fetea, in New York city, cost about \$1,000 per night; and the receipts were not much above the expenses.

—The Mississippi Senate has passed a resolution appropriating \$30,000 for a monument to the late General Quitman, at Natchez.

—During one week 548,600 lbs. of butter passed the Willrich toll-gate, in Ulster Co., for N. Y. city. Its cash value is \$135,000.

—Rev. Thomas K. Beecher, brother of Henry Ward Beecher, has been elected Captain of a military company in Elmira, N. Y.

—A large number of petitions have been presented in the House for the abolition of the office of Chaplain in the Army and Navy.

—There was imported into this country, last year, 800,000 lbs. of opium. Not more than one-tenth is used for strictly medicinal purposes.

—If the new law against free negroes goes into operation in Maryland, full 25,000 persons must leave the State, or be sold into slavery.

—There are now 86 coast survey parties in the field and afloat—on the Atlantic coast, 16; on the Gulf coast, 13; and on the Pacific coast, 6.

—Since the Montebello trial all the English papers sent to France have been confiscated, and telegraphic messages have been intercepted.

—Such is the popularity in France of the Suez canal project of M. de Lesseps, 8,000 street porters in Marseilles are among the subscribers.

—The Memphis Avalanche of the 15th ult., notices a sale of 1,520 bales of cotton for \$77,000, being the largest single sale ever made in that city.

—A New York correspondent of the Boston Advertiser states that Washington Irving has made a donation of \$500 to the Mount Vernon Fund.

—The Susan has returned from Nicaragua without having been able to land the filibusters. She is now cruising near the mouth of the Colorado.

—Another company of filibusters has set sail for Nicaragua, and another revenue cutter has fired a harmless shot at the departing "emigrants."

—On Dec. 3d, the regent of the Mt. Vernon Ladies' Association paid John A. Washington \$37,000, with interest, the amount due on the first installment.

—New York is certainly a great city. They have now a "Dog Boarding House." The keeper will, for \$1 per week, board dogs, and train them for \$10.

WHAT THE LITTLE YEARS DID.

BY REV. E. T. A. LOWELL.

Three years! Three years! Those naughty years!
Once they were pretty things!
Their fairy foot-falls caught our ears,
Our eyes their glancing wings—
They flitted by our school-boy ways
We chased the little imps in play.

We knew them soon; for, tricky elves,
They brought the College gown;
With thoughtful books filled up our shelves;
Darkened our lips with down;
Played with our throat, and lo! the tons
Of manhood had become our own.

They, smiling, stretched our childish size
Their soft hands trimmed our hair;
Cast the deep thought within our eyes,
And left it glowing there;
Rings songs of hope in College halls;
Bright fancies drew upon the walls.

They flashed upon us Love's bright gem:
They showed us gleams of fame;
Stout-hearted work we learned from them,
And honor, more than name.
And so they came and went away:
We said not, Go; we said not, Stay.

But one sweet day, when quiet skies
And still leaves brought me thought,
When hazy hills drew forth my eyes,
And woods with deep shade fraught—
That day I carelessly found out
What work these elves had been about.

Alas! Those little rogues, the years,
Had fooled me many a day;
Plucked half the locks above my ears,
And tinged the rest all grey.
They left me wrinkles, great and small!—
I fear that they have tricked us all.

Well, give the little years their way;
Think, speak, and write, the while;
Lift up the bare front to the day,
And make the wrinkles smile:
They mould the noblest living head;
They cause the best tomb for the dead.

Entered according to act of Congress, in the year 1888, by
D. D. T. Moore, in the Office of the Clerk of the District
Court for the Northern District of New York.

ALICE AND ADELAIDE;

OR,

THE TRUE AND THE FALSE.

BY MRS. MARY J. HOLMES.

(Continued from page 13, last number.)

Chapter III.—The Brown House in the Hollow.

Miss ELINOR was naturally of a rather inquisitive turn of mind and she strove very skillfully to learn something of the stranger's history. But the young girl evaded all her questioning, and after a few moments arose to go. Mr. HOWLAND accompanied her to the door, holding the lamp until she passed down the walk and out into the street. Then the door was closed and ALICE WARREN was alone again in the cold, dark night, but she scarcely heeded it, for her heart was lighter than it had been for many weeks. The gentleman whom she had so much dreaded to meet had spoken kindly to her; the lady, too, had whispered "poor child" when she told them of her father, while better far than all she had procured a shelter for that father, the payment of which would come within their slender means.

Not time, but the joy or sorrow it brings, changes people most, and the ALICE WARREN of to-day is scarce the same we saw one year ago. Then, petted, caressed and glowing with youthful beauty, she presented a striking contrast to the pale-faced girl who, on the wintry night of which we write, traversed street after street until she came to the humble dwelling which for the last few days had been her home. Every cent of his large fortune had Mr. WARREN given up, choosing rather to starve, and know he had a right to do so, than to feed on what was not his own. His handsome house and furniture had all been sold, and with a more pittance which would not last them long, they had gone into the country where ALICE hoped to earn a livelihood by teaching. But she was "too small, too childish, too timid," the people said, ever to succeed, and so at last she resorted to her needle, which, in her days of prosperity, she had fortunately learned to use. As time passed on a kind-hearted woman who visited in that neighborhood, became interested in them and urged their removal to Oakland, her native town, whither they finally went, stopping with her for a few days until further arrangements could be made. Hearing that the brown house in the Hollow, as 'twas called, was vacant, ALICE, as we have seen, had rented it of Mr. HOWLAND and now, returning home, she smoothly tucked the snowy hair of her poor blind father, while she tells him how small a sum they will have to pay, tells him, too, how neatly she can fit it up with the furniture they have, and how, in the long winter evenings, he shall sit in his arm chair before the cheerful fire, for he likes the fire-light best, he can feel it upon his face, he says, "can see, too, in fancy, the little room which ALICE pictures to him, and listening to her as she talks, he thanks God that the wife-love he has lost forever is in a measure made up to him in the love of his only child.

Two weeks went by and then, in the shoe shop and store, the workmen said one to another, that "to-morrow was the New Year," wondering the while if Mr. HOWLAND would present each of the families in his employ with a turkey, as he was wont to do. "He had always done so before," they said, "he would surely do so now." Nor were they disappointed, for when the day's labor was done, to each man was given his usual gift and when all had been served, there was found one left for whom no owner came.

"We shall need it ourselves," Mr. HOWLAND

thought, as he remembered the numerous city friends expected on the morrow,—and placing it in a covered basket he started for home, turning involuntarily down the street, which would take him through the Hollow. He did not often go that way, for though it was quite as near, 'twas not a pleasant portion of the town. But he was going that way now, and as he came near the brown house, from whose windows a cheerful light was shining, he thought of his new tenants and half decided to call—then, remembering that one of his clerks had told him of a stylish-looking young lady who had inquired for him that afternoon, expressing much regret at his absence, and saying she should call at his house early in the evening, he concluded to go on. Still the light shining out upon the snow seemed beckoning him to come, and turning back he stood beneath the window from which the curtain was drawn aside revealing a picture at which he paused a moment to gaze. The blind man sat in his old arm chair just as ALICE had said he should do, and the flickering flame of the blazing fire shone on his frosty locks and lighted up his grief-worn face, on which there was a piteous expression most touching to behold. The sightless eyes were downward cast as if they vainly would see the fair young head and wealth of soft brown tresses resting on his knee.

ALICE was weeping. All the day long she had striven to repress her tears and when, as she sat in the gathering night with her father, he said, "She was with us one year ago," they burst forth, and laying her head upon his lap she sobbed bitterly. There were words of love spoken of the lost one, and as Mr. HOWLAND drew near Mr. WARREN said, "Tis well, perhaps, that she died before she knew what 'twas to be so poor."

The words, "to be so poor," caught Mr. HOWLAND's ear and glancing around the humble apartment he fancied he knew why ALICE wept. Just then she lifted up her head and he saw the tears on her cheek. Mr. HOWLAND was unused to tears,—they affected him strangely,—and as the sight of them on ALICE WARREN's eye-lashes when she told him her father was blind had once brought down the rent of that house by half, so now the sight of them upon her cheek as she sat at that blind father's feet brought himself into her presence and the turkey from his basket! Depositing his gift upon the table and apologizing for its abruptness, he took the chair which ALICE offered him, and in a short space of time forgot the "stylish-looking lady" who had so nearly prevented him from being where he was,—forgot every thing save the blue of ALICE's eyes and the mournful sweetness of her voice as she answered the few questions he addressed to her. He saw at once that both father and daughter were educated and refined, but he did not question them of the past, for he felt instinctively that it would be to them an unpleasant subject, so he conversed upon indifferent topics, and ALICE, listening to him, could scarcely believe he was the man whom she had heretofore associated with her wages of Saturday night, so familiar and friendly he seemed.

"You will come to see us again," Mr. WARREN said to his visitor when the latter arose to go, and smiling down on ALICE, who stood with her arm across her father's neck, Mr. HOWLAND answered, "Yes, I shall surely come again."

He bade them good night, and as the door closed after him, the blind man said, "It seems darker now that he is gone," but to ALICE, looking through the window pane, the room was lighter far for that brief visit. Mr. HOWLAND, too, felt better for the call. He had done them some good, he hoped, and the picture of the two as he had left them was pleasant to remember, and then, as he drew near his home and saw in imagination his own large easy chair before the blazing fire, he tried to fancy himself a blind man, sitting there, with a brown-haired maiden's arm around his neck!

Chapter IV.—The White House on the Hill.

"Miss HUNTINGTON, brother," and Mr. HOWLAND bowed low to the lady thus presented to him by his sister on his arrival home.

She had been waiting for him nearly an hour, and she now returned his greeting with an air more befitting a queen than ADELAIDE HUNTINGTON—for she it was; and by some singular coincidence she had come to rent a house of Mr. HOWLAND just as ALICE WARREN had done but two or three weeks before. The failure which had ruined Mr. WARREN had not affected Mrs. HUNTINGTON further than the mortification and grief she naturally felt at the disgrace and desertion of her husband, from whom she had never heard since he left her so suddenly on the night of the party,—neither had she ever met with Mr. WARREN, although she had written him a note, assuring him that in no way had she been concerned in the fraud. Still her position in the city was not particularly agreeable, and after a time she had removed to Springfield, Mass., where lived a distant relative, who supplied her with plain sewing—for without her husband's salary it was necessary that she do something for the maintenance of her family. Springfield, however, was quite too large for one of ADELAIDE's proud, ambitious nature. "She would rather live in a smaller place," she said, "where they could be somebody. They had been trampled down long enough, and in a country village they would be as good as any one."

Hearing by chance of Oakland and its democratic people, she had persuaded her mother into removing thither, giving her numerous directions as to the manner in which she was to demean herself—"With a little management," she said, "no one need know that they worked for a living,—they had only left the city because they preferred the country," and old PEGGY, who still served in the capacity of servant, was charged repeatedly "never to say a word concerning their former position in society." In short, ADELAIDE intended to create quite a sensation in Oakland, and she commenced by assuming a most haughty and consequential manner towards both Mr. HOWLAND and his sister.

"She had come as my delegate," she said, "to rent the white house on the hill, which they had heard was vacant. Possibly, if they liked the country, they would eventually purchase, but it was doubtful,—people who had always lived a city life were seldom contented elsewhere. Still, she should try to be happy, though, of course, she

should miss the advantages which a larger place afforded."

All this and much more she said to Mr. HOWLAND, who, hardly knowing whether she were renting a house of him or he were renting one of her, so stately and dignified she seemed, managed at last to say, "Your mother is a widow, I presume."

Instantly the dark eyes sought the floor, and ADELAIDE's voice was quite low in its tone as she answered, "I lost my father nearly a year since." "I wonder she don't dress in mourning, but that's a way some folks have," thought Miss ELINOR, while her brother proceeded to say that Mrs. HUNTINGTON could have the white house on the hill, after which ADELAIDE arose to go, casually asking if the right or left hand street would bring her to the Hotel, where she was obliged to spend the night, as no train after that hour went up to Springfield.

For a moment Mr. HOWLAND waited, thinking his sister would invite the stranger to stop with them, but this Miss ELINOR had no idea of doing,—she did not fancy the young lady's airs, so she simply answered, "The right hand street—you can't mistake it!"—frowning slightly when her brother said, "I will accompany you, Miss HUNTINGTON."

"I dislike very much to trouble you. Still, I hardly know the way alone," and ADELAIDE's dark eyes flashed brightly upon him as she took his offered arm.

Mr. HOWLAND was not a lady's man, but he could be very agreeable when he tried, and so ADELAIDE now found him, mentally resolving to give her mother and old Aunt PEGGY a double charge not to betray their real circumstances. Mr. HOWLAND evidently thought her a person of consequence, and who could tell what might come of her acquaintance with him. Stranger things had happened, and then she thought that if ever she did go up to that handsome house as its mistress, her first act should be to quarrel that stiff old maid away!

With such fancies as these filling her mind, ADELAIDE went back next day to Springfield, reporting her success, and so accelerating her mother's movements that scarcely a week elapsed ere they had moved into the white house on the hill, a handsome little cottage, which looked still more cozy and inviting after ADELAIDE's hands had fitted it up with tasteful care. It was a rule with Mrs. HUNTINGTON to buy the best if possible, and as her husband had always been lavish with his money, her furniture was superior to that of her neighbors, many of whom really stood in awe of the genteel widow, as she was called, and her stylish, aristocratic daughter. They were supposed to be quite wealthy, too, or at least, in very easy circumstances, and more than one young girl looked enviously at ADELAIDE, as day after day she swept through the streets, sometimes "walking for exercise" she said, and again going out to shop,—always at Mr. HOWLAND's store, where she annoyed the clerks excessively by examining article after article, inquiring its price, wondering if it would become her or suit her, and finally concluding not to take it, "for fear every shoemaker's daughter in town would buy something like it, and that she couldn't endure."

Regularly each week she went up to Springfield to take music lessons, she said, and lest something should occur making it necessary for her to stay all night, Aunt PEGGY usually accompanied her to the depot, carrying always a well-filled satchel, and frequently a large bundle, whose many wrappings of paper told no tales, and were supposed by the credulous to cover the dressing-gown which ADELAIDE deemed necessary to the making of her morning toilet. "Twas very annoying," she said, "to carry so much luggage, but the friends with whom she stopped, were so particular, that she felt obliged to change her dress, even though she merely staid to dinner."

And so the villagers, looking at the roll of music she invariably carried in her hand, believed the tale, though a few of the nearest neighbors wondered when the young lady practiced, for 'twas not often that they heard the sound of the old-fashioned instrument which occupied a corner of the sitting-room. Then, as country people will do, they guessed it must be at night, for a light was always seen from Mrs. HUNTINGTON's windows until after the clock struck twelve. As weeks went by, most of those whom ADELAIDE considered *sombody's*, called, and among them Mr. HOWLAND. By the merest chance she learned that he was coming, and though she was "greatly surprised to see him," and was "just going out, she was so lonely at home," she looked unusually well in her nicely-fitting merino, which in the evening did not show the wear of four years. The little sitting-room, too, with its furniture so arranged as to make the best of everything, seemed home-like and cheerful, causing Mr. HOWLAND to feel very much at ease, and also very much pleased with the dark-eyed girl he had come to see. She was very agreeable, he thought, much more so than any one whom he had met in Oakland, and at quite a late hour, for one of his early habits, he bade her good-night, promising to call again ere long, and hear the new song she was going to take the next time she went up to Springfield.

In dignified silence his sister awaited his return, and when to her greeting,—"Where have you been?" he replied, "Been to call on Miss ADELAIDE," the depth of the three wrinkles between her eye-brows was perceptibly increased, while a contemptuous "Pshaw!" escaped her lips. Miss ELINOR was not easily deceived. From the first she had insisted that ADELAIDE "was putting on airs," and if there was one thing more than another which this straight-forward, matter-of-fact lady disliked, it was *pretension*. She had not yet been to see Mrs. HUNTINGTON, and now, when her brother, after dwelling at length upon the pleasant evening he had spent, urged her to make the lady's acquaintance, she replied rather sharply that, "she always wished to know something of the people with whom she associated. For her part, she didn't like Miss ADELAIDE, and if her brother had the least regard for her feelings, he wouldn't call there quite as often as he did."

"Quite as often," repeated Mr. HOWLAND, in much surprise. "What do you mean? I've only been there once," and then in a spirit which men will sometimes manifest when opposed, particularly if in that opposition a lady is involved, he added, "but I intend to go again,—and very soon, too."

"Undoubtedly," was his sister's answer, and taking a light, the indignant woman walked from the room, thinking to herself that, "if ever that girl did come there to live,—she'd no idea she would,—but if she did, she, Miss ELINOR HOWLAND, would make the house a little too uncomfortable for them both."

Chapter V.—Calls.

The next morning Miss ELINOR felt better, and as time passed on and her brother did not again visit his new tenants, she began to feel a little more amiably disposed towards the strangers, and at last decided to call, intending to go from thence to the brown house in the hollow, where she was a frequent visitor. She accordingly started one afternoon for the white house on the hill, where she was most cordially received. With the lady-like manners of Mrs. HUNTINGTON she could find no fault, but she did not like the expression of ADELAIDE's eyes, nor yet the sneering way in which she spoke of the country and country people; neither did she fail to see the basket which the young lady thrust hastily under the lounge as Aunt PEGGY ushered her into the sitting-room. On the table there were scissors, thimbles, needles and thread, but not a vestige of sewing was visible, though on the carpet were shreds of cloth, and from beneath the lounge peeped something which looked vastly like the *wrist-band* of a man's shirt.

"Pride and poverty! I'll venture to say they sew for a living," thought Miss ELINOR, and making her call as brief as possible, she arose to go.

It was in vain that ADELAIDE urged her to stay longer, telling her "twas such a treat to see some one who seemed like their former acquaintance." With a toss of her head Miss ELINOR declined, saying she was going to visit a poor family in the Hollow, a blind man and his daughter, and in adjusting her furs she failed to see how both ADELAIDE and her mother started at her words. Soon recovering her composure the former asked "who they were, and if they always lived in Oakland?"

"Their name is WARREN," said Miss ELINOR, "and they came, I believe, from some city in Western New York, but I know nothing definite concerning them, as they always shrink from speaking of their former condition. ALICE, though, is a sweet little creature, so kind to her old father, and so refined, withal."

Mechanically bidding her visitor good afternoon, ADELAIDE went back to her mother's side, exclaiming, "Who thought those WARRENS would toss up in Oakland! Of course, when they know that we are here, they'll tell all about father and everything else. What shall we do?"

"We are not to blame for your father's misdeeds," answered Mrs. HUNTINGTON; and ADELAIDE replied, "I know it, but folks think you are a widow with a competence sufficient to support us genteelly,—they don't suspect how late we sit up nights, sewing, to make things meet. Mercy, I hope the pecking old maid didn't see that," she exclaimed, as her own eye fell upon the *wrist-band*. Then, after a moment, she continued, "I know what I'll do. I'll go to ALICE this very night, and tell her how sorry we are for what has happened, and I'll ask her to say nothing about father's having cheated them and run away. She's a pretty good sort of a girl, I guess, if I did use to think her so proud."

The plan seemed a feasible one, and that evening as ALICE WARREN sat bending over a vest, which she must finish that night, she was startled by the abrupt entrance of ADELAIDE HUNTINGTON, who, seizing both her hands, said, with well-feigned distress, "My poor ALICE! I never expected to find you thus."

In his arm chair the blind man slept, but when the stranger's shadow fell upon him, he awoke, and stretching out his arm, he said, "Who is it, ALICE?—who stands between me and the fire?"

"Tis I," answered ADELAIDE, coming to his side, "the daughter of him who ruined you. I have just learned that you were living here in the same village with ourselves, and at my mother's request I have come to tell you how bitterly we have wept over my father's sin, and to ask you not to hate us for a deed of which we knew nothing until it was all over." Then seating herself in a chair she continued speaking hurriedly, telling them some truth and some falsehood,—telling them how, for a few months, they had lived with a distant relative, a wealthy man, who gave them money now for their support,—telling them how her father's disgrace had affected her mother, and begging of them not to speak of it in Oakland, where it was not known.

"I don't know why it is," she said, "but people have the impression that mother is a widow, and though it is wrong to deceive them, I cannot tell them my father ran away to escape a convict's doom. 'Twould kill my mother outright, and if you only will keep silent, we shall be forever gratified."

There was no reason why Mr. WARREN should speak of his former clerk, and he answered ADELAIDE that neither himself nor ALICE had any wish to injure her by talking of the past. Thus relieved of her fears ADELAIDE grew very amiable and sympathizing, saying she did not suppose they were so poor, and pitying ALICE, who must miss so much her pictures, her flowers, her birds and her music.

"Come up and try my piano. You may practice on it any time," she said, when at last she arose to go.

"I never played much. I was not fond of it," was ALICE's answer, while her father rejoined quickly, "Then you keep a piano? I did not know you had one?"

"Oh, yes, father bought it for me at auction three years ago, and as he was not owing any one, our furniture was not disturbed."

The blind man sighed, while ALICE dropped a tear on the vest she was making, as she thought of the difference between her and ADELAIDE, who paused as she reached the door, and asked if she knew Mr. HOWLAND.

"I saw for his store," said ALICE, and ADELAIDE continued, "Isn't he a splendid man?"

ALICE did not know whether he was splendid or not,—she had never observed his looks particularly; but she knew he was very kind, and she liked nothing better than to have him come there evenings, as he often did."

"Come here often," exclaimed ADELAIDE, her voice indicating the pang with which a feeling of jealousy had been brought to life.

Ere ALICE could reply, there was a footstep heard without, and the blind man, whose quick ear caught the sound, said joyfully, "He's coming now." [To be continued in our next.]

For Moore's Rural New-Yorker.
MISCELLANEOUS ENIGMA.

TO MR. FORLORN HOPE.

I AM composed of 24 letters.
My 1, 3, 3, 14, 7, 10, 11 is a writer who is considered a model.
My 4, 14, 2, 3, 15, 22, 6 is a favorite amusement.
My 5, 10, 20, 18, 4, 5, 3 is what Noah did to the Ark.
My 8, 14, 17, 30, 14, 10, 10 is a popular kind of writing.
My 9, 20, 20, 1, 21 has always been regarded sacred.
My 12, 13, 5, 19, 16, 15, backwards, expresses Mr. Hope's condition.
My 18, 9, 21, 24 is a popular person among Romanists.
My 15, 12, 4, 22 is a musical instrument.
My 20, 4, 24 is a school-boy's encouragement.
My 22, 7, 6, 1, 12 is what Pope wrote about man.
My 28, 5, 2 is a celebrated colored man.
My 24, 18, 7 often gives great satisfaction, so I have heard young men say.
I've solved your enigma, and upon my life,
I find you want a prudent wife.
Now, Mr. Forlornity, try your skill,
"For there's a way when there's a will,"
And if you really feel lonely indeed,
"My whole" will answer your urgent need.

MATHEMATICAL PROBLEM.

WHAT number of marbles, that are half an inch in diameter, can be packed in a box which is six inches square and six and one-tenth inches deep?
Rochester, N. Y., 1888. L. L. NICHOLS.
Answer in two weeks.

For Moore's Rural New-Yorker.

RIDDLE.

I AM composed of letters six,
In syllables I'm one.
I am divided up in words,
Which easily is done.
Erase two letters, 5th and 6th,
And there'll be left twice two,
I'm something then, as you will see,
That doctors try to do.
Erase my 4th, and I'm a shrub
Whose leaves are always green,
Erase my 4th and 6th and I'm
An agent that's unseen.
Erase my 1st, my 4th, and 6th,
I'm something we all do,
Erase my 3d, 4th, 5th, and 6th,
And I'm a pronoun, too.
Erase my 2d, 4th, and 6th,
And then you'll see I am
A thing that's indispensable,
And that is worn by man.
My whole all persons should preserve,
And it is right they should,
For when you've found out who I am
You will pronounce me good.
East Guilford, N. Y., 1888. E. W. HOLT.
Answer in two weeks.

ANSWERS TO ENIGMAS, &c., IN No. 468.

Answer to Geographical Enigma:—All the letters of the Alphabet, except J and K.
Answer to Grammatical Enigma:—Classical:—Utinam minus vili cupula fruissemus—O, that we had been less attached to life.
Answer to Miscellaneous Enigma:—Chewing and smoking.
Answer to Geometrical Problem:—The base is 160 rods—the perpendicular 120—the hypotenuse 200 rods.

Moore's Rural New-Yorker,

THE LARGEST CIRCULATED

Agricultural, Literary and Family Weekly,

IS PUBLISHED EVERY SATURDAY BY

D. D. T. MOORE, ROCHESTER, N. Y.

Office, Union Buildings, Opposite the Court House, Buffalo St.

Agents in New York and Boston.

SUBSCRIPTION.—C. M. SEXTON, Agricultural Book Publisher, 25 Park Row, (opposite Astor House,) New York.
WHOLESALE, (to supply Periodical Dealers, &c.)—DEXTER & BRO., 14 Ann St.,—ROSS & TOUSEY, 108 Nassau St.,
ADVERTISING.—S. M. PETTINGILL & CO., No. 110 Nassau St., New York, and No. 10 State St., Boston.

TERMS, IN ADVANCE:

TWO DOLLARS A YEAR—\$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for \$5; Six, and one free to club agent, for \$10; Ten, and one free, for \$15; Sixteen, and one free, for \$22; Twenty, and one free, for \$28; Thirty-two, and two free, for \$40, (or Thirty for \$37.50) and any greater number at same rate,—only \$1.25 per copy,—with an extra copy for every Ten Subscribers over Thirty. Club papers sent to different Post-offices, if desired. As we pre-pay American postage on papers sent to the British Provinces, our Canadian agents and friends must add 12½ cents per copy to the club rates of the RURAL. The lowest price of copies sent to Europe, &c., is \$2.50—including postage.

THE POSTAGE ON THE RURAL is only 3½ cents per quarter to any part of this State, and 4 cts. to any other State, if paid quarterly in advance at the post-office where received.

ADVERTISEMENTS.—Twenty-Five Cents a Line, each insertion, payable in advance. Our rule is to give no advertisement, unless very brief, more than six to eight consecutive insertions. Patent Medicines, &c., are not advertised in the RURAL on any conditions.

PUBLISHER'S SPECIAL NOTICES.

THE MONEY WE RECEIVE.—Bills on all solvent Banks in the U. S. and Canada taken at par on subscriptions to the RURAL, but our agents and other friends will please remit New York, New England or Canada money when convenient. For all amounts over \$15 we prefer drafts on either New York, Philadelphia, Boston, Albany, Rochester or Buffalo (less exchange,) payable to our order,—and all such drafts may be mailed at our risk.

THOSE who are forming large clubs, can forward the names and money for a part, and complete the lists afterwards,—receiving the same gratuities, when completed, as if all were received at once.

ANY person so disposed can act as local agent for the RURAL, and each and all who form clubs, will not only receive extra copies, but their aid will be appreciated. We have no travelling agents, nor do we give certificates.

IN ordering the RURAL please send us the best money conveniently obtainable, and do not forget to give your full address—the name of Post-Office, and also State, &c.

NON-SUBSCRIBERS who receive this number of the RURAL New-Yorker, are invited to give it a careful examination, and, if approved, lend their kind offices to introduce the paper to notice and support in their respective localities.

MOORE'S RURAL NEW-YORKER,
AN ORIGINAL WEEKLY
AGRICULTURAL, LIBRARY AND FAMILY NEWSPAPER.
CONDUCTED BY D. D. T. MOORE,
WITH AN ABLE CORPS OF ASSISTANT EDITORS.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, Usefulness and Variety of Contents, and unique and beautiful in Appearance. Its Conductor devotes his personal attention to the supervision of its various departments, and earnestly labors to render the RURAL an eminently Reliable Guide on all the Important Practical, Scientific and other Subjects intimately connected with the business of those whose interests it so carefully advocates. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate and beautiful Engravings, than any other Journal, rendering it the most complete AGRICULTURAL, LIBRARY AND FAMILY JOURNAL in America.

All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.
For Terms and other particulars, see last page.

PENNY-WISE.—POUND-FOOLISH.

BEND our steps whither we will—seek sociability amid any of the self-constituted "circles" into which society (even in our republican land) is divided—in public or private, church or State, we find the extremes indicated by our caption—the men who are penny-wise, and their opposites, those who may be classed among the pound-foolish. It is not our intent, however, to take the world for a field in which to operate; to select and analyse the peculiar physical and mental organisms with which we daily and hourly come in contact, but rather, to observe that the farm has its representatives in this idiosyncrasy of temper and disposition, and to point out, if possible, the deleterious effects action, governed by such a code of laws, must have upon any calling—to seek the proper mode of avoiding these pernicious results by combining all energies, the out-lay of thought, strength, time and money, for the promotion of one object—the working together of all things for good.

When we speak of progress as associated with agriculture the ideas cluster around the word fertility—here we have the Alpha and Omega, the beginning and the end of all operations intimately related to the soil. It is a well-established fact that manure is the basis of agricultural prosperity, and the farmer who permits the springs that would enrich him to run waste—who allows the very "sins of war" to be squandered—because of the expense connected with the construction of sheds or cellars for its protection, is fully exhibiting a penny-wise policy. Nor are the fatal workings of such a mode of procedure confined to his own immediate domain, the whole country,—by the force of bad example, by a decrease of products and a proportional decline in the monetary value of the soil—is affected injuriously. In order to form some slight estimate of the dependence which the mechanical, manufacturing and commercial interests of the country place upon the culture of the earth we make a short extract from a paper upon the "Statistics of our Nation's Agriculture," read by JOHN JAR, Esq., before the Geographical and Statistical Society of New York. Mr. JAR said:—"Agriculture is by far our largest National interest, employing forty-four per cent. of the male population, while commerce, manufactures, trade, the mechanic arts and mining, employ but thirty per cent. It represents about five-sixths of the capital of the country, and its products amount to some sixteen hundred millions of dollars a year. In New York, notwithstanding the wealth of the metropolis, the agricultural interest pays three-fourths of the taxes." As Mr. WHEATON remarked, "agriculture, commerce, and manufactures stand together as pillars in a cluster, the largest in the center; and that largest is agriculture."

Many farmers, however, are performing all that could be consistently required, as far as gathering the pabulum of their crops is concerned, and yet, in its application, the very objects sought to be attained are thwarted. The soil is well fed and the crop well tended, but the returns are not sufficient to justify a further and similar outlay, and the cause for this untoward condition of affairs seems to be beyond comprehension. A little examination of the soil might prove that it was almost saturated with moisture—that a large quantity of stagnant water could be found in it at any period. There is little doubt that this is the chief cause of nine-tenths of the complaints with which the ear

is greeted about crops that "don't pay," and it is a waste of words to argue that such a soil cannot be made to produce a paying crop without draining. If one of the penny-wise men be the opponent in discussion. A man possessed of such a soil must be tardy in all his operations, preparing the ground, planting the seed, etc., and when these labors are finished, the crop is at the mercy of the weather, drownings and burnings alternate, and the finale is marked by depletion of energy, kindly feelings and purse.

Mistaken economy is nowhere more observable than in the purchases often made by this class of individuals. "What's the price?" is the only question in the least related to acquisition or transfer. Utility and convenience have nothing to do with their bargain-making—valuable or valueless it matters not if it be only obtained with the minimum expenditure of dollars and cents. Next summer's corn-field labors may be prolonged, and hired help be needed for doubled work days, because of defective tools with which to "hoe out the rows;" there may be a cessation of hostilities in the midst of haying or harvesting because of some "old iron" that cost only its one-fourth of a cent per pound, (very dear at the price, however,) but these are for the future, and if any of our penny-wise men are ever known to exhibit the slightest knowledge of Holy Writ they would probably quote for our especial benefit, "take no heed of the morrow."

There are those whose *beau ideal* of a farmer could be better tested by a dynamometer than any other instrument we wot of. Their battle-cry is, "muscle! muscle!" We must, however, do them the justice to say that they practice what they preach—from morn till night they toil and tug in the harness they, themselves, have put on. The implements they use are scanty in numbers, or imperfect in material and manufacture,—their looms, in all probability,—but were not their ancestors good farmers, and what knew they of these new-fangled farming notions? Talk to such of labor-saving machinery, of change of seeds, rotation of crops, &c.; but one labor remains and you have reached the height of absurdity—advocate book-knowledge in farming.

But why shall we specify further? Not a department of the farm but can feel the blighting influence of the penny-wise—the soil and its peculiar products, stock, out-houses, and last, though not by any means least, the farmer's own home and family. What shall be said of one who, for the sake of putting a few paltry shillings in his purse, would deprive his household of that wealth which it is not in the power of man to take from them—would add to the burden of cares sustained by the mother of his children, or destroy the budding hopes of those who look up to him as father?—And yet this class is not to be figured up by tens or even hundreds—would we could say their numbers were more like "angel visits!" When such individuals have put on the "old man" is it strange that they are left to wage life's battle alone?—strange—should you query concerning the sons and daughters who "long ago" made what little sunshine was noticeable around the old homestead,—to learn they "began to put on airs; got a notion they were too good to make farmers of," and have long since lost their identity and genuine whole-souled country simplicity amid the crowded avenues and artificial wants of the city? The remedy for all these evils is apparent, and, while we leave this portion of our subject for the thinkers to digest or extend as they may see fit, we can but hope that our chosen calling—that of tilling the soil—may never be left in the hands of the penny-wise to receive its meed of merit or labor.

Want of space compels the putting over of the second branch of our subject for future reference.

WHAT HAS BECOME OF IT?

In the RURAL of December 4th we stated, upon the authority of a telegraphic dispatch, "that the Commissioner of Patents purposed inviting sixty or seventy eminent agriculturists from different States to meet at Washington in Convention early in January, to discuss agricultural topics, and compare statistics. Each one will receive five cents a mile mileage, and twenty-five dollars expenses." This was sufficiently explicit—no risk would be incurred by the "eminent agriculturists"—they were to be carried to the "city of magnificent distances," fed and lodged, and sent home again at the expense of the "dear people." Here was a golden opportunity for the self-dubbed "professor," "scientific agriculturists," "terra-culturists," *et id omne genus*, that was not to be despised—a chance to "fare sumptuously every day," and at the same time, each could blow his measure upon the trumpet of Fame. The eventful period arrived Monday, 3d inst., if we mistake not, and we have anxiously watched and waited for the lightning's intimation that the "wisdom of the country" had assembled. Anxiously watched and waited, while,

in imagination, the steed harnessed by Monse, was sending throughout the length and breadth of the land the results of long continued experiments in culture—universal panaceas for all the ills to which our domestic animals are subject—analyses of soils, roots, grains, fruits, &c., coupled with the honored names of LIEBIG, JOHNSON, DAVY, and the other worthies who have rendered essential aid to agriculture. We had prepared ourselves for any amount of "organic matter," "phosphates and super phosphates," "ammonia," "silica," "chlorides, and anti-chlorides,"—we held ourselves in readiness to receive a large freight of all the "gases" in the chemist's category—as well as some that were to be generated at the "Convention"—but our watching and waiting has been in vain—alas! they come not as yet.

But, seriously, none are more ready than are we to admit the almost boundless opportunities for improvement which our present system of farming is offering to the thinking, intelligent cultivator of the soil,—and none, are more gratified at the progress which each year is slowly but surely developing. While we hail with satisfaction every agency calculated to elevate the calling of the agriculturist, we may, in all good faith, be permitted to question the propriety of such a Convention as the one above noticed. What aid can these garrulous individuals, with their scientific jargon, their reckless estimates and assertions, and their visionary theories bring to agriculture? Were we moving, as a rural people, at hazardous speed, we would joyfully note such a gathering—when dangers ahead give signal "put on the brakes," just such an institution as this Washington Convention could find fitting and appropriate duties to perform.

The extreme paucity of facts—of thoroughly established conclusions in agricultural affairs, has left open a field in which those who live at the expense of the honest toiler find ample grazing surface. Hardly is one fallacy buried, before another occupies its place—scarcely has this or that scheme been branded as an imposition, before the leeches are again abroad—too often with a parchment bearing the seal of one of the Departments of government. Year after year Congress appropriates thousands of dollars for "the dissemination of useful Agricultural information,"—and with what result? The question is put boldly, honestly—with what result? Those of our farmers who have experimented with the seeds and scions that have been issued under the frank of the "Commissioner of Patents," are requested to respond. Let us know whether we are getting value received from this enormous outlay of the Nation's funds—let us ascertain whether the people have received anything—if we except the Chinese Sugar Cane, and one or two other minor matters—for the money so lavishly squandered in order to obtain "useful Agricultural information." This is the point—we want the farmers to answer whether this whole affair is a National Benefit or a National Humbug.

The position of Patent Commissioner, we are aware, is not that of a sinecure—there are too many conflicting opinions which need toning to render its duties a merely pleasant mode of passing away the time—and while we take great pleasure in recalling any of the good things which this Department has been instrumental in presenting to the agriculturist, we must express our long-formed opinion that radical changes will have to be instituted before it can lay claim to materially aid or assist in Rural Improvement.

WINTERING CALVES.

WHILE attending to our five calves one day, a visitor asked, "Why do you take so much trouble about calves,—many people let them take their chance with the other stock through the winter?" A very poor chance, I thought that would be, for farmers who treat calves so, wouldn't take much care for the comfort of any tenant of their barnyard. Calves which "take their chance," are of the same breed with those which furnish crows with bait, and tanners with kip-skins in spring time. If they live, it takes all summer for them to get ready to grow again—if tough enough, they will stand another winter, and fill the ranks of the raw-boned cows and lank, untidy steers, which are the pests of our highways, and disgrace our stock husbandry.

There is "a more excellent way"—one more satisfactory to the "merciful man's" feelings, as well as profitable to the pocket. Perhaps I do not practice it in all respects—yet my way may be worth the telling of.

This winter I have got my calves in the barn, and the stable arranged to suit me. They have plenty of room—14 feet square—and a good manger to eat from—one which holds all I put in for them until they "eat it out," or CHARLEY, or myself remove it. The front has V shaped openings for them to put their heads through, of a size appropriate for calves. The bottom of the manger is about six inches above the floor, a board slants

R. NUTTING'S FANNING AND ASSORTING MACHINE.

THE machine above represented is of recent introduction, having been patented on the 10th of August, 1858, but has already received much favor and commendation. Though we have not yet seen it in operation, we are of opinion—from the manner of its construction, and the testimony of practical and reliable men—that it will prove of great value to the agricultural public. In noticing it the editor of the New England Farmer says:—"We have several times seen this machine in operation, and believe it to be the best Fanning and Separating Mill ever invented." As it promises a cheap and easy manner of thoroughly cleaning grain for seeding, it is worthy the special attention and examination of farmers throughout the country. The construction, capacity and operation of the machine, are thus described by the inventor or owner of the right—whether in too strong language those having personal knowledge of it can decide:—"This machine not only cleans rapidly every kind of grain, grass and garden seeds, beans, peas, coffee, rice, &c., from chaff, dust and dirt, but it separates from them all foul seeds, and also assort

each pure article into several distinct grades or sizes, for extra or Graham flour, for seed, &c. Wheat is cleaned from oats, cockle, chaff, and all impurities; so also all cereal products. Indian, broom and sugar corn, clover, timothy, red-top, millet, hemp, flax, canary and garden seed, are cleaned, separated and assorted, so that no picking over can improve them. The machine possesses many novel and superior features, separates everything according to size, weight and shape. It has two shoes, which act or play independently of each other; the lower one runs the whole length of the machine and over the draws, and its motion is perfectly horizontal. The screens used in this machine are a new invention, differing from, and in all respects superior to, anything heretofore in use—being perfectly smooth, of immovable mesh, firm, elastic or springy, and of great durability. The machine is smaller than ordinary winnowing mills, runs much easier—is very simple and durable, not liable to get out of order, and may be retained in any place on the floor by the weight of the operator. Its cost is about the same as good Fan Mills."

ABOUT CIDER-MAKING.

EDS. RURAL:—It would gratify me much if some of your readers would give a good and easy method of rectifying cider and keeping it sweet through the summer months. There is a person in my neighborhood who uses some process to his own profit, but he keeps it a profound secret. I have tried the popular nostrums of mustard seed and raw beef without any benefit. It is said that a gallon of alcoholic spirits will stop fermentation; but it is objectionable, rendering it too stimulating for a common beverage, and to many on temperance principles.

I would like to inquire what is the meaning of the process, in your number of the 11th ult.,—clipped from a Springfield paper, and given under the authority of a learned professor—which proposes to add a certain quantity of "sulphate of lime," known, as an article of manufacture, as *anti-chloride of lime*. Now, Sirs, sulphate of lime is common plaster, or gypsum, and as to "anti-chloride of lime," there is no such chemical combination—no such article known in chemistry—and I am at an utter loss to know what is meant by this discrepancy of terms. Neither can I understand the rationale of the prescription, or how it can have any effect, as the chemical affinities of lime and sulphuric acid are so strong that no other acid can decompose them—nothing short of a red heat will effect it, and not entirely then. The addition of pure quick lime would be more in unison with chemical laws, as it would be acted upon by the carbonic acid produced in fermentation, and form a neutral and insoluble compound of carbonate of lime, and be precipitated to the bottom. Ashes, ley, saleratus, or any other alkaline substance would have much the same effect. But, would the residue be cider, or a vitiated apple juice?

In my opinion, we know very little of the perfection of cider by the ordinary process of its manufacture. The usual course is to gather all the fallen rotten and wormy apples—those the hogs have rejected—let them lie, fermenting, in heaps, till all other work is done, when they are ground, and pressed through straw of very doubtful cleanliness—in fact, the whole process is as far from that Christian virtue as light from darkness. It is

back about a foot from the front, so that the feed will slide forward within their reach. The openings come within six inches of the manger bottom, and extend up nearly three feet, and are about twenty inches wide at the top.

Nothing in the fodder line, that I ever put before a calf, seems to "take" better than good, early cut and well, but not over cured clover hay. They will do well on it without anything else, but they will do better with an occasional feeding of roots, cut fine, and well salted, "just for a change;" they return to hay with a renewed appetite, and evince by their playfulness that they "feel first-rate," and by their looks that they are thriving and growing. I like to have my calves and other stock, with coats as sleek and shining in winter as in summer, and with comfortable shelter and care, it is not difficult to secure it.

Calves, to thrive, must have water at least twice a day, and if they can have it close at hand and at will, all the better. The best we can do is to give them water morning and night, letting them take a little excursion of about six or eight rods, to get it. It seems "tough" to them, no doubt, to leave their warm stables on a blustering day, for a drink of cold water; but the weather is no worse to them than to their owner who goes with them. I should like to have a big cistern to catch the water from the barn roof, a good pump in it, and there my stock should have water before them in the yard, three or four times a day, at the least.

Calves may be stabled, and fed, and watered, and yet suffer from want of cleanliness. We clean our stables out every day and give new litter, and the amount of good manure furnished will be quite an item to our next year's crop. But our story is getting tedious—we will only say to the farming reader, "give your calves a chance, don't wait for them to take it, you will find it to pay in more ways than you now think of."

P. S. My managers won't hold corn stalks—the calves every time they went through the cow yard, seemed to think them very nice, so I gave them some to-day; and, like any old cow, they pulled them out one by one, and dropped them under foot—eating but a small portion. Just as I expected. I, too, think out-doors, on clean frozen ground, the only fit place to feed corn fodder.—B.

said that every person, in his lifetime, ate a peck of dirt—if so, the cider-drinker gets a half bushel.

If the juice of good, sound and clean apples, free from all impurities, could be obtained, and by the means of the addition of sugar be brought to the density required for making domestic wine, and filtered free from pomace, it would produce a cordial in no respect inferior to that article, and be a cider *à la cider*.

The process now mostly in vogue of making by the spiked cylinder, or grating process, is a most wasteful operation, as it takes from 10 to 12 bushels of apples to make a barrel—one-third of the pomace is left of the size of kernels of corn, from which no juice can be expressed by the means used, and is lost. There is no doubt but there are 50 gallons of juice in six bushels of sound apples, and if a contrivance could be invented to express, at one operation, the juices free and the pomace dry, as in the working the sugar cane—it would be the *ne plus ultra* of cider-making, and I have no doubt but some ingenious Yankee will yet effect it and make a fortune.

L. B. MANLY.
Monroe Co., N. Y., 1859.

* The Journal from which we copied the article referred to substituted "Sulphate" for "Sulphite" of lime, which we understand to be a salt formed by a combination of sulphurous acid with lime as the base.

OUR PLANK ROAD.

It was a pretty thing when it was new. What a luxury to roll easily along while travelers on the common roads were wading in mud! "Progress and Improvement" seemed to be the motto, and "Excelsior" the watch-word of the day. The few hard-fisted fogies who growled at the exactions made upon their purses at the toll-gates, were voted behind "the age." Alas, and alas! Hardly two years passed ere stockholders, who had fondly dreamed of ample dividends, began to shake their heads; and a little later to "give signs of woe that all was lost!" The patronizing public bore the jolting from sharp hemlock knots reasonably well for a time, but, at last, they *caved!* All came to regard the thing as a great waste of excellent timber, that for other purposes would be exceedingly valuable. They learned that there is not *wear* enough in a hemlock plank, if extending through a term of years, to pay original cost and provide means to replace with new when the old is worn out. The sixteen thousand dollar outlay is a total loss! And this is not all. We had a tolerable road before the Company took possession, but, such of Mars! what have we now? Was a more jagged thing ever dignified with the name highway? Holes and pit-falls, plunk lying lengthwise of the road or floated off to the region of tides,—broken sluice-ways, and bridges careening from the perpendicular, are its *best* characteristics! An old-fashioned log-way is "a king" to it, for in a new country such roads are looked for; while in old settled regions the traveler reasonably calculates to move along at the usual rate of speed without imminently risking his spinal column. What is to be done? The road must be fixed, *but how?* Should plank (what there are left) and stringers be buried under, or hauled out of the way? Which, in the long run, is found to be the cheaper and better plan? A SUBSCRIBER.

COWS HOLDING THEIR MILK.

DEAR RURAL:—It is the practice of those who meet together at fairs to discuss the various subjects which come under their notice, and to give and receive such light as may be communicated. There is one subject which often comes up, and no one remedy seems to have been generally discovered; or, if so, it has escaped my notice. I refer to the fact so often inquired about at agricultural meetings, of cows holding up their milk. There is many a noble cow entirely worthless because she will not give down her milk, unless the calf is to be accommodated thereby. I have just such a cow, and was compelled for four months, to first let the calf in to induce her to give down. At last, one day as I was absent, my wife milked the cow, without turning in the calf,—being unable to handle him,—and found no trouble. On learning this, I concluded there must be some peculiarity in the manner of her milking, and on inquiry found she milked with only one hand at a time. This, of itself, may seem trivial; but when we consider that a cow never holds up her milk from her calf, and that the calf never asks but one teat to give milk, the nearer we imitate the calf the more certain will we be to obtain the milk. Now, this may not prove effectual in all cases; but it has never failed with my cow—whereas, previous to that, nothing would induce her to give down her milk but the calf. In this locality, where butter sells at 40 cents a pound, and milk at 10 cents a quart, we do not consider this subject beneath our notice.

Should the spirit move me at a future time, I might trouble you with some facts relative to the horticulture of this new land—for exciting as has been the contest here, the quiet and peaceful cultivation of the soil is now the occupation of a great majority of the settlers of Kansas. Already fruit trees have arrived from the Rochester nurseries, and may the time not be distant when the RURAL will have a large circulation here.

Wyandott, K. T., 1858.

DANIEL B. HADLEY.

SCRATCHES—A CURE.—T., of Danville, N. Y., will find that by taking a soft or fresh corn cob and using warm dish-water, or warm water and castile soap, (I prefer the former) and rubbing the affected part with the cob, dipping it frequently in the water, until he has the scurf all off and perfectly clean—then drying it with a cloth and applying the following salve—rubbing it well, that it will take but a few greasings until the horse is perfectly cured. I have used this method repeatedly for 10 years, and have never known it to fail.—Scrape from the outside of the iron pots used for cooking, the soot, or black that is on them, with a case knife, and then mix tallow with it until it forms a good salve, or paste, and rub the scratches with it after being cleansed, three or four times, or even six times, if necessary. An improvement will be seen immediately. The horse should be kept in the stable or out of the mud until he is cured, or nearly so.—A. FAHNESTOCK, *Tribune*, Jan. 1, 1859.

AN ALDERNEY BULL.

DURING the progress of the Tenth Volume of the RURAL, we purpose to present our readers with illustrations of the various breeds of Cattle, Horses, Sheep, etc., together with brief descriptions of their peculiar characteristics. To this end we give an engraving of an Alderney Bull, the representative of a breed of small cattle found in France and the islands along the French coast. To the eye they exhibit but little symmetry of form; color light red, yellow, dun or fawn, short, wild-horned, deer-necked, thin, and small boned. Youatt says of them:—"They are found mainly in gentlemen's parks and pleasure grounds, and they maintain their occupancy there partly on account of the richness of their milk, and the great quantity of butter which it yields, but more from

the diminutive size of the animals. Their ugliness is passed over upon these accounts; and it is thought fashionable that the view from the breakfast or drawing-room should present an Alderney cow or two grazing at a distance." Their milk, as has been stated, is very rich—giving more butter per quart than any other—but the quantity is small, and as they are voracious eaters they will not answer in the dairy where that business is followed for profit. Where the *excellence* of the article is considered, and not the *expense*, the Alderney cow will be found fitted. When dried, they fatten with much rapidity, and this feature may be called their great excellence. They do not possess sufficient merit to commend them to practical agriculturists in this country.

WORN-OUT LANDS.—SEEDING TO GRASS.

EDS. RURAL:—Wishing to give you some of my experience in a long course of agricultural operations, I send the following:

Some years ago I owned a farm in New Hampshire, comprising a variety of soil, among which was a piece of "old N. E." pine plain land, so exhausted by continued cropping that it was considered worthless. In fact, it was so run down that for years before I came in possession, it had lain as waste land. It would not sward over, except in small patches, and it had the appearance of being entirely exhausted. I drained a small maple swamp adjoining, where the muck was from 6 to 10 feet deep, then I dug out the muck and carted it upon one acre of the land, to try an experiment. Seventy-five or eighty ox-cart loads were dumped down—half a load in a pile—which lay until the next spring, when it was spread and plowed under, then marked out for corn, 3½ feet apart, and manured in the hill with twelve loads of rotten manure.—Now for the result:—I harvested fifty bushels of good shelled corn from that acre, and the ensuing spring sowed to rye and grass. The rye was fair, and the grass took well. It remained in grass nine years. Some years I think we cut more than one ton, and none of the years less than a ton to the acre. The next acre adjoining, of the same quality of soil and the same worn-out appearance, was managed in the same way precisely, as to muck and manure, and planted to corn. I harvested 50 bushels—the same as the first piece—and sowed down the next spring with oats and grass. I harvested 50 bushels of excellent oats, the grass took nearly as well as it did on the first piece, but it did not flourish, and there was not more than half a ton on the acre, yet the seasons were very near alike. Now, what occasioned the failure of the crop of grass on the second piece? Was it the oat crop? I am inclined to think it was. Since that time I have sown a part of a piece to wheat and a part to oats, on the same kind of land, side by side, on the same day, and I have invariably found the grass crop about one-third larger on land sown with wheat, rye, barley, &c., than that sown with oats.

Collins, N. Y., 1858.

WOODEN DRAINS.

Messrs. EDS.:—Wooden pipe, I perceive, is advertised in the RURAL, for conveying water. I can give some information concerning their durability, as I have put down many hundred rods. My work was chiefly in the northern part of Massachusetts and southern part of New Hampshire. I commenced about forty years ago, and followed the business for several summers, together with making pumps out of pine logs, and during this time I re-laid several old lines. The owners would tell me how long they had been laid, which was generally from eight to fourteen years—the logs used, pine, from five to nine inches in diameter. In some of the lines I found logs sound enough to relay, by renewing the joints. This depended on the kind of soil they were in—in a coarse gravelly soil they decayed fast, but in clayey ground that was moist or wet, they would last much longer. I once re-laid a line of logs that led a part of the way thro' a swamp, where there was mud and water all the year—the other part was dry land of a clay nature. They told me that the logs had been laid twenty-eight years—those on the dry land were decayed, those in the swamp were apparently as sound as ever, except at the joints. I took them up, removed the joints, and laid them down again. We can see from this that it depends wholly on the ground they are laid in. When I discovered the joints failed first, I adopted a remedy, by taking a cotton cloth about three inches wide, covered one side with tar, and wound round the little end of the log, then put the joints together, and they lasted much longer.

I came to Marlborough, N. Y., in 1828, and since then have laid a few lines, but mostly with tamarac logs, they make a very pretty aqueduct, but not so durable as pine. In dry gravelly land, or coarse sand, I would recommend cement as best and more durable.

Marchus, N. Y., 1858.

ECONOMY, joined to industry and sobriety, is a better outfit for business than a dowry.

Inquiries and Answers.

WHITE GUINEA FOWLS.—(W. L. G., Fairfield, Mich.)—EDWARD UNION, of Dedham, Mass., will give you all the information you require.

REMOVING GREASE FROM SKINS.—Will you inform me through the RURAL the best and easiest way of removing grease from the skins of fur animals—those that are very greasy?—B. I. G. HUNTER, Rushford, N. Y., 1859.

WATER LIME.—I wish to know what is Water Lime, or Hydraulic Cement? What is it chemically? To what is its resistance to water due? Is it good for anything agriculturally, after age and exposure to dampness have spoiled it for plastering cisterns?—S. M., Newport, Wis., 1859.

MORTAR made from common lime, when placed in water, gradually softens and disintegrates, the lime dissolving and mixing with the water. Limestone, which contains about 20 per cent. of clay, (silicate of alumina) when burnt, gives a lime which possesses the property of hardening under water, and is called Water Lime, or Hydraulic Cement. Nearly as good for agricultural purposes, we should think, as common refuse lime.

A CORN HOUSE WANTED.—Has the RURAL any plans for a Corn House in its list of designs for farm buildings? Since the farmers of Old Monroe have been compelled to abandon wheat-growing, there is, consequently, more corn produced, and the curing or drying the same after husking has become of considerable importance. The curing in small cribs will do, but is not convenient for storing and saving after it is dry, in many respects. I am desirous of building a Corn House with a small granary in it, and having the same convenient—sure fire against mice and rats, and constructed as to enter thoroughly the newly husked corn, without mould or black mildew. Now, if you have any plans on hand, or if some of your numerous subscribers will be kind enough to give us them, or their views through the RURAL, it will be gratefully received.—H. B. H. North Rush, N. Y., 1859.

WANTS ON COWS' TEATS.—Will some of your numerous readers give information through the RURAL how to take warts off of a cow's teat, and prevent them from coming on? I have a valuable young cow whose teats are covered with them—some nearly an inch long. I presume such information has been given, but as I am a new subscriber, I have not seen it.—W. B. P., Buchanan, Mich., 1858.

WASHING IN ALUM WATER is strongly recommended. Another remedy is composed of equal parts of neat's foot oil, beef's gall, spirits of turpentine, and old brandy—shake well before using, and apply once each day.

COUGH IN HORSES.—Will you, or some of the readers of the RURAL, please give me a little information through your paper? I have a young horse which took cold last winter which produced a cough. I gave him medicine one of the M. D.'s prescribed, but with no good effect. Through the summer his cough nearly subsided, but when I began feeding hay in the fall, he again commenced coughing. Now, if any one will inform me what will effect a cure, he will greatly oblige.—A. G., Scott, Penn., 1859.

Is the treatment of simple colds, a few warm washes, warm clothing, and a warm stable are generally all that is necessary. Sometimes a little relaxing physic may be given to advantage. Damp recommends 4 ounces each of slippery elm, Indian turpentine, oleo-campene, skunk cabbage and caraway seeds—all powdered. Dose, half an ounce twice a day, in gruel. While administering medicine, the horse should be deprived of water, and be made to drink of slippery elm or flaxseed tea. Where the cough has become chronic, a blister extending from the root of one ear to that of the other, taking in the whole channel, and reaching six or eight inches down the windpipe, has often been tried with good effect. Feeding has much influence upon a chronic cough. Too much dry feed increases it, and one of the best things that can be used as a portion of the animal's daily fodder are carrots. The authority before quoted says "for an old chronic cough that seems likely to wear the animal out, and also the patience of its owner, depending perhaps on some organic change, or irritable state of the respiratory surfaces, use counter irritation, and give a dose of the following, night and morning:—Equal parts of pleurisy root, licorice, lobelia, sulphur, sassafras, and blood-root—all powdered. Dose, one ounce, night and morning, for the first two days; then omit the morning dose. To be mixed with the food."

Rural Spirit of the Press.

Chinese Sugar Cane as Fodder.

In the December issue of the *American Farmer*, Mr. M. B. SHEPHERD, of Fluvanna Co., Virginia, writes thus relative to the value of the Sorghum as food for stock:—"I have now grown the second crop of the Chinese Sugar Cane; I have fed it freely to horses, cattle and hogs—to the two former in both a green and cured state; I have found that they thrive finely on it. From the great drought we have had, the corn crop is a short one—hence, I have given my fattening hogs but little so far except sugar cane, and they are now fat. The seed I have ground with or without corn for my horses; I consider it one of the safest and most profitable crops we raise."

Feeding Carrots to Horses.

A CORRESPONDENT of the *Working Farmer* writes that his attention has lately been called to the best mode of feeding carrots to horses, and after many experiments he has arrived at the following conclusions:—"The carrots should be sliced by an ordinary root cutter, and fed at the time the animal gets his regular feed. If the horse has been fed with four quarts of oats at a time, give him two quarts of oats and two quarts of sliced carrots; by such a practice the nitrogenous part of the oats has no chance to pass off in a fluid state, but combines with the pectin of the carrot and forms a gelatinous substance that is retained to supply the wants of the body, and give muscular strength to the animal. Carrots alone are not as good as oats for a working horse, but carrots, and oats fed according to the above directions, are better than oats."

An Important Question.

In a recent number of the *New England Farmer*, the question "Can corn fed to hogs be made to pay west of Ohio?" is raised, and Mr. STEARNS, of Felchville, Vt., gives his views as follows:—"Corn fed to swine can be made to pay almost anywhere by proper management. However fertile land may be, I do not believe you can farm it long without manure. Therefore, in feeding corn to hogs, have an eye to the manure. In fattening swine, the meat is one object and the manure is equally another. When pork is worth six cents per pound, you get seventy-five cents per bushel, in pork, for your corn; and with proper management, you get, in the long run, seventy-five cents more in manure. Turn your pigs into your orchard up to the middle of August; then put them into the sty, with a good yard, into which throw turf, muck, leaves, sawdust, or anything to absorb the ammonia. Sawdust, usually wasted, is much more valuable than many imagine. When thrown into hog-yards or stables, it proves a good absorbent, and forms a most valuable fertilizer."

A Cheap Filter.

In some situations spring water cannot be obtained, hence rain water is employed for all domestic purposes. To render it fit for drinking and cooking, it requires to be filtered, as show-ers carry down insects and their ova from the atmosphere and dust from the roofs upon which they fall. It is best to purify rain water before it enters the cistern, and for this purpose a good filter can be made by any person at the cost of only a few shillings. The way to do this, says the *Scientific American*, is as follows:—Construct a tolerably large and stout wooden box, with a hole in the bottom, or at the side near the bottom, and in connection with a pipe leading into the cistern; nail a coarse cotton or linen cloth over its bottom inside, and then fill it up to within three inches of the top with layers of clean gravel, sand, and charcoal, and over the top of these secure a stout cloth. Into this box lead the pipe, and as the rain passes through it to the cistern, it will be purified and fitted for drinking or any other purpose. The top cloth of this filter can be easily removed and frequently washed. At a little extra cost, this filter may be made so as to rotate on an axis to be turned upside down, and washed out by making clean water rush from its bottom through to the top. It is necessary to make such filters somewhat large to carry off water rapidly during heavy showers.

Benefits of Underdrainage.

JOHN S. LACEY, of Harrison Co., Ohio, writes the *Ohio Cultivator* thus:—"Some 16 years ago I began to underdrain in a small way, without experience, only what I had gathered from writings on the subject, which was very limited at that day. In a very short time I began to realize the benefits, and, as my draining increased, my desires increased much faster than the drains. At this time I am so thoroughly convinced of their great importance, that unless I have dried up some wet, swampy, or too level spots on the farm every year, I feel I have neglected my own interest, and that of my family and posterity. I do this work in spring and fall—the most in the fall, being the more pleasant time to work in wet land. I have stone and use them. I have thought if I had not stone I would make a kiln of bricks 8 inches long, 4 inches broad, 2 inches thick, set them on end on the bottom of drains, 4 inches apart, lean tops together, lay over them some straw, and fill up. Let me urge my brother farmers to a trial on a small scale, with tile, stone, brick or wood, the one most convenient and cheap. I have faith to believe if you make one trial the good work will go on. I have made of these drains upwards of three and one-half miles. My mode of constructing them is to sink the trench about two feet deep at the lowest place to be drained, from there to some suitable outlet, then take stone 8 or 10 inches broad, stand them on the bottom, 4 or 5 inches apart, lean tops together, cover the tops closely with straw or litter and fill up—when you have a main drain completed, you can branch as many arms on either side as you please. I have long since declared war against the crawfish tribes on my farm, and I consider every drain I make an effective piece of artillery added to my battery, which plays day and night against the strongholds of the enemy. It gives me great satisfaction to say several strongholds of the enemy have been taken, and those not slain are banished, and other tribes are in council considering the propriety of beating a speedy retreat."

Agricultural Miscellany.

THE AGRICULTURAL Press enters upon the year 1859 with renewed vigor, and better prospects and promises of augmented success and usefulness, than for many years preceding. Many of our exchanges apparently commence the year hopefully, evincing an earnest and progressive spirit, and we trust their efforts will be crowned with abundant success—that those who labor in the cause will be amply remunerated, and their readers and the public generally greatly benefited. Among other improvements, we observe that the *Michigan Farmer* has been changed from a monthly to a weekly, and is now a handsome quarto of 8 pages—another evidence that farmers are progressing. We wish it success.—The *Boston Cultivator* has also made an improvement—for it not only appears in new and beautiful type, but has changed its general appearance by ignoring that "awful" border which has marred its pages some ten or fifteen years, and donning more modern and tasteful surroundings. The world is moving.—Ewen's "Journal of Agriculture and Prairie Farmer" also appears in a new dress and tasty vignette heading, with *Prairie Farmer* as the main title.—The last No. of the *Maine Farmer* announces the retirement of Mr. R. Eaton, who has been its successful publisher for the past fifteen years, and that Messrs. HOMAN & STANLEY, former publishers of the *Gospel Banner*, are his successors. We hope Mr. E. retires with a competency. The *Farmer* will probably continue under the supervision of Dr. E. HOLMES, its long-time capable editor.

WOOL GROWER AND STOCK REGISTER.—As we are almost daily receiving inquiries and orders for this journal, formerly published by us, we again state that it was merged in the RURAL NEW-YORKER some two years ago—and that we cannot supply complete sets of the work. Though tolerably well sustained, the W. G. and S. R. was discontinued because many of its subscribers preferred the RURAL, on sight and examination. Perhaps we made a mistake in sending specimens of the RURAL to its readers, but if so it is too late to repent, and we are satisfied with the result. The W. G. and S. R. is not the only monthly that has had to succumb to the more varied, interesting and progressive weeklies.

NATIVE WINE.—Among those who have favored us with samples of wine of their own manufacture, not before acknowledged, are the following: E. FERGUSON, of this city, a fine article of wine made from the Clinton grape. This has more of that nutty flavor, peculiar to foreign wines, than any other native wine we ever tasted. W. H. H. BAXTON, and DEWEY & MUNROE, of Rochester, excellent samples of Isabella grape wine. Mr. BAXTON was awarded first premium on Isabella wine at our last Co. Fair. HENRY SQUIRES, also of this city, unusually fine currant wine. ALBERT DEYERLICK, of Clyde, two samples (one two years old and the other new,) made from the Oporto grape. The two years old is especially fine. We should like to receive a communication from Mr. D. relative to his manner of cultivating the Oporto grape, and also his success.

THE AG. CONGRESS AT WASHINGTON.—This brilliant gathering is beginning to reflect a portion of its light. A ray, by some unaccountable means, fell upon the floor of the House of Representatives, and the reader will discover, by referring to our report of "Congressional Proceedings," that it created considerable excitement in that quarter. Probabilities favor the idea of a little amusement for the movers in this concern, and the edification of outsiders, and the people generally. So mote it be.

THE WEATHER has at last become decidedly Boreas. The present week opened in a very rigid manner, the Thermometer indicating 8 degrees below zero on Monday morning—a great change from the preceding soft, warm weather. To-day (Tuesday) is nearly as cold, and the prospect is fair for quite a "spell" of winter weather, with good sleighing to match, (the snow being nearly one foot deep hereabouts,) which latter is decidedly favorable for out-door business operations.

TOMPKINS COUNTY AG. SOCIETY.—This Society held its annual meeting at the rooms of the Ithaca Farmers' Club, Jan. 5th, and the old officers were mainly re-elected. President—EZRA CORNELL, of Ithaca. Treasurer—O. B. CURRAN, of Ithaca. Secretary—W. H. PURDY, of Ithaca. The meeting was well attended, and much interest was manifested in the promotion of Rural affairs. The Ithaca Farmers' Club is a new institution, now less than two months old, yet has already secured a commodious room, where weekly meetings are held. The Library already numbers over 150 Volumes of well selected Agricultural Books and additions are daily made by the liberality of citizens.

UNION AG. SOCIETY.—The annual meeting of this Society was held at Brockport, Jan. 1st. After voting that the boundaries of the Society include the towns of Sweden, Clarkson, Union, Parma and Ogden, in Monroe Co., and Clarendon, Murray, and Kendall, in Orleans Co., the following officers were elected for 1859: President—E. B. HOLMES. Vice Pres't—C. J. PROSSER and JOK. H. PRATT. Sec'y—H. N. BEACH. Treasurer—THOS. CORNELL. Directors—J. N. WARREN, Clarkson; J. O. PETTENGILL, Ogden; Abner WOOD, Parma; Hiram MORDOFF, Union; S. V. W. REGAN, Kendall; S. H. DAVIS, Sweden; Nicholas DARROW, Clarendon; Thos. Jewett, Murray.

SCARCITY OF FODDER.—The Wyoming Mirror says:—"The scarcity of fodder in the Southern counties of this State makes it necessary to transport feed for stock from this vicinity. An Alleghany dealer has contracted with one of our millers for 100 tons of feed, which he is delivering at the railroad station at the rate of about three tons per day. The demand for corn has already increased the price of that article, and it will no doubt be still further increased before hay comes."

HORTICULTURAL

FRUIT GROWERS' SOCIETY OF WESTERN NEW YORK.

Annual Meeting.

The Annual Meeting of the Fruit Growers' Society of Western New York, was held in the city of Rochester, on Wednesday, the 5th inst., President Norton in the Chair, and was the largest and most interesting meeting ever held by the Society. Large delegations were present from Onondaga, Oswego, Cayuga, Yates, Ontario, Wayne, Livingston, Niagara, Erie, and Monroe Counties. Several hundred of the most intelligent fruit growers in Western New York were in attendance during the whole session, which occupied nearly two days. Our report of the proceedings will be found pretty full and correct.

First Day—Morning Session.

The meeting was called to order at about half-past 10 A. M., and after reading of the minutes of the last meeting, reports of Standing Committees were called for, but nothing of special interest was presented. A Committee was appointed to nominate officers for the ensuing year, and also one to report subjects for discussion. While these Committees were out, the President suggested that any questions which gentlemen would like to have discussed, or on which they desired information, might be presented to the meeting.

PEARS SUITABLE FOR QUINCE STOCKS.

W. R. CORPOCK, of Buffalo, said he had been much interested in ascertaining what varieties of pears were adapted to the quince stock. Had tried some experiments, to ascertain what varieties would, and would not form a perfect union with the quince root. The *Urbaniste*, it had been said, was unsuited to the quince, but on examining a large tree 2½ inches through the stem, that he had lost by accident, he found the union perfect. The *Columba*, had not made a good union. Examined a large tree, nearly three inches through the pear stem, but the quince stock not more than half that size, and the union was very imperfect, a mere granulation. The *Bartlett* was the same. The fitness of the *Belle Lucrative* for the quince root had been questioned, but he found the union most perfect.

Dr. H. SPENCE, of Yates county, recommended caution in reporting the results of experiments of this kind. A failure of the pear to unite with the quince wood, may be accidental. We should multiply tests, and in this way we can arrive at unerring conclusions.

RIPENING WINTER PEARS.

W. R. CORPOCK thought all would admit that pears were delicious, and that they may be had the greater part of the year. But how to keep and ripen winter pears was a question of absorbing interest. All do not succeed with winter pears. The *Vicar of Winkfield* many will say, judging from their own experience, is nothing but a cooking-pear—sour and astringent. The speaker would give his experience in ripening this pear. The present season had a large crop, the trees over-bearing as to require propping; the fruit good in size, and uniform. The *Vicar* was a most constant and uniform bearer. Allowed the fruit to remain on the tree as long as prudent, for fear of frost, then picked them, (about 20th October,) and carried them into a dark and unheated room on the north side of the house, spread a layer on the floor, carpet, spread a blanket over these, and then another layer, and so on. Procured a pine box, with shelves, something like a cupboard, that would hold about three bushels and placed this behind the kitchen stove, where the thermometer would range from 70 to 90 degrees. When he desired to ripen the pears, filled this box, and allowed the fruit to remain in it for about ten days, in which time they would be fully ripe, and on opening the door of the cupboard, a most delightful fragrance, like an orange grove, or a pear orchard, would strike the olfactory. The specimens ripened in this way were beautiful, highly colored, and delicious. Ripened his crop in the month of December, and sold to retailers at \$6 per bushel. Soil, stiff loam, with clay base. The roots of this, as of all vigorous sorts, strike deep into the soil.

Dr. SPENCE had found the *Vicar of Winkfield* a good bearer, but had been very unfortunate in his attempts at ripening. Put them in a warm room, around the stove pipe; they would not ripen, and he threw them away after keeping them until March. In answer to a question, Mr. S. said his specimens were from standard trees.

P. BARRY, did not consider most winter pears difficult to ripen, certainly not the *Vicar*. The old plan of ripening was something like that described by Mr. CORPOCK, but he thought the labor unnecessary. If this pear is well grown, it may be placed in a good dry cellar, where the temperature ranges from 40 to 45 degrees, and will ripen like apples. Mr. SPENCE's specimens were not well grown, or they would not have kept until March. The 1st of January is as long as they will keep. A good judge can tell by the appearance whether a *Vicar* will ripen. Poor specimens should be picked off during summer. Winter pears should be allowed to remain on the trees as long as possible. If picked too early they ripen prematurely, because we have no cool place to keep them; and unless well matured on the tree winter pears are generally good for nothing. In this respect they are quite different from summer pears. Pears in ripening, should not be exposed to the air.

H. J. HARRIS, of Buffalo, had grown the *Vicar of Winkfield* for six years. The trouble with those who complain of it is not in ripening, but in growing. If well grown, they may be put in the cellar like Baldwin apples, and will come out ripe and good. If gathered too early, or if the specimens are poor, they will shrivel, and become hard and woody. Valued it highly; no variety more so except *Louise Bonne de Jersey*. Mr. H. had tasted the specimens ripened by Prof. CORPOCK, and they were fine—in fact delicious—almost equal in flavor to *Virgatus*. Winter pears must be fully matured on the tree. Summer pears will ripen in the house if not fully matured.

Prof. CORPOCK would like to learn how to ripen the *Glout Morceau*. It was vigorous in its growth, something like the *Vicar of Winkfield*, and was just the kind for a friend of his to plant on Grand Island, for it is only necessary to plant them and they will take care of themselves, but he found great difficulty in getting them of good flavor. In answer to an inquiry from Mr. HOOKER, Mr. C. said his trees were from ten to twelve years old, vigorous, bear well, and from two three trees will yield a barrel.

H. E. HOOKER, of Rochester, said his experience with the *Glout Morceau* was that young trees bore flavorless fruit. Never had good flavored specimens until the trees bore a barrel each. Place them in the cellar when the weather becomes cold; keep them there until near Christmas, and find them yellow and delicious.

Mr. BARRY remarked, that when this pear first began to bear around Boston, every one was disappointed with it, and most of the trees were grafted over. When the few trees that were allowed to remain became older, the people were again disappointed to find the fruit so good.

Mr. CORPOCK inquired of the last speaker if he did not think ten years old enough for the production of good fruit.

which seemed to form an exception to all general rules.

Prof. CORPOCK said he must be allowed to speak a word or two for Buffalo. They were not as badly off as persons might imagine, from some things that had been written. Some years ago, when dwarf pear culture was in its infancy they commenced their culture with zeal, but not perhaps with zeal according to knowledge. A gentleman who now condemns dwarf pears, procured a large lot of *waisting* trees, *cheap*, which proved worse than worthless. These were disposed of to citizens of Buffalo, himself among others, and he was happy to say they were now almost all gone. Later purchases had proved successful. On New Year's Day, in his travels, he was astonished to see such fine trees growing in the gardens. Dwarf pear culture about Buffalo was a success, except with a few who have some of the old trees, that caused so much disappointment and so much trouble.

H. P. NORTON, of Brockport, grew *Leaves*—had no difficulty in ripening them—perfectly delicious—none better, if specimens were all grown and allowed to remain on the trees until well matured. S. H. AINSWORTH, of Bloomfield, had a number of trees of *Vicar of Winkfield*—good, universally—better than expected; almost equal to *Virgatus*. Ripened latter part of November and in December, in a warm room about 70°. Kept in that temperature for about ten days, in drawers, covered with cloths. Kept until he wished to ripen them, in barrels and boxes in the cellar. Picked fruit from trees towards the last of October. *Glout Morceau* on pear stock not as good; had none on quince.

BENJAMIN FISH, of Rochester, wrapped *Vicars* in paper and kept them in a dark closet, in a cold upper room. They ripen beautifully; almost as good as *Virgatus*. Was quite disappointed to find them so good.

Prof. CORPOCK was surprised at what had been said by gentlemen about ripening winter pears in the cold, as it did not accord with his experience.

H. E. HOOKER, never found the least difficulty in ripening winter pears, and while his friend CORPOCK was entitled to much credit for his skill in growing good fruit that would ripen, he could not award him much credit for ingenuity in devising boxes or any other process of ripening. If good fruit is put in a box or barrel, and receives as much care as we give our winter apples they will ripen, but if we put in poor specimens no process will make them good.

THE CURCULIO.

Dr. SPENCE inquired if any remedy for the Curculio had been discovered. This insect was destroying all our finest fruits, Plums, Apricots, Nectarines, &c.

To this inquiry the general expression was that the only remedy was the jarring of the trees and killing the insects. This work must be thorough, or it is useless. The jar must be sudden and sufficient to shake all the insects from the trees. The best way is to saw off a limb, leaving a stump which may be struck without injuring the bark.—To make a sure thing it is well to strike the limbs. The jarring should be done in the morning quite early, though it may be done in the evening. It should commence early, as soon as the blossom falls, and be continued once or twice a day for three or four weeks; or as often and as long as the insects can be caught. Sweep up all stung fruit that falls, or if convenient let the fowls have the range of the plum orchard—the pigs too, are quite useful. Nearly every one who had followed this process faithfully, reported a full crop of plums, but no half-way work will answer. Smoking, lime, salt, and such processes were reported as useless.

Afternoon Session.

On assembling in the afternoon the President delivered the Annual Address, which was listened to with the greatest interest, and a copy was requested for publication. We may give it next week. The election for officers was then held and the following gentlemen were unanimously elected to fill the offices of the Society.

President—BENJAMIN HONOR, of Buffalo.
Vice-Presidents—J. J. THOMAS, Union Springs; W. BROWN SMITH, Syracuse; Prof. W. R. CORPOCK, Buffalo.
Secretaries—C. P. BISSEL, Rochester; J. NO. B. EATON, Buffalo.

Treasurer—W. P. TOWNSEND, Lockport.
Executive Committee—P. BARRY, Rochester; J. J. THOMAS, Union Springs; C. L. HOAG, Lockport; W. B. SMITH, Syracuse; Joseph Frost, Rochester.

The newly elected President expressed his thanks to the Society for the unexpected honor conferred upon him. While he felt gratified at this expression of confidence, he could not help expressing the opinion that some member might have been selected better qualified to fill this responsible position, particularly when he remembered the honorable gentlemen who had been his predecessors. Though he had seen many summers, he had not lost his interest in horticultural pursuits; never had the waving trees, the green leaves, and the gay flowers appeared so beautiful to him as in the one just past. His energies and abilities should be directed to advance the interests of the Society, and meet the just expectations of those who had made him its presiding officer.

The following being the first subject submitted by the Committee, was then discussed:

CULTIVATION OF APPLES.

How many varieties should be embraced in an Orchard of 1,000 Trees, to secure the largest profit of Orchard in Western New York? What are the most profitable varieties for an Orchard of 1,000 Trees?

L. B. LANGWORTHY, for market, would plant but two varieties, 500 *Baldwin* and 500 *Fall Pippin*. The *Baldwin* is not a first rate apple, but is very profitable. Never could get enough of the *Fall Pippin* to supply the demand. It was rather uncertain as to bearing, but one of the best apples ever created.

Dr. SPENCE said the *Fall Pippin* was a shy bearer in Yates county, and unprofitable as a market fruit. Would plant *Baldwin*, *R. I. Greening*, and the *Tompkins County King*, which is an abundant bearer, fine keeper, and of excellent flavor. It is larger than the *Baldwin*, and more productive. These three sorts are of good quality and good bearers. The *King* is good early in the fall, from November until spring.

J. J. THOMAS, of Union Springs, said that in some seasons one variety would fail while others would bear. For that reason would plant not less than ten or twelve sorts, if they could be had, and then a crop was sure almost every season. This would give a uniform supply for market, as well as a desirable variety. Railroads, too, have increased our facilities for sending summer varieties to market, and in some locations it would be advisable to plant freely of the summer sorts. Would plant two-thirds of the thousand of *Greening*, *Baldwin* and *Tompkins County King*.

H. E. HOOKER considered the wants of a community like the wants of a family. Would plant freely of the *Baldwin*, *R. I. Greening* and *King*. The *Twenty Ounce*, or *Cayuga Red Streak* is an early and profitable variety, and a great favorite with many. It takes the place of the *Fall Pippin*, which is so poor a bearer that no one can afford to raise it. He wanted *most* apples—could not keep house without them—and supposed every one else did. The people of New York city are beginning to learn that sweet apples are good, and the eastern buyers now pay a high price for them. The *Tollman Sweet* was the only one he could unqualifiedly recommend. It would be desirable for the orchardist to have some sort that would keep later than the *Baldwin*, and this they could secure by planting the *Roxbury Russet*. *Cooper's Redding* is a fine, showy apple, a good keeper, and exceedingly prolific. It promises to be a very profitable apple for the fruit grower.

Mr. BARBER, of Ontario, in planting an orchard of 1,000 trees, would procure about 500 *Baldwin* and divide the balance between *Roxbury Russet* and *R. I. Greening*. The *King*, he thought did not promise to be as productive as the *Baldwin*.

A. STONE, of Oswego, would add to the list recommended by Mr. HOOKER, the *Wagener* and the *Unsett*, a most excellent apple in every respect and ripens in the latter part of Sept. or Oct.

Geo. ELLWANGER, in addition to these varieties mentioned, would say a good word for the *Street* *Unsett* and *R. I. Greening*.

T. G. YEOMANS, of Wayne, said that every one who has a village lot plants a few apple trees, and all early, because they can pick them as they are needed, during the summer and fall, for cooking and eating, while their winter fruit is purchased of the farmer. This in a great measure destroys the demand for early apples in country villages and small cities. The farmer cannot leave his business and early to market a few bushels of apples, as they ripen. Winter apples can be picked late in the fall, and marketed in early winter, when other work is over. W. L. is looked for large orchards, trees of rapid growth, and good bearers, fruit of good quality, and of looking-keeping well, and that will bear transportation. The *Baldwin* possesses these qualities in an eminent degree. Its color is in its favor, it is firm, and will not show bruises, and keeps well. As to failing some seasons if only one sort was grown, he had yet to see the *Baldwin* fail, when any other variety bore fruit. He would plant 999 *Baldwin* and 1 *Greening*.

BENJ. FISH, of Rochester, said the *Baldwin* bore well, and is hardy, but for a late apple it is almost worthless. The *Greening* is far superior.—The *Golden Russet* he considered No. 1. Would have at least ten varieties in an orchard.

L. B. LANGWORTHY considered the *Golden Russet* almost worthless, and *Sweet Bough* as bad.—*Roxbury Russet* was far ahead of *Golden Russet*.

W. BROWN SMITH, of Onondaga, thought gentlemen had lost sight of the size of the orchard. The products of an orchard of 1,000 trees would be sold to the shippers, and if the fruit was of the right kind, they did not desire variety. Indeed it was a convenience to them to get but one kind from an orchard. He would plant the whole 1,000 *Baldwin*.

Prof. CORPOCK said that those who, like himself, lived near a large city, knew the value of early apples. In an orchard of 1,000 trees, he would have at least five kinds—*R. I. Greening*, a universal favorite; *Baldwin*, of good size and color, of fair quality, and an excellent bearer; *Keweenaw Codlin*, fine for cooking even when as small as walnuts; *Early Harvest*, a good eating and cooking apple; and the *Red Astrachan*, of beautiful color, and a fine acid.

Mr. BARRY thought each person must decide for himself what varieties were most desirable for his location and circumstances, and that he could easily do, after becoming acquainted with the character and quality of the different sorts. Those who plant 1,000 trees will expect to plant winter fruit in the main. New York, Boston, and other cities will take our supply of fruit, and such varieties should be grown, as in addition to good quality and productiveness, will bear shipment without injury. *Baldwin*, *R. I. Greening* and *Roxbury Russet* are the three most desirable varieties. Might plant 50 trees of *Tollman Sweet* and *Golden Russet*, but the bulk would be the varieties named. Mr. B. thought the *Greening* as good a bearer as the *Baldwin* when the tree is of good age, but the *Baldwin* bears the youngest. There was no particular advantage in having trees bear very early; indeed, it may prove a positive injury. A bushel or two from a young tree is a matter of little consequence, compared with obtaining a good healthy growth, and a vigorous constitution. In future years it may repay a hundred-fold for a little supposed tardiness at first. Believe the *King* would be a profitable apple, though had not sufficient experience to speak with confidence.

H. N. LANGWORTHY thought if we confined ourselves to these two or three kinds, the people would become satisfied, and as a necessary consequence of an abundant supply of these sorts the price would be reduced, while other kinds that were neglected would increase in value from their scarcity. Ten or a dozen varieties were few enough.

Mr. BARBER found that the *Wagener* would not bear shipment. It is an early bearer and a delicious apple. Nothing better to grow near cities, or for family use.

BENJAMIN HONOR planted eight or ten years since a large orchard on the lower end of Grand Island, principally of *Northern Spy*, *R. I. Greening* and *Roxbury Russet*. He was now planting *Baldwin* and *Greening*. The *Spy* was slow in coming into bearing, and the *Roxbury Russet* is a poor grower.

L. B. LANGWORTHY had grown the *Northern Spy* about eighteen years. It was time that humbug was knocked in the head. It is crisp, juicy and fresh to the last minute, but the juice is thin and watery, and it can't be packed, and must be handled with the greatest care.

J. J. THOMAS had never been a particular admirer of the *Spy*. One small tree in his garden bore six bushels of apples the seventh year after planting. In some parts of the West it is well liked, and in California it is placed at the head of the list.

P. BARRY said the *Northern Spy* Apple, to his taste, was the finest ever grown. He would as soon call the *Seckel* Pear a humbug, as the *Spy*. Had seen orchards ten or twelve years old, bearing immense crops. A few years ago it was praised to the skies—there was no such apple—now it is condemned, and principally because of our unreasonable impatience. It does not bear young, but does bear good crops when arrived at a proper bearing age, if well treated. The very fact that it will not bear shipment and hard handling, is one evidence of its excellence. It is a general rule that all of our most delicious fruits—those of the greatest perfection of flavor and the highest refinement, are tender. Mr. B. saw last year fine specimens in Milwaukee that had been brought from Western New York.

T. G. YEOMANS—the *Northern Spy* was grown in his neighborhood, as fine as could be desired, and good crops. The orchardist will find great advantage in growing large quantities of one kind of apples. Purchasers from abroad will give fifty cents per barrel more for a large lot barreled up in an orchard, than for a lot made up of a few barrels each from a dozen orchards. In the latter case they have to open and assort them before sending off. Shippers from Maryland offered \$2 per barrel for a thousand barrels, when the selling price was only \$1.25. At first was astonished at this, but when he came to consider the trouble of opening and assorting these picked up lots, and the loss, from poor and bruised specimens thrown out, saw very well that they could afford it. Some of these lots may be good, but others are poor, and so the good suffers for the bad; but where a large lot is put up well, the owner can command an extra price.

Mr. BARBER said growers would not take good care of their trees, and that was the reason why they do not succeed with the *Northern Spy*. It requires a good, warm soil, and the head of the tree must be thinned out, and the fruit thinned, for when it begins to bear, it bears too much.

S. H. AINSWORTH, were speaking for the present, would recommend the *Baldwin*. But, for the future, would add *Greening*, *Roxbury Russet*, *Tompkins County King* and *Twenty Ounce*. Anticipated an over production of *Baldwins*. The *Wagener* would keep longer, and bring a high price when the *Baldwin* is past, and the *Twenty Ounce* is good earlier in the season. It bears, too, better than the *Baldwin*, is almost always loaded to breaking down, and sells as high. The *Roxbury Russet* sells for \$1 per barrel more than *Baldwin*, bears well, and the tree is not a bad grower after it becomes of age. Would plant, also, some *Northern Spy*. It makes a handsome tree, but should be headed low and the top kept trimmed out; and when it bears, a part of the fruit should be picked off, and only enough left to make a fair crop, and this will be fine. *Spy* trees bear good crops every year, unless allowed to over-bear. They bloom so late that the flowers escape late spring frosts when other sorts are killed. They do best on light, warm soils. For an orchard of 1,000 trees would plant 500 *Northern Spy*, 300 *Baldwin*, 200 *Greening*, 100 *Roxbury Russet*, 50 *Twenty Ounce*, 50 *Tollman Sweet*, 50 *Street Bough*, 50 *Red Astrachan*.

C. J. RYAN, of Rochester, would recommend 25 *Early Harvest*, 25 *Golden Russet*, 25 *Keweenaw Codlin*, 25 *Fall Pippin*, 25 *Unsett*, 25 *St. Lawrence*, 25 *Baldwin*, 1 *R. I. Greening*, 100 *Red Canada*, 100 *Leaves* *Bartlett*.

At the conclusion of the discussion of this question, it was proposed that members should band in lists of the varieties, and the number of each, they would plant for an orchard of 1,000 trees.—Eighteen ballots were presented, many being unwilling to vote, believing they had not sufficient experience to warrant them in presenting varieties which others might take as a guide in planting.—The following is the aggregate, and it being understood that 18,000 trees were voted for by 18 members, one thousand each, the figures will show the standing of the varieties in the opinions of those voting:

Baldwin	7,500	Lady Apple	100
Blonde Island Green	100	Sweet Bough	100
102	3,350	Red Canada	100
Roxbury Russet	1,600	Golden Russet	100
King of Tompkins Co.	1,325	Keweenaw Codlin	75
Northern Spy	850	Dutchess Oldenberg	50
Twenty Ounce	550	Sweet	50
Tollman Sweet	475	Cooper's Market	50
Fall Pippin	225	Pick's Pleasant	25
Esopus Spitzenberg	200	William's Favorite	25
Lowell	150	Early Harvest	25
Golden Russet	100	Golden Sweet	25
Red Astrachan	100	Fameuse	25
Wagener	100	St. Lawrence	25

Evening Session.

CULTIVATION OF PEARS—BEST FOR MARKET.

Which offers the surest and greatest profit in extensive orcharding; Autumn or Winter Pears, or both?

P. BARRY said that taking the present state of knowledge on the subject into consideration, he thought it most profitable to cultivate autumn varieties. The time would probably come when winter pears, like winter apples would be the most profitable. Fall pears can be gathered, packed without storing, and will ripen on their passage.

B. HONOR felt that it was safe to recommend autumn pears. Would recommend the *Bartlett* as No. 1. The *Flemish Beauty* and *Stevens' Genesee* had done remarkably well.

A. STONE said that in Oswego county the *Bartlett* had suffered somewhat the past cold winters. In consequence of this there was but few trees and little fruit. The *Louise Bonne de Jersey* is to be found in almost every garden, bears well and is hardy.

Mr. BARBER would go for fall pears, and the *Louise Bonne*, particularly.

J. J. THOMAS said our experience with winter pears is quite limited yet. Winter pears, doubtless, would pay, but we don't know. Keeping and sending to market in winter is troublesome.—Would, however, recommend late fall, or early winter pears, say as late as the *Lawrence*.

How many and what varieties of Pears should be embraced in an orchard of 1,000 trees, to insure the greatest degree of success and profit?

J. J. THOMAS would say a word about *Flemish Beauty*. Its fault was, that the fruit dropped from the tree. Its great recommendation was its extreme hardness. In the parts of the West where the winters are the most severe, it passes through them uninjured. It will bear hard fare and usage as well as any tree. Would recommend *Bartlett*, *Flemish Beauty*, *Sheldon* and *Lawrence* on their own roots, and *Louise Bonne de Jersey* and *Duchesse d'Angoulême* on quince stocks.

W. R. CORPOCK—the varieties recommended by friend THOMAS are vigorous growers and good, but the *Louise Bonne de Jersey* will not sell as well as the *Bartlett*. People have their fancies, and the *Bartlett* pear, like the *Black Tartarian Cherry*, is a general favorite.

H. E. HOOKER had been informed by those who sent them to market that *L. B. de Jersey* was very valuable. It is often very good when it has a green look, and this is against it.

J. J. THOMAS said people would know more about pears ten years hence than now, and learn not to condemn a first rate pear because its looks were not prepossessing.

Mr. BARRY hoped there would be a general expression of opinion on this question. Planting wrong varieties had been the rock on which many had split. A pear tree for a market orchard, must be healthy, vigorous, and a good bearer. The *Bartlett* was every way desirable, *Flemish Beauty* good, but it had two faults, dropping its leaves and fruit. The fruit, however, did not usually drop until it was matured. The *Sheldon* was fine, at least equal to the *Seckel*. *Bonne de Jersey* was a vigorous tree, bears well, specimens all fine, gives good crops, but does not over-bear. In appearance and flavor leaves nothing to ask for. *Seckel* was small, and not very good looking, but persons of good taste were always found willing to pay for it. *Lawrence* never drops a leaf, a half evergreen—a very desirable quality in a winter pear. A winter variety that drops its leaves is useless. That is the reason the *Lawrence* ripens so readily. It is like *Vicar of Winkfield* in this respect, but the *Vicar* over-bears like the *Northern Spy* apple, and should be thinned to procure good specimens. For an orchard on quince roots he would recommend *Duchesse d'Angoulême*, *L. B. de Jersey*, *Vicar of Winkfield* and *Ester Beurre*. The *Beurre Diez* is a good pear, but sheds its foliage, and being late, this is quite an objection. On clay soil thought it might do well.

Mr. BARBER recommended the *L. B. de Jersey* and *Vicar of Winkfield* on quince. *Bartlett*, *Seckel*, *Doyenne de Ete* and *Flemish Beauty* on pear roots. The *Flemish Beauty* was remarkably hardy, and the *Bartlett* a little tender. It had not yet recovered from the past cold winters.

S. H. AINSWORTH said no variety with him held its leaves like the *White Doyenne* on a heavy clay soil. With him it succeeded, and where it did he would recommend planting the whole 1,000 of this sort. Of the cracking of this pear there was a good deal of talk. It had not been known to crack in Ontario county, and in the district of country south and south-east of this city, while in Cayuga and Wayne counties, and in the counties west of us the crop has been much injured by cracking. It has also been very bad in the eastern part of this State, New Jersey, and in the Eastern States.

SPRING AND FALL PLANTING.

What season, fall or spring, is most advantageous generally for planting extensive orchards?

Mr. BARBER had noticed that young trees planted early in the fall made quite a growth of root before winter set in. This he discovered on removing trees the second time. They thus get ready to take an early start in the spring. Trees that are tender should not be removed until spring.

Mr. BARRY was strongly in favor of fall planting. The ground settles—the roots get their places; those that are cut become callous, and at the first opening of spring fall planted trees start. Had seen a good deal of difference in this respect between those planted in the fall and in the spring, though alike in every other respect.

J. J. THOMAS thought the time made but little difference, at any rate, not half as much difference as the care trees received after planting. Would prefer to plant entirely hardy trees in the fall, but hardy trees he thought were made a little more tender by removal, and when removed from sheltered place to one cold and exposed they were apt to suffer.

S. H. AINSWORTH liked the fall best for hardy trees. Roots start in the autumn, and make a growth of an inch or two in three weeks. Such trees take an early start and are better able to stand the drouth of summer.

H. E. HOOKER said his observation had not led him to think that fall planting was as generally successful as spring.

Mr. BOARDMAN, of Rochester, had raised and sold trees for twenty-five years. The last of May or first of June he thought the best time to plant trees. Thought five times more died from fall planting than from spring.

J. J. THOMAS said where total neglect was to be the rule, he considered spring the best time.

A. STONE found that the ends of newly transplanted pear roots often die back, probably from the cold. If planted in the spring the roots may be cut back. His directions would be not to set trees until the corn was planted.

Dr. BARRY, of Livingston, planted 218 pear trees in the fall two years ago, and 216 of them grew. The following spring he planted about the same number, and they all lived. Didn't care whether trees were planted in the spring or fall, if they were only well planted and well taken care of afterwards.

W. R. CORPOCK planted any time from November to June, when he could get time to do it.

Second Day.

PRUNING THE DWARF PEAR TREE.

On this interesting subject there seemed to be a general desire for information, and some gentleman had procured a young tree for illustration. At the request of the meeting, T. G. YEOMANS, Esq., of Walworth, gave a brief but most lucid and satisfactory lecture on this question, and we will endeavor to give a few of the most interesting points, though we hope Mr. Y., or Mr. BARRY will give us the substance of their views more fully, and so plainly illustrated with drawings, that all may understand not only the importance of pruning, but the best way to do the work. We give a drawing of the tree.

Mr. YEOMANS, on taking the stand, said he held in his hand a yearling tree that had made a strong growth. The tendency of the sap was to the highest limbs, and to the extremities of the limbs. The object of pruning was to counteract this tendency, and thus to obtain a tree of good form. The upper limbs, it was seen, were stronger than the lower ones, and should this tree be planted and allowed to grow without pruning, the lower limbs would grow but little while the upper ones would gain a greater ascendancy over them

THE ORPHAN BOY.

BY CHARLES SWAIN.

The room is cold—the night is cold—
But night is dearer far than day;
For then in dreams to him it seems
That she's returned who's gone away;
His tears are past—he clasps her fast—
Again she holds him on her knee;
And in his sleep—he murmurs deep,
"Oh! Mother, go no more from me!"

But morning breaks, the child awakes—
The dreamer's happy dream has fled;
The fields look sad—and cold and drear—
Like orphan, mourning Summer dead;
The wild birds spring on shivering wing,
Or, cheerless, chirp from tree to tree;
And still he cries with weeping eyes,
"Oh! Mother dear, come back to me!"

Can no one tell where angels dwell?
He's called them oft till day grew dim;
If they were near—and they could hear—
He thinks they'd bring her back to him!
"Oh! angels, sweet, conduct my feet,"
He cries, "where'er her home may be;
Oh! lead me on to where she's gone,
Or bring my mother back to me!"

Written for Moore's Rural New-Yorker.
OLD LETTERS.

OLD LETTERS! What a charm they possess!
Some witty and foolish, some sober and sage, sentimental and poetical, some filled with past sorrows, others with joyful anticipations of the future, but all very dear memorials of days "long syne." To-day we will look them over for the hundredth time, and then destroy all but a few too sacred to perish, even in their old age.

Here is a bundle from SARAH. A faithful correspondent, to judge from the size of the package.—Shall we burn these, so ancient that the paper looks brown, and the writing dimmed by age?—They surely are of no consequence—but we'll read them first. They speak cheerily and bid us look with an eye of faith to a future which may be rose-tinted—they bid us seek for better than earthly things, for a life whose object shall be to teach the ignorant the way to eternal glory, and lead the outcast to a river whose waters "shall cleanse from all stain." Yes, we'll remember the days of which they speak, days of sorrow and poverty, of blighted hopes and heart-burdens which, too young, taught us that all below the sun is vanity. But these letters bring up thoughts too sad, we'll lay them by, and look at those of later date, for they bear the impress of happier hours, when we had triumphed over ourselves, and gone bravely forth on the battle-field of life, strong to bear its trials, and conquer its discouragements. These well-filled sheets bring the tears from their fountains—tears, not of sorrow, but joy, for there are rich golden memories connected with thoughts of those happy years, when the heart ran over with its wealth of gladness. We will not destroy one of the precious mementoes, but cherish them more dearly than ever, for in one we find a tiny fold of white satin, and in another a wedding card, which tells the tale. Her letters now reveal much happiness, and, perchance, she will forget us amid her new duties and cares, and her new found joy, so we'll tie them all up again—the old ones soiled and worn with age, and many readings, and those of later date, laying them by until we look at another package from MARION. We need not open it. The contents are too familiar to require a re-perusal, and their author too dear to let a vestige that she has perished in oblivion's grave.—We can see her now, with her soul looking out from her dark eye. Our hearts were bound by the sacred chain of school-girl friendship—our hopes and aims were one. Together we studied and worked, together we enjoyed our recreations, laid our plans and built fairy castles. Fancy painted rare pictures to hang in the halls of the future, but now, in our backward glance, we see them sadly faded. We parted and enjoyed each other's society only through the medium of pen and paper. For while her letters were filled with lofty aspirations and dreams of future greatness,—she would have shone a bright star in the literary galaxy,—but there came a long silence, then more letters saying that she was more happy with her chosen lord, and the wee WINKIE, who filled her parent's hearts with gladness, than she should have been in the realization of her brightest dreams of fame. Our correspondence long since ended, and in life's stern realities, we neither of us find time to indulge in the ideal.

There are many others—some whose writers long ago wandered from the homes of their youth, and perhaps our names have perished from their memory are there—others whose hearts are forever stilled, and their waxen hands are folded for the last time over their quiet bosoms. Here is another—dearer than all the rest—written by one who was the light of home, even in childhood—the pet of the neighborhood—the leader of all our childish plays—the peace-maker in our petty quarrels.—She was the brightest sunlight of our schoolroom, and long was the day in which she did not gladden us with her presence. Of the whole troop of rosy-lipped, laughing-eyed school-girls who daily assembled beside the silver stream in the old woods, through whose leafy branches the sun shot golden arrows down on our mossy cushions, she was the gayest. A smile was always ready for every one, and a world of affection beamed from the liquid depths of her eyes. Poor NUTTY! whose earthly career was short—thou art singing now with angels, and the light has gone out from thine earthly home. When thy brow was to have been graced with the bridal wreath it wore the pale frost-work of death. Her last letter was written while she knew that his icy fingers would soon sunder her heart-strings. In it is a long wavy tress of her chestnut hair, trimmed with a raven lock from his head, to whom she had given her best earthly af-

fections, and who now wanders in foreign lands teaching the benighted heathen the way to the Saviour, and striving to prepare himself to meet those who have gone before. How much of love she breathed into its pages, telling of her sorrow at parting with loved ones, yet desiring to bow meekly to the will of Him who "doeth all things well." Now the flowers she so dearly loved, blossom over her grave, and bright birds sing in the drooping branches of the willow which nightly weeps above the place where she rests passing well.—CONILLA.

CHERISH THE HUMAN BLOSSOMS.

Written for Moore's Rural New-Yorker.

Go into that greenhouse, or garden, and see with what care and tenderness those beautiful exotics are watched, nursed and shielded. To what expense are the owners in purchasing, transplanting, and now nourishing, that they may gaze on their rare loveliness of blossom, or foliage? And why? What is a mere flower, however beautiful, or gorgeous? What good do they accomplish? They cannot toil, neither do they spin, nor assist the laborer in his tasks, nor accumulate treasures for moth and rust to corrupt. Then why guard them so tenderly, and protect them from the wind, or heat, or faintest breath of frost? Because they are lovely, and give forth sweet and rich perfume, and combine such delicate, yet such glorious colors.—They embody so much that is beautiful in nature—such wondrous architecture, such brilliant design, and teach us many lessons of love, and soften our hearts to see and appreciate all the wonderful works of nature.

Look again at yonder child. How frail, pale, and delicate. There is a human blossom, pining and drooping, and dying for just such fostering care and love as thousands bestow on plants and flowers. Many a human heart is like a rare exotic, and cannot live and flourish in an atmosphere of coldness or unkindness, and whom a cross word or look will crush and wither as speedily as does the frost your flowers. Gentle, trusting, loving, they would cling to some strong arm for support and love. Why, because they are not hardy and able to labor hard and buckle on the armor of strife, will you neglect and treat them coldly, and sternly? Perhaps all they can accomplish is a series of small, yet faithful services,—rendered in love, with smiles and kind words. And why not value these as highly as the colors and perfume of the exotics? A gentle, truthful, affectionate friend is really a treasure in this scrambling, jostling, deceptive world, and should be valued above price. Many a heart shrinks from rudeness, roughness, harshness, as quickly as the sensitive Mimosa, and such ones are not fitted to fight and elbow their way through jeers and scandal, or rush here and there unbidden. Ye who have such flowers in your households cherish them and let them feel that they are valued. Encourage, cheer them, and their daily life and conduct will, if you understand them, render an incense infinitely more precious and desirable than the most costly exotics.

QUERCHY.

THE "TOM-BOY."

Some persons seem still to entertain the notion that young girls need no training except that of the mental faculties; that their forms are of less consequence than their dresses; and that a development of physical strength would impair their delicacy, and tend to make them masculine. By restricting their physical education, and limiting their sphere of activity, they are condemned for life to enfeebled health, and an aimless, idle existence. Let such parents ponder the truth embodied in the following remarks, which we cut from *Hall's Journal of Health*:

The "Tom-boy" is an eager, earnest, impulsive, bright-eyed, glad-hearted, kind-souled specimen of the genus *femina*. If her laugh is a little too frequent, and her tone a trifle too emphatic, we are willing to overlook these for the sake of the true life and exulting vitality to which they are the "escape-valves;" and, indeed, we rather like the high-pressure nature which must close off its superfluous "steam" in such ebullitions. The glancing eye, the glowing cheek, the fresh, balmy breath, the lithe and graceful play of the limbs, tell a tale of healthy and vigorous physical development, which is nature's best beauty. The soul and the mind will be developed also in due time, and we shall have before us a woman, in the highest sense of the term.

When the "Tom-boy" has sprung up to a healthy and vigorous womanhood, she will be ready to take hold of the duties of life, to become a worker in the great system of humanity. She will not sit down to sigh over the "work given her to do," to simper nonsense, languish in ennui, or fall sick at heart—but she will ever be able to take up her burden of duty. In her track there will be sound philosophy, in her thoughts boldness and originality, in her heart heaven's own purity, and the "world will better that she has lived in it." To her allotted task, she will bring health, vigor, energy, and spirits, and these will give her both the power and the endurance, without which her life must be, in some respects at least, a failure.

HOW.—We have rarely ever seen a simple child story that more touched us than the following, which we find in an exchange:—"This is my home!" cried a little one, a treasured boy of four summers, as, fresh and rosy, he came in from school, at the close of a short winter's afternoon. "Indeed, little Willie," said his mother's visitor, "how is it? Suppose you go out on the sidewalk and try the next door; suppose you step into the entry, throw off your little sack, as you have here, and proceed to the parlor—wouldn't that be your home?" "No, indeed," said Willie, "that wouldn't be it." "But tell me why not?" Willie had never thought of this. He paused for a moment, then directing his eyes to where his mother sat quietly sewing, he replied, with an earnest gesture, "She lives here."

LIFE is what we make it. Let us call back images of joy and gladness, rather than those of grief and care. The latter may sometimes be our guests to-day and dine, but let them never be permitted to lodge with us.

Choice Miscellany.

POESY VS. AVARICE.

BY MRS. M. P. A. CROZIER.

A BIRD, a dewdrop, or a flower,
A snow-flake on the wing,
To him whose god is yellow earth
Is but a little thing.

He hears the robin's gush of joy,
And—let the truth be told—
Just wishes he could cage the bird,
And sell his song for gold.

He sees the dewdrop and the flake,
The blessed flowers bloom,
Nor opens his bit of heart to give
The tips of beauty room;

But wishes he could save the drop,
And melt the flake of snow,
And add them to the water-power
That makes his saw-mill go.

The flowers—what pity they should waste!
He hits upon a thought,
And ties his purse-strings o'er the dime
The fragrant roses brought.

The poet comes—as poets love—
A straying in the wood,
And with the first sweet forest-song,
His heart goes up to God.

The dewdrop which some violet
Doth humbly bend to wear,
He snatches to his poet-heart
And crystallizes there.

The snows come softly sailing down
As white doves from the sky,
And o'er his soul, as o'er the earth,
Fling robes of purity.

The flowers—God made them—and He loves
To trace in each bright vein
The riches of that love which he
Hath written there so plain.

O, poet of the heart of God,
In characters of fire,
Inscribe the name in every page
Of Nature's awful Lyre!

And "neath the name write out his love,
As God doth write at night
The azure scroll of heaven o'er,
In lines of golden light.

BE PATIENT.

LEARNING to wait has ever proved one of life's most difficult lessons. It has caused many a bitter heart-ache, and more burning tears of impatience and vexation, than the alphabet ever cost the bright-eyed child of four summers, or the boarding-school Miss ever shed over Euclid's problems. As the child, curious to know if his seeds will germinate, digs up the earth where he has planted them—or, weary with waiting for his flowers to bloom, pulls in pieces the buds upon his rose-tree, exclaiming, "what lovely roses I have made!"—which, alas, the sun's first rays will cause to wither and fade—so we, children of a larger growth, unwilling to abide God's own time, too often, in the pride of our strength and the conceit of our own ability, intrude the hand of human agency, to compel to premature development all those plans and purposes he has designed for our future well-being and happiness, thus marring the noblest schemes he has formed for our ultimate good, and oftentimes frustrating the very end for which we hope. We tear apart all the heart's sweetest buds of hope and promise, saying "what beautiful flowers," when the first breath of misfortune will blight and wither that, which if left to attain perfection, might gladden with their bloom and fragrance, all our future years.

It is one of Nature's inflexible laws, that whatever is of long endurance, must be of slowest growth. Thus, if the tender annual should say to the sturdy oak, "Lo I have budded, and blossomed, and borne fruit this single summer, whilst thou hast climbed and toiled upwards for a hundred long years, and what hast thou done more?"—would not the oak reply to the floweret, "Child of the summer, with the summer thou shalt die, while I, who have flourished for a hundred years, shall still for another hundred, aye, and even more, stretch forth my great arm to invite wearied man and beast to repose beneath my cooling shade."

Seek we another illustration of this universal principle? Let us go back through unnumbered ages, to the time when earth was still one wide scene of chaotic confusion, being fitted and prepared for the abode of man, that masterpiece of creative art who as yet had no being. During these pre-Adamic ages, while yet animal life existed but in strange, uncouth forms, and vegetable life only as varieties of gigantic ferns, down in the depths of the sea, a great rock was slowly forming. The rivers brought their contributions of sediment and drift-wood, the ocean gave its shells and seaweeds, the whole were consolidated by chemical agencies, and thus, atom by atom, layer by layer, the rock progressed through countless years, until at last, as the result of successive changes, the rock was elevated from its ocean bed, and became dry land. Gradually the soil accumulated over it, while deep underneath lies the solid rock, imperishable as the great globe itself, never to know change until that day, "when the elements shall melt with fervent heat."

This fundamental law of the universe of nature, is equally the governing principle of the mental and moral world. These are established truths,—there is no excellence without great labor,—no prize worth securing which can be obtained except by toil and sacrifice—no hoped-for good, for which we must not earnestly seek and patiently wait.

Knowledge is no common flower, blossoming by the wayside, and in waste places untended and uncared for; but a century plant of rare growth and unrequited bloom, requiring long years of constant care and cultivation to arrive at maturity; but when at last it puts forth bud and flower, and expands its golden petals to the morning sun, gladdening our weary eyes with a vision of beauty far exceeding in reality what even fancy had painted

in our dreams, are we not then amply repaid for all our long-continued daily toil and nightly vigils?

Character is not the result of a single act, but the work of a life-time. Circumstances tend to develop it—words make impressions—trifles give direction, and thus the noiseless fabric slowly rises, stone upon stone, course upon course. And if it is built upon the sure basis of truth and virtue, though its foundations are laid upon the earth, its walls and spires are ever tending heavenward, stopping not in their upward progress until the Master Builder himself shall pronounce the sentence, "it is finished." Once completed, enduring as eternity, and changeless as the mandates of JEHOVAH, we should count no labor too great, no trial too perplexing, no hardship too severe to be overcome in forming such a character as we shall wish to possess forever.

Child of sorrow, be comforted, "though weeping may endure for a night, joy cometh in the morning." Even now if thou wilt but lift thy tear-dimmed eyes sky-ward, thou shalt behold the Morning Star of Hope, already giving promise of approaching day. Why shouldst thou regret the storm-winds of affliction when they but fill thy sails, and wait thee towards the haven of eternal rest? What if the tempest howl around thee, and the waves, rolling mountain high, threaten to engulf thy little barque? Still rest thou undismayed, assured "thy Father is at the helm." He can guide thee safely through these unknown waters to calmer seas, beneath brighter skies. He can speak to the troubled waves of life's tumultuous sea, as he did to those of storied Galilee—"Peace, be still."

Earth-weary pilgrim, lieth thy way o'er thorny, rock-strewn paths. Have the song-birds hushed their music, and the flowers faded and died along the track? Have thick, black storm-clouds gathered above thee, shutting out the glad sunlight and the bright blue of the summer sky? Seems the way very long, and dark, and drear? Yet faint thou not. Go on, leaning for support, not on any puny arm of flesh, but on One who is stronger than thou. He, who careth for the sparrow, will not let thee perish. Run with patience the race which is before thee, ever keeping thine eye upon the prize which lieth at the end. Sweeter will be thy rest—thicker set with starry gems, the crown of thy rejoicing—louder and more triumphant thy songs of praise in Heaven above, for all the trials and temptations thou hast suffered here.

Mortal, whoever thou art, "be not weary in well-doing." Rise early, and go forth to labor with strong heart and willing hands in the world's broad fields, which are lying all barren and waste around thee. Scatter everywhere the seeds of truth and virtue. By river and streamlet, on upland and plain, in nook and glen, 'mid briars and thorns—in every spot, let fall some golden grains. Thou knowest not which shall take root and flourish, yet some, perchance, may spring up and bear "an hundred fold." Expect not immediately to reap the fruits of thy labors. Thou must wait for "the early and the latter rains to water it, and the sun to ripen it, for though thou may'st plant, 'tis God alone that giveth the increase." Bide thou till the harvest time, long may it be, yet the promise is sure. Strive wait and pray. Though the good thou look'st for come not, yet some other may gladden thy heart with unexpected joy. Be patient, therefore, assured that thou art possessed of one element of happiness and final success who hast learned "to labor and to wait."

Rush, N. Y., 1859.

AMBITION.

RIGHTLY directed, ambition is a noble trait in man. Without this element in the soul the moral world would be at a stand still. It is the kaleidoscope in which the eye of the philosopher discerns the color of the passions which the ever varying mind unfolds. What, if there now and then arise mighty captains, spurred by ambition to clamber dizzy heights, revolutionizing nations in their headlong march—sweeping with the force of the hurricane time-honored customs into the Lethæan sea? When the storm passes away is not the world the better for it? To be sure, in the path in which it raged, mighty wrecks may be seen, but is not the political sky more serene, the atmosphere purer and more bracing? Napoleon devastated Europe, but it came out more refined than when it entered. The ideas Napoleon have taken the place of that feudalism which for so many centuries chained the nationalities to the foot-stools of sovereigns; and to-day, though millions in blood and treasure were lost in the fierce struggle, the men of Europe are less despised by the potentates who rule "by right divine." Ambition, however, does not always lead its possessor to the tented field, where the argument of the opponent is ended only by the throes of death. It is at times a gentle monitor—an angel clothed with the habiliments of Mercy. For an Alexander we have a Howard,—for a Catherine of Russia a Florence Nightingale. Each are as stars shining in the moral heavens, but oh, how widely different is their glory!

FLATTERY.—Too much praise, we are inclined to think, does more harm than censure. Elation, self-conceit, blind confidence, presumption, and more or less contempt of others, which are apt to attend on indiscriminate praise, are great foes to grace, and create an inordinate craving for praise, which makes a man something like a spoiled child. The difference between praise and flattery is worth attending to. It is the difference between true coin and counterfeit. Praise is the expression of real sentiments; flattery of pretended sentiments. One is the homage of the heart; the other an artifice of the mind. The true and the base coins circulate freely in society—and most people are so eager for them that they do not stop to distinguish the genuine currency from the counterfeit.—*Banner of the Cross.*

WINTER.

THE landscape wears a shroud of snow,
The cold winds sweep along the plain,
And all above and all below
Show winter's melancholy reign.
Oh! well this season may compare
To that deep sadness of the heart,
Which comes in withering coldness there
When Hope's enlivening beams depart.

SABBATH MUSINGS.

Written for Moore's Rural New-Yorker.
SHE LOVED MUCH.

BY CAROLINE A. HOWARD.

Her sins, which are many, are forgiven; for she loved much.—Luke vii.—47.

Tunes happy she, who knelt in abject shame,
And washed with tears her Saviour's feet!
Gladly, the load of sin with which she came,
Exchanging for this comfort sweet.

O, timid souls, which falter, faint with fear,
New courage take, no more defer;
Trust in that love which, still unchanged, is near,
And contrite bow remembering her.

Still Jesus calls, the poor, despised, and weak,
Shall hear his voice and joyful come,
That voice which promised blessings to the meek,
Still guides repentant wanderers home.

Lov'st thou thy God with strong aspiring heart,
And lovest thou thy fellow men,
With love that shrinks not from the humblest part
That worketh good?—O, fear not, then!

Alas! how few the lives which truly bear
The impress of this law divine,
We love, but earthly joys and worldly care
Corrode the hearts love should refine.

O, gentle Shepherd, hear and pardon me!
Though far from thee, I oft may rove,
My longing soul, in thrilling ecstasy,
Still cries to thee—Dear Lord, I love!
Dedham, Mass., 1858.

WHAT IS OUR INFLUENCE?

It is one of Nature's laws, that almost every individual is destined to exert an influence upon society which may be felt in all its members, and when we see one that is endowed with mental and intellectual powers, that person is continually influencing those with whom he may associate, no matter in what grade of society he moves. It may be imperceptible to us at the present time, but will be strongly developed at some future period. It may be our conduct, or it may be only a sentence that falls carelessly from our lips; for by even such a simple thing many a weak heart has been influenced to go forward in the path of duty, to live a life of usefulness and for the benefit of his fellow-men, and given him strength to resist temptation—or it may have a tendency to give him a low estimate of all that is good, pure, and ennobling, and lead the heart, already filled with enmity to his Maker, down lower in the ways of sin and folly. It is important, then, that we cultivate a sound and well regulated understanding, and that we should strive to become pure in thought, in deed, and action, now in the spring-time of existence, while the fountains of joy and gladness are welling up from the heart and spreading themselves all around us, for "out of the fullness of the heart the mouth speaketh," and we are ever thus, although unconsciously, perhaps, exercising an influence, the power and extent of which we may never know until we have passed from time into Eternity.

Assyria, Mich., 1858.

THE WAY TO MAKE A POOR PASTOR.—1. Be very careless and irregular in attending church. Never go, except when you can manufacture no good excuse to stay at home.

2. When at church, be either asleep, or staring about. Do not listen to the sermon.

3. When you go home, complain of the sermon as light and chaffy, or dry and uninteresting.

4. Treat your pastor with a cold and uninviting civility, and then complain of him because he does not visit you.

5. Neglect to pray for a blessing upon him and his labors, and then complain of him because the church does not prosper.

6. Be always finding fault with your pastor, and yet regret that he is not more popular with the people.

7. Be very lukewarm and worldly-minded, and yet complain of him for want of zeal.

8. Neglect to provide for his necessary wants, and then complain of him because he wants his salary.

Do all these things, and you will never fail to have a poor pastor.

THE PATIENCE OF GOD.—How wonderful it is! Think what he hears, and sees, and yet though immaculately holy, so that sin is infinitely offensive to him, and infinitely powerful, so that he can punish it, how he spares! Take the oaths that are uttered. He hears them all, and they rear up in one horrid chorus to the skies. Take the cries which wrong and outrage extort from widows, orphans and the oppressed. He hears them all, and how—as Abel's slaughtered corpse called from the ground—must they pierce his ear and demand vengeance! The blood which is unjustly shed—drawn from the veins of innocence—he sees it all, and it is sufficient to make rivers. What a foul stench reeks up from the corrupt cities, dwellings, and hearts of depraved humanity! And it all mounts to him. And yet he spares—keeps back the struggling thunders. How amazing his patience! He is a God and not man; and therefore his compassion fails not.—*Rev. J. Bruce.*

PRAYER.—Prayer is the rustling of the wings of Angels that are on their way bringing us the boons of Heaven. Have you heard prayer in your heart? You shall see the Angel in your house.—When the chariots that bring us blessings do rumble, their wheels do sound with prayer. We hear the prayer in our own spirits, and that prayer becomes the token of the coming blessings. Even as the cloud foreshadoweth rain, so prayer foreshadoweth the blessing; even as the green blade is the beginning of the harvest, so is prayer the prophecy of the blessing that is about to come.—*Spurgeon.*

Written for Moore's Rural New-Yorker.
THE STUDY OF LATIN.

Messrs. Editors:—I am surprised that any one in these times should attempt to defend the study of the Latin language. In comparison with the acquisition of any modern language, it is far inferior, both in its construction and adaptability to the intellect of our day, and in its incompleteness and paucity of expression. The languages of Western Europe and this country have not only the Latin in them as far as it is necessary, but they have been enriched by an intermixture with a variety of tongues, which have given them an extent and variety of expression, a multitude of words, and a flexibility and suitableness to the vastly increased wants of the age, that places them in every respect far ahead of the old tongues. If, then, you would desire to improve and exercise the minds of your children by the study of a language, give them French, German, Spanish or Italian, and you will gain not only the greater advantage of a comprehensive tongue, with more than all that the Latin grammar could give—but ideas and morality more suited to our age. And this is a most serious consideration.

Indeed, admitting for the moment which would be absurd on reflection, that the Latin tongue is superior as a training for the mind, the use of it should not be encouraged by any really moral man, because its tendency,—owing to its disgusting mythology, its low moral tone, false principles of honor and conduct, and perpetual laudation of bloody violence,—is to demoralize the Christian to the inferior standard of the Pagan. Seven days of such labor cannot be counterbalanced, or even be corrected by one day's study of Christian teachings.

Then, again, the Latin tongue, for scientific and medical purposes, can be acquired, and to my knowledge, has been fundamentally acquired in a few months' time at a ripe age, when the mind is not so likely to be vitiated by the insane and filthy doctrines. Leave, then, the boy, the youth, to purer and more intellectual studies—to those studies of Nature, in the Sciences, which are "God-given," and for which the young mind has a peculiar adaptability—and study Latin at 15 or 20 years of age when the mind is formed and reflective, and not so easily impressed by Pagan filthiness. After all, few need such a study. Latin words and phrases come in here and there—so do French, Italian, Spanish or German, and how quickly we can get over that difficulty. But if these modern tongues were taught in an easy, natural manner, with the "God-given," and morally elevating sciences, every youth might master four or five languages with little or no trouble. Not so the dead languages,—they are dead, indeed, and require mental efforts commensurate with their insufficiency and unadaptedness to our minds.

My greatest opponents, I grieve to say, have been my clerical friends. While they cannot deny the infamy of the morality connected with the study of Latin, they still cling to it with a wonderful fascination, which some might say must be the work of evil spirits. When we reflect, however, we have to admit that minds trained in a school of error, are loth to believe that they have lost so many years of time. Their pride makes them revolt against a change. They are human, too.—Still, the influences are very disadvantageous and unchristian.

I well remember, when residing in England, many years ago—I was then a youth—many of my young friends were members of the University of Oxford. They had spent, many of them, 14 and 15 years at the classics, and were then not very bright scholars. To pass an examination they had to be crammed. Strange to say, few of them could write English correctly, or had ever studied its grammar. Few of them knew anything of the sciences, and it was a common saying among them, that they would have to begin their education on leaving the University! I think, since that classic time, something more has been done for youth; but such was the education then. Ruost, Srow, and other great schools produced the same classically uneducated boys—boys destined afterwards to rule our Empire. No wonder, as practical men, they were incapable of the work of a common clerk. Their utmost talent was that of wrangling about words and phrases, and he who had the longest word-memory was stupidly esteemed the most talented boy—an error pretty well exploded now-a-days.

But, Sirs, for agricultural people, we want no Latin. We want such practical knowledge of the wonderful creations of God as will enable us to make that practical use of it which tends to develop the moral as well as the mental capacities in a healthy way. Then the love of violence and antagonism, which we have acquired with our Latin, will be changed into a love for work. The sword will become a plowshare, and the wealth now wasted or uncreated, be increased a thousand fold.

Washington City, Dec. 24, 1856.

Education.—Thewald thought it very unfair to influence a child's mind by inculcating any opinions before it should have come to years of discretion, and be able to choose for itself. I showed him my garden, and told him it was my botanic garden. "How so?" said he, "it is covered with weeds." "O," I replied, "that is because it has not yet come to its age of discretion and choice. The weeds, you see, have taken the liberty to grow, and I thought it unfair in me to prejudice the soil in favor of roses and strawberries."—*Coleridge.*

Modesty of Learning.—Learning gives us a fuller conviction of the imperfections of our nature; which, one would think, might dispose us to modesty; for the more a man knows, the more he discovers his ignorance.

Self-Government.—The poorest education that teaches self-control is better than the best that neglects it.

NORMAL INSTITUTES IN WISCONSIN.

THE State of Wisconsin, in addition to a School Fund for the support of common schools, amounting to four millions of dollars, and a University Fund, amounting to five hundred thousand dollars, has set apart one-fourth of the avails of the sale of what are known as "swamp lands," as a fund for normal instruction. The income of this fund is about eighteen thousand dollars. This sum is expended by a Board of Regents, for the support of Normal Institutes in colleges, academies and high schools. This Board propose to expend the income hereafter, which will soon reach the annual sum of twenty-five thousand dollars, on a more comprehensive and practical scheme, submitted by Hon. HENRY BARNARD, of Connecticut, embracing a central normal school, normal classes in all higher institutions of learning, county teachers' institutes, state, county and town teachers' associations, and a general normal school agency. Dr. BARNARD, having accepted the Chancellorship of the State University at Madison, has, with the consent of the Regents of the University, accepted this agency for the purpose of organizing the system.

Wisconsin is doing a noble work in the cause of education, from which she cannot fail to reap rich returns. She is fortunate in having secured the services of so able and devoted a laborer as Dr. BARNARD in carrying out her wise provisions for the education of the masses.

WORDS IN THE ENGLISH LANGUAGE.—The Hon. Geo. P. Marsh, in a recent lecture on the English language, says that the English words found in use by good writers hardly fall short of 100,000. Even if a man was able on extraordinary occasions to bring into use half of that number, he generally contented himself with far fewer. Each individual used in his daily life a repertory of words to some extent peculiar to himself. Few scholars used as many as 10,000 English words; ordinary people not more than 2,000. In all Shakespeare there were not 15,000 words; in all Milton, 8,000.

PLEASURES OF THE MICROSCOPE.

FROM the Earthworm and the Housefly—by JAMES SAMUELSON—we take the following: The rich coat of the Leopard, the beautiful and variegated plumage of the bird of Paradise, the sweet note of the Nightingale, and the graceful form and movements of the Gazelle, all delight the senses, but tend little towards the elevation of the intellect. These afford gratification alike to the savage, the child and the educated man—perhaps in a less degree to the last than to either of the former; but when we come to examine those creatures that offer some much attraction to the superficial observer, we find them to be so wisely constituted, and to possess such interesting appliances by which they perform their natural functions, that we begin to wonder how it is we should have remained so long in ignorance of their remarkable propensities. We find ourselves in a new world, and the objects contained therein, at the same time that they impart sensations quite as pleasurable as those which were wont to excite our childish imaginations when first we beheld the more beautiful of the higher animals, communicate new ideas; a fresh capacity to imitate and design; and, what is of far greater importance, they instill into our minds careful habits of observation, and enable us to form a more correct estimate of our own humble capacities, and of the boundless power and wisdom of our Creator.

VELOCITY.

THE velocity of motion is estimated by the time employed in moving over a certain space, or by the space moved over in a certain time. The less the time and the greater the space passed over in that time, the greater is the velocity. Thus the space given, to find the velocity, divide the space by the time. The time and velocity being given, to find the space, multiply the velocity by the time.

The uniform velocity of sound compared with the instantaneous motion of light, enables us to determine the distance of the object from which the sound proceeds; as that of a cannon fired at a distance, or a thunder cloud, provided we can see the flash and hear the report. Multiply 1,138 by the number of seconds between the flash and report—the product will be the distance in feet. Divide the number of seconds by 4; 5, and the quotient will be the miles, nearly.

Sound conveyed by means of water, mercury, or spirits of wine, moves 4,900 feet in a second; conveyed by tin, 7,800; by silver, 9,800; by brass, 11,800; by copper, 12,000; by iron or glass, 17,500, and by wood, from 11,000 to 12,000 feet in a second. According to the experiments of SAUVUR, the lowest sound which the ear can appreciate consists of twelve and a half undulations in a second, and the most acute, of something more than 6,000.

THE FORMATION OF AN ICEBERG.—The glacier is composed of fresh water. Its elements are modified more or less by its base. The fracture and disruption is caused by wave action, by gravitation, and temperature. The iceberg is a liberated glacier. I know not how to describe it. In color, its whiteness is opaque, like frosted silver. Its base is cobalt blue, and its edges flash and sparkle. Its shape depends on the influence around it. You find all landscape forms and features upon it. Mingled with these pleasing associations are higher feelings of grandeur. I have measured them and have found them to be 300 feet, and the entire height of one such is, therefore, 2,100 feet. Millions of tons are embraced in it, and it moves sometimes three miles an hour. There is something infinitely imposing in its march through the ice-fields.—*North and South.*

SIR EDWARD BULWER LYTTON.

EDWARD BULWER LYTTON, whose portrait we give above, is the son of General Bulwer, of Heydon Hall, Norfolk, and ELIZABETH, daughter of HENRY W. LYTTON, of Knebworth Park, Herefordshire. Bulwer early gave signs of poetical taste. In childhood he wrote verses for his mother, and in 1826 made his first essay in print—a little volume entitled "Weeds and Wild Flowers" bearing his thoughts to the world. His Collegiate Course was completed at Cambridge, where he wrote a prize poem on Sculpture. The age was Byronic, however, and no opening offered to the young poet.—Though versification was his passion—though he read it lovingly and wrote it easily, while it was only with singular difficulty and exertion he could pen prose, his practical mind taught him that proper force must be applied in the proper place if he desired success, and he turned his attention to prose composition. Perseverance did for him just what it will for others—he toiled faithfully, and he conquered. Speaking of his first attempts he says:—"I wrote with incredible difficulty and labor. To a critical study of the rules of fiction, I owe every success in literature which I have attained; and in the mere art of composition, if I have now attained to even too rapid facility in expressing my thoughts, it has been purchased by a most laborious slowness in the commencement, and a resolute refusal to write a second sentence until I had expressed my meaning in the best manner I could in the first." Fiction was the first field of labor, and volume after volume fell with amazing rapidity from his pen. Soon we find him editing a London monthly, and in his new sphere he proved that BULWER, the Essayist, could make himself as noted for grace, lofty thought, and wide erudition, as BULWER, the Novelist, was known for his command of passion and satire. While engaged in this latter vocation, he was also ably performing parliamentary duties. When he entered the House, everything seemed to be adverse to success. His voice was weak, his

style florid, while his fastidiousness of attire almost wrote foppiness against his name. All were exclaiming "he will never be Speaker." The same untiring energy which had marked his previous life was brought into play, all the obstacles in his path were surmounted, and on a vital question—the bill for establishing a Dramatic Copyright Law—he decided the House. Parliamentary speeches, political pamphlets, essays learned and critical, editorial duties, etc., now divided his time. Thus, diversified with travel, he passed his time until 1837, when he gave further proof of his industry and versatility in the production of a play. His first attempt was a failure, but succeeding trials crowned his efforts, and some of the most popular pieces now placed upon the stage are the children of his brain. History succeeded the drama, and the "Rise and Fall of Athens" won for him golden opinions as a historian and philosopher.

One of his reviewers writes:—"Novelist, dramatist, essayist, poet, historian, orator, politician, and man of the world,—all these positions has BULWER filled with credit to himself. In each, except the last, he started out with a failure—worked ahead against discouraging circumstances, and impediments both natural and circumstantial, ultimately reaching the goal he had set for himself."

To the beginner there is a wholesome lesson in the development of BULWER LYTTON's genius. It teaches that what one would most be pleased with should always receive the individual preference—that judgment should control choice—that labor, not indolent aspirations, is the chief element of success. One feature, not the least to the credit of our subject, is the fact that, though born to independence and the prospect of a fortune, he put aside the advantages of wealth and station ready at his hand, and found his greatest gratification in earnest toil—the very thing which most in his position would have shunned as diligently as he pursued.

The Reviewer.

DORA DEANE, or the East India Uncle; and MAGGIE MILLER, or Old Hagar's Secret. By Mrs. MARY J. HOLMES, author of "Lena Rivers," "The Homestead on the Hillside," "Meadow Brook," or "Roan Lee," "Tempest and Sunshine," etc. New York: C. M. Saxton.

In a handsome volume of some 400 pages, we have two distinct and absorbingly interesting and instructive novels—a vast improvement upon the former (and too frequently present) custom of elongating one romance into two or more volumes. Mrs. HOLMES has already "made her mark" in the world of literature, but if we mistake not the present volume will greatly augment her reputation acquired from the publication of her previous works. Her heroines are human, and her heroes natural and life-like, while a good and instructive moral lesson is taught. This is especially true in regard to DORA DEANE, for, while a work of absorbing interest, its tendency (or tendencies, for it enforces more than one lesson,) is in the right direction. Of MAGGIE we cannot speak so advisedly, yet from the portion we have perused believe it fully equal to the story of DORA and her imitable Uncle. The many admirers of Mrs. H.'s writings among our readers will of course obtain the volume and judge of its merits for themselves. Sold by DEWEY.

JESSIE; or, Trying to be Somebody. By WALTER ALM-WELL, author of "Marcus," "Whistler," "Ella," etc. With Illustrations. Boston: Gould & Lincoln.

This is another of "The Almwell Stories," an admirable series of books for the young, and an improvement, we think, upon the preceding volumes. The preface well and truly says that "while this series of books is designed to furnish a succession of pleasant and instructive lessons and recreations for boys and girls, each volume has also a specific aim, more or less prominently wrought into its web. The special object of JESSIE is to kindle in the hearts of the young, especially the children of misfortune and poverty, a pure and noble ambition, and to encourage them to strive for that 'good name' whose price is far above rubies, and that 'conscience void of offence' which is of still more incalculable value." We cannot too strongly commend the Almwell series to parents who desire their children to imbibe a taste for reading, and wish them to pursue works that are pure, elevating and instructive. Sold by COLE & ADAMS.

HOWARD AND HIS TEACHER. The Sister's Influence, and other Stories. By Mrs. MADEIRA LESLIE, author of "Cora and the Doctor," "Courtships of Wedded," "Household Angel," etc. Boston: Shepard, Life.

This is one of Mrs. LESLIE's Juvenile Series, and a volume of excellent tendency. It comprises several distinct sketches or stories, viz., Howard and his Teacher—The Sister's Influence—Faithful Hannah—The Stolen Dress—Willie and his Mother. The volume is illustrative of the different modes of home government, and may be profitably read by parents as well as children. Sold by DEWEY.

THE BANKS OF NEW YORK, their Dealers, the Clearing House, and the Panic of 1857. With a Financial Chart. By J. S. GIBBONS. Thirty Illustrations by HERBICK. New York: D. Appleton & Co.

The author gives the purport of this volume as follows:—"To present a literal history of the New York city banks in their present organization and action; to show how they are connected with the interest and convenience of all classes of people; to explain the manner in which they transact business; and to place them in their true position as correlative with commerce, and not above it." In this is included the duties of the officers and clerks; the daily incidents of the business; the frauds and abuses to which it is liable; and also a description of the Clearing House, which introduced a new era in American Banking. To the denizens of New York city this work is invaluable, while all may read it with profit. Its practicability will give it favor with business men, while the lively style in which it is penned will recommend it to the general reader. The author is both a man of figures and of letters. For sale by DEWEY.

THE SHEEPFOLD AND THE COMMON; or, Within and Without. New York: Robert Carter and Brothers.—1855.

More than thirty years ago the series of tales comprised in this volume made their appearance in England under the title of the *Evangelical Rambler*. They were exceedingly well received, the copies running up to one hundred thousand, and equal favor was bestowed upon them in this country. They have long been out of print, and as the morals the narratives convey are well calculated to assist in arresting the progress and counteracting the effects of some popular errors and dangerous institutions, they have been republished in very neat style. The object of the work is to afford instruction and amusement, by the narration of the events of every-day life, and the author has been very successful in its attainment. Of the forty-seven distinct articles the volume contains, not one can be thoroughly read without benefit. The work numbers upwards of 500 pages and 18 finely-finished illustrations. COLE & ADAMS have it for sale.

ABRAHAM DAVE'S ENTERTAINMENTS. Translated from the German by HERBERT PRINCE CURTIS. Boston: Phillips, Sampson & Co.—1855.

Here is a work that will please the juveniles. Our readers have an illustration of the style in the story of "Caliph Stork," given in our last volume, which was translated for the RURAL by GLENN F. WILCOX, Esq. The "Caliph" figures in the book before us. The "Entertainments" cover upwards of 400 pages, and are profusely illustrated. Sold by DEWEY.

THE BATTLE OF BARRIE DEFIL, and other Poems. By THOMAS BAILEY ALDRICH. New York: Rood & Carleton—1859.

In a small, neat volume we here have many of the lesser poems of Mr. ALDRICH. All who have read Babie Bell—which is alone sufficient to establish the reputation of the author as a genuine poet—will desire the work. Sold by DEWEY.

A CITY BOY IN THE COUNTRY.

EDS. RURAL:—Although I am not a Young Ruralist, yet I feel so strong a desire to express my opinion in regard to some late articles in your paper, that I find myself venturing to write, in hopes I may be permitted to speak through your columns. I am the son of a merchant in New York city; fourteen years old, and a pretty favorable specimen of a fast young fellow, for my age. So they all say. I don't think, though, I am a very bad one for the times. I always treat every one well, and every one alike, whoever they are, (only let them bear in mind to keep me cool!) though I don't suppose I would quite come up to your standard of the right kind of a boy, for I go to the theatre, and smoke cigars, and all that sort of thing, pretty freely.

Father has always had so little leisure that he never found time to see me much, and never tried to keep me at any sort of business. (By the way, if he had tried, he would have been brought to the stern necessity of either giving up his job or leaving entirely his mercantile business.) I have been at school some, but do not like so much confinement.

Early last spring, being discontented and desiring a change, I at last took it into my head that it would be a very fine thing to live in the country and work on a farm, just about one summer. My father had a cousin living in Potato Hollow, somewhere in the western part of the State. I had often heard him speak of her as the most kind-hearted, old-fashioned old lady he ever saw—"This," I thought, "is the place for me," so, after some urging, my father consented that I should go, on condition that I should, at all events, stay through the summer. I gladly assented to this. In a week I was in Potato Hollow, nearly smothered with Aunt SUSAN'S kisses.

I brought a letter from father to Uncle JEREDIAN Brown, her husband. I afterwards found it was a strict injunction to Uncle Jan. to keep a sharp lookout for me, try to steady me down, and above all things, to keep me busy. And they have done it with a vengeance. A few days ago, I asked permission to go, with several boys of my age, to a cattle show, a few miles distant. Uncle JED replied, he was astonished to hear me make such a request, after the directions my father had given; talked to me a long time, and ended with an affecting story of a boy who went to a train against his father's wishes, and got "blowed up." One thing I wish—that is, that he could see me for about a week after I get home, and that won't be for some time yet, father writes. Two or three weeks ago I borrowed a pile of *RURALS* from my friend GEORGE SMITH, the son of our town physician. Uncle JED, doesn't take any paper. He says that farmers, as have to work for a living, don't have no money to pay for such things, nor no time to read none in 'em if they had 'em. But, I like to read your paper, and I rather think if I lived in the country all the time, I think a great part of my pleasure would consist in reading, and doing things so nice as to astonish the country folks. I see that those who read the most and know the most, have the nicest houses, and horses, and fruit, and clothes, while those who have everything tumbling to pieces are ignorant, and seem to like it. If you print this I will write to you again, and then, perhaps, I shall be so proud of the matter that I may think it best to stay in the country and be somebody. SOLON.

Potato Hollow, Wayne Co., N. Y., 1859.

WHAT IS A LIBRARY?

"WHILE recently engaged in arranging a large library," remarked Alexander Hamilton, "a friend came in to lighten our labors by pleasant conversation."

"What is the most common idea of a library?" said he.

"A workshop, perhaps, in which are all manner of tools."

"What is your idea?"

"A dictionary, in which we can turn to any given subject, and find the information we desire."

"Very fair, both these definitions, but I think I know of one much better. When a lad about sixteen years of age, living as a neighbor of Dr. Mason, and also a member of his congregation, I was engaged in helping him to move and arrange his valuable library. 'Hamilton,' said he, 'you bear a great name, a very great name; but it is still more honorable to bear the name of Christ!—Hamilton, do you know what a library is?' 'No, sir.' 'Well, sir, it is an ARMY. Do you see those books? They are my SOLDIERS! I am the centurion. I call them down, and make them fight for me, my boy. Now you know what a library is, which is more than most folks do. Don't you forget it!'"

SHUT THE DOOR.—The door of your ears must be closed against bad language and evil counsel. The door of your eyes must be shut against bad books, trashy novels and low papers, or your studies will be neglected, and you will grow up useless and ignorant. You will also close them sometimes against the fine things exposed for sale in the shop windows, or you will never learn to save your money, or have any left to give away. The door of your lips will need especial care, for they guard an unruly member, which makes great use of the bad company let in at the doors of the eyes and ears. The inner door of your heart must be well shut against temptation, for Conscience, the doorkeeper, grows very indifferent if you disregard his call, and sometimes drops asleep at his post.

STUDY OF LATIN.—Under this heading, in the EDUCATIONAL DEPARTMENT, our young friends who have been interested in the discussion of the question, will find a very good article, written by a gentleman at Washington.

ROCHESTER, N. Y., JANUARY 15, 1859.

A Few Timely Remarks.

ADDRESS TO AGENTS, SUBSCRIBERS AND OTHERS.

THANKS—Most grateful and sincere to the active and influential friends of the RURAL NEW-YORKER throughout the United States, Canada, &c., for their successful efforts in extending its circulation, as manifested by the hundreds of encouragingly-written and well-filled letters we are daily receiving. We sincerely believe the RURAL has more ardent, working friends than any other paper in the land—MEN and WOMEN who labor for the cause and community, rather than personal benefit—and that if their efforts are continued, and imitated by others, we shall, ere long, as some of our friends predict, have a larger circulation than any other journal in America. That we shall spare no effort or expense to MERIT such favor, by continuing to use wisely and well the power of benefiting our readers and the public which may be conferred, is our fixed determination. If its old friends, and the fast increasing thousands who are joining its standard, will only exercise a little personal influence in behalf of the paper, by bringing it to the notice and support of their neighbors, the present circulation and usefulness of the RURAL may and will be more than doubled during the ensuing three months.—Friends of the RURAL and its Objects, please bear this in mind, and do community, the cause and us the favor of showing the paper to your friends and soliciting their subscriptions. We will cheerfully furnish extra numbers, bills, &c., and supply duplicates of copies lost or injured in canvassing.

Affairs at Washington.

GOVERNMENT has received from Utah intelligence of an alarming character, indicating the prevalence of great excitement in the Territory and of settled hostility between the Mormons and Gentiles.—Great outrages had been committed by Mormons, and a violent outbreak was apprehended before spring.

It appears from documents communicated to the House in response to a resolution, that a correspondence between the Secretary of the Treasury and the Collector at Mobile, has been in progress since April in relation to the Nicaragua filibusters. In response to the Collector's inquiry as to what should be done with the returned shipwrecked filibusters, the Secretary telegraphed on the 4th inst. that the principals should be prosecuted, and desired the Collector to furnish him a list of those who arrived in the British vessel.

The Secretary of the Navy also transmitted copies of the instructions given to Commodore McLutosh. He was directed not to seize any vessels, or act on mere suspicion. He is counseled not to interfere on land or in any harbor for the purpose of arresting any filibustering expedition set on foot in the United States, contrary to the acts of Congress, but on the other hand to protect the persons and property of our citizens engaged in lawful business against all illegal acts of violence and oppression to the full extent of his power. The Administration have authorized the Marshal of Kansas to offer a reward of \$250, each, for the capture of Montgomery and Brown, and to increase his posse to any number desired.

The correspondence between the British government and Mr. Dallas, called for by Mr. Seward's resolution, will, it is said, if furnished, exhibit startling facts in regard to the continued abuse of the American flag to cover the slave trade, and show the yacht Wanderer played a prominent part in that traffic on the African coast.

New York Legislature.

SENATE.—At 11 o'clock A. M., of the 4th inst., the Clerk announced the arrival of the hour for the meeting of the Senate, and Lieut. Gov. CAMPBELL, by virtue of his office, took the Chair, making a brief address. After the adoption of the usual resolutions relative to the attendance of clergymen, the hour of meeting, &c., a Committee from the House announced the organization of that body; and Committees were appointed to communicate like information to the Assembly and to the Governor. The Governor's Private Secretary, handed to the President the Governor's Annual Message, and the organization of the Senate was completed.

The following will exhibit what has been the labor performed up to time of adjournment: The petition of H. C. WHITMORE, for a seat from the 11th district, was presented. Notices were given of a bill to regulate imprisonment of witnesses; for the annual appropriation to the Binghamton Inebriate Asylum; to enable the Agricultural Societies to better protect their property. Mr. TRUMAN introduced a bill providing for the payment to the State Inebriate Asylum the sum of \$120,000, in \$40,000 instalments, and confirming the site at Binghamton. Mr. LOVELAND presented a bill giving the State Prison Inspectors in charge, the power to make temporary appointments to fill vacancies until the next meeting of the Board, requiring all removals to be made on the return of charges, giving power of suspension to agents or wardens, until the quarterly meeting of the Board.

ASSEMBLY.—On the 4th inst., the House was called to order by the Clerk of last Assembly, whereupon, Hon. GIBSON J. TUCKER, Secretary of State, proceeded to administer the oath of office to the members. When all present were sworn in, the House proceeded by a *visa voce* vote, to elect a Speaker. Dr. WITT C. LITTLEJOHN, of Oswego, was voted for by the Republicans; JOHN W. CHAMBERLAIN, of New York, by the Democrats; and CHAUNCEY BOUGHTON, of Saratoga, by the Americans.

Mr. LITTLEJOHN having received a majority of the whole House, was declared duly elected, and was conducted to the Chair. The following officers were also elected:

Clerk—Wm. RICHARDSON, of Albany; Sergeant-at-Arms—D. M. PRESCOTT, of Oneida; Door-keeper—Geo. C. DENNIS, of Washington; 1st Assistant—JOSEPH BALL, of Erie; 2d Assistant—J. J. STEVENS, of New York; and organization effected.

Committees were appointed to inform the Governor and the Senate that the House had organized, and was ready to proceed to business; when the Governor's Private Secretary handed to the Speaker the Governor's Annual Message, which was read.

Notices were given of bills, to authorize the Rochester Bank to reduce its stock; to repeal the law allowing parties to be witnesses; to amend the equalization act of 1857; to incorporate religious societies; to better secure Counties against loss from County Treasurers, and a large number of local bills.

MESSRS. LAW and SPENCER introduced laws for registration of voters, similar in their provisions to those of last year.

Congressional Proceedings.

SENATE.—On the 4th instant, it was announced that the new Hall was ready for occupancy, and the Senators took occasion to make speeches on parting with the "Old Chamber." Mr. Crittenden, of Ky., reviewed the scenes he had witnessed, and recalled the names of CLAY, WEBSTER, CALHOUN and others whose fame was dear to the American people. The Vice-President followed, giving historical sketches of Congress at the various seats of government, until its location at Washington. He then narrated the burning of the Capitol by the British Army, the assembling thereafter of the Congress in Blodgett's Hotel, on the site now occupied by the General Post-Office, and finally the assembling in 1819, in the present building. The Senators then proceeded in a body to the new hall.—The discussion of the Pacific railroad bill has occupied most of the time during the present week.

HOUSE.—On motion of Mr. Farnsworth, of Ill., the resolution was adopted, calling on the Secretary of the Interior for information as to whether the Rock Island Military Reservation has been transferred from the War to the Interior Department, and thrown open to pre-emption at \$1.25 per acre.

Mr. Faulkner, of Va., offered a resolution which was adopted, calling on the Secretary of War to furnish a statement of the Morris expedition, during the last ten years for barrack officers, the object being to reduce the expenses of the Quartermaster's Department.

Mr. Jones, of Tenn., offered a resolution calling on the Secretary of the Interior to report under what law and by what authority the advisory board of agriculturalists to the Patent office is assembled, the manner in which the delegates are appointed, and from what fund they are paid.—Messrs. Hughes, of Ind., and Stephens, of Ga., severally gave their understandings of the subject, supposing that the delegates assembled under the direction of the Secretary of the Interior, \$75,000 having been appropriated for the collection of agricultural statistics. Mr. Jones, of Tenn., said if it was right and proper that such committees should be brought together, Congress ought to take the responsibility for providing how they shall be called, the number of delegates and the amount of compensation. The resolution passed.

THE REASON WHY subscribers at post-offices where we have clubs do not receive all their papers in one package, or by the same mail, is because we are almost daily receiving additions to the lists and are obliged to mail some papers from the books, and others from letters. In a few weeks we shall be able to regulate this matter satisfactorily to subscribers; friends must exercise a little patience meantime, for we are doing our very best to meet the wishes of all by mailing all orders on the day of receipt, as far as possible. The great rush has overworked our entry clerks, however, and they find it impossible to get all the names properly on the books—hence the necessity of mailing part of the lists from letters.

Political Intelligence.

NEW YORK.—At the Special Election in the Fourth Congressional District of New York city, on the 5th inst., THOMAS J. BARN, the Democratic member elected to the next Congress, was chosen, almost without opposition, to fill the vacancy, until March 4th, caused by the resignation of JOHN KELSEY.

MASSACHUSETTS.—The Legislature organized on the 5th inst. Mr. CHARLES A. PHELPS, of Boston, was chosen President of the Senate by 26 against 5. Stephen A. Gifford, Clerk, of last year, was re-elected. In the House, CHARLES HALE, of Boston, was chosen President by 185 out of 202.

NEW HAMPSHIRE.—The Republicans of New Hampshire held their State Convention for the nomination of State officers on the 4th inst.—ICHABOD GOODWIN was nominated for Governor, and ADAMS TWITCHELL for Railroad Commissioner.

The Democratic State Convention, on the 7th inst., nominated Hon. ASA F. CARE for Governor, and FREDERICK Voss, for Railroad Commissioner.

MAINE.—The Legislature organized at Augusta on the 6th instant, by the choice of C. W. GODDARD, of Danville, as President of the Senate, and Wm. T. JOHNSON, of Augusta, Speaker of the House.—Clerk and Secretary same as last year.

PENNSYLVANIA.—The Pennsylvania Legislature met on the 4th inst. W. C. LAWRENCE, Opposition, was elected Speaker of the House. The Governor's Message states that the finances of the State are in a most satisfactory condition. The receipts of the Treasury for the fiscal year, were over \$4,000,000. The expenditures were three millions and three quarters. Balance on hand over three quarters of a million, and the entire State debt nearly \$40,000,000. He recommends great reduction in the public debt, looking towards its extinguishment.

MARYLAND.—The House organized on the 5th inst., by the election of J. W. GORDON as Speaker. Both Houses adjourned immediately after the organization.

MICHIGAN.—The Legislature assembled at Lansing, on the 5th inst. HENRY A. SHAW was elected Speaker of the House. The retiring and incoming Governors delivered their messages according to law. The former states that the finances are in a satisfactory condition. The receipts of the Treasury for the fiscal year had been \$1,024,000, while the expenditures were \$848,000. The balance on hand is \$176,000. The entire State debt is \$1,317,000, a diminution in four years of \$215,000. He recommends the speedy extinguishment of the public debt, and reports the State University, Agricultural College, Normal and Common Schools, and the Asylums, &c., in a flourishing condition.—Gov. WISNEN's message is entirely devoted to the State affairs. He recommends the appointment of a State Geologist and Emigrant Agent, and favors a Registry Law, and the erection of a new Capitol building.

ILLINOIS.—The Legislature met on 3d inst., and elected Mr. MORRISON, Anti-Lecompton Democrat, Speaker of the House. STEPHEN A. DOUGLAS has been re-elected to the U. S. Senate. The vote stood—DOUGLAS, 54; LINCOLN, 46.

Interesting News from Kansas.

THE Kansas Legislature have adjourned to Lawrence, receiving the sanction of the Governor.

The Committee on contested seats reported, and the Secretary of the Territory was requested to administer the necessary oaths, which he refused to do, when a Secretary *pro tem* was authorized to perform the act, which he did.

Mr. HOLIDAY, of the Council, gave in a bill asking Congress to annex to Kansas all that portion of Nebraska south of the Platte river. Bills were introduced in the House to abolish slavery, and to report adversely to the bogus statutes.

The Governor's Message regrets the growing disposition of various parties in the Union to overrate the voters and corrupt the ballot boxes. The Governor strongly reprehends the conduct of persons in Lynn and Bourbon counties, and says he is prepared to unite with the Assembly in the most cordial manner, for the adoption of such measures as shall restore order, and will bring to their aid all the power placed at his disposal by the Executive.

The report of the Commissioner appointed to audit claims, shows the amount presented to be upwards of \$301,000, and the amount awarded \$264,000, of which \$39,000 are of a public class, and \$215,000 of a private nature.

The Comptroller reports the taxable property of the Territory at \$25,000,000, and the number of acres of land sold and pre-empted at about 2,000,000.

A reliable person from the vicinity of Fort Scott, represents the acts committed there as similar to those of the time of the notorious MURRELL. The whole country is divided into "jay-hawkers" and "anti-jay-hawkers." The former commit all sorts of crimes, and are openly upheld by many respectable people. The "jay-hawkers" justify their acts as a proper revenge for the same kind of depredations, and more atrocities committed upon them by the pro-slavery party when they were in a majority.

By reference to "Affairs at Washington," it will be seen that the general government has had official notice of these depredations. Missouri has taken the matter in hand, as the telegraph informs us that Gov. STEWART transmitted to the Senate a special message, reiterating the recent depredations committed in Kansas under MONTGOMERY and BROWN, upon citizens of Missouri residing in the border counties, and asking for legislative action in the matter. A bill was accordingly immediately reported, which authorized the government to call out a volunteer force sufficient to protect persons and property in peril, and to repel all further attempts at invasion. The bill appropriates \$30,000 to defray expenses.

TEMPERANCE LECTURES.—We are advised that Mr. C. S. TOWNS, a young gentleman of ability and devotion to the cause, is lecturing very acceptably on the subject of Temperance in this county, and will soon visit Livingston and perhaps other counties. From what we know and have heard concerning Mr. T., we are induced to believe him an earnest and successful advocate of the cause he has espoused, and hence worthy the confidence of community.

News Paragraphs.

THERE is a company of five Americans engaged in gold mining in Siam, about thirty-five miles from Bangkok. The mines are located in an elevated basin, oval in shape, thirty miles long by eighteen broad, surrounded by craggy walls of rock, with only seven gaps or means of entrance in the whole circumference. Nearly the whole basin is covered with forests. The gold is found in ravines. The mines are very rich, but jungle fevers, heavy rains, and other circumstances interfere with operations.

CAMELS, which a few years ago were a curiosity of the traveling shows in this country, have been declared a nuisance in Texas, where government is breeding stock for the use of the army. The City Council of Galveston have passed an ordinance declaring that no person or persons shall ride, drive, or introduce within the corporate limits of the city any camel or camels, except for the purpose of immediate shipment from the city, under a penalty of fifty dollars.

CAPT. WILKES, of the Navy, who was some time ago commissioned to make an examination of the mineral deposits in Chatham county, North Carolina, with a view to the establishment of a depot of construction for the navy, has made a report highly favorable to the object, having found the deposits of coal and iron of extraordinary richness and of inexhaustible extent.

MR. E. MERIAM says that during the past year, so far as he has been able to learn, fifty-three persons have been killed by lightning, and sixty-eight injured. There are also three accounts where it is reported "several persons were killed." Thunder and lightning storms occurred on sixty-one days in the three summer months.

THURSDAY afternoon a train of cars on the Ohio and Mississippi Railroad ran off the track at Delhi, Ohio, and two cars full of passengers were thrown down an embankment ten feet in height. Nearly every person in them was more or less injured, though none fatally.

The amount of gold shipped from California to New York during the year 1858, was \$36,179,344; amount shipped in 1857, \$34,222,904—showing a balance in favor of 1858 of \$1,956,440. Of the shipments in 1857, nearly \$2,000,000 were lost in the ill-fated steamship Central America.

The statistics of the criminal calendar of the city of New York, for the year now closed, disclose the startling fact, that there were upwards of sixty murders in the city during that period, and in all that time, only one murderer (Rogers) was hanged.

Tas San Joaquin Republican says, that parties in San Francisco have sent to Europe for weasels, to be used in killing the squirrels that infest the ranches in the Southern valleys of that State.

The Governor of Jamaica has recommended to the Legislature of that island measures for the promotion of more regular and frequent intercourse with the United States.

THE PARAGUAY FLEET.—The steamer Melacomet, the last of the fleet sent by our government to wage war upon Paraguay, sailed from Pensacola, Florida, on the 3d inst. As the expedition and its progress may soon occupy a large share of public attention, a complete statement of the squadron may be of interest:

LAKE DISASTERS IN 1858.—The aggregate losses on vessels, cargoes, and of lives the past season, show a gratifying decrease compared with the previous year. The 7th, 8th and 9th of October were the most memorable days of the year, a terrific storm having raged over the whole chain of lakes, doing much damage to shipping. The total loss in vessels and cargoes by this three days' storm is estimated at \$150,000. The Chicago Press gives a list of disasters for the year, compiled from the files of that paper, which shows the loss of 105 lives, and a total loss of property estimated at \$787,000. In 1857 the lives lost numbered 221, being double the loss in 1858, and the loss of property was \$1,920,315, being nearly treble that of '58.

THE CURFEW.—It is stated by a London correspondent, that the old Norman Curfew, which required all persons to be housed at dusk, has recently been revived in Paris, and its limit fixed at eleven o'clock, P. M. No noise has been made about this new regulation, but at the indicated hour, the agents of police walk through the more refractory streets and quarters of the city, and order all cafes, billiard-rooms and drinking houses closed. The new regulation has thus far been quietly acquiesced in, but nevertheless it has excited much sullen discontent. It is a long while since the people of Paris submitted to be told at what hour they must go to bed.

EUROPEAN NAVIES.—The various European powers are striving hard to increase their navies. The Prussian, Austrian and Russian princes of the blood are at the head of the service. Austria spends \$2,400,000 this year on her squadrons, and for 1859 will increase the amount to \$4,000,000.—Prussia is said to be about to ask the Legislature for \$2,500,000 for the navy. All know the Russian designs are not diminished in naval matters; and this time next year it is said, France will possess forty screw line-of-battle ships.

THE GEORGIA RAILROAD ACCIDENT.—Later accounts from the scenes of this disaster—to which we briefly adverted in the last RURAL—show the first reports to have been much exaggerated. Fifteen persons were killed. The cause of the accident was the washing away of the track. The cars fell thirty feet, emptying the passengers into the stream.

The News Condenser.

—Deaths in Baltimore during 1858, 5,115.
—Cotton is now grown in Cuba with excellent success.
—The Canadian Parliament is to meet on the 29th inst.

—During the past year there were 70 fires in Cincinnati.
—In some towns in France the lamp-lighters are women.
—There is an extensive gold excitement in South America.

—During the year 1858, eighteen Revolutionary soldiers died.

The office of the Detroit Tribune was burned the other night.
—The United States imports \$245,000 worth of needles per annum.

The number of deaths in Boston in 1858, was about 2,800—a decrease of 125.

—Two large black bears were killed within the limits of Ogdensburgh on the 17th ult.

—Two hundred and ninety-seven vessels are laid up in the harbor of Chicago for the winter.

—The Philadelphia Bulletin contains a list of over 11,000 delinquent tax payers in that city.

—Advices from Naples of the 26th ultimo, state that Mount Vesuvius is again in full eruption.

—The New England Society of Montreal celebrated "Forefathers' Day," with great enthusiasm.

—The editor of the Tallahassee (Fla.) Republican, had green peas for dinner on Christmas day.

—A society, favorable to discouraging the use of tobacco, has been formed in Bucks Co., Penn.

—The English Methodists are said to be pleased that lay representation is being agitated in America.

—The Germans in the United States publish at present more than two hundred periodical papers.

—By railway accidents in the United States in 1858, there were killed 103 persons, and injured 229.

—John Hancock, a nephew of the John Hancock, died at Boston on Sunday, the 2d inst., aged 85.

—There have been 1,075,000 hogs packed in the Mississippi Valley thus far during the current year.

—The Hebrew ladies of Cincinnati have set on foot a subscription in behalf of the Mount Vernon fund.

A statement of the Irish potato crop of 1858 shows that it has been one of the finest raised since 1840.

—Over four hundred persons were arrested in Baltimore, Christmas night, for being drunk and disorderly.

—Statistics show that the consumption of spirituous liquors in Scotland is one-third less than three years ago.

—The Milford boot business for 1858 amounts to about 115,000 cases, or 1,850,000 pairs, valued at about \$3,000,000.

—The "Flying Artillery" is the name of a religious organization of young men in New York. What next?

—Elder Knapp whose "revivals" some years ago excited so much attention, has consented to visit California.

—During the year 1858, thirty-five persons, of one hundred years and upwards, died within the United States.

—At the late session of the Recorder's Court in Chicago, twenty-eight men received passports to the State prison.

—The amount of taxes annually collected in Cuba is \$28,000,000, which is equal to about \$46 for every inhabitant.

—The total number of fires in Chicago in 1858 was 49. Eleven lives were lost, and \$384,125 worth of property.

—Since the introduction of steam fire engines, the rates of insurance in St. Louis have been reduced 25 per cent.

—Private advices from Cuba state positively that a squad of Americans are in Cuba ready to aid the revolutionists.

—Dedham Village, Mass., has expended \$40,000 on churches and \$17,000 on a school-house within the past two years.

John M. Barnard, Esq., of Boston, has offered a premium of \$1,000 for the best essay on Temperance Legislation.

—The United States Senate has confirmed the nomination of Alexander Wilson to be United States Attorney for Utah.

—Seventy-one and a half dollars have been cleared per acre on a crop of sweet potatoes by a farmer in Lawrence Co., O.

—The losses by fire in the United States in 1858, excluding all losses less than \$10,000, make an aggregate of \$12,000,000.

—A Rhode Island farmer brought a goose to market one day last week, which weighed twenty pounds and three-quarters.

—The tonnage of the commercial marine of the United States is 5,153,773, having increased 103,965 during the year.

—The number of emigrants reaching New York for 1858 up to the 15th of December, was 75,989, against 182,802 for 1857.

—One of the public squares in Sebastopol has been named "Amerikanski Place," in honor of the American residents there.

—The Sons of Malta in Fall River, Mass., distributed one thousand leaves of bread to the poor of that city New Year's day.

—Pekin, Niagara Co., is sadly afflicted by that dreadful scourge, the small pox. There are some 20 or 30 cases at present.

—The London Times has an article asserting that England has a much more direct interest in Mexico than the United States.

—The Commercial, of Cincinnati, estimates the population of that city, for a year past, at about one hundred and thirty thousand.

—The number of deaths in Philadelphia for the year

THE SNOW SHOWER.

BY W. L. CULLEN.

Stand here by my side and turn, I pray.

On the lake below thy gentle eye;
The clouds hang over it, heavy and grey,
And dark and silent the water lies;
And out of that frozen mist the snow
In wavering flakes begins to flow;

Flake after flake,

They sink in the dark and silent lake.

See how in living swarms they come
From the chambers beyond that misty veil,
Some hover awhile in air, and some
Dash prone from the sky like summer hail,
All, dropping swiftly or settling slow,
Meet and are still in the depths below;

Flake after flake,

Dissolved in the dark and silent lake.

Here delicate snow-stars, out of the cloud
Come floating downward in airy play,
Like sparrows dropped from the glistening crowd
That whiten by night the milky way,
Their broader and brier masses fall;
The sullen water bubbles them all;

Flake after flake,

All drowned in the dark and silent lake.

And some, as on tender wings they glide
From their chilly birth cloud, dim and grey,
Are joined in their fall, and, side by side,
Come clinging along their unsteady way;
As friend with friend, or husband with wife
Makes hand in hand the passage of life;

Each mated flake,

Soon sinks in the dark and silent lake.

Lo! while we are gazing, in swifter haste
Stream down the snows, till the air is white,
As, myriads by myriads madly chased,
They fling themselves from their shadowy height
The fair, frail creatures of middle air,
What speed they make with their grave so high;

Flake after flake,

To lay in the dark and silent lake!

I see in thy gentle eyes a tear:
They turn to me in sorrowful thought;
Thou thinkest of friends, the good and dear,
Who were for a time and now are not;
Like these fair children of cloud and frost,
They gladden a moment, and then are lost;

Flake after flake,

All lost in the dark and silent lake.

Yet look again, for the clouds divide;
A gleam of blue on the water lies;
And far away, on the mountain side,
A sunbeam falls from the opening skies.
But the hurrying host that flew between
The cloud and the water no more are seen;

Flake after flake,

At rest in the dark and silent lake.

Entered according to act of Congress, in the year 1884, by
D. D. T. MOORE, in the Office of the Clerk of the District
Court for the Northern District of New York.

ALICE AND ADELAIDE;

OR,

THE TRUE AND THE FALSE.

BY MRS. MARY J. HOLMES.

(Continued from page 30, last number.)

Chapter V.—Cells.

"I wish I had gone home before," was the first thought of ADELAIDE, who did not care to be seen there by Mr. HOWLAND. It might lead to some inquiries which she would rather should not be made. Still, there was now no escape, and trusting much to the promise of the WARRENS, she stepped back from the door just as Mr. HOWLAND opened it. He seemed greatly surprised at finding her there, and still more surprised when he learned that they were old acquaintances.

"It is kind in her not to desert them in their poverty," he thought, and his manner was still more considerate towards ADELAIDE, who, after standing a few moments, made another attempt to go. "Wait, Miss HUNTINGTON," said he, it was both raining and snowing when I came in, and you will need an umbrella."

This was just what ADELAIDE wanted, and taking a seat she waited patiently until Mr. HOWLAND signified his readiness to go. Then, bidding ADELAIDE good-night, she whispered to her softly, "You never will say a word of father, will you?"

"Certainly not," was ALICE's answer, and in another moment ADELAIDE was in the street walking arm in arm with Mr. HOWLAND, who began to speak of the WARRENS and their extreme poverty.

"It is evident they have seen better days," he said, "but they never seem willing to speak of the past. Did he meet with a reverse of fortune?"

For a moment ADELAIDE was silent, while she revolved the propriety of saying what she finally did say, and which was—"Yes, they met with reverses, but as they are unwilling to talk about it, I, too, had better say nothing of a matter which cannot now be helped."

"Certainly not at all," it would be to their detriment," said Mr. HOWLAND, a painful suspicion entering his mind.

Hitherto he had regarded Mr. WARREN as the soul of integrity, but ADELAIDE's manner, even more than her words, implied that there was something wrong, and hardly knowing what he said, he continued, "Was it anything dishonorable?"

"If you please, I would rather say nothing about it," answered ADELAIDE. "I don't wish to do them harm, and I dare say they regret it more than any one else can do."

Mentally pronouncing her a "very prudent, conscientious girl," Mr. HOWLAND walked on in silence, feeling the while that something was taken from him. He had become greatly interested in the helpless old blind man, and in his writing desk at home was a receipt in full for the first part of the rent, then due in a few days. But Mr. HOWLAND was a man of stern integrity, having anything like fraud or deceit, and if Mr. WARREN had been guilty of either, he was not worthy of respect. ALICE,

too, though she might not have been in fault, did not seem quite the same, and now as he thought of her, there was less of beauty in the deep blue of her eyes and the wavy tresses of her hair.

"Will you go in? 'Tis a long time since you were here," said ADELAIDE, when at last they reached her mother's door.

Her invitation was accepted, and the clock struck eight ere Mr. HOWLAND arose to leave. Accompanying him to the door, ADELAIDE said, imploringly, "I trust you will forget our conversation concerning those WARRENS. You know I didn't really tell you anything."

Mr. HOWLAND bowed and walked away, wishing in his heart that "she had not told him anything, or at least had not created in his mind a suspicion against people he had hitherto liked so much. So absorbed was he in his meditations that he did not at first observe the slender figure which, wrapping its thin shawl close around it, came toiling on, but when the young girl had reached him and the rude north wind blew the brown curls over her white face, he knew it was ALICE WARREN, and his first impulse was to offer her his arm and shield her from the storm. But ADELAIDE's dark insinuations were ringing in his ears, and so ALICE went on alone, while the rain and the sleet beat upon her head and the cold penetrated through her half-worn shoes, chilling her weary feet, and sending a shiver through her frame. But she did not heed it—did not even think of the driving storm, so eager was she to be at home, where she could count the contents of the little box and see if with the money received to-night there were not enough to pay the quarter's rent.

But the blind man, listening to the storm, knew how cold his darling would be, and groping in the darkness, he added fresh fuel to the fire, and then swept up the hearth, placing her chair a little nearer to his own, so it would seem pleasant to her when she came. Poor, helpless man! He could not see,—nay, he had never seen his child, but he could fancy just how bright and beautiful she would look, sitting at his side with the fire he had made shining on her hair, and when at last she came, he clasped her little red hands between his own, rubbing, kissing and pitying them, until he felt that they were warm. Then, seated in his chair, he listened while she counted the silver coin, dropping it piece by piece into his palm and bidding him guess its value by its size. It was all numbered at last, and very joyfully ALICE said to her father, "There is enough to pay our rent, and we have been comfortable, too, thanks to Miss ELIXON, who has saved us many a shilling by her timely acts of charity."

Yes, Miss ELIXON had been to them a ministering angel, and however much she might be disliked at the White House on the Hill, she was loved and honored at the Brown House in the Hollow, and that night when ALICE WARREN sought her pillow, she breathed a prayer for the kind woman who was yet to befriend her in more ways than one.

Chapter VI.—Pay-Day.

Miss ELIXON sat alone in her pleasant parlor, bending over her bit of embroidery, and setting her needle into the dainty fabric in a manner plainly indicating a mind ill at ease. And for a lady of her temperament, Miss ELIXON was a good deal disturbed. During the last week her brother had spent four evenings at the White House on the Hill, and though she, his sister, had unreservedly given him her opinion of the young lady ADELAIDE, he persisted in saying she was the most agreeable and intelligent girl in Oakland. It was in vain that she told him of the *wristband*, saying "she presumed they sewed secretly for a living."

He only smiled incredulously, telling her, however, that "he should like ADELAIDE all the better, if he found she was skilled in *shirt-making*."

In short, Miss ELIXON began to have some well-founded fears that she should yet have an opportunity of making that house uncomfortable, both to herself and the wife her brother might bring there, and it was this reflection which made her so nervous as she sat there alone that pleasant March afternoon.

"I would rather he should marry little ALICE WARREN,—blind father and all," she thought, just as the door opened softly, and "little ALICE WARREN" stood within the room.

"She had been to the store to see Mr. HOWLAND," she said, "and as he was not there she had come to the house, hoping to find him, for she would rather give the money into his hand, and know there was no mistake."

"What money, child?" asked Miss ELIXON, and ALICE replied that "it was *pay-day*," at the same time opening the little box and showing her the pieces of money she had saved from her earnings.

Miss ELIXON did not know of the receipt lying in her brother's writing-desk, but she resolved that not a penny should be taken from that box, and bidding ALICE be seated on a little stool at her feet, she told her to wait until her brother came. Then, when she saw how languid and tired ALICE seemed, she laid her head upon her lap, smoothing the long, brown curls until the weary girl fell asleep, dreaming that 'twas her mother's hand which thus so tenderly caressed her hair. For half an hour she slumbered on, and then Mr. HOWLAND came, treading carefully and speaking low, as his sister, pointing to the sleeping girl, bade him not to wake her.

"Look at her, though. Isn't she pretty?" she whispered, and Mr. HOWLAND, gazing upon that fair, childish face, felt that he had seldom seen a more beautiful picture.

In a few words Miss ELIXON told why she was there, adding, in conclusion, "but you won't take it of course. You are rich enough without it, and 'twill do them so much good."

"I never intended to take it," answered Mr. HOWLAND, and going to his library, he soon returned with the receipt, which he laid within the box.

Just then a new idea presented itself to the mind of Miss ELIXON. They would change the silver, she said, into a *bill*, which they could roll up with the receipt and place in ALICE's pocket while she slept. This plan met with her brother's approval, and when at last ALICE awoke, the box was empty while Mr. HOWLAND, to whom she told her errand,

blushing deeply to think he had found her sleeping, replied indifferently, "Yes, I found it there, and I like your promptness."

At that moment Miss ELIXON left the room, and when she returned, she bore a basket of delicacies for the blind man, who, even then, was standing in the open door at home, and listening anxiously for the footsteps which did not often linger so long. He heard them at last, and though they were far down the street he knew they were *her's*, and closing the door he passed his hands carefully over the tea-table, which he himself had arranged, feeling almost a childish joy as he thought how surprised ALICE would be.

"Oh, father," she exclaimed, when at last she came bounding in, "how could you fix it so nicely, and only think, Miss ELIXON has sent you so many good things,—here's turkey, and cranberry sauce, and pie, and cheese, and jelly-cake, and white sugar,—and everything! I mean, for once, to eat just as much as I want," and the delighted girl arranged the tempting viands upon the table, telling her father, the while, how pleased Mr. HOWLAND was at her promptness.

"He gave you a receipt, I suppose," Mr. WARREN said, and ALICE replied, "Why, no, I never thought of a receipt. I'm so sorry," and in her confusion she hit her hand against the hissing teapot she had just placed upon the table.

The slight burn which she received, made her handkerchief necessary, and, in feeling for it, she touched the little roll which Miss ELIXON had placed within her pocket. Drawing it forth, and examining its contents, she experienced, for an instant, sensations similar to those which Benjamin's brethren may be supposed to have felt when the silver cup was found in their possession.

"What does it mean?" she exclaimed, reading aloud the receipt and examining the bill, which amounted exactly to the quarter's rent.

The blind man knew what it meant, and, bowing his white head upon his bosom, he silently thanked God who had raised them up friends in their sore need. Upon ALICE, the surprise produced a novel effect, moving her first to laughter and then to tears, and, notwithstanding her intention of "once eating as much as she liked," she forgot to taste of the many delicacies spread out so temptingly before her. In her estimation they were almost rich again, and never, perhaps, came sleep to her more sweetly than on that night, when she knew that the contents of the little box was *their's*, to do with as they pleased.

Several evenings after this, they were surprised by a call from Mr. HOWLAND, who had not visited them before since the night when he had found ADELAIDE HUNTINGTON there. Thoughts of ALICE, however, as she lay sleeping on his sister's lap, had haunted him. "She was innocent of wrong, he was sure, and to see her he had come. That old man, too, with the snow-white hair shading his truthful-looking face, 'twas hard to believe there was naught of evil in him, and, after receiving as best he could their thanks for his generosity, he resolved to question them a little of the past, so he commenced by asking ALICE if she had been intimately acquainted with ADELAIDE HUNTINGTON.

Remembering her promise, ALICE seemed much embarrassed, and answered hastily, "We were never intimate," while at the same time she glanced towards her father, whose voice trembled slightly as he rejoined, "I had business transactions with ADELAIDE's father, but our families seldom met."

The next moment he was talking of something else,—his manner plainly indicating that any further allusion to the HUNTINGTONS was not desired.

"There is something wrong, or they would not be so unwilling to talk of their former life," Mr. HOWLAND thought, and, with his suspicions strengthened, he soon took his leave, stopping by the way to call on ADELAIDE, whose eyes beamed a joyous welcome as he entered the parlor, that being the place where she now received his frequent calls.

Her mother was in the way in the sitting-room, she said, and whenever she had reason for expecting him, she made a fire in the parlor, shutting up the stove and turning down the lamp until the ringing of the bell announced his arrival; then, while old Precy hobbled to the door, she opened the draught and turned up the lamp, so that by the time Mr. HOWLAND was ushered in, everything looked cheerful and inviting. By this means, too, she escaped another annoyance, that of being urged to play; for, if Mr. HOWLAND did not see the piano, he was not as likely to ask her to sing, and she had already nearly exhausted her powers of invention in excuses for her indifferent playing and the style of her music.

"Ma insisted upon her taking old pieces," she said, "but by-and-by, when she had a new piano, she should do differently."

Fortunately for her Mr. HOWLAND was not a musical man and was thus more easily deceived.—On the evening of which we are speaking, after listening awhile to her sprightly remarks, he suddenly changed the conversation by saying he had been to see Mr. WARREN, "and he told me," said he, "that he once did business with your father."

Turning her face away to hide its startled expression ADELAIDE asked hastily, "What else did he tell you?"

"Nothing," returned Mr. HOWLAND. "He would not talk of the past."

"I should not suppose he would," quickly rejoined ADELAIDE,—then, after a moment, coming to his side, she continued, "Mr. HOWLAND, I wish you would promise never to mention that subject again, either to me, or those WARRENS. It can do no good, and a knowledge of the truth might injure some people in your estimation. Promise me, will you?"

Her hand was laid imploringly upon his arm, her handsome, dark eyes looked beseechingly into his, and as most men under similar circumstances would have done, he promised, while ADELAIDE, mentally congratulating herself upon the fact that his business never took him to the city where she had formerly lived and where the name of *Huntington* had scarcely yet ceased to be a by-word in the street. Mr. HOWLAND was much pleased with her, she knew, and if they could manage to keep up appearances a little longer, he might be secured. One thing, however, troubled her, "*Pay-day*," was near at hand, but alas for the wherewithal to pay!

'Twas not in her mother's purse, nor yet in any other purse whence they could procure it. Still ADELAIDE trusted much to her inventive genius, and when she bade Mr. HOWLAND good-night, chatting gaily as she accompanied him to the door, he little dreamed how her mind was distracted with ways and means by which to dupe him still more effectually.

Three weeks passed away and then as Miss ELIXON sat one evening with her brother she asked him if Mrs. HUNTINGTON's rent were not that day due.

"Possibly, though I have not given it a thought," Mr. HOWLAND answered, his voice indicating that he neither deemed it essential for himself to be particular or his sister to be troubled about Mrs. HUNTINGTON's rent.

As far as dollars and cents were concerned, Miss ELIXON was not troubled, though she did think it doubtful whether ADELAIDE would be as prompt as ALICE had been. But, when, as if to verify a proverb not necessary to be repeated here, ADELAIDE came to the door, almost before her brother had ceased speaking, she began to think her suspicions groundless and her manner was quite conciliatory towards the young lady, who, after throwing back her veil of dotted lace and fidgeting awhile in her chair, managed to say, "It is very humiliating to me, Mr. HOWLAND, to tell you what *ma* says I must. She fully expected that the agent who does her business would have sent her money ere this, but as he has not, she cannot pay you today. Shall we pack up our things at once?" she continued playfully, as she saw the expression on Mr. HOWLAND's face.

"Perhaps you had better," he answered in the same strain, continuing in a more sober tone, "Tell your mother not to be concerned about the rent. It does not matter if 'tis not paid until the end of the year!"

ADELAIDE drew a relieved breath, while Miss ELIXON dropped her embroidery and involuntarily gave vent to a contemptuous "umph."

The sound caught ADELAIDE's ear and thinking to herself "*stingy old thing*,"—afraid they will lose it, I dare say," she made her call as brief as possible. Nodding to her civilly as she arose to go, Miss ELIXON turned to her brother, saying, "You know, RICHARD, you are to go with me to-night to call on JENNY HAYES."

But RICHARD did not know any such thing, and as his distressed sister saw him going down the walk with ADELAIDE HUNTINGTON on his arm she muttered, "I'd like to see the man who could make such a fool of me as that girl has made of him!" A wish not likely to be verified, considering that she had already lived forty-five years without seeing the man.

Chapter VII.—The Unknown Deliverer.

Very rapidly the spring passed away, and the soft, sunny skies of June had more than once tempted the blind man and his daughter into the open fields, or the woods which lay beyond. Their favorite resort, however, was a retired spot on the bank of the river, where, shut out from human eye they could speak together of the past, the present, and what the future might bring. Here one pleasant afternoon they came, and while Mr. WARREN talked of his childhood and his early home, ALICE sat sewing at his feet, until growing somewhat weary she arose and began to search for wild flowers upon the mossy bank. Suddenly spying some beautiful pond lilies floating upon the surface of the water, she exclaimed, "Oh, father, father, these must be white lilies just like those you used to gather when a boy."

"Where, where?" the blind man asked, and all over his wrinkled face shone the intense longing he felt to hold once more within his hand the fair blossoms so interwoven with memories of his boyhood.

"They are here on the river," ALICE replied, "and I can get them, too, by going out upon that tree which has partly fallen into the stream."

"Don't, ALICE, don't, there may be danger," Mr. WARREN said, shuddering even while he spoke with an undefinable fear.

But ALICE was not afraid, and springing lightly upon the trunk of the tree she ventured out,—further, and further still until the lilies were just within her reach, when, alas, the branch against which she leaned was broken, and to the ear of the blind man sitting on the grass there came the startling cry of "*father*," while a heavy splash in the deep, dark water told that ALICE was gone! [To be continued in our next.]

Wit and Humor.

A good story is told of a fellow in Ohio driving a crazy one horse wagon over a railroad track. He was run into by the locomotive, his vehicle demolished, and himself landed, unhurt, about two rods from the scene of the disaster. The engineer stopped the train to see if any one was killed. "Well, friend," said he to the fellow, "are you badly hurt?" The reply, Yankee like, was by another question, long drawn out. "Will—you—s-e-t-t-l-e now, or—wait till—till morning?"

Mr. SNUS perceived that the milk that he was pouring into his coffee-cup was none of the richest. On this he said to his hostess—"Haven't you any milk that is more *cheerful* than this?" "What do you mean by that?" "Why, this milk seems overpowered by the *blue*."

"MANY a young lady who objects to being kissed under the mistletoe, has no objection to being kissed under the rose." A stupid compositor once made an error in the above, rendering it so as to say, "has no objection to being kissed under the *rose*."

WHAT is the difference between attempted homicide and a *big* butchery? One is an assault with intent to kill, and the other is a kill with intent to salt.

ALTHOUGH one swallow will not make a summer, still a pin, maliciously inverted in a chair, will make one spring.

YOUTH'S CORNER.

For Moore's Rural New-Yorker.

MISCELLANEOUS ENIGMA.

I AM composed of 22 letters.
My 1, 3, 18 is an adverb.
My 2, 4, 16 is a fruit of many varieties.
My 8, 2, 16, 5 is a kind of meat.
My 21, 4, 10 is a verb.
My 7, 9, 18, 22, 16 is a lady's name.
My 17, 2, 4 is a part of the foot.
My 11, 20, 9, 17 is one who entertains a stranger.
My 19, 2 is a call to excite attention.
My 14, 15, 17 is to devour.
My 10, 12, 15, 16 is to pull in pieces.
My whole is a maxim.
Pittney, Steu. Co., N. Y., 1889.
Answer in two weeks.

MECHANICAL PROBLEM.

For Moore's Rural New-Yorker.

MECHANICAL PROBLEM.

With what velocity must a cannon ball be projected from the summit of a mountain five miles high, that it may pass around the earth in a circular orbit, the resistance of the air not being taken into account?
Madison University, N. Y., 1889. A. B. EVANS.
Answer in two weeks.

RIDDLE.

Selected for Moore's Rural New-Yorker.

RIDDLE.

BENEATH the Heavens a certain one did dwell,
As sacred writers uncontested tell,
Within this world his vital breath he drew,
Yet never sinned nor moral evil knew.
He never shall be raised from the dead,
Nor at the day of Judgment raise his head.
He never shall be doomed to suffer pains of hell,
Nor yet in Heaven's Kingdom dwell;
Yet in him there was a soul that must
Suffer in hell, or reign among the just.
Maple Grove, N. Y., 1889. D. T.
Answer in two weeks.

CHARADE.

For Moore's Rural New-Yorker.

CHARADE.

My first is a dweller on the seas,
With flag unfurled to catch the breeze;
My second was with Noah in the Ark,
But may be found in market or in pork;
My third is a youthful leader and chief,
Who in many hearts has caused lasting grief;
My whole is of man and woman the basest deceiver,
Although in religion a pretended believer.
Wauwatosa, Wis., 1889. A. B.
Answer in two weeks.

PUZZLE.

For Moore's Rural New-Yorker.

PUZZLE.

FIND four legal American coins which, when added up shall amount to fifty-one cents.
Monroe Co., N. Y., 1888. JULIAN.
Answer in two weeks.

ANSWERS TO ENIGMAS, &c., IN No. 469.

Answer to Scriptural Enigma:—God with us.—Taken from earth—God is my Judge.—That which oppresses—Hidden—Joyful—Exulted—Given—A worker—Filled—Asked of God—Peaceful—Strength; all combining the following portion of the 119th Psalm:—"Thy word is a lamp unto my feet, and a light unto my path."

Answer to Mathematical Problem:—Length of ladder, 180.498254 feet; distance of foot from highest tower, 170.22518 feet; from second tower, 178.429567 feet; from lowest tower, 176.005155 feet.

Answer to Geographical Anagram:—The city is in China; its name, Teeshoo-Loomboos.

Moore's Rural New-Yorker,

THE LARGEST CIRCULATED

Agricultural, Literary and Family Weekly,

IS PUBLISHED EVERY SATURDAY BY

D. D. T. MOORE, ROCHESTER, N. Y.

Office, Union Buildings, Opposite the Court House, Buffalo, N. Y.

Agents in New York and Boston.

SUBSCRIPTION.—C. M. SAXTON, Agricultural Book Publisher, 25 Park Row, (opposite Astor House), New York. WHOLESALE, (to supply Periodical Dealers, &c.)—DEXTER & BRO., 14 Ann St.—ROSS & TOLSEY, 103 Nassau St.

ADVERTISING.—S. M. PETTENGILL & CO., No. 119 Nassau St., New York, and No. 10 State St., Boston.

TERMS, IN ADVANCE:
Two DOLLARS A YEAR—\$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for \$5; Six, and one free to club agent, for \$10; Ten, and one free, for \$15; Sixteen, and one free, for \$22; Twenty, and one free, for \$26; Thirty-two, and two free, for \$40, (or Thirty for \$37.50); and any greater number at same rate—only \$1.25 per copy—with an extra copy for every Ten Subscribers over Thirty.

Club papers sent to different Post-offices, if desired. As we pre-pay American postage on papers sent to the British Provinces, our Canadian agents and friends must add 12½ cents per copy to the club rates of the RURAL. The lowest price of copies sent to Europe, &c., is \$2.50—including postage.

THE POSTAGE ON THE RURAL is only 3½ cents per quarter to any part of this State, and 6½, to any other State, if paid quarterly in advance at the post-office where received.

ADVERTISEMENTS.—Twenty-Five Cents a Line, each insertion, payable in advance. Our rule is to give no advertisement, unless very brief, more than six to eight consecutive insertions. Patent Medicines, &c., are not advertised in the RURAL on any condition.

PUBLISHER'S SPECIAL NOTICES.

THE MONEY WE RECEIVE.—Bills on all solvent Banks in the U. S. and Canada taken at par on subscriptions to the RURAL, but our agents and other friends will please remit New York, New England or Canada money when convenient. For all amounts over \$15 we prefer Drafts on either New York, Philadelphia, Boston, Albany, Rochester or Buffalo (see exchange) payable to our order—and all such drafts may be mailed at our risk.

THOSE who are forming large clubs, can forward the names and money for a part, and complete the lists afterwards—receiving the same gratitudes when completed, as if all were remitted at once.

ANY person so disposed can act as local agent for the RURAL, and each and all who form clubs, will not only receive extra copies, but their aid will be appreciated. We have no traveling agents, nor do we give certificates.

IN ordering the RURAL please send us the best money conveniently obtainable, and do not forget to give your full address—the name of Post-Office, and also State, &c.

Non-Subscribers who receive this number of the RURAL New-Yorker, are invited to give it a careful examination, and, if approved, lend their kind offices to introduce the paper to notice and support in their respective localities.

MOORE'S RURAL NEW-YORKER,
AN ORIGINAL WEEKLY
RURAL, LITERARY AND FAMILY NEWSPAPER.
CONDUCTED BY D. D. T. MOORE.
With an Able Corps of Assistants and Contributors.

The Rural New-Yorker is designed to be unsurpassed in Value, Purity, Usefulness and Variety of Contents, and unique and beautiful in Appearance. Its Conductor devotes his personal attention to the supervision of its various departments, and earnestly labors to render the Rural an eminently Reliable Guide on all the important Practical, Scientific and other Subjects intimately connected with the business of those who are interested in its contents. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate and beautiful Engravings, than any other Journal, rendering it the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.
For Terms and other particulars, see last page.

PROGRESS OF AGRICULTURE.

The past history of Agriculture is at once curious and instructive—sometimes making a little progress—sometimes remaining stationary, and at others evidently declining. For many centuries, all through what has been not unfitly termed the "dark ages," we note but little advancement. When, however, knowledge began to increase, and men learned more of Nature—more of the earth on which we live, and the laws by which it is governed, then the attention of the wise was directed to Agriculture, and knowledge was diffused among the people. Still the progress of Agriculture was slow, much more so than other departments of the arts and sciences, and other human pursuits of far less importance to the world. Why this should be the case with a pursuit as natural and attractive to the human mind as it is essential to our existence, is a question perhaps not easily and satisfactorily answered. Still, something like an answer may be found in the importance of the subject. All nature seems to testify to the slow comparative growth of whatever is most truly and permanently valuable. Trees producing timber comparatively short-lived and worthless mature in a few years, while the time-defying oak requires ages for its perfection. The earth, too, without particular care or skill on the part of cultivators had furnished food and clothing for man from the first morn of Creation, and the necessity for study and improvement in this direction was not feelingly apparent. At the early dawn of light, men, and particularly those who had made such discoveries as to place them on the pinnacle of fame, were apt to neglect the plain and practical in the investigation of the theoretical and sublime. The cultivation of the earth and the study of vegetable growth was not a promising field for gathering a crop of immortal honors.

Variety of Climate, which has been the promoter and in fact the basis of commerce, has operated against the accumulation of Agricultural knowledge. The fact that oranges and figs, olives and other fruits, and the fragrant spices of a warm climate, would not grow in a more northern latitude, created a necessity for commerce, and made its pursuit profitable. But this diversity of climate made the Agricultural knowledge gained in one country of little use to others. The experience of the Egyptian, where lands were enriched and almost cultivated by the annual overflowing of the Nile, afforded little practical knowledge to the farmers of other lands.

Difference in Soil, too, has done much to retard the rapid advancement of Agricultural knowledge. Each province or district has had to experiment for itself and learn what course was best adapted to its own soil, so that little could be gained from a knowledge of the practice in other localities. Of course some general principles are applicable to all. Imitation of others, differently situated, has led to confusion, and often to improper practices, and those who pursue a course which experience has taught is best adapted to their situation, are sometimes unjustly condemned. Those who read in our journal the report of the discussion on Corn Growing, held during the State Fair, at Syracuse, last summer, had an illustration of this fact. One gentleman living on the hills of Enfield, in Tompkins county, in opposition to the experience of almost every other person, and in face of the ridicule of many, insisted that he could grow the best crops of corn by plowing as shallow as possible—only about two inches deep. He had experimented on this

point for fourteen years, and insisted that he was right. It was a case of the fact that we are endeavoring to set forth, the different culture required by different soils, that caused us to write, in reporting this discussion—"a good many excellent farmers thought the speaker had pursued and was recommending an improper system, but he had a bright eye, and we have no doubt had learned in fourteen years' experience what course of plowing was best adapted to his mountain home." This important point is often forgotten in reports of experiments, premium crops, &c. On the other hand we are well aware that peculiarities of the soil cultivated is an argument often resorted to as a defence for the very worst practices, when every other argument has failed.

Another impediment in the way of the rapid accumulation of Agricultural knowledge is the condition which the pursuit of Agriculture renders necessary. The farmer is, by the very nature of his pursuit, more or less isolated. The influence of that mental attrition—the combat between mind and mind—consequent upon congregation in towns, is denied him. The advancement of art is mainly promoted by emulation, but emulation and comparison are almost out of the question in a sparsely settled country. To overcome this obstacle in the way of progress, Farmers' Clubs were established, for discussion, for pitting mind against mind, and fact against fact; and Fairs, for the comparison of stock, produce, &c., and they are well calculated to accomplish the object, and have been eminently successful.

Growing out of the extreme sparseness of population peculiar to a new country, are other facts which have produced their influence on agricultural progress—ages ago in Europe, but quite recently in our own country. Under such circumstances, from the abundance and cheapness of land, only the very best, requiring the least skill and care, is cultivated; produce is cheap and labor generally scarce and dear, and the wits of the farmer are directed to getting along with the least possible outlay of labor. On the first settlement of a country, too, the farmers are poor. Every dollar that can be scratched out of the earth is needed to pay taxes and make payments for land as fast as they come due. Nothing can be spared for improvements, at least only those that are absolutely necessary. It is only when an increased population and the consequent scarcity of the most fertile land, and the higher rates of produce induces the farmer to apply his skill to the cultivation of less fertile soils, and the improvement of those which, from bad management, are becoming exhausted, that the profession of farming assumes the true features of an art, eager to receive aid both from science and experience.

A fact to which we have before alluded, must also be taken into account. Agricultural knowledge can have no mushroom growth. Experiments, to be reliable, and to establish principles, must be conducted with the greatest care and patience, and even then should be oft-repeated. Conclusions arrived at hastily are worse than useless. Nature gives but one lesson yearly; hence progress is slow. The doggedness with which many adhere to old customs retards the onward march of improvement. Some strictly regard the latter part of the old maxim, and "hold fast that which is good," or which they believe to be good, but forget the first and equally important part, to "try all things." It is for this reason that we so often see farmers continue in about the same course for years, with very little improvement, while many a mechanic or professional man who engages in farming in middle life, with no knowledge of the details of the business, make up in zeal, study and observation what they lack in practical knowledge, and in a few years outstrip the man who has been a farmer all his days. Of this we have many examples around us. This fact was observed by an old author who said such persons "often form the most intelligent and accurate of husbandmen. Like converts in religion, they have more zeal and fewer prejudices to surmount, than those who have been brought up in it from their infancy; their indefatigable attention makes more than amends for their ignorance of minutiae; and having been at the pains to acquire a knowledge of the theory of their new pursuit, they establish their ideas on rational principles."

Some of the thoughts we give are from an Essay on Agriculture, by C. WREN HASKINS, in which is noted laws, &c., particularly affecting English Agriculture, such as war; and the excessive passion for sports of the field, which caused the formation of laws protecting animals and birds, which preyed upon the products of the farmer's industry. The feudal system, too, which made the agricultural worker an appendage to, rather than an improver of the soil, produced its full crop of evil. As we designed, however, to only furnish our readers a few subjects for profitable thought, we leave it for the present.

ABOUT INDIAN CORN.

The corn crop has always been an important one to the people of this country. It was so long before its discovery by the white man. It was almost the only crop cultivated by the natives, and the only one they valued. As it was then, so it is now, the staple grain crop of the Continent, nor is there any other plant cultivated by the farmer that can compare with it in value. Its cultivation should be encouraged and extended, for in it we have the elements of wealth. In corn we have beef, and pork, and mutton—we have milk, and butter—a healthy food for man as well as for beast. Unlike the other grains the annual production of corn has been steadily increasing for the last twenty years in the older States, and since 1840 the increase has been very marked and permanent. The United States Census of 1840 shows that for the year 1839 there was grown in the New England States, 6,992,909 bushels. New York, New Jersey and Penn., 29,374,258

Total, 86,567,192

By the Census of 1850 we find that the increase had been large, for by that it appears that for the year 1849 there was grown in the New England States, 10,175,855 bushels. New York, New Jersey and Penn., 45,468,818

Total, 55,629,174

Being a gain of 19,061,982 bushels in ten years.—The largest gain was in our own State, being a trifle over 7,000,000 bushels.

The next Census, should this year be as good a corn year as the past, will show more bushels raised in this State than the aggregate of all the States mentioned in 1849.

In England the increased cultivation of roots marks an increase in the animal production of the farm. So in this country, whenever there is an increase in the cultivation of corn we may look for an increase in animal productions, for it is only through that means, the corn can be profitably carried to market. We may safely conclude then, that so far as our own State is concerned, there is progress in the right direction. The object of the present article is not so much to go into the detail of cultivation, as to call the attention of farmers to the great importance of the crop.—P.

SAINFON AS A FORAGE PLANT.

Among the many herbs grown in Europe for fodder is Sainfoin, of the order Leguminosae, with showy red flowers and spreading stems. Its cultivation was introduced into England from France in 1651, and it was then called French finger-grass. Its present appellation is Gallic, and doubtless refers to the color of its blossoms. In a wild state it was almost altogether confined to the dry chalky soils of England. One of the peculiarities of its culture, says the *Cyclopaedia of Agriculture*, is the fact of its growth being confined to districts. In one district (on chalk) a greater breadth of it will be seen growing than any other herbage plant, while in another, probably only a few miles distant, (on clay) it will be as unknown as though it were a fresh importation from America or Australia.

When the system of turnip farming was inaugurated upon the limestone hills of Cotswold, and upon the sheep farms of the chalk formations of Berkshire, Wiltshire, and Hampshire, the prestige which Sainfoin had previously held began to fade, for, until that period, it was considered the mainstay of the stock-breeder. Nor has its fame become totally extinct as yet,—the authority before referred to, states "even now it is acknowledged to be of so much importance that a clause in many of the leases compels the tenant to leave a certain quantity of land in sainfoin at the expiration of his lease." The usual custom upon the Cotswold hills, and the southern counties of England, was to allow the land to remain in this crop for a term of years, varying from four to seven. The growth of the first year was inferior, the second and third good, and then the natural grasses, and the growth of seeds dropped by sheep fed upon hay, begin to drive it out, and in a short period quite smother it. This result is attributed to carelessness and want of cleanliness in culture, as a farmer in the eastern counties writes "to insure a fine crop, and one that will continue for a term of years, it is necessary that the land should be clean and in good condition, for to the neglect of these principles of good husbandry may be attributed the failure of the crop after a few seasons, and also the very generally received opinion of the southern farmers, that the first year's crop is inferior to the two or three succeeding ones; while upon highly cultivated soils the first year's crop is found to be the heaviest." In these latter counties, on the light sands and sandy loams, with calcareous subsoils or admixtures, sainfoin takes the place of clover in the rotation, and lies sometimes only one, and seldom more than two years, except on the very lightest and poorest lands.

The system of culture under the so-called "eastern or alternate method" is thus described: "Sainfoin takes the place of clover, and its gradually increasing cultivation may be attributed both to its being highly esteemed as food for sheep and other stock, and to its proving an excellent preparation for wheat. On the better class of soils it is not uncommon to permit it to lie four years. About four bushels of seed are sown to the acre, and the land is generally seeded with barley after turnips. Drillings very highly esteemed, and the mode practiced with the most success, is to drill upon young wheat with the land in good condition and thoroughly clean. Upon land moderately firm, with a finely pulverized surface, the seed vegetates with the greatest certainty."

The manner of making into hay is not very different from the process employed with clover—care needs to be exercised and the swathes moved as little as possible while the sun is shining with full power, or the virtues of the hay—the best part—will be sadly injured. For silage sainfoin is perfectly adapted—it may be cut green and fed—and where the requisites of the crop are met—cleanliness and good condition of the soil—two cuttings may be taken in the season.

In a fresh state, sainfoin, when in flower, contains from 76 to 78 per cent. of water. Dr. Vossler made a practical analysis with the following results:

	In natural state.	In a dried state.
Water	77.22	
Sugar, gum, albumen, and other organic substances, soluble in water	8.00	35.29
Inorganic soluble salts	1.29	5.29
Impure vegetable fibre	12.95	57.09
Insoluble inorganic salts	.53	2.34
	100.00	100.00

The fresh plant contained 562 per cent. of nitrogen—dried, 2.48 per cent. According to this, the general composition may be represented as follows:

	In natural state.	Dried at 212 deg. Fah.
Nitrogenized organic matters, capable of forming flesh	8.518	15.50
Substances (not containing nitrogen) fitted to support respiration, and to lay on fat	17.488	76.87
Inorganic salts	1.780	7.63
Water	77.820	
	100.000	100.00

COMMON SAINFOIN—(Onobrychia sativa)

The common sainfoin, (*Onobrychia sativa*), of which we give an engraving above, is the variety most prized in England and is thus described:—Woody perennial roots, many straggling stems two or three feet long, taper, smooth, and not much branched. The leaves consist of many pairs of

oblong pointed leaflets, which are sometimes a little hairy on the under side. The flower-stalks stand higher than the leaves, and terminate in a close tapering spike of variegated crimson papilionaceous flowers, which are succeeded by roundish, flat, hard pods, strongly toothed at the edge, and netted and prickly at the sides.

A second variety is what the French call *sainfoin a deux coupes*, and which is very generally cultivated in the central provinces of France. Its peculiarities are a rapid growth, by which the farmer is enabled to take off two crops of hay, or one of hay and one of seed in a single season. This variety, however, does not meet with much favor from the English farmer, for while the common is hardier and improves in its growth with age, this deteriorates after the first year.

SAINFON—(*Onobrychia sativa*)

The above engraving is taken from *Grasses and Forage Plants*, of CHARLES L. FLINT, Sec'y Massachusetts Ag. Society. The fruit is shown by figure 1 and the flower by figure 2. Mr. FLINT says that experiments have been made to introduce it into Massachusetts without success. It has been found not of sufficient hardiness to successfully withstand the effects of a severe winter when young, but after the second or third year it will bear up under a considerable degree of cold. There has not been such a multiplicity of experiments, however, as will warrant us in saying that sainfoin is of no use to the American farmer. The facts we have already given, in relation to the comparative failure of one body of English farmers, and the entire success of another class, especially when we consider how much our system is behind that of the Mother Country in its cleanliness, will go far in removing any belief as to the constitutional weakness of the plant. With like care and experience it might prove valuable, if for no other purpose, at least for silage. For this latter use it is a favorite in France—in fact, is considered indispensable as feed for milch cows, increasing the flow of milk and materially improving its quality.

WHO INVENTED THE MOWING MACHINE?

Eds. Rural:—Amid the number of names that now exist as applied to Mowing Machines, the question very naturally arises—Who is the Original Inventor? The world is indebted to some one as the original discoverer of the fundamental or main principles that attach to all the machines now made, no matter whose name they bear. The rights secured to individuals at the present time appear to have their origin or basis in some particular improvement, which has been secured to the inventor as indemnity for his discovery, but not as an inventor of the original machine itself. All the machines now in use embrace, in the main, one and the same feature, or principle; and this principle is covered by a Patent granted to Enoch A. LAMSON, of Root, Montgomery Co., N. Y., dated December 23d, 1854, securing to him the sole right of an invention or machine for "cutting hay and grain." On examining the specifications accompanying the Patent, the guards protecting the scythe, the driving wheel, crank motion, &c., are in full similitude with the machines now in use, though the scythe has been materially improved by substituting the form of saw tooth, for straight blade, while some other minor improvements have been added, thus bringing the machine into a higher state of perfection. The authors of these improvements, stand only as secondary to the original inventor, Mr. A. LAMSON, whose discovery embraces all of the important first principles of this machine, and to whom the world should award the honor or credit

CRAWFORD Co. (Pa.) AG. SOCIETY.—The Annual Meeting of this Society was held at Conneautville on the 3d inst. Officers elected:—President JESSE SMITH; *Vice-Presidents*—C. B. POWELL, Freedom Ld., J. Dayton Sigler; *Treasurers*—A. J. Mason; *Cor. Secretary*—J. W. Patton; *Treasurer*—Wm. Power; *Executive Committee*—A. Foster, Conneautville; W. D. Beatty, Vernon; Calvin Gates, Beaver; J. C. Thayer, Pine; Aug. Gilman Stanley.

HORTICULTURAL

THE PEACH CROP DESTROYED.

We regret to have to announce the fact that the peach buds around Rochester are destroyed, as are the hopes of the lovers of this delicious fruit. Monday, the 10th inst., was the coldest day of the present winter, the thermometer marking from 6° to 8° below zero in the city, and in the country around, we believe about 10° below. This was immediately followed by warm weather which continued through the week. This degree of cold did not cause alarm among the extensive peach growers of this neighborhood, as during the winter of 1856-7 the thermometer marked as low as 15° below zero, without doing the least injury to the blossom buds of the peach, and the crop of 1857 was abundant. Some of the more curious or timid, however, were led to examine their trees, and to their dismay found that every fruit bud that had been exposed was dead. We have reports from all directions, and the statement is the same—all gone! We have examined hundreds of buds brought in from the orchards around, without finding one sound. The following note is a sample of half-a-dozen now before us:

Messrs. Root.—The Peaches, I presume, are killed in Western New York. I have examined 150 Peach trees in my yard, and all of the blossom buds are killed beyond hope of recovery, which fact shows that ten degrees below zero, of frost, will kill the blossom buds on the peach tree, under certain conditions, in which the sap vessels may be in.—H. N. LANGWORTHY, Greece, (5 miles from Rochester City), N. Y., Jan. 17, 1858.

The winter, with the exception of the day mentioned, and the one previous, on which the "cold snap" commenced, has been extremely mild. The buds had become swollen, and in this condition were easily injured. We hope to hear better reports from other parts of the country, but fear that peaches next season will be a luxury beyond the reach of most of us.

PEAR CULTURE.

In the *Horticulturalist* of December last, is a lengthy article from Mr. E. Norton, of Farmington, Conn., against the Culture of Dwarf Pears, and the action of the American Pomological Society on that subject, in which the Editor joins to give the article his decided approval. Permit me to call attention to some of the fallacies and inconsistencies therein contained, and show them mainly from their own statements.

Mr. Norton says, "Seven years ago I planted four hundred dwarf trees on well prepared ground, holes dug 2½ feet deep by 8 or 4 wide and filled with a carefully prepared compost, having all the ingredients prescribed by the experts." (I wonder what those ingredients are, and what the cost of such a compost.) He says the ground was well cultivated with various crops "till lately," trimmed, scraped and washed yearly, &c., and at the end of one year about 100 were dead; and that about 50 died the second year; and they have gone off at about that rate ever since; that he re-planted 100 and that about 100 remain, some of which are going to die soon.

He names five or six gentlemen at Albany whom he says mostly think unfavorably of them, "though one of them, a skillful florist, now thinks well of them if planted deeply." And another picked from a single tree, 5 or 6 years old, about 200 pears, which he sold at from 25 to 50 cents each.

In Springfield, Mass., he says some think well of them and some otherwise, though he names some gentlemen there who grow fine fruits and generally take premiums at the Fairs, for their pears grown on dwarfs, &c. He also refers to the fine display of pears at the State Fair, at Hartford, Conn., as evidence of their successful culture on pear stocks, without attempting to show that any of those fine specimens were grown on standard trees.

He tells us "it is evident that the pear on quince grows finely at Rochester, Boston, and perhaps all along our whole seaboard where the air is tempered by water, &c., and that in all the places referred to in his article the standard pear does well; and like all other trees will produce fruit according to the treatment it receives; but like the apple, will grow and do something even in the hands of unskillful and careless cultivators."

And lastly, that five years ago he visited the grounds of THOMAS RIVERS, of Sawbridgeworth, England, and saw his trees, and that "very few of them were what we would call thrifty trees, and most of them looked badly, and he should like to hear from them now." Let us examine this matter, and from the statements of Mr. Norton himself, and with a few words from Mr. Rivers, from whose trees he desires to hear now, see what are the real facts and fair conclusions.

The same Mr. Norton, in the *Country Gentleman* of March 1st, 15th, and 22d, 1855, in an article giving his experience and conclusions, states—"Firstly, my trees were poor and feeble, I trusted to a nurseryman to select them whom I did not know and who did not know me, and he sent trees from which the best had been culled, and slipped in many that could not have been sold alone," and goes on at considerable length to show how a nurseryman may have such a lot of "maimed, halt and blind" trees on hand. In the next place he says, "I was told I did not plant deep enough, but with my second lot this was not a fault. My trees were moved from a deep, black loam to a lighter soil, and thus many that were not vigorous fell away after a time. For the death of some I could assign no other reason than that they would die; this kind of experience, however, is not confined to dwarf pear trees; it will be observed that most of these conclusions pointed at RIVERS, and not at nature, as at fault in my misfortune."

Now let us hear what Mr. Rivers, to whose trees Mr. N. refers, and from whom he expresses a wish to hear now, will say on this subject. In the June

No. of the *Horticulturalist*, 1853, in reference to the discussion going on in this country, on this subject, he says:—"How strange it is that bad cultivators place the blame on the stock and not on their own mismanagement. I have now had more than 20 years experience in the cultivation of pears on quince, and am more than ever convinced that their culture, as garden trees, is the most agreeable and profitable of all fruit culture. Due regard should be paid, however, to the sorts selected; for to a certainty there are some kinds, that, even in the most favorable soils, will not do well. If I were a young man I should desire no better speculation than forming a large pear tree garden on quince stocks, in your country, (U. S.) to grow the finer kinds of pears for market; but it must be understood it should be strictly a pear garden, not grow orchard, or a field full of rude weeds, &c., and then adds, "No act of my pomological career has given me more pleasure or profit than the planting out of 2,000 dwarf trees, as a pear garden." I ask, does this not sound like hearing from Mr. RIVERS' trees now; and whether his twenty years experience does not enable him to judge wisely of the value of pear trees, as well as of "bad cultivators?"

Mr. Norton, in his article of 1855, states that he has about twenty sorts, while in the article of Mr. Rivers, above referred to, he names only six which he would cultivate for greatest profit, and in planting his two thousand trees, he planted but one sort; and it is doubtless true that experience is teaching, or should teach all growers of fruit, that a select and very brief list of varieties of any kind of fruit will be very much more profitable than one more extended.

Now, I think any sensible man who knows enough of trees to be capable of caring well for one pear tree, will conclude first, that Mr. Norton's trees, which he says were poor and feeble, and from which the good ones had been sold, were worthless, or nearly so. Second, that he had no knowledge of soils best adapted to such culture, (and very few persons at that time had,) and therefore may have had mostly unsuitable sorts; that he did not know how they should be planted, and there is no evidence that he ever pruned them properly; and yet there are one hundred and twenty, still holding on to find relief in better culture, or an early death.

He mentions one single dwarf tree, five or six years old, which produced about 200 pears in a single season, which were sold for from 25 to 50 cents each. Only think of it!—who ever heard of such a product from any other than a dwarf pear tree? This is almost equal to golden eggs—say 100 pears at 25 cents, and 100 at 50 cents, being an average of 37½ cents, or \$75 for the crop of a single tree, 5 or 6 years old, and this too at Albany, where he says they do so poorly.

I had felt quite well satisfied with selling over \$400 worth of pears from less than one-third of an acre within seven years of planting, and selling pears at 15 cents each, by the barrel, but this statement of Mr. Norton places me quite in the background, and my only remedy is to try and do better next time.

He admits that the quince stock secures in some varieties an improved quality of fruit, and I might ask, and perhaps wait long for an answer:—What variety that grows well on the quince does not give on that stock an improved quality of fruit?

In connection with the article of Mr. Norton the Editor inquires, Why do choice pears bring such prices if they are easily grown on the quince? while he at the same time claims that as standards they do well, beyond question.

Now if it be true that standards do as well as they would have the people understand, let me ask them why it is that good pears bring such prices, while standard pears have been grown as long as apples, and succeeded so well?—they, without the aid of dwarfs, ought to have brought the price down, if their reasoning be correct. The question why such fruits are not cheaper, has been answered conclusively in all our agricultural papers the past season; and at this time I do not believe there is an average of one pear tree, five years old, to five square miles of our territory throughout the United States; and it is a notorious fact, that a careful estimate has indicated, that less than one-tenth of all the fruit trees planted out, are ever cared for so as to bring them into a productive state within a reasonable time. The truth is, that choice fruits, or choice productions of whatever kind, are more and more appreciated, and always will command a price above a common or inferior article; and the careless, heedless cultivator ought never to hope for success in any department; and any man who will not give his fruit trees, whether dwarf or standard, pear, apple or peach, as good culture as a good farmer gives his corn or potatoes, had better make his calculation early to save any expenditure for the purchase of trees, and allow those who will give them such culture to supply our already extensive but rapidly expanding markets with choice fruits, which will doubtless always be sought after at remunerating and probably advancing prices, even though their production shall be increased a thousand fold. The careful, intelligent and persevering cultivator will reap a reward of luxury and profit, scarcely equaled in any other department of agricultural industry.

T. G. YEOMANS.

Waltham, Wayne Co., N. Y., 1859.

MASSACHUSETTS HORTICULTURAL SOCIETY.—The Annual Meeting of this Society was held on Saturday the 1st inst. The retiring President, JOSIAH STICKNEY, Esq., on vacating the chair, addressed the Society in reference to its condition, reviewing its operations for the past year, and congratulating the members on its general prosperity. He introduced his successor, JOSEPH BAXTER, Esq., alluding in appropriate terms to that gentleman's long labors in the cause of horticulture, both as a cultivator and author. On taking the Chair, President BAXTER made an able address, comprising many practical suggestions, especially in reference to the culture of the grape and the pear. The report of the Finance Committee showed that the receipts for the year 1858 amounted to \$11,541.14—being a sum in excess of all expenditures, and leaving \$107.10 cash in the treasury. The Society has over \$40,000 in property.

FRUIT GROWERS' SOCIETY OF WESTERN NEW YORK

(Continued from last week.)

We continue the report of the last number. S. R. AINSWORTH, in his method of picking, saving a large amount of *Isabella* Grapes.

In this condition buyers will pay 20 cents per pound, according to quality. They may be packed in pasteboard boxes, 8 cents each, and holding about 6 pounds. A layer of cotton batting at the bottom, and so full that when the cover is put on, it will be tight. Occasionally we had a winter that killed the fruit buds, so to make sure of a crop it was well to lay the vines down. Never knew the buds killed on a vine that was laid on the ground, even if it had no covering other than a board to keep it down. The *Isabella* grape makes an excellent wine. Put half a pound of sugar in a gallon of juice. Had been offered \$4 per gallon for it. It takes 10 bushels of grapes to make a barrel of wine. A bushel of grapes weighs about 40 pounds. Used no water. To make good wine the grapes should be well ripened.

L. B. LANGWORTHY had always been of the opinion that the *Isabella* grape would not make wine—thought the *Clinton* came nearest to a wine grape, but none of our native grapes possessed sufficient saccharine matter to make a good wine, nor did they yield tartaric acid, like the wine grapes of Europe. The cream of tartar of commerce is procured from the vine stalks. Our grapes yield a malic acid, the acid we have in cider. Tomato, parsnips, &c., makes a pleasant cordial, called wine, but it bears no comparison to the wines of Europe. Mr. B. thought by selecting good, sound, ripe apples we could make as good a wine from them as from our grapes. We can't make a raisin from our grapes, nor can we make wine. A gentleman who makes the best native wine he had ever tasted from *Clinton* grapes, states that he had found tartaric acid on his wine casks or bottles this season.

Dr. H. H. FARLEY had raised his finest grapes on a clay soil. His opinions in regard to the best soil for a grape had undergone some change. The *Diana* was as early, or perhaps a little earlier, than the *Isabella*, and of the most excellent quality. It certainly is as hardy as the *Isabella*—perhaps not as showy a grape to sell, but far better; ripening about the same time—cannot say that it is much earlier; but had rather eat a *Diana* half-ripe than the best ripened *Isabella* he ever saw. A valuable grape. The *Concord* ripens early, two weeks earlier than the *Isabella*, and almost as good. Had five acres in *Isabella*, planted four years since. Sold from these 18,000 pounds the past year, and the price averaged 13 cents a pound, giving over \$2,000 for the crop. Trained on wire trellis, 10 feet each way thought the best distance, and 7 feet high. Packed in the manner described by Mr. AINSWORTH. Pruned by the renewal system, in November, and never lay the vine down.

Mr. AINSWORTH remarked that Dr. MINER, a neighbor of his, and a large cultivator of grapes, was full in the faith of *Diana* being one of the best grapes we have, both for quality and fruitfulness. Wherever the *Isabella* will not ripen, *Concord* is valuable.

Mr. H. N. LANGWORTHY never pruned at any other time than in the spring—February or March. Once tried pruning in April—old vines, and the branches died profusely. That season had one of the best crops, of the largest sized grapes, well ripened.

Dr. DOOLITTLE, of Ontario, witnessed the results of grape growing. Had seen profuse bleeding caused by excessive trimming of old and neglected grape vines, but never saw any ill results from it. Such vines after pruning usually produce early and fine crops. Perhaps it can be accounted for on the principle of letting out the bad blood, sometimes recommended for the human race.

MANURING NEWLY PLANTED TREES.

Is the Application of Manure or Compost necessary at the time of planting, and if so, what kind?

H. E. HOOKER applied the manure to the surface of the ground, and the rain will dissolve and carry it to the roots, in the most suitable form for their nourishment.

L. B. LANGWORTHY said fresh barn-yard manure to roots of trees is always fatal. Well rotted chip manure, muck, or a very rotten barn-yard manure is good, particularly on a heavy soil, and may safely be applied, and no danger if a little does come in contact with the roots.

H. E. HOOKER. Carbonaceous manures tend to late maturity of both tree and fruit. Horse manure well fermented, but not washed, is first rate to produce early fruitfulness. Will hasten the early maturity of the fruit, and produce fine specimens. Mucky, loose soils, are not good soils for fruit trees, and do not raise the best fruit,—which argues against the use of muck as a manure for fruit.

W. B. SMITH thought it very unsafe to recommend manuring the soil when transplanting trees. The best way for the cultivator to do is to rely upon thorough pulverization of the soil beforehand, and good cultivation of the trees afterward, using the manure only as a mulching. Mulch for a pretty good sized circle around the tree; but don't let the manure touch the bark.

E. BOARDMAN once put upon a piece of land a heavy coat of manure, which he plowed under, and then set out the trees and three-fourths of them died. For the setting out of an orchard would recommend the same preparation of the land as for a crop of wheat,—manure the year before, or sow a crop of clover and plow it in. Get the land in good heart and trees will do well.

Mr. BROWSON inquired if any one had used gas lime, so as to tell of its value?

W. R. CORPCK about four years ago used four loads to an acre, as a top-dressing to a meadow, and was well pleased with the result. Had used it in some other cases. Intended to top-dress an apple orchard with it.

[To prevent mistakes on this subject we will briefly remark, that gas lime when fresh is a mixture of sulphate of calcium with carbonate of lime, and a portion of caustic lime. It has been claimed that it contains ammonia, but the quantity is so small as to be of no account, and is soon dissipated on exposure to the air. The alkaline sulphurets are generally believed to be injurious to vegetation, and for this reason gas lime should not be used in a fresh state. By exposure to the air the sulphuret of calcium speedily absorbs oxygen and becomes sulphate of lime, or gypsum, in which state it may be used to advantage wherever plaster would prove valuable.]

E. MATTISON was in favor of using manure at the time of planting, but judiciously—not in contact with the roots. If holes were dug as deep as generally recommended, the trees were apt to be planted too deep, as the earth would sink, carrying the tree with it. The best way was to plow and sub-soil to an equal depth all over. Cover the roots of trees with good soil, then give a good top-dressing of manure, and bank up with earth, and the tree will suffer less in the winter than if allowed to remain in the nursery rows. In the spring, remove the banks and let the soil equal to the surrounding ground. A young tree, 1½ or 2 years old, will not be injured by a heavy coat of manure, or will never be injured by a heavy coat of manure. Shallow and frequent watering is a very unprofitable business.

W. R. CORPCK said he had experienced that trees that were planted on pieces of old mill-race, or good fibrous roots, but still growing, and the consequence was, the trees obtained sufficient nourishment, and made

H. E. HOOKER said, he did not believe in the use of old mill-race, but when a seedling had a good, long, strong root, if cut in two pieces, and one section put on the crown of another on the piece below, no one could tell the difference by the growth of the tree, or the appearance of the roots. Had tried this method, and planted them in different rows, to see if there was any advantage in either, but could discover none. Thought Mr. CORPCK had imbibed the theory, that the collar was the seat of life.

J. J. THOMAS said considerable prejudice had existed at the west against root-grafted trees, partly from misapprehension as to the practice, but more from being changing on this matter. Recent letters from the most experienced men of that section of the country had informed him of this fact, and that there was no perceptible difference.

THE PEAR ORCHARD.

T. G. YEOMANS gave his method of cultivating a dwarf pear orchard. Could give an acre of pears good culture, with one-fourth less labor than an acre in potatoes. Used a small steel tooth cultivator, and with care could work as near the trunks of the trees as necessary, without doing the trees the least injury. Had fruited over sixty varieties, and prepared the *Duchesse de Angoulême* for market, as it is more productive and profitable than any other; next to this the *Louise Bonne de Jersey*.

W. R. CORPCK said, with him the *Duchesse* was a shy bearer, and inquires of Mr. Y. as to the nature of his soil, situation, &c.

Mr. YEOMANS replied, that the *Duchesse* did not bear as early as some varieties. His soil was a good, strong loam. Dry ground is indispensable to success with the dwarf pear. His orchard was entirely exposed. Small, badly grown specimens of the *Duchesse* are worthless. Sold his best this year at \$25 per barrel, and a barrel contained only 180 specimens. Had a few standard trees of this sort, and would as soon have willows, as far as the growing of fruit was concerned. The fruit of all varieties of pears is improved by being grown on the quince, that is when they will grow on that stock.

The meeting adjourned, after resolving to hold the summer session in Rochester, at such time as the Council may designate.

DWARF PEARS.—The discussion of this question is not ended. The enemies of dwarf pears dislike to rest under the heavy weight of proof that their failures were caused by negligence or ignorance, and so they keep up a running fight. In the *Horticulturalist* for December, E. Norton, of Connecticut, endeavored to show that some half a dozen persons had failed in several places in New England, and at Albany, in this State. This is no doubt true, for some will fail at anything requiring care, or skill, or even labor. The last cord of wood we hired sawed and split, was a decided failure, as we were often reminded, when called upon to use the ax in reducing the size of the sticks. Mr. N. failed himself. If we understand the matter, he commenced pear culture some eight years ago, with very extravagant notions about making a business, and perhaps a fortune, at growing pears on a few hundred dwarf trees, and many of them varieties that would not succeed on the quince stock. Some of the trees, too, were cuttings, according to his own showing, and he knew but little about planting or caring for them. No wonder he failed. T. G. YEOMANS, who not only writes intelligently about dwarf trees, but grows them understandingly, and makes them produce pears in abundance, and dollars too, reviews the article of Mr. N. in this number of the *RURAL*. Mr. YEOMANS planted largely of the *White Doyenne*, and expected to reap a rich harvest, but the fruit cracked so badly as to be worthless. Instead of writing and scolding about it, he simply learned the lesson taught, that this variety was unsuited to his soil or climate, and grafted his trees with the *Duchesse de Angoulême*, and now is beginning to receive the reward of his good sense.

MISSOURI FRUIT GROWERS' CONVENTION.—The Fruit Growers of Missouri met in convention at St. Louis on the 5th inst. A society was organized, and the following officers elected:

President—NORMAN J. COLMAN, of St. Louis.
Vice Presidents—1st Congressional District, Dr. McPherson, of St. Louis; 2d do., Prof. J. C. Swallow; 3d do., Gen. M. Homer; 4th do., Dr. McGuire, of Platte; 5th do., Eldridge Burden, of Lafayette; 6th do., Wm. C. Price, of Greene; 7th do., John Deadrick, of Platte Rock.

Recording Secretary—F. R. Elliot, of St. Louis.
Corresponding Secretary—George Husman, of Gasconade.

Treasurer—John Garnett, of St. Louis.

A fine show of winter fruit was made, and the discussion on the growth and quality of fruit, and the soil best adapted, is represented as interesting and profitable.

HUBBARD SQUASH.—Having seen an article in the *RURAL* of January 8th, from H. N. LANGWORTHY, entitled *Sweet Potatoes vs. Hubbard Squashes*, I wish to add my testimony in favor of this excellent garden vegetable. Seeing a notice of them in the *RURAL* last spring, I sent to Marblehead, Mass., and obtained some seed. From one hill I raised nine squashes, not equaled by anything in that line that I ever saw. In fact, I think (when baked) they are nearly equal in flavor to the sweet potato, and taking into the account their qualities for late keeping, I consider them far preferable. In conclusion, I would say to the readers of the *RURAL* that I shall be happy to send, to any who may desire, seeds of this superior squash, if they will but enclose an envelope directed to themselves, and prepaid, as I wish all to test its excellence and enjoy its luxury.—J. E. NORTON, Scott, Cortland, Co., N. Y.

ILLUSTRATIONS prepared for this and the last number have been crowded out by the lengthy Fruit Report. In our next we will endeavor to make amends. Several interesting communications, one quite valuable to our Western readers, on the Culture of Apples at the West, and the varieties best adapted by their hardness to that section, are in the same condition. We like to give variety, but two or three times in a year we find it impracticable to do so.

CHICKEN PIE RUSK.

MISS P. S. Having noticed in a late No. of the *RURAL* an inquiry how to make a good chicken rusk, I send you the recipe, which we consider very good. Dress and cut up your chickens as for frying, and have your water hot, put them in and let them boil quite tender, then set away to cool.

When sufficiently cool, make a crust the same as for good short biscuit, season the chickens with plenty of butter, salt and pepper to the taste, let the pan be about half filled with the rusk, (the remainder to be thickened and served when eaten,) place in a moderate oven and bake one hour.

GOOD RUSK.—To one quart water, two or three tablespoons good yeast, sponge over night,—when light, add one cup sugar; one shortening; one dried cherries,—mix and let it stand to rise, then mould in balls the size preferred,—when light, bake in a moderate oven. A SUBSCRIBER.
Union District, Wash. Co., Mich., 1859.

BAKED BEETS.—Not long since, noticing in the *RURAL* that baked beets were highly recommended by a correspondent, I thought I would try some. The thought was no sooner conceived than I proceeded to put it into execution. Procured some medium-sized beets, and, after leaving them in a very hot oven for two hours, placed them on the table for eating. My husband took one mouthful, and then asked what it was,—told him. "Well," said he, "hadn't you better leave them in the oven a little longer?" Now, I should like to ask your correspondent if there is not some stove invented which has an oven with a separate apartment, in which to leave the beets for ten months or a year, so as to be sure and have them done?—C. GREENE, N. Y., Jan., 1859.

LOAF CAKE.—Having thoroughly tested, I can recommend the following recipe:—Six lbs of flour; 3 of sugar; 3 of butter; 3 of raisins; 3 pints milk; 3 gills of yeast; 1½ ounces of apice; 6 eggs. Roll sugar and mix with butter—add half at the time of making cake, and the remainder when it has risen, and the raisins and apices. Put it into pans, let it stand about an hour to rise, then bake. One-third of this is sufficient for three loaves.—CONDRIE, Hudson, O., 1859.

BREAD FROM GROWN WHEAT.—Having noticed in the *RURAL* for December 18th, an inquiry for the best process of making bread from the flour of grown wheat, my "better two-thirds" says send you the following:—Scald the flour before putting it to sponge; let it cool a little, and then stir in the yeast; knead the dough a little stiffer than usual. It can hardly be told from good flour.—T. D. TOOKER, Toledo, O., 1859.

CLOVE CAKE.—One and one-half cups of sugar; 1 cup of butter; 2 eggs; 1 teaspoon of saleratus dissolved in 1 teacup of milk; 1 teaspoon of cloves; 1 of cinnamon; 1 of nutmeg; flour enough to make a stiff batter. Will some of the friends of the *RURAL* be kind enough to give a recipe for making Rock Cake?—West Chester, 1859.

COOKIES.—Take one cup of butter; 2 of sugar; 1 egg; 1 tablespoonful of sour cream; 1 tablespoonful of good buttermilk; 1 teaspoonful of saleratus; 1 tablespoonful of ginger. Will some of the many contributors to this department give a good recipe for making Crullers?—A HOUSEKEEPER, Out West, 1859.

SANDWICHES FOR EVENING PARTIES.—Chop fine some cold dressed ham, say about a quarter of a pound; put it in a basin with a tablespoonful of chopped pickles, and a teaspoonful of mustard, a little pepper or Cayenne; put about six ounces of butter in a basin, and with a spoon stir quickly till it forms a kind of cream; and add the ham and seasoning, mix all well, have the sandwich bread cut in thin slices; have already cut, thinly intermixed with fat, either cold roast beef, veal, lamb, mutton, poultry, fowl, pheasant, partridge, &c., either of which lay evenly, and not too thick, on your bread; season with a little salt and pepper; cover over with another piece of bread; when your sandwich is ready, cut them in any shape you like, but rather small and tastily, and serve. You may keep them in a cold place, if not wanted, as they will keep good under cover for 12 hours.—Lady's Book.

SALVE FOR FROST BITES.—The following is the recipe for *Waller's Frost Salve*, which has been long known and valued in Germany, but the recipe for which has been kept secret till recently purchased by the government of the kingdom of Wurtemberg, and made public:—24 oz. mutton tallow, 24 oz. hog's lard, 4 oz. peroxyd of iron, (red iron rust,) 4 oz. Venice turpentine, 2 oz. oil of bergamot, 2 oz. bole arménien, rubbed to a paste with olive oil. Heat together the tallow, lard and iron rust, in an iron vessel, stirring with an iron spoon constantly till the mass assumes a perfectly black color; then add gradually the other ingredients, stirring till well mixed. It is applied upon linen, daily, and its effect upon even the most painful open frost sores is most extraordinary. In all probability, for other similar wounds it would also be an excellent application.

CURE FOR CHAPPED HANDS.—Most of our juveniles, during the winter season, are troubled with chapped hands. For the benefit of mothers who are obliged to listen to their endless complaints, we publish the following recipe for chapped hands: Take 3 drachms of gum camphor, 3 do. of white beeswax, 3 do. of spermaceti, 2 ounces of olive oil. Put them together in a cup on the stove, where they will melt slowly, and form a white ointment in a few minutes. If the hands be affected, anoint them on going to bed, and put on a pair of gloves. A day or two will suffice to heal them.

REMEMBRANCE.

I remember! I remember!
 How the waking echoes roll,
 As the scenes that once we cherished,
 Bright with joys that now have perished,
 Fill the chambers of the soul.

How the friends that time has shaded
 Mingle with our spirits again,
 As in the wide pathway straying,
 Memory's magic, round us playing,
 Brings the pleasures cherished then.

I remember well the homestead
 Where my early years grew by,
 Though its halls are now forsaken,
 Yet it still hath power to waken
 Memories that never die.

I remember—oh, how fondly!—
 One whose gentler heart with mine
 Beat in one responsive measure,
 As the scenes of joy and pleasure
 Made our youthful pathway shine.

I remember days of sadness—
 Days of sorrow's deepest shade—
 When beneath the drooping willow,
 With the cold earth for a pillow,
 Forms of love and death were laid.

Thus, remembrance, thou art ever
 Bringing joy or giving pain,
 As the heart's long buried treasures—
 All its sorrows and its pleasures—
 Gather round us oft again.

Somerset, N. Y., 1859.

W. C. W.

PLAIN TALKS TO AMERICAN WOMEN.—No. II.

BY MRS. M. P. A. CHOLET.

In the present article we purpose to refer to some of the most essential requisites for the wife and mother duties, most essential to render woman an efficient "help-meet" or "help-proper" in the family constitution.

First we shall speak of physical health. Without this, it is impossible for a woman to fill properly the peculiar sphere of her nature. And yet how few are possessed of it! But can a being infinite in love, have subjected the crowning work of his creation necessarily to a life of pain and disease? Everything created by God was created perfect; but it was subjected to the government of laws by which alone it could retain its perfection. The violation of moral law has introduced moral disease into the world, and the violation of physical law is followed by a train of physical disarrangements and diseases. If a single planet of the celestial system should move off in a tangent to its appointed orbit, who can estimate the destruction that must follow!—how complete, it would seem, must be the wreck of the universe! So, when man disobeys the laws appointed for the government of his being, destruction, disorganization as surely follows.

This disobedience has largely prevailed, and still prevails, and it is only by returning to the right path that we can hope, in this state of being, to approximate the primal perfection of humanity. We may never reach it, for our physical natures have become so thoroughly corrupted by the accumulated results of errors practiced through generations past, that it were vain to hope for complete regeneration; but we may rise so far above the present standard of health, that it may become a very pleasant thing to live, and the corporeal sufferings we must necessarily endure be very limited. Especially should woman aim to attain this elevation—not for her own sake only, but for the sake of those to whom she may sustain the relation of mother—that giving to the world healthy offspring, she may also rear them to a healthy maturity.

The next point to which we would call attention, essential to the best fulfillment of woman's duties as second head of the family, is *thorough mental culture*. Her intellectual attainments should be as varied, and, if possible, as deep as those of man; but passing over the question as to whether there is any essential difference in the power of the male and the female mind, we affirm from her relation to society as mother, there is as much necessity for thorough culture in the latter as in the former. An anecdote is related of certain Indians who sent only their sons to be educated, but it made little difference in the state of their society, and it became apparent that their progress in civilization could only be effectually promoted by the education of the daughters.

The idea is coming to be appreciated that the child is born with such capacities of mind as are transmitted by the parents—that a decided bias is given to its mentality before birth. If this be true, what a weight of responsibility is thrown upon the mother! How assiduously should she cultivate her own intellect that the children she gives to society may inherit all the mental greatness necessary to build up and strengthen that society on a noble and enduring basis! How should this thought be realized by American mothers, especially, to whose posterity is liable to be committed the trust of free institutions, necessary to be guarded by that "eternal vigilance" which "is the price of liberty." A feeble, puerile race cannot long sustain a republican government in its purity. There must be a progressive strength to do this.

And when we consider how much the intelligent mother may influence the development of her child's mind through all its earlier years, giving direction to "the twig" according to her own standard of perfection—how greatly intensified becomes the idea of maternal responsibility! By the course she adopts, the American mother may make a true American of her child, or implant within him those principles which shall lead him to aspire to subvert the throne of Freedom, and elevate to power the principles of monarchical tyranny.

This leads us to speak of a third necessary element of the true and noble mother's character, viz.: a *deep and unswerving moral and religious principle*. Without this she may be intellectually great, but in proportion as she is so, will her influence upon the forming character of childhood be subversive of those principles of right which may, by some extraneous means, have become implanted there; and in that proportion is her power to promote the establishment of error increased.

A sad thing for our country would it be, should its mothers be intellectual giants, and at the same time moral dwarfs! We might expect to see its noblest principles speedily overthrown—liberty, wounded and bleeding, prostrate in the dust, and the eagle of our national banner soon seeking, among his own native crags, and in the depths of the blue sky, that air of freedom which had ceased to blow gently over the beautiful valleys of our land.

ILL-TEMPERED WOMEN.

VARIED as the flowers of the earth is the character of women; to a large garden may the whole be compared; rank weeds are found there, the sharp, stinging nettle and the poisonous nightshade; but likewise are seen blooms of rich beauty—plants of graceful growth—the scented rose and the climbing jasmine—the painted tulip and modest lily—all are met in the great parterre of world blooming side by side, mingling either fragrance or poison with the air around. And the influence of a woman is as diversified as her character, whether in a domestic or public point of view. Two women may be placed in precisely the same circumstances socially, the one will diffuse happiness, the other destroy it; the one will give a perfect charm to life, the other make it almost a curse; and simply by a diversity of temperament producing different results.

An ill-tempered, quarrelsome woman is a nuisance on earth. An ill-tempered man is bad enough, but the perpetual "niggle" of a sour-tempered woman is insufferable; there is a meanness about her irritability which men generally do not possess. A man may swear and behave like a brute—such conduct is as common as daisies in summer, but unless he be something below the level of a bully—and that is low enough—he won't keep up an incessant small-shot charge of hint and innuendo, and pettish rejoinder—for that is the style of these nettles of the human race, these vegetable blistering plasters of humanity—cross-grained women. Such women, without having anything of positive vice in their composition, do an immensity of harm; there is sorrow and trial enough in the world without ill-temper adding to the burden; a cheerful heart, and a cheering word of comfort it is woman's prerogative to bestow, and if she fails to exert her prerogative, she loses, and deserves to lose, that supremacy over man she is born and destined to hold.—*Tail's Magazine*.

HOUSEHOLD CARES.

Mrs. KIRKLAND has very truly said that woman is never really and healthily happy, without household cares. But to perform house-work is too frequently considered degrading. Even where the mother, in obedience to the traditions of her youth, condescends to labor occasionally, the daughters are frequently brought up in perfect idleness, take no bodily exercise except that of walking in fine weather, or riding in cushioned carriages, or dancing at a party. Those, in short, who can afford servants, cannot demean themselves, as they think, by domestic labors. The result is, too frequently, that ladies of this class lose what little health they started life with, becoming feeble in just about the proportion as they become fashionable. In this neglect of household cares, American ladies stand alone. A German lady, no matter how elevated her rank, never forgets that domestic labors conduce to the health of mind and body alike. An English lady, whatever may be her position in society, does not neglect the affairs of her household, and, even though she has a housekeeper, devotes a portion of time to this, her true and happiest sphere. A contrary course to this, results in a lassitude of mind often as fatal to health, as the neglect of bodily exercise. The wife who leaves her household cares to her domestics, generally pays the penalty which has been affixed to idleness since the foundation of the world, and either wilts away from sheer ennui, or is driven into all sorts of fashionable follies to find employment for her mind. If household cares were more generally attended to by ladies of the family, there would be comparatively little backbiting, gossiping, coyness, and other kindred sins, and women in good society would be much happier and much more truly lovable.—*Springfield Republican*.

WOMEN'S INFLUENCE.—God has given to the two sexes different intellectual powers and qualities—to us, the sterner and harder power of arriving at the truth chiefly by argument, by induction, and the like; while to her he has given that which, after all, is a higher attribute—the power of intuition, of perceiving what is true, what is pure, and what is noble, and, without the tardy process of a long-considered logic, of coming, by that power with which he has endowed her heart, at the truest and the best conclusions.

CHILDREN.—A house full of children composes as powerful a group of motives as ever moved a heart or hand; and the secret of many a gallant struggle and triumph in the world's battle may be found throned in its mother's lap at home, or done up in a little bundle of white fannel. A nation's hope, before now, has been found in a basket of bulrushes. Get ready to be afraid of the man that children are afraid of, and be sure that he who hates them, is not himself worth loving.

CARELESSNESS.—Sullen and good, morbid and wise are impossible conditions. The best character is a man's wisdom and his goodness is his cheerfulness. When one is not cheerful he is almost invariably stupid. A sad face seldom gets into much favor with the world, and rarely deserves to "Sorrow," says old Montaigne, "is a base passion."

Choice Miscellany.

A FARMER'S SONG.

BY D. D. RYNDOL.

We envy not the princely man,
 In city or in town,
 Who wonders whether pumpkin vines
 Run up the hill or down;
 We care not for his marble halls,
 Nor his hoards of gold;
 We would not own his sordid heart
 For all his wealth threefold.

We are the favored ones of earth,
 We breathe pure air each morn,
 We sow—we reap the golden grain—
 We gather in the corn;
 We toil—we live on what we earn.
 And more than this we do,
 We hear of starving millions round,
 And gladly feed them, too.

The lawyer lives on princely fees,
 Yet drags a weary life,
 He never knows a peaceful hour—
 His atmosphere is strife.
 The merchant thumbs his yard-stick o'er—
 Grows haggard at his toil—
 He's not the man God meant him for—
 Why don't he till the soil?

If he'd but dig the generous earth,
 And breathe pure air of heaven,
 And sleep all night and wake at dawn,
 He'd know what God hath given
 Of health and comfort, peace and joy,
 Outweighing glittering ore—
 And silks, and prills, and lace, and tape,
 All numbered o'er and o'er.

The doctor plods through storm and cold,
 Plods at his patient's will,
 When dead and gone he plods again
 To get his lonely bill.
 The printer (bless his noble soul),
 He grasps the mighty earth,
 And stamps it on the *RURAL*'s page
 To cheer the farmer's hearth.

We sing the honor of the Plow,
 And honor of the Press—
 Two noble instruments of toil,
 With each a power to bless.
 The bone—the nerve of this *fast age*—
 True wealth of human kind—
 One tills the ever-greening earth,
 The other tills the mind.

Delaware Co., N. Y., 1853.

THE ORIGIN OF GENIUS.

It is a remarkable fact, and one no less remarkable than true, that in examining the history of *Genius* we find that those who have been most conspicuous and celebrated for their talents, have generally arisen from the lowest origin—have had to contend, in the earlier part of their lives, with difficulties almost insurmountable—to struggle against the frowns of fortune, the want of friends, and the lack of the advantages of education. Yet it is among persons of this description that the Arts and Sciences are indebted for some of the greatest and most valuable discoveries which have been made, and it is these over whom Poesy has spread her all-inspiring veil and wrapped them in the beauties of creative fancy. Genius is inborn—it favors no particular class; but it is certainly remarkable that it should so frequently be the case that those whom poverty oppresses within its iron grasp should carve, by their own exertions, a name imperishable—should be enabled to reach the highest pinnacle of Fame's slippery mount, while those upon whom fortune has lavished her bounties with an unsparring hand should go down to the grave "unsung, unobscured, and unknown." Yet this has been the case in ancient as well as in more modern times.

So it was with Homer, the Father of Poetry and Song, who toiled through life to exalt the Literature of his country—to throw around her the charms of Poesy, and to raise the minds of his countrymen to other themes than those of gains and conquests. He passed away without his countrymen knowing that such a genius as poor, blind Homer had budded, bloomed, and withered among them. The old adage, "a prophet has no honor in his own country," is, with regard to literary men, too true. The generation in which they live pass them by unnoticed, and posterity is left to be the avenger of their greatness. So it was of Homer—his own times were unmindful of his literary attainments, and what remained of his writings to-day stand as records of the beauty of Grecian poetry. VIRGIL, one of the most celebrated of the Latin Poets, was very humbly born, and cultivated a small farm, of which he was a long time deprived, until it was restored to him by the Emperor Augustus. But we need not pore over the history of ancient times—we need not be confined there to find examples, for later times have shown that Genius has generally for its concomitants misery and poverty, and often-times, crime. The history of WILLIAM SHAKESPEARE furnishes an extraordinary instance of the onward course of Genius, by whatever difficulties it may be surrounded.—First fleeing his native hills and childhood's home for poaching, we see him acting as an hostler—then as an actor in one of the mormon theatres—again as the writer of short dramatic pieces, and now, in the eyes of the World, the greatest dramatic writer it ever produced—the admired of all. OLIVER GOLDSMITH, too, the simplicity of whose writings every one has admired, traveled over a great part of Europe on foot, procuring, by his musical talents, entertainment among the peasantry of the countries through which he passed. He died in London in indigent circumstances, and a monument was erected, by subscription, to his memory. He needs no monument—his own fame has raised one more enduring than marble—one which will stand as long as the love of literature remains. The great work of MILTON's—"Paradise Lost"—was composed after he was blind, and

transcribed by his daughter. ROBERT BURNS, the Ayrshire Poet, was born in one of the mud-thatched cottages of the Scottish peasantry. He has rendered classic his native hills, and braes, and dales, and bonnie streams, by his enchanting lays and songs. He had, at his death, scarce enough of this world's goods to defray his funeral expenses. So it is—the brightest genius and the most exalted intellect seldom has anything more than its mighty mind as a portion.
 Ayles, N. Y., 1853.

WALTER R. BARNES.

"STOP MY RURAL!"

STOP it, I say. I won't have another number. I can't endure such torture a single week more. I am in earnest—take my name from your books. What on earth is the matter? Well, now, I will tell you. I like the paper—that's a fact. In its new dress it smiles like a bride. The headings are superb, the bordering is exquisite, the engravings beautiful and instructive, and the letter press is all that could be desired. There is a choice variety in the contents. The Agricultural Department is invaluable to the farmer; the Horticultural is *Victorious* over all competitors; the Educational is of itself worth the price of the paper; and then there is the "Choice Miscellany," the "Sabbath Musings," the "Young Ruralist" and the "Youth's Corner" which are of so much interest to the boys and girls. The news columns will keep one "posted" without the aid of any other journal, the book notices are just and discriminative, and the very advertisements are more interesting than the "Leaders" in some Agricultural journals which have a wide circulation. JOHN likes the wit and humor, SUSAN looks out for the stories, and the "old woman"—that's my wife—turns at once to the column devoted to Domestic Economy. Yes, it's a grand paper, and we like it,—we do. Mr. MOORE, they say, is "some," though his picture wouldn't embellish the *RURAL*; he has an "able corps of assistant editors,"—he has hosts of racy correspondents, (besides this writer,)—he has all the facilities for making a crack journal, and *he does it*. His motto is "Excellence,"—he goes in for "Progress and Improvement,"—he is resolved on success, and he achieves it. His paper has a high literary character; no one ever saw a word or line in it not instinct with moral purity; it is an excellent family paper; in the truest and best sense of the term, it is a religious journal.

But, nevertheless, I don't want it. The truth is I live in a city, on a narrow street, and in a small house. I don't own a foot of land on God's earth. I have not a spot to plant a tree or a flower. There is hardly room in doors for poor NELLIE'S geranium, though we love it for the sake of the dear one who budded on earth to bloom in heaven. I come home from business weary and perplexed.—My wife draws my arm-chair close to the grate, and brings my gown and slippers. SUSAN gives me the last *RURAL*, and goes to make my toast and tea. I am soon absorbed and rested in body and mind. I forget my cares and troubles. I seem to live in the country. I have a little farm—no matter how small—which is all my own. I "dream of meadows and clover blooms." I walk amidst the fragrance of flowers and fruits. My little cottage is covered with woodbine and honeysuckles. I rise in the morning—which nobody does in the city—and hearken to "the low of cattle and song of birds." I take milk from the cow, and not from the milk-man, and find the quality greatly improved. I gather fresh laid eggs as in my boyhood, and think of brother CHARLIE and the nice, white head-stone which marks his resting place in the village church-yard. I pluck apples and pears from my own trees, and I teach my children to love and beautify the chosen spot which is "our home." The tea-bell rings. The charm dissolves apace. It was all a dream. I am tied down to business. My fate is sealed. It was the *RURAL* that awoke these pleasant fancies, which thrilled me for awhile like the inebriating cup, but which have left me more restless and discontented than ever. How I hate these paved streets with the endless thunder and clatter of omnibuses and dray—the everlasting travel on the pavements—the ceaseless din and turmoil of this great, heartless Gotham! I am no longer fit for business or society. The *RURAL* has worked my ruin. I am homesick for the country. I am dying for Mother Earth. With the desperation of a drowning man who has but one chance for deliverance, I implore you, O *RURAL*, stop my paper! Neapolis, Jan., 1853.

MILKMAN.

SUCCESS.—Every man must patiently abide his time. He must wait, not in listless idleness, not in useless pastime, not in querulous dejection, but in constant, steady, and cheerful endeavor; always willing, fulfilling and accomplishing his task; that when the occasion comes, he may be equal to the occasion. The talent of success is nothing more than doing what you can do well, without a thought of fame. If it comes at all, it will come because it is deserved, not because it is sought after. It is a very indiscreet and troublesome ambition which cares so much about fame; about what the world says of us; to be always looking in the face of others for approval; to be always anxious about the effect of what we do or say; to be always shouting to hear the echoes of our own voices.—*Longfellow*.

HOPE.

The world may change from old to new,
 From new to old again;
 Yet hope and heaven, forever true,
 Within man's heart remain.

The dreams that bless the weary soul,
 The struggles of the strong,
 Are steps toward some happy goal,
 The story of hope's song.

ILLUSION.—There is nothing so real in this world as illusion. All other things may desert a man, but this fair angel never leaves him. She holds a star a billion miles over a baby's head, and laughs to see him clawing and battling himself as he tries to reach it. She glides before the hoary sinner down the path which leads to the inexorable gate, jingling the keys of heaven at her girdle.—*The Autocrat*.

There is no courage but in innocence, no constancy but in an honest cause.—*Southron*.

DEATH.

We cannot tell which exceeds in beauty—the death of the young or the old. Morning clouds are delicate indeed, painted and pearl-like Saxon beauty's cheek, but gorgeous are the clouds that, stained with dying dyes, are drawn like Caesar's mantle over its changing face.

Some, like the Morning Star, went out at dawn,
 When birds did sing at Heaven's gate aloud;
 Some, like the Sun, kept climbing bravely on,
 Till in the west, beneath a golden cloud,
 The dead Day lay in state, and lamps did burn
 In all of Heaven, to welcome their return;
 And Earth was dewy with the tears she shed,
 And bared her bosom for the coming dead.
 But there, upon the western threshold of the World,
 They yet shall linger, and our eyes behold,
 Till this great azure tent of time is furled,
 And Ages stand before God's Gates of Gold.
 We cannot weep for these. The Sexton makes
 Their graves in vain. The green Earth idly breaks
 In voiceless billows, for her Ethiopean breast
 Shall not enfold them. Let her love the flower,
 And woo the leaves December has carcass;
 Let her put shrouds upon the Summer hours,
 And fold dead birds within the snowy drift.
 But these are not for her. Oh! may she lift
 The pall, the turf—the mighty are not there,
 Though bell, and rite, and dirge were rung, and said,
 And sung—no sigh nor song can make them dead,
 Whom God did give His wardrobe for their wear!
 As vainly dream to bear the star away
 Shining the night out, in a drop of dew
 That June has shed upon the rose's crest—
 A syllable of Heaven—in some far day,
 And think to set that crystal shrine ashore,
 In starry splendor upon beauty's brenet.

And those who went at morning, like the bird
 That meets the dawn a moment out of Heaven—
 For whom a window opened, and we heard
 The songs of seraphs and of souls forgiven—
 We cannot weep for them, who ever keep
 So close to Paradise, their very sleep
 Is white with wings, and beautiful with dreams.
 The Foundations of the Word, see where they lie,
 On Heaven's threshold, and above it streams
 A ray of glory. Do ye deem they die,
 When, gates ajar, they creep confiding in,
 Transits from thee, oh Time, from tears and sin?
 Oh! wondrous journey, have they finished there,
 From cradle morning unto angel choir?

Written for Moore's Rural New-Yorker.

MEMORY'S TREASURES.

PERHAPS she lies 'neath the clods of the valley,
 But does not memory, over-faithful memory, beckon
 you on, breathing in your ear the same familiar
 tone with all its former love and tenderness?
 Does it never whisper the same prayer you heaped
 at the parent's knee; tempting you again to lift
 up your voice with child-like trust to your Mother's
 God? And, when inclined to wander from the
 paths of virtue, do you not feel the soft hand passed
 lightly over your brow, soothing the inmost
 soul to rest? Do you not indeed forget that you
 are dreaming of the past, not of the present?

But dream on. Imagine that same faithful hand
 guiding you through life's rugged pathway—those
 prayers still ascending to heaven in your behalf.
 Dreams which point to you the counsels and in-
 structions of a sainted mother will not unfit thee
 for life. No! rather go and be a better man.
 May they be thy guide while thou dost sojourn
 here below, and be the instruments in God's hands
 of opening the pearly gates to receive you.
 Hillsdale, Mich., 1853.

ADDIE E. WALKER.

IT IS OF THE LORD'S MERCIES.—I believe the
 Lord has always, ready provided, some kind Sa-
 maritan, journeying, as if by chance, on the very
 road where the wounded traveler lies, and who
 arrives just at the very moment when oil and wine
 are especially needed. I believe, too, that the
 Lord, in the workings of that providence which is
 over all his works, and which suffereth not a spar-
 row or a hedgeling to fall to the ground unpunished
 of him, whenever he has a torn and bruised
 one of his flock, needing a tender hand than
 usual to nurture and heal it, has that hand ready
 to stretch out and help—has one close at hand to
 supply the want—one whose own heart has been,
 perhaps, touched and prepared by sorrow for the
 especial work of sympathy with some other torn
 and sorrowing one of the family. We are apt to
 say of such apparently accidental circumstances,
 "How very fortunate!" but faith lifts up the curtain
 and sees God's hand at work, and cries out,
 "It is of the Lord's mercies!"—*Rev. B. R. Bouchier*.

TRIUMPH OVER EVIL.—We are rewarded for
 every triumph we make over temptation. I will
 suppose there are many who have struggled
 against the vanity of vain pleasures; many who
 have put down evil thoughts with a strong will;
 many who, after a long and, it may be, an uncer-
 tain conflict with the seductions of the world, at
 length have triumphed. I will put it to them
 whether, when they have combated and so pre-
 vailed against the evil, and their hearts have not
 softened and melted within them, whether they
 have not felt within their bosoms a seraphic influ-
 ence? They have so felt; and so it will ever be.
 No sooner shall they have driven from them the
 tempting demon of pride, of vanity, of anger,—
 no sooner shall the devil have left them, than
 angels will come and minister unto them.

ALWAYS PRAYING.—Felix Neff once made the
 following comparison:—"When a pump is fre-
 quently used, but little pains are necessary to have
 water; the water pours out at the first stroke be-
 cause it is high. But if the pump has not been
 used for a long while the water gets low, and when
 you want it you must pump a long time. It is so
 with prayer. If we are instant in prayer, every
 little circumstance awakens the disposition to
 pray, and desires and words are always ready.—
 But if we neglect prayer, it is difficult for us to
 pray."

THE TRAVELER.

AERONAUTICS IN PARIS.

GRAPHIC ACCOUNT OF A BALLOON ASCENSION.

BY H. A. WARD, OF ROCHESTER.

In a late letter to his grand-father, the venerable Dr. L. Ward, of our city, Mr. Ward has given a very interesting account of his balloon ascension from Paris, last September. Mons. Godard, who has successfully pursued aeronautics for years, and has made more than six hundred ascensions, kindly offered him a seat in the car, the ascension to take place in the afternoon from the Hippodrome. Mr. Ward instantly accepted the invitation, which he had hoped to receive for some weeks. It need scarcely be remarked, that practical aeronautics is carried to great perfection in France, so that balloon ascensions are a very frequent, and in summer of almost daily occurrence at Paris. In this case the ascension was to the height of one and a half miles, or nearly 8,000 feet, where the diameter of the circle of vision is about two hundred and twenty (220) miles. To his honored grand-father, Mr. Ward writes as follows:

"But you will ask me why I desired to go up at all? It was simply for the intrinsic interest of the ascension. There were, I thought to myself, reasons why this experience must be entirely peculiar. The emotions in fading one's self suddenly let loose in space, the earth far beneath, and the sphere of silk above them their only little world, must be of a character very different from all we feel upon the ground. So when, just before I left Paris, Mons. Godard wrote me one day that I could that afternoon have a place with him in his car in an ascension from the Hippodrome, I replied in a moment, accepting his proposal, and in due time made my appearance on the spot.

The balloon, a beautiful globe, large as the dome of our Rochester court-house, and of elegant proportions, was already filled, and stood swaying gracefully to and fro, pulling like a fretted eagle upon the cord which held it down. Its silken sphere was covered by a net work of fine cord, in large diamond meshes; these cords gathered to a stout wooden hoop two feet in diameter, just below the balloon, and from this hoop hung, attached by its four corners, our car, which was simply a huge wicker-basket, strongly woven. At length the moment came to introduce the balloon into the arena, where a thousand spectators were awaiting this last act of the afternoon's performance. This was easily done, and its ascensional power was tested, and found to be equal to the weight of about four men. No one, however, saw fit to join us, so we got into the car together, and untied the rope below, amid the hurrahs of the audience and the strains of the orchestra.

We went up like a rocket, or rather, to describe the seeming instead of the actual, the earth fled from below us as if we were stationary and it were suddenly falling from its wonted position. We swung our bats, and shouted to the people below, but in a moment this was ended, for their faint and almost whispered cries of "Don't voyage!" "Neurvous descendez!" showed us by their indistinctness that we, likewise, were no longer heard. M. Godard then occupied himself in launching a number of small paper parachutes, which remained stationary in the air, but seemed to fall like bullets, so rapidly did we ascend. Meanwhile I knelt on the bottom of the car, crossed my arms over its side, and lost myself in contemplating the scene below.

The crowd in the Hippodrome had ceased to regard us, and were thronging like little ants through the outer passage. The streets began to appear narrower, the houses to look smaller, and the carriages to move slower. The various edifices, too, commenced to approach each other, so that the same glance showed us very different parts of the city; and although we were rising in a nearly right line, we seemed at one moment to be over one church or square, then an instant later, to be over another, a mile distant from it. For about twenty minutes we had been rising, first swiftly, then slowly, but in the whole we had appeared to me to be perfectly stationary. It was only when our last parachute remained floating like a little satellite by our side, that M. Godard informed me that we had ceased to ascend, and that we were about 1½ miles above the earth. At this elevation we remained about an hour, which I could have wished to be a year, so beautiful was the view. Paris lay below us in all its splendor, teeming with its bustling multitudes and myriad deafening sounds. Yet no sound reached us,—all was hushed to the stillness of night. No signs of life manifested themselves, not a man nor a conveyance was to be seen in the streets, save only one railway train, which noiselessly left the capital, tracing its path by a pencil wreath of white smoke. The Public Monuments were wondrously concentrated,—the Madeleine, the Hotel des Invalides, the Pantheon, Notre Dame—all, leaving their wide separation, stood side by side—the streets were like the microscopic threads of a spider-web—the squares were a single white foot-print—the groves a single green tree. The whole city had undergone a magic reduction, and Paris, mighty Paris,—nine miles in diameter, and nine leagues around,—looked like the tapestry covering of a centre-table, its zig-zag fortifications encircling it with a narrow, waving band of black.

Beyond the city walls all was equally enchanting and equally uncertain. The forests were only distinguishable from the meadows by their deeper green, and the vineyards were only manifest among the former by the brighter hue arising from their proportion of sere and yellow leaves. The horizon embraced a region which gathered the delightful variety of its scenery from the green pastures of Normandy, the rolling plains of Picardy, the vine-clad hills of Champagne, and the golden wheat-fields of the Departments towards the south—a beautiful panorama of gold and emerald-green, studded with snow-white villages, and the lovely

Seine winding its course across the whole like a silver thread. And above all this we soared like the gossamer in our noble balloon, enjoying the enchantment of the scene, and yielding to its imposing influence.

The mysterious, unearthly silence which prevailed was that which most impressed the mind, not a sound reached us from below, not an echo answered back to our voices from the solitudes of space around and above us, and almost imperceptibly to us both our conversation lowered itself under this influence almost to the tone of a whisper. And hear we were, all alone—in an isolation of which the hunter on the summit of the Alps, or the mariner in the silence of the Polar Ocean, has not a fuller experience,—our tiny car swinging like a pendulum over the abyss below. Unfortunately we had no wind to move us along, so that for more than an hour we remained in nearly the same point. Having then opened the valve in the top of our balloon, we came gently down till we met a faint current of wind blowing towards the west. In this we balanced ourselves by throwing out a few handfuls of ballast, and were carried slowly but steadily beyond the fortifications, across the "Bois de Boulogne" and a few miles in the direction of St. Cloud. There our breeze failed us, and as it was approaching night we concluded to descend to the earth, which we did safely in a very few minutes in the vicinity of Neville, two leagues only out of Paris. Here an immense crowd had gathered to meet us, and as M. Godard feared for the integrity of his balloon among so many people, we told them all to stand clear for a moment, and throwing out a whole bag of sand, we bade them an unexpected adieu. Rising to the height of a few hundred feet only, we sailed along, followed by the crowd below. But a turn of the Seine soon stopped the further progress of our suite, and we chose this occasion to land upon a huge island in it, where a meadow offered a very opportune spot. We had hardly finished discharging our balloon when night came on. The peasants were astonished to see us come down to the river bank for a boat, carrying lightly between us our basket-car, in which they had seen us so lately suspended.

I had intended at the close of this sheet to give you some account of some things which struck me as most peculiar in this mid-air experience, but you see that I have but a few lines left. Perhaps the most striking feature of all the view, was the seeming concavity of the earth's surface. The whole panorama appeared in a bowl-like form, dipping gently from the horizon on every side to the point exactly below us. This appearance, or figure of the panorama, interested me much, and was to me new and even unheard of before. Yet, it results from the refraction of light. By this refraction the distant horizon is always elevated above its true position, and as the view is continued from the horizon towards the middle, the refraction is continually less, so that the bowl-like form is the necessary result. Beautiful as this phenomenon was, it a little disappointed me, for it detracted immensely from that view of the world, as seen from a distance, which I had anticipated; forgetting that at no height which man can reach, can the spherical form of our earth become sensible.

You ask me, in this my last line, if I was at all frightened when away from terra-firma? I had expected to be, but was not in the least from first to last. Still I should have been, had I not strongly commanded my feelings. I think that I could in a moment have made myself perfectly miserable by calculating the chances and effects of a fall, or by watching too closely the strings which bound us to the balloon.

Thus closes the account of this elegant exploration in the atmosphere, an element very different from the geological regions below, in which Mr. Ward has so laboriously toiled for the past years. Still, the lofty elevation had not "turned his head," or cooled the ardor of his mind in his favorite pursuit. True to his geology, he writes to a friend about the "Balloon Excursion,"—"The view of the 'Paris basin' was magnificent. How I regretted not to have seen it from some such safe point of view, when the waters of the diluvial period were ravaging it, and sweeping away whole square miles of the strata, which are now wanting." How many thousand years before the creation of Adam, was this convulsion by the diluvial waters?

ARTESIAN WELLS.

These wells have become relatively common. Still they form a subject of great interest and curiosity, especially when bored to great depths.—Though the Chinese are said to have used them for many hundred years, they are a recent result in Europe. The oldest was bored in the province of Artois, France, the ancient Artesium, which originated the name Artesian, and is perhaps not 150 years old. Its water flows in a constant stream to the height of eleven feet above the surface.

The Artesian Well of highest interest at this time, is at Louisville, Ky. It has been lately described by Dr. J. LAWRENCE SMITH, Professor in the University of Louisville, in the *Daily Courier* of that city. A friend has kindly sent me the paper, and I propose to give an abstract of Prof. Smith's interesting account.

DUPONT'S ARTESIAN WELL.—It was completed last August, after sixteen months of constant boring. The diameter of the bore was five inches for 76 feet, and after that three inches to the depth of 2,086 feet. Though the flow of water had increased greatly at 1,900 feet, and more still to 2,086, yet for the last 50 feet to 2,086, no addition was made to the stream. The water now rose in a tube 170 feet above the surface of the earth.

The water discharged is 13,600 gallons an hour, or 331,200 gallons in the day. The force of the stream is strong, so that it will give a jet forty feet high, and with all the pressure sixty feet or more.

At the bottom of the well the temperature of the water is 82.5°, and at the surface 76.5°, as the water in the tube is surrounded by the cooler water around it to 76 feet. As the mean temperature of Louisville is 54.9°, the increase of heat for 2,000 feet is about 72 feet for one degree of heat.

This water is a strong mineral water, and contains many ingredients, as 17 species of salts, besides silica, and three gases. It may prove of great sanitary importance, unless this great number diminishes the general good results. Dr. Smith mentions many diseases, upon which it will produce a beneficial result. It is evident that this water greatly resembles that of the famous mineral springs at Kissingen, Bavaria.

This well is in the Devonian formation of rocks, and is continued far into the Upper Silurian strata which underlie the county of Monroe and this latitude for some hundred miles east and west. The source of the water must be traced to strata which are 2,086 feet below the surface at Louisville, but rise to the surface at some distance. Dr. Smith locates the rock at the distance of 76 miles, in another county, and elevated 500 feet above Louisville.

The well-known principle of the rise of water in Artesian Wells, viz., that water will rise no higher than its level, connected with the small inclination of the rocks there, shows that the source must be distant. If that source is 500 feet above the surface of Louisville, the pressure would be increased one-fourth, and there would be an additional reason for the force of this stream.

No other well has been bored to so great a depth in our country, or in Europe, so far as known. The famous well of Grenelle, near Paris, and in the Paris Basin, which has the upper limit of the chalk rocks, or of the cretaceous formation, all around it, is only 1,794½ feet deep; has a much larger bore—even the area of the smallest part is four times as great as this—and discharges 22,000 gallons an hour, or over 500,000 gallons a day, at temperature of 81° Fah. If the mean annual temperature at Paris is 53°, the mean rate for 1,700 feet, would be 61 feet for rise of one degree in descending.

The Kissingen Artesian Well in Bavaria, is 1,874 feet deep; that at La Fayette, Indiana, is only 230 feet; that at Charleston, S. C., 1,250 feet.

It is said that Artesian Wells in the African desert are bringing up water with success. The sterile parts of our country among the Rocky Mountains would be greatly relieved by these wells, and there have been some explorations by the Topographical Engineers for this purpose.

The boring has not been carried far, and not always successful. At 34 feet in the Niagara series of rocks here, a constant supply has been raised by a

pump. In another instance, a well dug to the rock, had an Artesian boring to the depth of 80 feet or more into the rock, when abundance of hepatic water, or water holding hydro-sulphuretted gas, was obtained, which has proved permanent. As soon as this was done, a hepatic spring, used for bathing, fifty rods distant, commenced discharging pure water, and has had no return of hepatic water since. The boring evidently formed another outlet for the discharge of the mineral water. C. D. Rochester, N. Y., Dec., 1855.

THE HUMAN THERMOMETER.—The marvellous balance between supply and loss exhibited by the human organism, and indeed by that of most warm-blooded animals, may be seen in the following facts:—Our temperature is 98°, and this is the standard, no matter what may be the external heat. In the tropics, the thermometer during several hours of the day is 110°. In British India it is sometimes as high as 120°. In the Arctic Zones it has been observed by our voyagers as low as 80°, and even 102° below freezing point. Nevertheless, amid such extensive variations of the external temperature, that of the human organism has but slightly varied, and a thermometer placed under the tongue of an Arctic voyager will show the same degree of heat as one under the tongue of a soldier before the walls of Delhi.—Blackwood.

FENCE POSTS.

Messrs. Editors:—To the 7th question of FRANK, I will answer in part from my experience, that a post bottom upwards in the ground will last longer than if placed in its natural way. Twenty-four years ago, having no shelter for my wagons from storms and sun, I went to work to build a shed by inverting six black ash poles about eight inches in diameter, and from nine to twelve feet in length, and three feet in the ground, the butt-end being best calculated to place poles upon which to lay my boards; a very good substitute for something better. Ten years since I had occasion to remove these round posts to give place for a house, and so sound did they appear, that an examination took place, when it was found that near the surface of the ground from two to four grains of wood were partially decayed, the remainder being perfectly sound, and fit to stand the same test for years to come. I have, since those were first set, placed the same kind of timber both natural and inverted, and find the latter to last almost twice as long, and presume it is so with any other timber, and that water and atmospheric influences are not as destructive upon the grains of a round stick, as one that is split. I also believe that timber cut in the latter part of summer, as those posts were, are not so liable to decay as those cut in early spring or after the sap has started. H. O. Monroe Co., N. Y., 1859.

MANNERS.—Young folks should be mannerly. But how to be is the question. Many good boys and girls feel that they cannot behave to suit themselves in the presence of company. They are awkward, clownish, rough. They feel timid, bashful and self-distrustful the moment they are addressed by a stranger, or appear in company. There is but one way to get over this feeling and acquire easy and graceful manners; that is, to do the best they can all the time, at home as well as abroad. Good manners are not learned so much as acquired by habit. They grow upon us by use. We must be courteous, agreeable, civil, kind, gentlemanly and womanly at home, and then it will be a kind of second nature to be so everywhere. A coarse, rough manner at home begets a habit of roughness which we cannot lay off if we try when we go among strangers. The most agreeable people we have ever known in company, are those that are perfectly agreeable at home. Home is the school for all the best things.

We should manage our fortune like our constitution—enjoy it when good, have patience when bad, and never apply violent remedies but in cases of necessity.

NATURAL HISTORY.

Near the end of the last volume, at the request of a *YOUNG RURALIST*, we promised to give occasionally, in this department, sketches in *Natural History*. This promise we now purpose to redeem.

THE CAROLINA PARROT.

This is the only species found native within the territory of the United States. The vast luxuriant tracts lying within the torrid zone, seem to be the favorite residence of those noisy, numerous and richly plumaged tribes. The Carolina parrot inhabits the interior of Louisiana, and the shores of the Mississippi, and Ohio, east of the Alleghenies. It is seldom seen north of Maryland. Their private resorts are low, rich alluvial bottoms along the borders of creeks; deep and almost impenetrable swamps, filled with sycamore and cypress trees, and those singular *salines* or *licks*, so interspersed over the western country. Here, too, is a great abundance of their favorite fruits. The seeds of the cypress tree and beech nuts, are eagerly sought after by these birds.

The flight of the Carolina parrot is very much like that of the wild pigeon, in close compact bodies, moving with great rapidity, making a loud and outrageous screaming, like that of the red-headed woodpecker. Their flight is sometimes in a direct line, but most usually circuitous, making a great variety of elegant and easy serpentine meanders, as if for pleasure. They generally roost in the hollow trunks of old sycamores, in parties of thirty or forty together. Here they cling fast to the sides of the tree, holding by their claws and bills. They appear to be fond of sleep, and often retire to their holes during the day, probably to take their regular siesta. They are extremely social and friendly towards each other.

They build in companies in hollow trees. This bird is thirteen inches long; the forehead and cheeks are orange red; down and round the neck a pure yellow; the shoulder and bend of the wings also edged with rich orange red. The general color of the rest of the plumage is a bright yellowish silvery green, with light blue reflections. It is altogether superior in elegance of figure, and beauty of plumage, to many of the foreign parrots. It is docile and sociable, and soon becomes perfectly familiar, but cannot be taught to speak.—These birds are rapidly diminishing. According to Mr. Audubon, very few of them are to be found north of Cincinnati; and there are not, at present, half the number along the Mississippi, that existed there twenty years ago.

THE THRASHER, OR BROWN THRASHER.

This is the largest of all the American thrashers, and is a well known and distinguished songster, and from the tops of hedgerows, apple or cherry trees, he salutes the opening morning with his charming song, which is loud, emphatic, and full of variety. At that hour, you may plainly distinguish his voice at half a mile's distance. These notes are not imitative, but solely his own.

Early in May, he builds his nest, choosing a thorn-bush, low cedar, thicket of briars, or cluster of vines for his situation. It is constructed of small sticks, dry leaves, and fine fibrous roots.—He often attacks the black snake in defence of his young, and with success, as his bill is strong and powerful. His food consists of worms, caterpillars, beetles, and berries. He also destroys vast quantities of grubs, which he scratches from the ground. He is an active and vigorous bird, flying generally low from one thicket to another, with his long, broad tail spread out like a fan; he has a single note or chuck when you approach his nest. He inhabits North America, from Canada to Florida. They are easily reared and become very familiar in confinement.

The thrasher is eleven inches and a half long the whole upper parts are of a bright reddish brown; lower parts yellowish white; the breast and sides are marked with pointed black spots, running in chains. The wings are crossed with two white bars.

One to-day is worth two to-morrow.

Entered according to Act of Congress, in the year 1885, by T. D. Moore, in the Office of the Clerk of the District Court for the Northern District of New York.

ALICE AND ADELAIDE; OR, THE TRUE AND THE FALSE.

BY MRS. MARY J. HOLMES.

[Continued from page 35, last number.]

Chapter VII.—The Unknown Deliverer.

In wild agony the distracted man ran to the water's edge and unhesitatingly waded in, shrieking, as he did so, "My child! my child! Is there no eye to pity, no arm to save?"

Yes, there was an eye to pity, and it raised up an arm to save; for, rushing from a clump of alders which grew not far away, there came a rough, hard-featured man, who, catching up Mr. Warren as if he had been a child, bore him back to the grumpy bank, then boldly plunging into the river, he seized the long tresses of the drowning girl, just as they were disappearing for the third and last time. Wringing the water from her brown hair the stranger folded his light burden gently to his bosom, and bending over her still, white face, looked earnestly to see if she were dead. There was yet life, he hoped, and swimming to the shore, he laid the unconscious maiden upon the grass, resting her head in the lap of her father, who cried, "Is she dead? Oh, tell me, is she dead?"

But the stranger made him no reply save to take his hand and lay it on the little heart which was beating, oh, so faintly! Then with rapid footsteps he walked away, half pausing once and dashing aside a tear as he heard the poor old man call after him imploringly, "Don't leave me all alone, for I am blind, and Alice's heart will stop beating, I'm afraid. It has stopped beating! She's dead! Oh, she's dead!" he screamed, as in the distance he heard the tramping footsteps going from him fast.

Still, though he knew it not, they went for him, and Mr. HOWLAND, whom chance had led that way, was surprised in his walk by the sudden appearance of a man with uncovered head and dripping garments, who bade him hasten to the river bank, where a young girl, he feared, was drowned. "I am going for a physician," he said, and he sped away, while Mr. HOWLAND hurried on to the spot where Alice still lay insensible, and whither then the lilies for which she had risked her life. Over her bent the poor blind man, his tears falling like rain upon her face, and himself whispering sadly, "It's darker now than midnight,—they are all gone from me—wife, daughter, all; oh, Alice, Alice, my bright, my beautiful one. Why did God take you from me when I needed you so much?"

"She may not be dead," said Mr. HOWLAND, and touched with the grief of the stricken man, his own tears dropped on Alice's face.

But they did not rouse her, and with a terrible fear at his heart, he lifted her lightly in his arms, saying to her father, "My house is nearer than any other; we must go there."

Dizzy and faint with excitement, Mr. WARREN arose to his feet, but to walk was impossible, and sinking back upon the grass, he cried, "Leave me here and care for her. You can send for me by-and-by."

This seemed the only alternative, and Mr. HOWLAND started for home, meeting ere long with several of the villagers who had been alarmed by the stranger. A few of them kept on to the river, while the others accompanied Mr. HOWLAND to the house, where crowds of people were soon assembled, and where every possible means were used for Alice's recovery. But all in vain they seemed, and when at last the poor old father reached the door he knew by the death-like silence pervading the room, that the physician had said "no hope."

"Lead me to her, somebody,—lead me to Alice," he whispered, and taking his old-stretched arm, Mr. HOWLAND led him to the couch where Alice lay, her wavy hair clinging in damp masses to her forehead, and her long eyelashes resting upon her marble cheek.

Quickly the trembling fingers sought the heart, but alas! they felt no motion, and more than one turned away to weep as they saw the look of bitter anguish settling down upon that father's face.—There was yet one test more, and laying his ear upon the bosom of his child, the blind man listened—listened,—oh, how intently he listened, while the lookers-on held their breath in agonizing suspense.

Suddenly through the room there rang the wild, glad cry, "I hear it—she lives! she lives!" and with renewed courage the people returned to their labor, which this time was successful, for she, who had been so near to death, came slowly back to life, and when the sun went down, its last parting rays shone on the bowed head of one who, from his inmost soul, was thanking God for not having written him "childless."

It was deemed advisable that ALICE should remain where she was for a day or two, and into a large, pleasant chamber, overlooking the town, they carried her, Miss ELINOR constituting herself the nurse, and ever and anon bending down to kiss the lips of the young girl who had so narrowly escaped a watery grave.

him, but an old man's blessing might be of some avail, and that he should have, even though he were my bitterest enemy, and had done me a terrible wrong."

There was a deep flush on ADELAIDE's cheek as Mr. WARREN said these words, and turning quickly away, she walked to the window to hide the emotions which she knew were plainly visible upon her face. She seemed greatly excited, and far more interested in the accident than her slight friendship for the WARRENS would warrant, and when she learned that ALICE was to remain, she, too, insisted upon staying all night, provided she could be of any assistance. But Miss ELINOR declined her offer, and at a late hour she started for home, managing to steal away when Mr. HOWLAND did not see her. She evidently did not wish to have him accompany her, and for a few succeeding days she avoided him, going to his house but once, and that on the morning when ALICE was taken home in the carriage. There was something preying upon her mind—something, too, whose nature neither Mr. HOWLAND nor his far-seeing sister could divine, though the former fancied he had discovered it when, a little more than a week after the accident, she came to him with her face all wreathed in smiles and handed him the entire amount of money then due for the rent.

"That provoking agent had attended to them at last," she said, "and she was so glad, for it was very mortifying to be owing any one!"

"And this is what has been troubling you of late?" said Mr. HOWLAND, who was greatly pleased at seeing her appear like herself again.

"Then you noticed it," answered ADELAIDE, coloring crimson and adding hastily, "We have recently been much annoyed and perplexed, but for the future our agent will be prompt, and so shall we."

Whether the agent referred to was prompt or not, there seemed for several weeks to be a plenty of money at the White House on the Hill,—so much so, in fact, that ADELAIDE did not, as usual, go up to Springfield to take her accustomed lesson, while old PEARSON, whose shabby dress was beginning to create some gossip among the villagers, presented quite a respectable appearance in her new gingham, and muslin cap. About this time, too, there was sent by mail to Mr. WARREN the sum of twenty-five dollars, and as there was no word of explanation accompanying it, he naturally felt curious to know from whence it came.

"Miss ELINOR sent it, I am sure. It is exactly like her," said ALICE, who was now entirely well, and that afternoon, when her work was done, she went up to see Miss HOWLAND, whom she found suffering from a severe headache, and in ministering to her wants she entirely forgot to speak of the money. The next day Miss ELINOR was much worse, and for many weeks was confined to her bed with a lingering fever, which left her at last so nervous and low that her physician advised a journey to the West as the surest means of restoring her health. Her only sister was living in Milwaukee, and thither Mr. HOWLAND, who began to be seriously alarmed, tried to persuade her to go. For a time Miss ELINOR hesitated, and only consented at last, on condition that her brother promised not to engage himself to ADELAIDE HUNTINGTON during her absence.

Bursting into a laugh, Mr. HOWLAND assured her that she need have no fears of finding her station, as mistress of his house, filled on her return, for though ADELAIDE might possibly some day bear the name of HOWLAND, he could wait awhile, and would do so for his sister's sake.

With this promise Miss ELINOR tried to be satisfied, and after giving him many charges not to neglect the blind man, she started for Milwaukee in company with some friends, who, like herself, were westward bound.

Chapter VIII.—The Party Dress.

It was now the first of December. Miss ELINOR had been gone from home nearly three months, and during this time Mr. HOWLAND had spent one-half of his evenings at least with ADELAIDE HUNTINGTON, who marvelled greatly that he did not "come to the point," as she termed the asking of her to be his wife. But the promise made to his sister must be kept, so, night after night, he came and went, while on her finger the engagement ring glittered only in fancy, and ADELAIDE, as often as there came to her mother letters from their agent, felt a fresh pang of fear lest her deception should be discovered ere Mr. HOWLAND was secured.

About this time there were rumors of a large party to be given by Mrs. HAYES, the most fashionable lady in Oakland, and knowing well how the beauty of her person would be enhanced by a full party dress, ADELAIDE resolved to leave no means untried for the procuring of such a dress. "She had always observed," she said, that Mr. HOWLAND "was unusually attentive when she looked unusually well, and there was no knowing what would happen if she eclipsed all the ladies who might be present at the party," and then, as day after day went by, she fretted and wondered because no letter came from one who, at the post-office was designated as "Mr. A's provoking agent," but who at home, with none save her mother to hear, was called by a different name! Fretting, however, was of no avail,—the "provoking agent" did not write, and her purse contained only seven dollars.

"If I could get the dress," said she, "I might possibly manage the rest," and then, as she remembered the dainty fabric which ALICE WARREN had worn upon that memorable New Year's Eve, she started to her feet exclaiming, "That's the very idea," and ere her mother had time to question her she was on her way to the Brown House in the Hollow.

For a few weeks past Mr. WARREN had been severely ill, and though ALICE worked both early and late, she could not procure for him the little comforts which he needed and missed so much. Miss ELINOR's words "do not neglect the blind man" had been forgotten, and many a weary night had the blind man's daughter bent with aching head and tearful eyes over the piece of work which her increased cares had not permitted her to finish during the day. They were indeed drinking the bitter cup of poverty, and the sick man to his sleep was moaning sadly for more, which he said would make him strong, when ADELAIDE HUNTINGTON entered the humble room, glancing hurriedly at

the scanty fire and empty wood-box, she thought, "They must be wretchedly poor—I dare say I can get it for almost nothing." Then seating herself by ALICE's side she told at once the object of her visit. "She had never forgotten the beautiful lace dress which ALICE had worn on the night of her party, and if there was one thing more than another which she coveted, it was that. In short she wished to know if ALICE had it now, and if so, would she sell it, telling no one, of course, that it had ever belonged to her."

At the first mention of the dress, ALICE's tears began to flow, for 'twas almost the only relic of the past which she possessed, and now, laying her head in ADELAIDE's lap, she sobbed out, "Oh, ADELAIDE, my mother bought it for me, admiring it so much, and can I let it go?"

"You know which you need the most, that or the money," was ADELAIDE's cold reply, while from his pillow the sick man faintly murmured "something to make me well."

'Twas enough, and wiping her tears away, ALICE took from her trunk the dress, sighing deeply as she recalled the night when first and last she wore it.

"I did not know it was so exquisitely beautiful," was ADELAIDE's mental comment, as ALICE shook out the soft, fleecy folds, but she did not say so.—On the contrary she depreciated its value, saying "it had turned yellow, was rather old-fashioned, and a second-hand article at most, besides being quite too short for her in its present condition."

In this manner she paved the way to the price which she finally offered, and which ALICE at first refused to take. Four dollars seemed so little for what had cost so much. But ALICE's necessities were great, and when ADELAIDE offered her another dollar to fix the dress as it would have to be fixed for her, she yielded, promising to have it in readiness and bring it home on the night of the party. After trying it on and giving numerous directions as to the changes she wished to have made, ADELAIDE arose to go, saying not a word concerning the pay. With a beating heart ALICE saw her about to leave, and though it cost her a mighty effort to do so, she at last conquered her pride and catching ADELAIDE's shawl as she was passing out she said with quivering lips, "If you only will pay me part-to-day! Father is sick and we are so poor," and the little blue-veined hands were clasped beseechingly together.

"There's a dollar, if that will do you any good," said ADELAIDE, thrusting a bill into ALICE's hand, and then hurrying away.

She had no intention whatever of cheating ALICE out of her pay, but she hated to part with her money, and on her way home she thought of so many things which she must have, that she began at last to wonder if ALICE would not just as soon take something from the house, bread, or potatoes, or soap—she heard old PEARSON boasting of having made a barrel full, and soap was a very useful article,—she'd ask ALICE when she brought home the dress!—and, feeling a good deal of confidence in her soaping plan, she stopped at Mr. HOWLAND's store, where she spent a portion of her remaining six dollars for white silk, satin ribbon, blonde lace, and so forth.

As she was leaving the store, she met with Mr. HOWLAND, who accompanied her to the door, casually asking if she knew how Mr. WARREN was getting along. "Tis some time since I was there," said he, "and I think of going round to-night. As he is sick they may perhaps be suffering."

"Oh, no, they are not," quickly rejoined ADELAIDE, who did not wish to have him go there, lest he should see the dress, and ascertain that it had once belonged to ALICE. "I have just been to see them, myself. Mr. WARREN is no worse, and they are doing very well. I gave ALICE some work, too, paying her in advance."

"And, on the whole, you think I had better spend the evening with you?" said Mr. HOWLAND, playfully interrupting her, as he saw that one of his clerks was desirous of speaking to him.

"Most certainly I do," she answered laughingly, as she passed into the street.

And so that night, while her father slept, poor ALICE WARREN trimmed her little lamp, and with a heavy heart sat down to work upon the costly garment, every thread of which seemed interwoven with memories of the mother, who had bought it for her. Ever and anon, too, she lifted up her head and listened for the footsteps which now but seldom came that way. Not once had he been there since her father's illness, and brushing away a tear, she sighed, "He does not care for such as we."

That afternoon she had heard the rumor that "the proud Miss HUNTINGTON was to be his wife," and though the idea that she, little ALICE WARREN, could ever be sought to him, had never entered her mind, the news affected her painfully, and as she sat there alone that night, the world seemed darker, drearier, than it had ever been before, while very pleasant to her looked the future home of RICHARD HOWLAND's bride!

"ALICE," came faintly from her father, and in a moment ALICE was at his side. "ALICE, are you sewing to-night?"

"Yes, father, I am sewing."

"But I thought you finished the vest this afternoon. What are you doing now?"

ALICE hesitated. She could not tell him she had sold her party dress, neither would she tell him a lie, so she finally said, "ADELAIDE came here while you slept, and I am fixing a dress for her to wear to Mrs. HAYES' party. She gave me a dollar for it, too, and to-morrow I shall buy you the wine which Dr. MARTIN says you need, and may be I'll get you some oranges, too. Would you like some oranges, father?"

"Yes, yes," the tremulous voice replied, and the childish old man cried, as he thought that to-morrow he should have the wine and the oranges, too! The morrow came, and with it came the delicacies so long desired. But the sick man scarcely tasted them; "some other time he might want them more," he said, and with a feeling of disappointment, ALICE put them away, while her father, turning wearily upon his pillow, prayed that the deep dark waters, through which he instinctively felt that he must ere long pass, might not be suffered to overflow.

But to ALICE there came no forebodings like these. She only knew her father was very sick,

and she fancied that the luxuries to which he had been accustomed would make him well again.

So with untiring patience she worked on, thinking how the money which ADELAIDE was to pay her, should be expended for her father's comfort.

Alas for the poor little girl, who just as it was growing dark on the night of the party, folded carefully the finished dress, and then stole softly to her father's bedside, to see if he was sleeping. He was very—very pale, and on his face there was a look like that of her dead mother.

But ALICE was not alarmed. She had never thought it possible for him to die, so quiet, so gentle, so uncomplaining he seemed.

"Father," she said, "can you stay alone while I carry ADELAIDE her dress? She is to pay me more than that dollar, and I will buy you ever so many nice things."

"By-and-by," he whispered, "it is early yet," and drawing ALICE to him, he talked to her of her mother, who he said seemed very near to him that night,—so near that he could almost feel her soft hand clasp his own, just as it used to do in the happy days gone by. And while he talked, the darkness in the room increased,—the clock struck six, and releasing his daughter, Mr. WARREN bade her go.

"He felt better," he said, "and was not afraid to stay alone."

"You must sleep till I return; I shall not be gone long," were ALICE's parting words, and going out, she walked rapidly in the direction of Mrs. HUNTINGTON's.

In a very unamiable mood ADELAIDE met her at the door, chiding her for her delay, and saying, "I began to think you were never coming."

"Father has been worse, and I could not work so fast," was ALICE's meek reply, as she followed ADELAIDE into the sitting-room, helping her try on the dress, which the petulant young lady declared "didn't fit within a mile! 'Twas too high in the neck—too long in the waist—too short in the skirt—and must be fixed before it was decent to wear!"

"Oh, I can't leave father so long," said ALICE, in dismay, as she thought how much there was to be done.

"I'll risk him," returned ADELAIDE. "Anyway, when I hire anything done, I expect it to suit me, or I don't pay, of course."

This remark was well-timed, for ALICE could not go back without the money, and with a heavy heart she sat down to her task. But the tears blinded her eyes, and so impeded her progress that the clock struck eight ere her work was done.

"Now, put these flowers in my hair, and fix my sash just as yours was fixed," said the heartless ADELAIDE, as she saw ALICE about to tie on her bonnet.

In a box which stood upon the table laid the head purse, and glancing at that, ALICE did whatever was required of her, nor scarcely felt a pang when at last the toilet was completed, and ADELAIDE HUNTINGTON stood before her, arrayed in the self-same dress which she had worn but two short years ago.

"I meant you should dress me all the time," said ADELAIDE, glancing complacently at herself in the mirror. "I meant you should dress me,—mother knows so little about such matters, and then, too, she is sick up stairs with a violent headache, but I do not need you any longer—what are you waiting for?" she continued, as ALICE made no movement to go.

"I am waiting for the money, which I want so much to-night," answered ALICE.

"Ah, yes, the money," said ADELAIDE, making a feint to examine the purse, which she knew was empty.

ALICE knew it, too, all too soon, and sinking down upon a little stool she cried aloud,

"What shall we do! The wood is almost gone and I baked the last cake to-night. Oh, father, father, what will you do to-morrow!"

ADELAIDE HUNTINGTON was not hard-hearted enough to be unmoved by that appeal, and forgetting entirely the soap she glided from the room to which she soon returned, bringing a basket of food for ALICE whom she comforted with the assurance that she should be paid as soon as possible.

"I'd no idea they were so poor," said ADELAIDE to herself, as the door closed upon ALICE, and then she wished the agent would send the money so she could pay the debt and have it off her mind.

Just then the village omnibus stopped at the gate, and ADELAIDE ran for a moment to show her mother how she looked, then gathering up the folds of her rich lace skirt and throwing on her shawl, she entered the carriage and was soon riding towards the scene of gayety, while ALICE WARREN was hurrying home, a nameless terror creeping into her heart and vaguely whispering that the morrow, for which she had been so anxious, might bring her a sorrow such as orphans only know.

Chapter IX.—The Figure on the Hearthstone.

For awhile after ALICE left him, Mr. WARREN lay perfectly quiet, trying to number the minutes, by counting each tick of the clock, and then wondering if it were not time for ALICE to return. While thus engaged he fell asleep and when, at last he woke there was a deathlike faintness at his heart; his lips were dry and parched, and he felt a strong desire for water with which to quench his burning thirst.

"ALICE," he said, feebly, "ALICE, is that you? are you here? but to his call there came no answer, and throughout the room there was heard no sound save the steady ticking of the clock.

Why then did the blind man raise himself upon his elbow and roll his sightless eyes around that silent apartment. Did he hear aught in that deep stillness? He thought he did, yes, he was sure he did, and again he called, "ALICE, ALICE, are you here?"

But ALICE made him no reply, and as the minutes glided by the sick man grew delirious, talking of the past, which seemed present with him now. Then, as reason for a moment returned, he moaned, "Oh, ALICE, will you never come? The fire is going out and I am growing cold. Oh, must I die alone at last?"

No, not alone, for crunched upon the hearthstone there sat a human form! 'Twas the figure of a man,—a dark, hard-featured man, and often as the wailing cry came from the humble bed, it bowed

its head upon its hands and wept. Carefully, stealthily through the door it had come while Mr. WARREN slept, and the deep black eyes which glowed at first like coals of living fire grew dim with tears as glancing hurriedly around that room they saw how poor it was.

"Isn't there somebody here with me?" the sick man said at last, as his quick ear caught the sound of breathing. "Speak, isn't there somebody here?" he continued, while the figure on the hearthstone glided noiselessly to the bedside, where it stood erect, gazing pitifully upon the white, worn face which, with the lamp-light shining on it, seemed of a deathly hue. [To be concluded.]

DOUBLE ACROSTICAL ENIGMA.

I am composed of 19 letters.
My 1, 5, 18, 11, 19 is a river in Kentucky.
My 9, 16, 8, 18 is a lake in Ireland.
My 3, 16, 1, 19, 9, 9, 17 is a town in Hindostan.
My 4, 12, 18, 9, 16 is a Scripture name.
My 5, 9, 10, 15 is a woman's name.
My 6, 5, 17, 9, 14 is an ancient weapon.
My 7, 16, 10, 18 is an instrument of torture.
My 8, 4, 13 is a boy's nickname.
My 9, 6, 6, 19, 1, 11 is a cape on the coast of S. America.
My 10, 3, 17, 19, 10 is a town in Turkey.
My 11, 9 is an important diphthong.
My 13, 8 are consonants.
My 18, 3, 4, 7 was the vulnerable part of Achilles.
My 14, 9, 7, 1, 6 is a river in Russia.
My 15, 3, 1, 11, 5 is the cause of much evil.
My 16, 6, 12, 4 is a plant.
My 17, 9, 14, 11, 8 is a kind of fodder.
My 18, 16, 10, 2 is the language of the Scotch Highlanders.
My 19, 15, 1 is an animal.
My whole was a distinguished Revolutionary patriot.
Avon Springs, N. Y., 1859. T. N. G.

Answer in two weeks.

ALGEBRAIC PROBLEM.

THREE persons, A, B, and C, bought a flock of sheep. The square root of A's share is equal to five times the fourth root of B's share divided by two, and the square root of B's share is equal to four times the cube root of C's share divided by three, and the square root of A's share added to the cube root of C's share is equal to eight. What was the whole number of sheep in the flock, and what was each man's share?

Knowlesville, N. Y., 1859. W. M. JONES.

Answer in two weeks.

ANSWERS TO ENIGMAS, &c., IN No. 470.

Answer to Miscellaneous Enigma.—Address "Fanny," Mill Centre, N. Y.

Answer to Mathematical Problem:

Your readers will probably say the problem in No. 470 is very simple, and anybody can answer that the number is equal to the number of cubic inches in a cubic foot, which is 1,728. But some curious mind may inquire why have one-tenth of an inch in the height of the box? I answer that in consequence of the 1-10 of an inch above 6 inches, I am enabled to pack in 121 more marbles than could be done with the height just 6 inches. If the height be just six inches, there can be put in 16 courses—8 courses of 144 in each, and 7 courses of 121 in each, but if the box be made 1-10 of an inch more than 6 inches in height, there may be 17 courses put in, 9 of 144 and 8 of 121 in each, which equals 2,304—the answer. L. L. NICOLAIS.

Answer to Riddle.—Health.

W. D. R., Copenhagen, N. Y.—We have nothing further in reference to the problem of which you speak than what has been already published. The answer is 10 928-1000 miles. You do not send answer to your enigmas—a necessary feature, as we depend upon the boys and girls furnishing all solutions, and giving them correctly.

Moore's Rural New-Yorker,

THE LARGEST CIRCULATED

Agricultural, Literary and Family Weekly,

IS PUBLISHED EVERY SATURDAY BY

D. D. T. MOORE, ROCHESTER, N. Y.

Office, Union Buildings, Opposite the Court House, Buffalo St.

Agents in New York and Boston.

SUBSCRIPTION.—C. M. SEXTON, Agricultural Book Publisher, 25 Park Row, (opposite Astor House) New York, Wholesale, (to supply Periodical Dealers, &c.)—DEKSTER & BRO., 14 Ann St.,—ROSE & TOUSEY, 103 Nassau St. ADVERTISING.—R. M. PETTINGILL & CO., No. 119 Nassau St., New York, and No. 10 State St., Boston.

TERMS, IN ADVANCE:

TWO DOLLARS A YEAR—\$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for \$5; Six, and one free to club agent, for \$10; Ten, and one free, for \$15; Twenty, and one free, for \$25; Thirty, and one free, for \$35; Forty, and one free, for \$45; Fifty, and one free, for \$55; and any greater number at same rate—only \$1.25 per copy—with an extra copy for every Ten Subscribers over Thirty. Club papers sent to different Post-Offices, if desired. As we pre-pay American postage on papers sent to the British Provinces, our Canadian agents and friends must add 12½ cents per copy to the club rates of the RURAL. The lowest price of copies sent to Europe, &c., is \$2.50—including postage.

THE POSTAGE ON THE RURAL is only 3½ cents per quarter to any part of this State, and 6 cts. to any other State, if paid quarterly in advance at the post-office where received.

ADVERTISEMENTS.—Twenty-Five Cents a Line, each insertion, payable in advance. Our rule is to give no advertisement unless very brief, more than six to eight consecutive insertions. Patent Medicines, &c., are not advertised in the RURAL on any conditions.

PUBLISHER'S SPECIAL NOTICES

THE MONEY WE RECEIVE.—Bills in all payment books in U. S. and Canada taken at par on presentation to the R. N. Y., but our agents and other friends will receive from New York, New England or Canada money with discount. For all amounts over \$15 we prefer Drafts on either New York, Philadelphia, Boston, Albany, Rochester or Buffalo (less exchange), payable to our order—and all such drafts may be mailed as our risk.

THOSE who are forming large clubs, can forward the names and money for a part, and complete the lists afterwards—receiving the same gratification, when completed, as if all were remitted at once.

IF ordering the RURAL please send us the best money conveniently obtainable, and do not forget to give your full address—the name of Post-Office, and also State, &c.

Now, SUBSCRIBERS who receive this number of the RURAL New-Yorker, are invited to give it a careful examination, and, if approved, lend their kind offices to introduce the paper to notice and support in their respective localities.

MOORE'S RURAL NEW-YORKER

AGRICULTURE, HORTICULTURE, RURAL LIFE, EXCELSIOR, LITERATURE, SCIENCE, ARTS, & CRAFTS

TWO DOLLARS A YEAR.

"PROGRESS AND IMPROVEMENT."

(SINGLE NO. FOUR CENTS.)

VOL. X. NO. 5.]

ROCHESTER, N. Y.,—FOR THE WEEK ENDING SATURDAY, JANUARY 29, 1859.

[WHOLE NO. 473.]

MOORE'S RURAL NEW-YORKER,
AN ORIGINAL WEEKLY
RURAL, LITERARY AND FAMILY NEWSPAPER.
CONDUCTED BY D. D. T. MOORE.
With an Able Corps of Assistants and Contributors.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, Usefulness and Variety of Contents, and unique and beautiful in Appearance. Its Conductor devotes his personal attention to the supervision of its various departments, and earnestly labors to render the RURAL an eminently reliable Guide on all the important Practical, Scientific and other Subjects intimately connected with the business of those who are interested in its contents. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate and beautiful Engravings, than any other Journal, rendering it the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.
For Terms and other particulars, see last page.

TIMELY HINTS.

The winter is fast passing away, and soon it will be numbered among the long array that have gone before. Its departure will cause regret to but few, for while we love the winter, its quiet and rest, its social heart-life, its leisure for reading and thought, we rejoice at the approach of the gay, blooming spring, when the birds return with their sweet music, the trees begin to array themselves in their summer vestments, and all nature puts on a smiling face. But we had not the least design to be poetical, and only now purpose to make a few suggestions that may be of service at this time. The failure of the wheat crop in many sections of the country, has caused farmers to look about them for the best substitutes, and considerable forethought and planning is necessary to determine the best crops to plant, the best way to procure the seed, and the best mode of cultivation. A desire to aid our readers in arriving at proper conclusions, has caused us to give considerable thought to this subject, and in the present and previous numbers we have described plants not generally grown in this country, that perhaps may be introduced to advantage. Of late we have examined the importations of agricultural products to ascertain what we were purchasing from foreign countries that might better be grown at home, and we will give a few facts for the consideration of the producers of the country.

During the last fiscal year, ending June 30, 1858, there were imported into this country nearly \$100,000 worth of potatoes. Most of these were what are known in eastern cities as *Bermudas*. They are similar to our *Western Red*, but being raised in the warm climate of the British West Indies, are ripe about the time we plant, and find a ready sale here, as *new potatoes*. The Secretary of the Treasury, however, reports importations amounting to \$7,000 from Ireland and \$3,000 from England. Last fall we saw a statement in the Boston papers that 20,000 bushels of potatoes had been received at that port in one week, from New Brunswick. These facts would seem to show that growing potatoes is a good business for those who are within reach of the eastern markets. The *Blue Mountain* has long been the favorite with wholesale buyers, and sells for the highest price, but unfortunately it is not productive. For a year or two growers have been testing the *English Fluke*, and it is a good potato, and yields well. We have been told that it is not a favorite East, but with the experience of only a few trials, we think we know of none much better. Excepting always that little gem, the *Mountain*, which every farmer who is fond of good living should raise for his own use, and for a few customers who are willing to pay for them. The *Blue Mountain* is getting to be a great favorite East. It is a fair-sized, roundish, white-fleshed potato, the skin parti-colored, of red and white, one end being almost entirely red, and the other end almost entirely white. It bears good crops, and sells as high in New York as any variety, and therefore is a good sort to plant for shipping. It originated in New Jersey, we believe. Seed can be obtained here at \$1 per bushel.

Flax Seed we imported last year to the value of over three millions of dollars, mostly from the East Indies and Russia. *Linseed Oil* \$33,843 gallons, at an expense of \$164,757, nearly all of which was bought of England. Whether there is any necessity for this large importation of *Flax Seed*, and its oil, we leave our readers to judge.

Castor Oil, no doubt, will be thought a small matter, hardly worthy of notice, and yet we bought last year 936,578 gallons, costing us \$143,458. This mostly came from the East Indies, but over 22,000 gallons from England, and 240 from Canada. England presented a bill for *Oatmeal* of \$3,305. No one will believe there is any necessity for purchasing ground oats. Was the demand greater it would no doubt be generally manufactured in this country. It is principally consumed, we presume, by Europeans who prefer it to corn meal. It is ground pretty extensively in Canada, in some of the Scotch settlements. Germany and Holland we paid over \$10,000 for *Barley*.

Many of the *Dye Stuffs* that we import might be grown to advantage here, such as *Madder*, for which we paid last year \$721,786, *Wood*, and *Weld*, or *Dyers' Weed*, of which we may speak more particularly hereafter.

Of fruit we talk sufficiently in our *Horticultural Department*, and will here only remark that we exported last year 27,711 barrels of *Apples*, which brought us \$74,363, of these 941 barrels were sent to England, 14,570 to Canada and 858 to Australia. Boston shipped 7,000 barrels, Genesee, (Rochester,) 5,425 barrels, Niagara 3,931 and New York 2,836. That the raising of our fine, long-keeping apples, for exportation might be made profitable, we have not the least doubt.

If the *Hungarian Grass* is as valuable as feed for horses and cattle, and produces from four to eight tons per acre, as our friends at the West represent, it seems to us it might be profitably grown in some localities on our strong, deep soils, for pressing and shipping to the large cities. In others it might be grown to advantage for feeding.

We shall continue to introduce to the notice of our readers such things as are at least deserving of thought, in the hopes that some will be induced to give them a trial, and thus add to our stock of practical knowledge.

CANARY SEED.

Among the many articles not enumerated in our list of necessities, and for which we as a nation send out a considerable sum of money annually, is that indicated by our title. To what extent the purchases of this seed may have grown we have no means of obtaining information which might be deemed reliable. In the table of Imports, as furnished by the Secretary of the Treasury in his Report on Commerce and Navigation, all "Seeds" are included under a general head, and their aggregate value is several hundred thousand dollars. The consumption of this city and vicinity, may be taken as a fair estimate of the Middle and Eastern States, and here, from the best figures we have been enabled to make, we may safely place the value of the annual sales at from \$4,000 to \$5,000. One of our heaviest dealers remarked "that there were twenty persons engaged in the traffic who sold to the amount of \$200, and upwards, and quite a number whose sales run downward from these figures." For the past year the transactions will be much above the sums stated, as the seed has been scarce and high. It usually costs, in New York, \$3.00 per bushel, but now brings \$4.50; and, though subject to fluctuations in price, the amount disposed of is regular, with a tendency to increase. "These things being so," we have thought a brief description of the plant, its habits, culture, &c., might prove of interest to *RURAL* readers, more especially as a large number are just now scanning the products of both the Old World and the New, for something that will, in some degree, aid in supplying the loss caused by the devastations of the midges. At all events, if this crop be suited to our climate, it is useless to send abroad for that which may be produced at home.

CANARY GRASS—FORM OF HEAD.

Botanically, *Phalaris canariensis* is the common representative of a genus of grass allied to *Panicum*, but distinguished by its possessing a pair of rudimentary

forelets at the base of the perfect one, which latter is concealed inside of a pair of glumes, each of which is furnished with a broad wing at its base. The grain is eventually closed within the valves of the forelet, at which period it is hard and tough. The plant is an annual and is a native of the Canary Isles, from which it derives its name.

In the early growth of this plant it so strongly resembles oats or wheat, as to be scarcely distinguishable from these cereals, except to the practiced eye. When well cultivated, its usual height is from three to four feet; each head contains upwards of one hundred seeds, and the produce ranges from thirty to forty bushels per acre. In our engraving may be seen the form of the ears, and also that of the straw. The stalk or straw is hard, woody, and of little value for fodder, but the husk is considered good food for horses, and is used for this purpose in England and on the Continent.

In reference to its culture, we must draw from foreign journals for the knowledge obtained, and on this point the *Cyclopædia of Agriculture* remarks that a deep and adhesive soil is most suitable; still a crop of it can be procured wherever a good yield of wheat may be expected; on poor and ill-conditioned soils it is useless to plant it. In some parts of England it follows other grain crops in the rotation, and is frequently sown in the place of wheat or barley, when the husbandman fears that through the richness of the soil these would prove too strong and become lain. The ground intended for this crop is usually plowed in the fall, and as early in the spring as possible the surface is thoroughly harrowed to the depth of two inches, thus providing a fine seed bed and firm bottom, or rooting soil, two essentials to its successful cultivation. The quantity of seed used is about four gallons per acre, drilled in between one and two inches deep, and covered by a light harrow closely following the drill. The drills should be about ten inches apart, and the hoe is freely used between the rows. In its early stages the thin blade first produced scarcely shades the ground, and the weeds are inclined to occupy all the room, but these must often feel the hoe-blade, and the surface kept clean. The period of harvesting is usually after the grain crop—it must be left till the seed in the topmost heads is ripe. If sown as above described, it is cut with the cradle, laid in swaths, and thus left until the heads are well browned. Should wet weather occur, and some of the early seed become sprouted, it will not prove of such serious injury to the crop as though it were housed before the late heads were ripened. When the latter condition is attained, it is bound in sheaves while quite dry, and carried to the stack or barn immediately.

When threshing is attempted soon after harvest, a considerable degree of labor is encountered, and it is customary to keep it in the stack or mow until the succeeding spring or summer, as the whole may then be much more readily separated from the husk. While remaining in this condition, however, it needs the vigilance of the grower to preserve it from the mice, as it is preferred by these vermin to most food produced on the farm. The weight per bushel is about the same as wheat—the yield per acre, under like circumstances, is about equal—and to constitute it a profitable crop, as the straw is worthless, it should bring a little better price than the grain mentioned. This it generally does; but when lower, the English farmer, as it is easily preserved, keeps it over until his demands are complied with.

The question naturally arises—Can it be grown by the American farmer? To this query we reply that experiments, made in gardens in this city, have proved successful as far as growth and maturity are concerned. The following, narrated by one of the dealers in this commodity, proves its perfect hardiness:—"Keeping, as I do," he remarked, "quite a number of birds, I had the cages cleaned upon the side walk, and a considerable quantity of the seeds were carried and deposited in various places by the wind. Going out one morning to sweep up some saved for my pets, I was much surprised to find that a crop had sprung up, taking root between the curb-stones and the bricks, and an examination proved that, though the stalks were dwarfed to five or six inches in length, the heads were fairly developed, and the seed entirely matured." When it is known that the "field of operations" chosen for this remarkable crop was on the south side of one of our principal streets, and that the sunlight could reach the little struggler for life but a few hours morning and evening, all doubts as to its capacities for endurance will be dispelled.

FATTENING BEEF ON POTATOES.—A correspondent of the *New England Farmer* writes:—"About twelve years ago I fattened a heifer for beef wholly on potatoes. My plan was to feed small potatoes whole, without cooking, with as much hay as was wanted, and but little water, and I had as good beef as those fattened on corn meal."

STEEL-BLUE BEETLE, ITS FAMILY CONNECTIONS.

Figure 1.—*Gastrophysa*, CURVE. *Cyanæa*, MELI. a, the hind leg; b, the antennæ; c, the head. There are five described species.
Fig. 2.—*Gastrophysa*, female depositing eggs. e, on the *Rumex obtusifolius*.
Fig. 3.—*Graptodera*, CURVE. *Chalybea*, ILLI. The Grape Vine Flea-beetle. d, the antennæ. Six species.
Fig. 4.—*Phyllotreta*, CURVE. *Striolata*, ILLI. *Orthocera*, FAB. *Galleruca*, EL. Turnip Flea-beetle. f, antennæ; g, hind leg.

Fig. 5.—The Cucumber Flea-beetle, and its lower side, in part.
Fig. 6.—*Calligrapha*. Nine species are described.
Fig. 7.—*Ips quadrimaculata*, or 4 signatus. There are ten species described. This belongs to the family Nitidulidae. j, the clavate antennæ; k, the hind leg.
Fig. 8.—*Ilepea*, (Saturnalis) eight species.
Fig. 9.—Family *Cassididae*—a deloyala, natural size, upper and lower side. Two species.

DEAR RURAL:—I avail myself of your columns to give a short account of a small, steel-blue beetle, and its family connections, which was submitted to my inspection, with a view to learn its name; its pernicious habits were made lamentably manifest to Mr. G. P. PIERCE, of Wisconsin. Mr. P. sent several specimens of the small creatures, so brilliant in their coat of lustrous metallic blue, to J. B. GARDNER, Esq., of Floral Retreat, in this county, taken from his grape vines, on which they had made sad havoc, by eating out the undeveloped fruit clusters, and other tender parts of the vine, early last spring.

I know Mr. G. is a subscriber to the *RURAL*, and for the benefit of its readers generally, and Mr. P. in particular, (who is, no doubt, also a subscriber,) I submit the following:

The little beetle in question belongs to an extensive family of leaf and bud-destroying insects, comprehended among the CURVEOLINI, including the Flea-beetles and Galerucians, formerly considered distinct families. There are a number of genera each, embracing a greater or less number of species, which it is difficult, in many cases, to distinguish apart, owing to their close resemblance and minute size. Fig. 1, illustrates the *Gastrophysa cyanæa*; a, the hind leg; b, the gradually thickened antennæ; c, the strong jaws. Fig. 3 is a female, as I have seen them so early as the 5th of May, with their abdomens enormously swelled, prior to laying their eggs, which those did, on the under side of the leaves of the dock, (*Rumex obtusifolius*). I was not aware of their damaging anything, yet they are by no means free from suspicion, and it is well to have an eye on them, they so nearly resemble Fig. 2, the *GRAPTODERA CHALYBEA*, as to be readily taken for the same insect. This latter is the insect in question; its antennæ Fig. 3, d, are of a uniform thickness in the 11-joints, and its thorax has a transverse depression, which the other has not. Fig. 1, I copied from a specimen found January 2d, two inches beneath the soil, near a grape vine, "alive and kicking," certainly not below the frost line. I considered the little fellow rather early in making his way out of his winter quarters, and if so, likely to meet with a cold reception—so I humanely gave him a place in my cabinet, in company with his "kith and kin."

The colors vary greatly in the same species, as Mr. HARRIS also remarks, from a dark purple, violet, Prussian blue, greenish blue, to a deep green color, and not always steel-blue, as the specific name *chalybea* implies.

Notwithstanding their hard names, long enough for a Polish count, they are not entitled to rank among the "big-bugs,"—but the wee creatures are not without notoriety, and are found to afford matter for history, like other depredators; and such was their importance in Europe that they were made a matter of especial investigation by the Duncaster Agricultural Association. A report by Mr. RINGWAY was published in 1834. Mr. H. LE KEUX, also, wrote a prize essay on their history, which was read before the Entomological Society, and published in the 2d vol. of their Transactions.

In our own country they are by no means unknown. Mr. DAVID THOMAS gave a highly interesting account, which was published in the 26th vol. of *SILLIMAN'S "American Journal of Science and Arts,"* in which he states, "these brilliant insects were observed by me in the spring of 1831, in Cayuga county, N. Y., creeping on the vines and destroying the buds, by eating out the central succulent parts. Some had burrowed even half their length into the buds. When disturbed, they jump rather than fly and remain where they fall for a time without motion." During the same season, these beetles appeared in unusually great numbers in New Haven, Conn., and its vicinity, and the injury done by them was "wholly unexampled."

Some vines were entirely despoiled of their fruit buds, as to be rendered barren for the season. In 1880 and 1881, he found the vine leaves infested by "small chestnut-colored smooth worms," and suspecting these to be the larvæ of the *chrysomelid viticola*, he fed them in a tumbler, containing some moist earth. "After a fortnight or so," some of the beetles were found in the tumbler. Hence, there is no doubt that the former were the larvæ of this beetle, and that they undergo their transformations in the ground. KOLLER recommends a strong tea or decoction of wormwood, as plants wetted by it will not be touched by the flea-beetles. Perhaps a decoction of walnut leaves would be equally well, as suggested by Mr. HARRIS. A decoction of tobacco I know is good where it can be applied.

The Turnip flea-beetle or Turnip fly, as it is often called, is known as the *Haltica* and *Crioceris*, now called *PHYLLOTRETA STRIOLATA*. Fig. 4, f, the antennæ, g, the hind leg. This may be found on the turnip, horse radish, mustard and cruciferous plants generally, from May throughout the summer. They cut the seminal leaves, as do the cucumber flea-beetle, Fig. 5, showing the top and hind legs beneath, enlarged. These are very injurious in gardens. Fig. 4 are more oval or oblong in shape, each wing-cover has a buff, wavy line, while Fig. 5 are of a uniform black color. The lines on Fig. 4 are sometimes reduced to mere dots, when they were supposed to be a different species and called *bipustulata* instead of *striolata*.

Fig. 6, a species of *Calligrapha*, of which there are nine described. Fig. 8, the little *Hispæ* (saturnalis?) l, the antennæ gradually enlarged; m, an enlarged wing-cover, showing the ridges and creases on their external margin. Fig. 9 is a beautiful little insect of the finest gold and purple, like a minute tortoise under its shell, which has a transparent border. The larvæ of these are dirty little fellows; they form for themselves a covering of excrement, which they bear over their backs by the assistance of an elongated forked appendage on the extremity of their body, reaching nearly to the head when bent over. This belongs to the *Cassididae*, and is one of two species of *Deloyala*, I think. There are a number of other genera belonging here.

Fig. 7 is a species of *Ips*, (*quadrimaculata*?) found very destructive to the tomato. This is copied from one found embedded in the fruit; j, the antennæ with its club-shaped end; k, the hind leg. The genus *Ips* belongs to the family Nitidulidae, embracing a number of equally mischievous little scamps that require seeing to.

Not to burden your readers with too long a yarn, I will close with the few here touched upon, but the subject is by no means exhausted, trusting that I shall be excused by those who have no taste in this line, as it may be highly interesting to others who are curious in such matters. J. STAUFFER.
Lancaster, Pa., Jan. 6, 1859.

RAISING FIGS.

My neighbor, JOHN SKAATS, of Darien, is the most successful producer of pig pork in Western New York. He has just slaughtered a litter of five, at ten months old, some of which average four hundred pounds, dressed weight! I am sorry I have not the exact figures to give you, but I will get them. Last year his pigs outweighed, *weight for weight*, any recorded in the *RURAL*. He raises a cross between the Suffolk and the Hereford. One neighbor, quizzing him, said, "SKAATS, I don't like the marks on your pigs."

"I do," says SKAATS; "they are all marked four hundred at a year old!"
"What breed are they?" asked a neighbor.

HORTICULTURAL.

A CONVERSATION ABOUT DWARF PEARS.

NUMBER THREE.

Visitor.—The great difference in the results of attempts at dwarf pear culture, have somewhat surprised me. Some seem to succeed; the trees grow well, and produce astonishing crops; others not only fail in getting fruit, but even the trees refuse to grow. For this difference, of course there must be a cause, and in this cause it seems to me lies the secret of the whole matter.

Editor.—The cause of success and failure is the nut which we are attempting to crack. But it is surrounded with such a thick shell of circumstances, that the work is a little tedious, if not difficult. The causes are:

- 1st.—Planting improper varieties and poor trees.
- 2d.—Planting in unsuitable soil.
- 3d.—Neglect after planting.

1st.—There are only a few varieties that succeed sufficiently well on the quince to make it advisable to plant them for profit, and some of these perhaps it would not be advisable to plant for market, either on the quince or pear stock. At the time dwarf pear culture began to attract attention in this country, little was known practically on the subject, and our nurserymen propagated all varieties on the quince root, many of which refused to make a successful growth. Those who bought and planted these sorts, of course failed,—jumped at the conclusion that dwarf pears were a humbug,—and are now ready to give their experience to any editor who wishes it for publication. This would be well enough, and would not lead to wrong conclusions, were they to give the names of the varieties; but this important matter is generally forgotten. About this time, French nurserymen, induced by the demand, sent many poor trees, that were unsuitable at home, to this country. They were sold cheaper than trees could be bought of our nurserymen, and many planted them. Most of these died, and writers, in giving their experience, forget also to mention this fact, and it is only by careful inquiry of other parties conversant with the facts, that the truth can be ascertained. **LAWRENCE F. ALLEN**, in giving his experience and losses, neglected to mention that many of his trees were of this character, and **Mr. Norton**, who recently wrote against dwarf pears, forgot to state that many of his trees were *cullings*, a fact he had previously acknowledged, and also the other fact, that of the good trees he planted, many were varieties that experience has proved are worthless for culture on the quince root. **S. B. Parsons** wrote an article for the January number of the *Horticulturist* describing his failure with a dwarf pear orchard, directly contradicting all his previous published statements, and containing hardly a homeopathic dose of truth. This you will see proved in a future number of the *RURAL*.

2d.—The necessity of planting trees in a good soil, is a hard lesson for the majority of cultivators to learn. Many thousands of apple trees have been ruined by being planted in a wet, mucky, or springy soil. The soil for an orchard of any kind, should be well drained, and any first rate soil for an apple orchard, would be equally good for the dwarf pear. The pear, however, does not thrive (at least I have never seen it do so,) on a very light, sandy soil, nor can it be expected to grow where the ground is soaked with water one-half of the year. Perhaps one-half of the trees planted, are ruined from being planted in a bad soil.

3d.—From the time **Adam** endeavored to cast the blame of his transgression upon his wife, down to the present time, when negligent cultivators endeavor to charge the results of their own carelessness upon the poor dwarf trees they have starved, ill-treated and murdered, men have ever been very careful how they acknowledged themselves wrong,—ever anxious to blame some one or something, to get clear themselves. For this reason no one acknowledges that he did not give his trees good culture—blight, or mico, the nature of the trees themselves, or a dispensation of Providence—"anything you choose, sir," as one said, "only don't say that I did it." Look at the newly planted orchards in all parts of the country, see how they are neglected, and yet, talk with the owners, tell them the truth and they will feel insulted. It is not strange then, that when persons write of their failures with dwarf pears, that they do not acknowledge a want of care; indeed, it is not surprising that they stoutly affirm their trees were well cared for. Traveling in Canada West, north-west of Princeton, we observed that the country was almost bare of fruit trees. Passing a farm-house, near which was a meadow, and in it a few disconsolate looking young apple trees, we accosted the owner, and inquired why he had not a good orchard. To this he replied by pointing us to the few scrubby trees in the meadow, and informed us that that was the result of his third planting, and he had got through. Trees would not grow—the climate was too cold, the wind too bleak, and the trees nursery-men sold not fit to plant. This was pretty much the explanation of all his neighbors. We suggested want of care, but it was no use, so we passed on. Less than a mile further on we came to a blacksmith's shop, and near it we were surprised to see a neat garden, and as pretty a young apple orchard as our eyes ever beheld; the tops were well formed, the bark bright and glossy, with every evidence of vigor. Of the son of **VERLON** we inquired, what he did to cause his trees to grow so well, and why all his neighbors failed. To this he replied, as we expected, that he had only watched his trees and cared for them. Kept the cattle from injuring them kept the ground mellow, pruned when he thought necessary, washed the bark every spring with lime, and on every insect likely to do damage, "My neighbors," said he, "think my success is due to the smoke from the chimney, the apples, or sun-burnings, but if I served my trees as I served mine, there isn't iron-dogs nor ashes

JAMINETTE DWARF PEAR TREE.

enough in Upper Canada to keep them from dying. I used to tell them so, but now I let them alone. It makes them angry to be told they are not doing right." Two gentlemen near this city procured twenty-five seeds of the *Hubbard Squash* last spring, each took half and planted them. One is a very neat, careful man, the other a very little careless about small matters. The result was, the former raised fifty beautiful squashes, and the other did not raise one. The bugs destroyed them. And yet, should we inform him that the result was anything but luck; should we intimate that he was in any way at fault, he would think us very foolish or very impudent. Among the insects discovered by Entomologists, destructive to fruit trees; among all the animals wild or tame, large or small, that destroy our orchards, there is none so determined, so persevering, so unconquerable as man. **NERO** fiddled while Rome burned, and blamed others for the work of his own hands; tree-planters, more senseless still, grumble at the destruction they cause, and blame the objects that suffer and die from their ill-treatment.

Visitor.—This pretty clearly explains the cause of the difficulty, and also the difficulty of arriving at the whole truth, which, if fairly stated, would be of great benefit to cultivators, while a partial statement may lead to wrong conclusions and wrong practices. One thing is very apparent from our observations, that those who cultivate best, succeed best; and, therefore, I argue that what gives Boston and Rochester so good a reputation for pear growing, is the fact that the prominent cultivators at these places, understand the necessity of good culture, and not in any advantage of soil or climate. Those who neglect their trees, fail here as well as elsewhere.

[We are compelled by want of space to abridge our notes of conversation, but will remark in closing, that we visited the grounds of several private gentlemen, where we found pear trees as vigorous and beautiful as could be desired. Also the premises of **A. Frost & Co.**, and **ELLWANGER & BARRY**, and at the latter place we took a drawing of a very pretty and thrifty tree, planted eight years since, and that has borne abundant crops almost ever since. Last year, in bearing time, we saw it loaded, and about Christmas time we tasted of its ripened fruit. More than a bushel was picked from it last year. It is the *Jaminette*, which we figured and described in the *RURAL* of last year, (Dec. 4th,) and which we now recommend as an excellent grower on the quince, exceedingly productive and vigorous, and a fair winter pear. The tree is 12 feet in height.]

BEST APPLE TREES FOR THE WEST.

MESSES. EDITORS.—I notice in the *RURAL* of Dec. 11th, an article written by **H. P. KIMBALL**, of Rockford, Ill., advising new beginners to set seedling trees and top-graft them. **Mr. KIMBALL** says seedlings do better than any kind of root-grafted stocks; also, that the seedling always bears bountifully, and the cold affects them but slightly. I at present differ with **Mr. KIMBALL**, in part, at least. First, that seedlings are not always more hardy than root-grafted trees. All of our best varieties were once seedlings. Some were tender, as the *Rambo*, and others hardy, as the *Fameuse*. Now, if the *Fameuse* is grafted on any good stock, either in the root or in the top, it will make a hardy tree. I will admit that if the *Rambo* is grafted, standard height, on a hardy seedling it will make a better tree than if grafted in the root and then trimmed up tall, with but few limbs to shade the body from our scorching sun. But, if the *Rambo*, tender, or *Fameuse*, hardy, are both grafted on tender seedlings, standard height, both will be injured, or killed alike by cold.

Mr. KIMBALL says, by using seedlings you avoid the crooked trunks like the *Fameuse*, and have good feeders besides. Are all seedlings straight? No; but you can select straight ones. Are all grafts crooked? No; take the straight ones then. Select from both alike and in most cases you will have trees equally straight. We must not trim our trees in the West to a tall, straight stem, but let them limb out low, within two or three feet of the ground, and the crook in any variety, if the top is left low, will not be seen, after a few years' growth, and will be of no injury to the tree. If they are grafted at the collar of the root, as they should always be, then the root-grafted tree has the same feeders as the seedling. I do not approve of using short pieces of roots, indiscriminately, as some nurserymen do, but use the collar always.

Mr. KIMBALL says the seedlings always bear bountifully. If we set seedlings four or five years old and graft them, we expect to get fruit in three

years after grafting, if of early-bearing varieties. This makes them seven or eight years old, as the case may be. Now, I contend that if we take root-grafted trees, (grafted at the collar,) and of the same varieties, and of the same age as the seedlings, and set them at the same time you do the seedlings, that at the end of three years they will bear more fruit than the grafted seedlings, and the root-grafted trees will have by far the handsomest tops. I mean that the trees, seedlings and grafts, shall be of the same age at the time of setting.

We find seedling trees in most nurseries standing by themselves, and they are in most cases neglected, at least until the grafts have been well tended and cared for, and at the age of five or six years are not larger than the grafts, (which have been well cared for,) are at the age of three or four years. Now, if you take the seedlings of six and the grafts of four years old, and (because of the same size,) expect fruit as soon after setting from the root-grafted tree as from the seedling, it is not giving the grafts an equal chance with the seedling.

Mr. KIMBALL says seedlings injure but slightly in winter. Two years ago the coming spring I purchased eight hundred seedling trees, five years old, believing them to be more hardy than grafts. Before setting them in the orchard I cut one or more of the main branches off from every tree to see if they were injured by the cold of the past cold winter of 1855-56, as I was determined to set none but healthy trees. What was my surprise to find but three hundred and six trees that I would risk at all, and I have since replaced some thirty or more of these with root-grafted trees. The remaining four hundred and ninety-four trees I threw away, being worthless. Last spring I went eighty-four miles by railroad and bought two thousand large seedlings, five and six years old, with the privilege of throwing out such as I thought were injured in the least. I think I threw out one-third or more at the time of packing, and when I came to set them out in the orchard, I threw out over six hundred of the two thousand as worthless, being black at the heart. The remaining fourteen hundred have done well. Two years ago at the time I set my first-mentioned seedlings, I set one hundred two years' old root-grafted trees, of different varieties; not one has died, and they are by far the handsomest trees, and in one year more will be larger than the five year old seedlings set at the same time. Of course this convinces me that two years' old trees are better than five years' old. Also, that root-grafted trees, grafted at the collar, are as good if not better than most seedlings.

My way of setting an orchard is to select out of a quantity of seedlings, a few that are white at the heart, to graft tender varieties on at the height I want the top to form. I would only graft a few tender varieties; there are a few that we can hardly dispense with, and set the remainder of root-grafted or budded trees, of such varieties as are known to be hardy, good bearers, and of varieties that sell well in the market. Two or three years old trees are large enough, and I prefer the former age, as they can be moved with their roots entire, and they suffer little check in their growth.

The following varieties have proved hardy in nearly all sections of the country, and I should rather risk them than any seedlings that I have yet seen.

FOR WINTER.—*Raules Jannet* seven-eighths—hardy, and a great bearer. *Winecap*—handsome and perfectly hardy. *Golden Russet*—late keeper, and perfectly hardy.

FOR FALL.—*Fameuse*—always fair and perfectly hardy. *Full Winecap*—fair and hardy.

EARLY APPLES.—*Carolina Red June*—early bearer and perfectly hardy. *Red Astrachan*—early bearer and perfectly hardy. *Kewick Codlin*, for cooking—early bearer and perfectly hardy.

I hope to have the experience of others through the *RURAL*, as this is a subject that I am much interested in. I will close for this time by saying that I have twenty acres of orchard, and have twenty acres more ground that I shall set to orchard as fast as possible, and I shall set two years' old root-grafted or budded trees, in preference to large or seedling trees.

E. H. SKINNER.

GENESSEE VALLEY HORTICULTURAL SOCIETY.

The Annual Meeting of the Genessee Valley Horticultural Society, for the election of officers, appointing committees for the ensuing year, and transaction of other business, will be held at the Court House in this city, at 10 A. M., on Monday, February 7th. It is desirable that there should be a general attendance of members, citizens, and all in this vicinity interested in horticulture.

LEAF BLIGHT.—CRACKING OF THE PEAR.

MESSES. EDITORS.—In the *RURAL* of Jan. 4th, "W. W." of Rochester, speaks of Leaf Blight and cracking of the Pear. Does he mean to say that this mildew, or fungus, is the cause of cracking? I have an orchard of 200 pear trees, and have no leaf blight. One hundred and fifty of my trees are *White Doyenne* or *Virgatus*, and for the last two years they have cracked so badly that they were good for nothing. Half of them are standards and half dwarfs. No difference between them as to cracking. They are thrifty, fine trees, and no sign of leaf blight. I think of grafting in the spring. They have been set five years. Is there any remedy for it? W. W. speaks particularly of a remedy for blight,—does he mean the same for cracking? What would be your advice as to grafting? The soil is loam inclining to clay; subsoil clay. The ground has been drained with stone drains. I hope to hear from correspondents on this subject. **Horseshoe, Jan., 1859.** **CHUMERO.**

REMARKS.—When the leaves blight badly the fruit generally cracks, but pears often crack when the leaves are perfectly healthy. It has not been proved that there is any connection between the two diseases, though very similar in character.—We can give you no specific for either. We would graft the *Virgatus* with the *Duchesse de Angoulême*, *Louise Bonne de Jersey* and *Barlett*.

FORTY ACRE FRUIT AND NURSERY FARM.

RESERVED for time and space we have several inquiries for plans for laying out village and other gardens, which will receive attention before long.—Below we give a plan for laying out a small fruit farm, which we have no doubt will be of advantage to many of our readers, although it may not be adopted by one. The note below, sent us, with a plan that we did not like, explains itself:—

EDS. RURAL.—Accompanying these lines is a fac simile of a plan for a Fruit and Nursery Farm of forty acres, sent me by a Western friend for my criticisms, suggestions of alterations, &c., but as this is not my forte, I have decided to apply to you, believing you to possess both taste and skill in such matters, and would be pleased to see your alterations and arrangements (if any). Or, if the accompanying plan is not capable of alteration, would be pleased to see your plan of forty acres for such purposes, irrespective of the locality or position of the land, which, of course, should be consulted in practical execution. Think possibly it may be of interest to many, and set more than one reader of the *RURAL* to thinking how to arrange their home, with a view to convenience, comfort, and beauty.—**E. WILLIAMS, West Bloomfield, N. Y., 1859.**

The plan, we observed, we did not like. In the first place, the plots were of different sizes and forms, and although this is well in a garden, we dislike it for trees that are to be cultivated with horses. Then, they were difficult to get at, it being in some cases necessary to cross one plot to get into another. Neither the apple or peach orchards could be reached without crossing the vineyard. We gave this plan to a landscape gardener of this city, **Wm. WINTER**, and requested him to draw us a good plan, giving some suggestions as to our notion. The result is given below.

It is divided into eight plots, containing about four acres each, and the front plot, in which is the house, barn, lawn, &c., contains about eight acres. Through the centre is a road connected with each square, and a road is made around each. Opportunity for turning may be had at the crossings of the roads, but a still better chance is given at the back of the lot. A border of standard fruit trees is planted around the whole farm, both for fruit and shelter. These plots, of course, might be divided to suit convenience, or crops. A, A, apple orchards. B, standard pears, cherries and plums. C, peaches and apricots. D, vineyard. E, raspberries, gooseberries and currants. F, strawberries. G, vegetables. H, dwarf pears and quinces. I, nursery stock. Of course, if a person desired to do much in the nursery business, a larger quantity of land than the plan gives, would be needed.

THE PEACH CROP IN WESTERN NEW YORK.—From all parts of Western New York, we are receiving intelligence of the almost total destruction of the peach buds. In some orchards a few remain sound. One of the most extensive peach-growers in this county sends us the following note:—

I regret to say that on examination of peach buds, yesterday, I find that most of them are killed. I sincerely hope that it is not universal throughout the county.—**AUSTIN PERRY, Clarkson Jan. 18, 1859.**

The weather is now, January 25th, mild and bright. Our friends in some localities would do well to look out for the mice.

CAKES, YEAST, PRESERVES, BISCUIT, &c.

EDS. RURAL.—As I have been an attentive reader of your paper for a considerable period, and finding myself much benefited by many of your domestic recipes, feel inclined to add a few of my own, which have been well tested and highly approved by those competent to judge:

KENTUCKY CAKE.—One-half pound butter; 1 of sugar; 1½ pounds of flour; ¼ pint sour milk; 5 eggs; 1 teaspoonful of soda; spices with nutmeg.

CUP PUDDING.—Three-fourths pound of flour; 1 pt. sweet milk; 4 eggs; 3 ounces butter. This pudding is to be baked in small cups, make any sauce you fancy.

YEAST.—One handful of hops; two quarts of water; boil twenty minutes, then strain and mix this with flour into a batter, to which add one tablespoonful of salt; one of brown sugar; one of ginger; let it stand until lukewarm, then add one-half pint of fresh yeast. Do not cover the jar until the process of fermentation is over, then cover close and keep in a cool place. A small teaspoonful of this, well stirred up from the bottom, will answer for four common-sized loaves. The sponge should be set over night with warm water.

WATERMELON-RIND PRESERVE.—Select your rind firm, green, and thick; cut them in any fanciful shape—such as leaves, stars, diamonds, &c. When cut, weigh, and to each pound of rind allow 1½ pounds of loaf sugar. Now for the process of greening. Take a brass or copper kettle, and to a layer of grape vine leaves, which should be well washed, add a layer of the rind, and so on until the last, which should be very thick and well covered with a coarse linen cloth. To each pound of the rind add a piece of alum the size of a pea—then fill up with warm water sufficient to cover the whole, and let it stand upon the stove where it will steam, but not boil, until the greening is completed, which will be in two or three hours. When green, lay them in clear, cold water, and commence your syrup. To each pound of sugar add 1½ pints of water, clarify, put in your rind, have ready sliced some lemons, two to each pound of rind, and when about half done add the lemons. You must boil until the rind is perfectly transparent. If you like the taste of ginger add a few pieces of the root, which will impart a high flavor, and is very pleasant when blended with the lemon.

SODA BISCUIT.—One quart of flour; 1 tablespoonful of soda; 2 of cream of tartar sifted into the flour; ½ lb. of lard; ¼ teaspoonful of salt. Mix into a stiff dough with sour milk, and work soft. Bake quick. **M. C. O.**

Louisville, Ky., Jan., 1859.

CANDLES FROM SOFT TALLOW.

The following recipe I have used, and know it to be valuable:—To twelve pounds of tallow add half a gallon of water; to which add three tablespoonfuls of pulverized alum, and two of saltpetre, which heat and dissolve. Then add tallow and one pound of beeswax; boil hard all together, until the water evaporates, and skim well while boiling. It should not be put in moulds hotter than you can bear your hand in. The candles look much nicer when the wicks are not tied at the bottom. It is not only a disagreeable task to cut the wick off, but it injures the moulds. Never heat moulds to draw candles in cold weather.

Perhaps it is not generally known that tallow from beaves, fed on corn or grain, is much softer than when fed on grass or clover. Therefore, the tallow from grass-fed cattle should always be hard, with the addition of very little alum and beeswax. In very cold weather much less alum must be used, or they will crack so as to fall to pieces sometimes; and a third more of each should be used in very warm weather, if the tallow is very soft.—**G. B. F. in N. W. Prairie Farmer.**

CURING HAMS.—Please say to **R. G. B.**, that if he wishes to cure hams, so that they will be tender and sweet, he must not put any brine on them, for brine has a tendency to make lean meat hard. The following recipe I have found the best of any I have seen. To a common sized ham take one ounce of saltpetre, and mix with it enough fine salt to rub the ham twice; after rubbing the ham, you can lay them in a heap, or in a cask, putting some sticks in the bottom so that the brine may run off, or a hole in the bottom of the cask that it may run out. After they have lain one week, take them up and rub on the remainder of the salt and saltpetre, let them lay eight or ten days longer, then take them up again and rub them with salt alone; lay them as before for another week, and they are ready to smoke.—**P. F. M., Chatham Four Corners, N. Y., Jan., 1859.**

TO CURE RHEUMATISM.—Seeing in a late number a call for a recipe for Rheumatism, I forthwith send one that is best I have. Take a large handful of wild blue fl. root, and as much black cohosh root, (pounded fine,) put into a quart of best brandy; let it stand a day or two, then take a teaspoonful three times a day till nearly well. Then taper off gradually to one a day until cured.—This is also a preventive.—**E. E. A., Ripley, N. Y., 1859.**

APPLE DUMPLINGS.—One-third pint of thick cream; two-thirds butter-milk; one teaspoonful soda; one half teaspoonful of salt; use flour enough to make a good dough. Dress a large sized apple, very sour, for each dumpling, and cover with a crust.—Steam, from three-fourths to an hour, and serve with butter and sugar. Good enough for an epicure.—**JAMES E. H., Piffard, N. Y., 1859.**

TO SETTLE COFFEES.—When eggs are non-comestible, pour boiling water upon the coffee, set it a short time while it will keep warm, and when wishing to use fill up with hot water, and it is ready for use.—**S. D. TOOKER, Toledo, O., 1859.**

BURIED FLOWERS.

BY KATE CAMERON.

I remember when gazing this morning
On the drifts of new-fallen snow,
And thought of a little form sleeping
That cold, chilling mantle below;
I thought how we carefully shielded
Our darling from every rude blast,
How warm was her couch in our dwelling,
Ere she from our loving arms passed.

It seemed to my yearning affection
That lonely and sad she must be,
In her narrow bed on the mountain,
Away from her Father and me!
I fancied the cold breath of winter
Would disturb the calm sleep of the grave,
And I thought there was none to watch o'er her,
And I, too, was powerless to save.

But then I remembered the blossoms
That flourish in summer and spring,
And faded away in the autumn
When our forest songsters look wing.
I knew that those fair flowers were sleeping
'Nath the pall of the cold, cheerless snow,
Yet they will awake in the spring-time,
And again in fresh loveliness grow.

And will He, who watches their slumber,
And clothes them with beauty once more,
Forget the fair human blossoms
When the Winter of Death shall be o'er?
Ah, no! In the glad Resurrection
They will rise with new beauty and grace,
And then, Oh! our sweet Buried Flower,
Thou'lt be clasped in our loving embrace!
Rochester, N. Y., 1859.

Written for Moore's Rural New-Yorker.

THE INTELLECTUAL ABILITIES OF WOMEN.

ANDERSON says, "what sculpture is to a block of marble, education is to the mind." Is it not even more, for the process of polishing displays only that which actually existed as much before the block was hewn as afterwards; whereas cultivation largely develops those organs of the mind which had no existence except in *germ*. Knowledge is the proper element of the mind, and just as well might we expect the physical system to grow strong without food, as the mind to expand without knowledge. Discipline the minds of women to patient and persevering application in the more useful sciences—let them drink from fountains rather than the tiny rivulets, and we shall be better prepared to judge of her intellectual abilities. We do not claim for her the judge's seat, nor the halls of legislation as the place in which to display her talents; neither is the scene of carnage her field of glory; but we believe she moves in a sphere which requires equal strength of intellect with the other sex. It is no evidence to the contrary because she has never turned her thoughts in the direction of a NEWTON, or a FULTON, and made like discoveries. Upon woman devolves the care of guiding aright the youthful mind. By her the noble principles which are to distinguish them in maturer years are engrafted and carefully cultivated, while yet so tender that a ruler hand might snap them from the tiny stem and blast them forever. I cannot think that God, who is the fullness of wisdom and knowledge, would have entrusted her with that care had he not also rendered her competent for the performance of it. Is it not a fact, fully demonstrated from the pages of the past, that there have been women, in every department of life in which they were suffered to appear, who have shown genius, second only to the brightest genius in man? "No charter has given man (noble as he is,) an absolute dominion in the elevated empire of intellect," and so long as the name of a LAVINA MARIA BAKKA graces the pages of history, or the productions of a MONTE, a HEMANS, a SOMMERVILLE and a SPOONMAN adorn our libraries, so long, in our humble opinion, the different traits of character are to be traced to the different circumstances under which the sexes exist, and not to any absolute difference in their mental organization.

But there is a moral sublimity before which the brightest intellect must kneel and adore, and I would that I could, as with a diamond point, engrave it deeply upon the heart of every free-born daughter of our happy land, to become as the God of nature designed they should, not only intellectually, but morally great—that they might truly become the ornament of society, the free, equal, and happy companion of man. No noble, generous heart can long love a starved and dwarfish soul, although encased in nature's fairest casket. He finds no thought, no feeling in harmony with his own, and "like the wires of an unfused instrument, his very heart-strings corrode with the rust of loneliness." But the educated woman,—the whose mind has expanded beneath the influences of the lowly Redeemer—forms the very nucleus of society at home. Her husband loves "her because she is good, and reveres her because she is wise."—she makes bright with intelligence that can never die those who abide within her province where chiefly is maintained the throne of her power—the name of that province is home, sweet home. The culture of her mind will be admired when her beauty withers and is scattered by the wind like her tresses; when the spring of life has passed, and the winter of her years has set in, and she is left to the quietude of old age, and the peace of a well-earned rest.

Farmington, N. Y., 1859.

MARRIAGE should be considered as the most solemn league of perpetual friendship, a state-union, which artifice and concealment are to be banished forever, and in which every act of dissimulation is a breach of faith.

Money makes the gay lady, but virtue the noble woman.

HOME AND WOMEN.

Our homes, of what is their corner-stone but the virtue of women, and on what does our social well-being rest but our homes? Must we not trace all other blessings of civilized life to the doors of our private dwellings? Are not our hearth-stones guarded by the holy forms of conjugal, filial and parental love, the corner-stone of Church and State; more sacred than either, more necessary than both? Let our temples crumble, and our academies decay; let every public edifice, our halls of justice and our capital of State, be leveled with the dust; but spare our homes. Let no Socialist invade them with his wild plans of community. Man did not invent, and he cannot improve or abrogate. A private shelter to cover in two hearts dearer to each other than all the world, high walls to exclude the profane eye of every human being; seclusion enough for children to feel that mother is a holy and peculiar name—this is home; and here is the birth-place of every virtuous impulse, of every sacred thought. Here the Church and State must come for their origin and their support. Oh, spare our homes! The love we experience there gives us more faith in an infinite goodness; the purity, disinterestedness and tenderness of home is our forerunner and our earnest of a better world. In the relation there established and fostered, do we feel through life the chief solace and joy of existence. What friends deserve the name, compared with those whom a birth-right gave us. One mother is worth a thousand friends, one sister truer and dearer than twenty companions. We who have played on the same hearth, under the lights of the same scene and season of innocence and hope, in whose veins run the same blood; do we not find that years only make the more sacred and important the tie that binds us? Coldness may spring up, distance may separate, different spheres may divide; but those who can love anything—who continue to love at all—must find that the friends whom God himself gave, are wholly unlike any we can choose for ourselves, and that the yearning for these is the strongest spark in the expiring affections.—*Christian Inquirer*.

FAT YOUNG LADIES AND VINEGAR.

TAKEN in moderation, there is no doubt vinegar is beneficial; but in excess it impairs the digestive organs. Experiments on artificial digestion show that if the quantity of acid be diminished, digestion is retarded; if increased beyond a certain point, digestion is arrested. There is reason, therefore, in the vulgar notion, unhappily too fondly relied on, that vinegar helps to keep down any alarming adiposity, and that ladies who dread the disappearance of their graceful outline in curves of plumpness expanding into "fat," may arrest so dreadful a result by liberal potations of vinegar; but they can only arrest it at the far more dreadful expense of their health. The amount of acid which will keep them thin, will destroy their digestive powers. Portal gives a case which should be a warning. "A few years ago, a young lady, in easy circumstances, enjoyed good health; she was very plump, had a good appetite, and a complexion blooming with roses and lilies. She began to look upon her plumpness with suspicion; for her mother was very fat, and she was afraid of becoming like her. Accordingly, she consulted a woman, who advised her to drink a glass of vinegar daily. The young lady followed the advice, and her plumpness diminished. She was delighted with the success of her experiment, and continued it for more than a month. She began to have a cough; but it was dry at its commencement, and was considered as a slight cold which would go off. Meantime, from dry it became moist; a slow fever came on, and a difficulty of breathing; her body became lean and wasted away; night sweats, swelling of the feet and legs succeeded, and a diarrhoea terminated her life. Therefore, young ladies, be boldly fat! Never pine for graceful slenderness and romantic pallor; but if Nature means you to be ruddy and rotund, accept it with a laughing grace, which will captivate more hearts than all the paleness of a circulating library. At any rate, understand this, that if vinegar will diminish the fat, it can only do so by affecting your health.—*Blackwood's Magazine*.

TOUGHENING INFANTS.

A WRITER on physiological subjects, in *Blackwood*, gives the following advice to mothers on the above subject:

"Maternal instinct has in all ages and in all climates taught women to keep their infants warm. Philosophers have at various times tried, by logic and rhetoric, to thwart this instinct. Philosophy has been eloquent on the virtue of making infants 'hardy,' and has declared that cold baths and slight clothing must be as 'strengthening' to the infant as to the adult. Listen to none of these philosophers, ye mothers! They are to be suspected when talking physiology, for under certain circumstances they are the worst of guides, deceiving themselves and you by that fatal facility which intellectual power gives them of making ignorance look like knowledge, and of so speciously arraying absurdity that it looks like plain common sense. It is bad, very bad, to listen to grandmothers, mothers-in-law and nurses, for their heads are mostly mere lumber-rooms of crotchets and absurdities; but it is better sometimes to listen to them than to philosophers who inspire more respect, and cannot irreverently be treated as 'old women.' Maternal instinct must not be perverted by such unphysiological teaching as that of 'hardening' infants. It is true that strong infants can endure this process, but it is certain that in all cases it is more or less injurious; for the universal law is that the younger the animal, the feebleness its power of resisting cold, in proportion to its possessing a higher temperature than the adult."

POLITICIAN is the religion of the heart, as piety is that of the soul. It is good nature in action. It renders whoever may be its object contented and happy under its softening influence. It consists in acts which show their source—the heart.

IN THE STILL HOUR OF NIGHT.

Is the still hour of night when deepening shadows
Shut from the vision all earth's outward strife,
Within the souls of men a magic curtain
Divides the inner from the outer life.

Then all the semblances which mask the spirit
In the rash din and turmoil of the world
Are cast aside, and like a written banner
We see the records of the past unfurled.

Then in the solitude, alone with heaven,
Once more are dreamed the glowing dreams of youth:
Once more the spirit, as of yore it worshipped,
Bows only at the glorious shrine of Truth.

Again the star of Hope is brightly beaming—
Again Peace reigns the trusting heart within.
And, like a guardian angel, Virtue keepeth
It undeluded from even the thought of sin.

These are the moments when the light ariseth—
When "Heaven comes down," and faith, and joy, and love,
Ruling in triumph over many sorrows,
Raise us all earth's vain cares and wrongs above.

Let us thank God that thus we gain, through shadows,
Some glimpses of a "better home" than this;
Aye, let us thank Him that we thus inherit
A foretaste of the endless feast of bliss.
Hastings, N. Y., 1859. ROSALIA.

Choice Miscellany.

THE SPIRIT OF UNREST.

To illustrate the difficulty of being contented with one's lot, Dr. FRANKLIN gave an apple to a little child. This filling one hand he gave it a second, which filled the other. He then offered it a third—larger, rosier and more beautiful than the other two. Failing to hold all three, it burst into tears. In the principle thus illustrated, we discover one of the strongest contributors to man's happiness and unhappiness in life. Discontented with our present state, we are ever seeking "solid bliss, by trying something new." Impelled by the spirit of "unrest," man is constantly seeking for something beyond his present grasp, and he who has experienced the joy of the inventor or discoverer, can believe us when we say there is no almighty joy like that which ascends in the glad "Eureka!" about which one heralds his triumph. Men believe that in earthly fame and glory is to be found the boon of happiness, yet when these are once attained, they always fail—with the false man, because it is not in his nature to be filled—with the true man, because those feeble lights are lost in the brighter glory which he experiences, the inward satisfaction of having taken a step in advance of his age. Appealing to him through the sentiment, "what man has done, man can do," this spirit of "unrest" reveals to him the hidden things beyond the bounds of present knowledge, and teaches to the soul, the grandeur, the beauty of creation. This "unresting" in the present once revealed a great idea to a man, and for twelve long years—years of disappointed hope, of failure, and accounted madness—this man sought to embody his idea, and behold now in every dwelling the record of the labors and triumph of DAUGHERRE. Men, fellow-men with you and I, have conquered hidden ideas, and in their jubilant glee have lacked the means of proclaiming their triumphs to the world; and lo, greater inventions have given them publicity.—*Steamer* cried,

"Hearken me down with your iron bands,"
and it was done. The lightning laughed in hoarse thunder notes at the impotence of man, and defied him, and lo, it has been chained to the chariot of thought, and now vies with the speed of light in its haste to do man's bidding.

This spirit of "unrest"—the soul of progress, and the inspiration of Genius,—is well nigh invincible. Let an idea but once laugh in its face, and no matter how vague, no matter how dimly seen far down the corridors of the unattained, and it pursues that idea, "unhasting, yet unresting,"

"O'er bog, o'er steep, thro' straight, rough, dense or rare,
And swims, or sinks, or wades, or creeps, or flies,"
steadily in the pursuit until it overtakes and drags forth for the inspection of a world. Are there great men living? Study them, and you will find this spirit, united with industry and unwavering perseverance, at the bottom of all their success.—The joy of Hope lights their pathway, until it becomes the joy of the Attained, only to break forth again in firstborn glory, to light them once more.

But not thus alone, has it blessed the world. It is a favorite pastime with many to bewail the devastation caused by ambition, conquest, and that "insatiate grasping for power," manifested by the world's tyrants. Are they tyrants? Who would affirm that Cæsar's conquests did not more for the savage nations of the North, than the preachers of peaceful civilization would have done for them to the present? Who would declare that NAPOLEON, with all his insatiable ambition, the embodied spirit of "Unrest," did not more for the progress, the liberty of Europe, than all the Peace Societies the world ever saw? Did he act from an ambition that was purely ungodly? There are those who say he did, and there are those who are willing to put faith in the good spirit of his heart, and say he truly sought the good of his country and of Europe.

Let him who would accomplish much, be careful lest he be ready to rest in the present. The spirit of which we have spoken, calls to us daily, hourly, in the voice of duty, obligations to God, our fellows, and to self, commanding us to rest not, but "seek that which is good." If disobeyed, it punishes, for who more miserable than he who is willing to sit down quiet and inert, satisfied with the attained, beholding no good in the future, but ease, inactivity and ingloriousness. He is happiest, who rather than be tossed by this spirit as by an angry sea, is willing to work, to keep in advance of its restless surging; for by that very spirit, which seems the tyrant of his life, he is enabled to overcome—to conquer for himself a kingdom.

Toledo, Ohio, 1859.

OLDEN MEMORIES.

It is pleasant, sometimes, to forget the active, living present, and lose ourselves in the memories of scenes and times past and gone—to think of the days when we were "boys," and ran and frolicked in fields and pastures—when we chased squirrels and rabbits, and hunted birds' nests—when we slid down hill, and skated, and built snow huts and glorious air castles, (some of us have not left off doing the last yet,) in the years ago. Shall we recall some of these "Olden Memories?"

"They are jewels of the mind:
They are tendrils of the heart,
That with being are entwined—
Of our very selves a part.
They the records are of youth,
Kept to read in after years,
They are manhood's well of truth
Filled with childhood's early tears.
Like the low and plaintive moan
Of the night-wind through the trees,
Sweet to hear, tho' sad and lone,
Are these 'Olden Memories.'"

The Old School-house. How our thoughts fly back at the sound. Thousands have written about it and described its scenes—thousands have told of its enjoyments, and of the days spent within its walls, and yet the name still thrills our hearts, and calls up pleasant memories of youthful days—of days when we sat in the shade of the maple which grew by the door, laughing and shouting in unrestrained and thoughtless glee, and playing our childish pranks with the boys and girls who gathered there. Of the walk through the orchard and down the road by the old birch and great rock—where we often tried to climb, and got many a tumble and bruise in so doing—to the place where grew the red raspberries which we used to pick and string on spears of grass and present to the "Mistress"—and then the school-house itself, the color of weather-beaten pine, with its low walls and roof—the maple in front, with its robin's nest which all the boys held religiously sacred—the woods and bushes behind, where we gathered hazel nuts, and got branches of the white maple to hang as curtains over the windows in the hot summer days—and where we went "beech-nutting" when the October frosts came. A little beyond the school-house was the clear, bubbling brook which came flowing out of the woods in the shadow of a noble hemlock, and then ran quietly through the field to the bridge under which we anxiously looked for swallows' nests—then went winding along between high banks, half-concealed by alders, and forming numerous eddies in which we fished for speckled trout, to the "swimming place," and then on till once more lost in the forest. Beyond the brook was the hill where, in the winter "noonnings," we used to slide, and have grand trials of speed between rival sleds.

With the memory of the old school-house, comes that of spelling and singing-schools—of first attempts at "speaking pieces" and writing "compositions"—of our first dreamings of fame—and of those who used to sit on its benches with us, of many of whom it can already be said—"after life's fitful fever, they sleep well." Others have roamed far away from the paternal home and hearthstone, and now, when twilight approaches, sometimes look back to the old place with pleasant memories. A few of those who used to meet in the shade of the maple are making for themselves a name in the land. From tracing the lives of those who used to gather there, we come back to the old school-house, and our thoughts wander to the old farm where we lived then, and to the old orchard from whence we obtained the Pippins, Pearmaines, and Baldwin's, the Gilliflowers and Greenings, with which we used to fill our pockets and ourselves; but of these, we will write another time.

The old school-house is gone—the woods and bushes are cleared away—cattle graze where the children played—the hemlock no longer shadows the brook now flowing between bare banks, seemingly not more than half so large as in boyhood's days—the place where we used to slide, and which we thought quite a hill then, is nothing but a knoll to-day; but the maple by the door still thrives and the robins still build in it—I stood in its shade not many months ago while my mind was filled with "Olden Memories."
H. M. A.
Princeton, Min., 1859.

Dr. HENRY KING, an English poet and divine, who lived in the seventeenth century, wrote a poem to his wife, in which occurs the following passage:

'Tis true, with shame and grief I yield,
Thou like the vane first took'st the field,
And gotten hast the victory
In thus adventuring to dye
Before me, whose more years might crave
A just precedence in the grave.
But hark! my pulses like a soft drum
Beats my approach, tells thee I come,
And alone house'er my marches be,
I shall at last sit down by thee.

In the above, it will be noticed, Dr. KING anticipated one of LONGFELLOW's finest images in the "Psalm of Life."

Art is long and time is fleeting,
And our hearts, though stout and brave,
Still, like muffled drums, are beating
Funeral marches to the grave.

We think the image is used with equal felicity in both cases.

DEATH.—We thought nothing new could be said about death, but Taylor of the Chicago Journal, has the following ideas:—"There is a dignity about that going away alone; that dying; that wrapping the mantle of immortality about us; that putting aside with a pale hand, the azure curtains that are drawn around this cradle of a world; that venturing away from home for the first time in our lives, for we are not dead; there is nothing dead to speak of, and seeing foreign countries not laid down on any maps we know about. There must be lovely lands somewhere starward, for none ever return that go thither, and we very much doubt if any would if they could."

WRITING has been defined to be the art of painting visible words—giving substance and color to immaterial thought, enabling the dumb to talk to the deaf.

HYMN.

When I can feel my soul
From earthly fetters free,
And all her hope, her love, her trust,
Safe anchored, Laid, in Thee,
My lyre shall sound a note
Of praise unheard before,
And adorns, from her fearful strings,
Breathes through my song no more.

When levity shall cease
To mark my way of life—
And speech and thought no longer be
With sinful folly rife—
My lips shall then cease
To make thy goodness known,
And strive to tell, to other hearts,
The rapture of my own.

And, oh, more glorious still,
When every doubt shall flee,
And not a cloud of fear shall hang
Between my soul and Thee,
The grave shall seem no more
A vault of dread and gloom;
But perfect love and faith shall fill
With light and joy the tomb.

Franklin Corners, Erie Co., Pa., 1859. S. A. W.

THE SOUL'S SEPTEMBER.

THREE lives in the memory of every individual some sweet remembrance of by-gone moments amidst those treasured scenes Affection loves to linger—whose light once shed a rich halo around us, and even now reflects its happiness o'er our pathway, lighting us onward to our rest—our home—some cherished flower in life's wreath, diffusing still its fragrance as it blooms in Memory's garden—some chord in life's organ, which, though touched long ago, still reverberates through memory's halls. That precious moment was not one of thoughtless idleness, blessings neglected, or talents buried; but 'twas one of privileges improved, of untiring energy and earnest heart-work. That flower was not a fading flower, but one whose seed was sown in the June of life, and now in the "Soul's September" blooms brighter and brighter, until it is twined in the fadeless wreath that decks an angel's brow. That organ tone was not one which dies upon the listening ear, but one that awakens an echo which shall vibrate long after the organist is sleeping in dust—on through eternity. That moment was one spent in storing our minds with useful knowledge, in comforting the afflicted; or, mayhap, in performing an act of kindness which stirred in the bosom of the grateful recipient the deep fountains of affection, which, while life exists or being lasts, will never cease to flow—in directing some weary, thirsty traveler to the "River of life," of which "if a man drink he shall never thirst again." That flower was a loving smile bestowed upon one weary and fainting by the wayside, which sent him on his way rejoicing. That organ tone was a gentle, affectionate word, which came like a balm of healing to the wounded heart, and raised the drooping spirits of a fellow mortal, sending them far away on Hope's bright pinions.

And why may not our lives ever be made up of bright moments gleaming with gentle words and sunny smiles? Does it diminish aught of our happiness? "Youth is the seed-time of life—old age the harvest." Then, what sowest thou?—for what thou sowest thou shalt also reap. And if in the June of life thou sow the seeds of diligence, self-denial and love, thou shalt in thy "Soul's September" reap a rich, a precious harvest.—What sowest thou? Art thou dreaming away the diamond hours of a golden existence, allowing them, as each setting sun betokens thy journey shorter, to glide into Eternity laden with the dark memorial of thy frailties to be peened in the recording angel's ledger? Dreaming away thy time, that precious commodity doled out by atoms, without one thought of the "great hereafter?"—Thou art sowing to the winds, wasting the seed-time, the June of life, and in thy "Soul's September" thou shalt reap a harvest of tears.

When the genial breath of spring has unlocked the fetters of the frozen earth, the cheerful husbandman toils diligently to scatter o'er his well harrowed land the good seed, which being warmed by the sun, and refreshed by the gentle showers of Heaven, will produce in summer a golden harvest, and as he garners it into his storehouses, a song of praise goes up from his grateful heart to the God of the harvest, who, "though PAUL plant and APOLLOS water, alone can give the increase." And while Autumn is stealing o'er the landscape, he enjoys the September of the good. Brother, sister, what harvest hast thou garnered? We must strive not for earth's ephemeral pleasures, but for those that never fade—for a youth that never grows old—and if our cheeks do wear the scars of sorrow's war, strew life's pathway with unfading flowers, gem it with sunny smiles, if we would obtain the crown, secure interminable rest, and enjoy an abundant "Soul's September." Death will come—then secure that antidote for all earth's sufferings that taketh away its sting. Age will come—then strive for the seal of immortal youth that is impressed on seraph brows. Eternity will come—then prepare to sing the praise anthems of Heaven's angelic millions. On life's June plow God's furrows, plant sweet affections, fan them with sighs, water them with tears, and harvest ripe graces and joys in our "Soul's September."
Michigan, 1859. J. M. S.

I TAKE goodness in this sense—the seeking the real welfare of man; which is what the Greeks call philanthropia. This, of all virtues and dignities of the mind, is the greatest, being the character of the Deity, and without it, man is a busy, mischievous, wretched being, no better than a kind of vermin.—Lord Bacon.

THE STUDY OF LATIN, AGAIN.

Messrs. Editors:—In the *RURAL* of the 15th inst., there is an article written by a correspondent signing himself "S. of Washington," in which he expresses an unfavorable opinion of the study of the Latin language. He says, "In comparison with the acquisition of any modern language, it is far inferior, both in its construction and adaptability to the intellect of our day, and its incompleteness and paucity of expression." I do not write this because I wish to provoke a discussion, but because I do not like to hear the language of VIOLET, CICERO and SALLUST, characterized as useless and unworthy of any attention. Let me ask "S." from what the English, French and Italian languages are partly derived? It is generally admitted by men of education that a knowledge of the Latin language will render great assistance in the acquisition of many modern tongues, even the English.

He says, "its tendency—owing to its disgusting mythology, its low moral tone—is to demoralize the Christian to the inferior standard of the Pagan."—"Its disgusting mythology,"—disgusting because men on account of their glorious achievements, were rewarded by being rendered immortal, and in some cases with places among the gods, according to Latin authors. Does "S." take into consideration that our Savior had not been revealed to the ancient Latins? They worshiped the "Di Penates" which had been worshiped by their ancestors, and which had been transmitted from father to son. They had no evidence of the falsity of their religion, and on that account had no reason to doubt it. "Low moral tone!" Ask any one versed in ancient or modern literature, if they can produce a more beautiful poem than "Virgil's *Æneid*," descriptive of the capture of Troy, and the subsequent adventures of *Æneas*. His description of Tartarus is more than equal to Milton's "Hell!" As to oratory, the world has never listened to finer eloquence than that of Cicero. In the oration in which he thunders his contempt against CATULINE, what more eloquent and convincing can be produced from the pages of ancient or modern literature?—He says:—"Its effect is to reduce the Christian to the Pagan!" If the scholar has not enough strength of moral character to discriminate between truth and error, when he enters upon classical studies, then he is entirely unfit for them, not they unfit for him! "S." recommends the French and Italian languages. These two nations have long been remarkable for their utter want of moral character, and yet he recommends their study. A person, in order to obtain a correct knowledge of the language he is studying, must be conversant with the literature of the country, and as a consequence will become inculcated with some of the doctrines which he reads. As a specimen of Italian literature, read GUERAZZO's "Beatrice Cenci." It is one of the most disgusting works ever issued by a respectable press. If he turns his attention to French Philosophy, he will no doubt read the works of VOLTAIRE and ROSSAUR, and unless he takes good care he will become an advocate of their doctrines,—perhaps some of their Atheist doctrines. "S." says truly that Latin is of no use to farmers, but this is no evidence that it is useless to the rest of the world. *Batavia, N. Y., 1852.* W.

Written for Moore's Rural New-Yorker.

WISDOM.

WHAT is Wisdom? Is it a mere bubble on the sea of life—an *ignis fatuus* that shines but to deceive? No. The path that leads to knowledge, though trodden but by a few, is not some cunningly devised scheme to delude mankind. There may be trials to endure and crosses to bear before we can stand on the pinnacle of fame and bid adieu to the low attainments that the world calls honorable. I have seen the fair youth kneel at the shrine of pleasure, moving amid fashionable circles, beloved and courted by the gay and mirthful, and aim at nothing higher. Think you that an All-wise and Unerring Creator would form man, endowed with intellectual and moral powers that will remain when the sun grows dim with age, and place him on this beautiful earth for no purpose but to live, be merry, and die like the brute creation—neither thinking or caring that there were nobler ends to be attained.

Did DEMOSTHENES gain his position among the great of earth by sitting with folded hands and having his learning handed to him? He was but a poor boy, and arose by his own exertions and self-denial. He proclaimed his orations by the ocean shore, amid the roaring of the billows, that he might accustom himself to the noise of a great audience. Thus he arose to be called "The Prince of Orators." And HOMER, the great Grecian Poet, traveled from place to place singing his songs. He was poor and blind, yet his writings are immortalized. I love to muse upon the glorious achievements of the past, and try to listen to that beautiful admonition, "Go thou and do likewise;" and though we may never stand as high in the annals of fame, yet by patience and perseverance we may obtain a knowledge which is durable and not to be despised.

If we obtain a thorough knowledge of History and all other desirable studies, and to these add energy, industry, patience and perseverance, we shall have conquered the world. Nor is this all. While we acquaint ourselves in all desirable accomplishments of the present age, let us seek for that knowledge "which is pure and undefiled, and that fadeth not away." Then shall we be truly happy, and understand the full meaning of Wisdom. *Chapinville, N. Y., 1853.* ORRILL.

REASON AND REVELATION.—He that takes away reason to make way for revelation, puts out the light of both, and is as if he would persuade a man to put out his eyes the better to receive the remote light of an invisible star by telescope.—Locke.

OUR GRAMMAR CLUB.

It is usually found quite difficult to induce scholars to write "compositions." This I have remedied during the last, and thus far the present winter, by organizing a "Club" described as follows:—Last winter we occupied a short time each Friday P. M. as a "committee of the whole," myself acting as Chairman, and one of the pupils as Secretary. One of our number was then chosen, *vice voco*, according to parliamentary rules, to address us upon any proper subject, for each morning of the week. The election was made as formal and dignified as possible, so as to command respect and enlist support, and the result was astonishing. No attendant of the school wished to be excused, but instead, pupils hardly able to write, were anxious to perform the duties. The address had to be written and corrected by the teacher, and read each morning at commencing of exercises, and if teachers want their pupils on hand at "tap of the drum," let them awaken an interest of this kind.

This winter we have organized a little differently—forming, for the same object, what we have named "The Students' Grammar Club." The teacher acts as Chairman, and we have a Clerk who records the result of each election, &c. Great interest is felt, and improvement in spelling, writing, reading, composing, &c., are the result, with something of a knowledge also of the manner of conducting public meetings properly. We recommend it for trial. W. H. GARDNER, Sublette, Ill., 1853.

BOOKS AND THEIR INFLUENCE.

How many homes are destitute and void of those treasures—books, too, where are displayed all the little gewgaws and trinkets to attract the eye. Often have we entered the parlor of those in middling circumstances, where every stand, side-table, or shelf had upon it some weak-minded person's taste displayed, but in the way of books, not one was to be seen. Parents, many of them having large families, are likewise bereft of these valuable companions, save, in many instances, the family Bible, and the torn and scribbled school-books of their children. Did they only know that by selecting a few or a well-chosen assortment of books, and from time to time making additions, a handsome library might be formed, which should be within the reach of all, and that many a wild, roving boy might be kept from the streets, and from mingling with the pernicious influences which invariably must surround him.

Books, to an inspiring mind, have a charm, a fascination that never tires; they take hold of thought and enchain you within their precincts, and by cultivating this taste it moulds and softens their very nature, as well as adding information at the same time.

Strange as it may appear, we form an opinion at once of a family where we see no books around—it is to us like a garden where are no flowers—a space filled and choked up with weeds; therefore, we say to those who are lacking and deficient of these invaluable ornaments, by all means and without delay make your selections, for home without them is beamless, a day without a sun.—*N. Y. Mercury.*

A POPULAR ERROR.

ONE of the most common and fatal mistakes made by ardent friends of education, is the indulgence of unreasonable hope, and the maintenance of extravagant views as to what they can effect by the means of it. It is often supposed that great results can be produced in a single term of twelve or fifteen weeks. Both teacher and committee aim at this rapid mode of manufacture. True education is that which aids the slow and healthy growth of the mind—the incorporation into it of principles and the formation of tastes and habits, the full value of which will appear only after mature years have developed their tendencies. The highest and best parts of education are incapable of exhibition. The show made at the close of a term is well enough to amuse children and their fond parents, but is often like that of a newly dressed pleasure grounds, adorned with trees and shrubs fresh from the nursery, having a show of vitality in the foliage, though as yet drawing no sap from the root. Such frost-work of the school-room is soon dissolved, and generally passes away with the occasion. All attempts at such premature results of education are entirely useless, and yet our system of employing teachers by the term renders it almost necessary for a teacher who is ambitious of distinction, to lay his plans for that kind of superficial culture and mechanical drill which can be produced in a few weeks, and shown off as evidence of marvelous skill.—*Sears.*

DECREASING THE HOURS OF STUDY.—The Teacher's Association of Middlesex county, Mass., have adopted resolutions expressing the opinion that children in the primary schools should not be confined in their seats more than three hours per day, and if the convenience of their parents requires that they should be under their teachers' tuition a longer time each day, the additional hours should be devoted to exercises calculated to promote the moral, the social and physical welfare of the pupils. They also suggest that as pupils advance in years, it is proper to increase the hours of study. The only objection to this is, that children would not be kept at school sufficiently long to suit the convenience of parents, but the difficulty can be obviated by having some arrangements connected with the schools, whereby children can be kept under supervision, and at the same time obtain proper exercise. There can be no doubt that the seeds of disease are implanted in many constitutions by premature and prolonged confinement in schools, and the action of the Middlesex Board is one which deserves consideration.

A GEM OF WISDOM.—Few things are impracticable in themselves, and it is for want of application rather than means that men fail of success.

WHOLESALE SENTIMENT.—rain, which makes the fields of daily life fresh and odorous.

SCENES IN AND ABOUT JERUSALEM.

AMERICAN CHRISTIAN MISSION PREMISES, ON THE STRONGHOLD OF ZION.

ACCORDING to promise, we continue our sketches of scenes in and around Jerusalem, and the substance of the matter and illustrations we take from the "City of the Great King." Jerusalem is divided into three general sections, called QUARTERS—the Jewish, Christian and Mohammedan. The Christian Quarter comprises all that part of the city lying west of the main thoroughfare that runs from the Zion and Damascus gates, through the principal bazaars or shops. The Jewish or Zion Quarter is bounded by the Southern portion of the above street on the west, the central part of Temple street, on the north, the base of the hill (Zion) within the wall, on the east, and a portion of the wall on the south—being the more north-eastern corner of Mount Zion, comprising only about one-fifth of its area. All the remainder of the city is embraced under the Turkish Quarter, to which appertain also two reservations in the Christian Quarter—the large fortifications and barracks at the Jaffa gate and the miserable string of huts at Zion gate belonging to the Lepers.

Perched upon a bold, rocky promontory of Mt. Zion, in the Jewish Quarter, is a cluster of rudely constructed houses, now occupied as the premises of the American Christian Mission, and its appearance is shown the engraving. This spot is undoubtedly one of the most notable localities about the Holy City, though heretofore it has failed to attract the attention not only of tourists and pilgrims, but of professed antiquarians and topographers. It is the north-easternmost projection of the "Holy Hill of Zion."

CITY WALL ON BEZETHY HILL—THE GREAT CAVERN QUARRY.

This lofty cliff was the great bulwark of the ancient city of the *Jebusites*, and is first mentioned in 2d Samuel V, 6, being unquestionably the "stronghold" of Zion, where King DAVID was so derided by the King of Jebus, in the taunting language of insult and defiance—"Except thou take away the blind and the lame, thou shalt not come in hither." And well might the insulting and overbearing *Jebusites* so think; for even JOSHUA himself, that pious and pre-eminently successful old generalissimo of the hosts of Israel, had not succeeded in reducing this fort. "Nevertheless, DAVID took the stronghold of Zion—the same is the city of DAVID;" and now the united cities of *Jebus* and *Salem* became *Jebus-Salem*, or, for euphony's sake, *Jerusalem*—the proud capital of the son of JESSU. How often have the halls with which he crowned this lofty summit resounded to the mellifluous strains of the harp of "the Psalmist" and bard of Israel, as he sang the "sweet songs of Zion."

This commanding situation must ever have been a very important one, whether in the possession of Heathen, Jew or Christian; and accordingly we learn from JOSEPHUS that it was successively the site of the royal palaces of the Davidian, Amonian and Herodian dynasties of Israel.

sense, at least, resembling a city set on a hill, that cannot be hid. The tent pitched on the top of one of the houses, now jumbled on its ruins, covers one of the circular skylights of the ancient church; and the little court beneath this tented skylight is the humble tabernacular chapel of the mission. The photograph—of which the wood cut is an exact transcript—was taken from the embankment of the "causeway" upon which the lower part of Temple street is situated. Immediately in the foreground is the top of a Mugrabin house, upon which a few pieces of clothing are suspended for drying. The pointed dome-building, further on in the foreground, is a *weli* or mausoleum of a Moslem *santon*. In the elevated garden in the middle ground, a man is seen looking through a hole in a large rock, that serves the double purpose of window and chimney to the bakeries and mills—several of which there are beneath this garden—and are entered by doors in the wall along the street, where an Arab is seen riding a camel. The pottery aqueduct, that brings water from Solomon's Pools to the great mosque, enters the city beneath the wall beyond the furthest cove of cactus, and passing along just at the foot of the old palm, penetrates by a channel cut through the solid rock on which the Mission premises are situated; and issuing through the lowest door seen in one of the corners of the house, passes along the base of Mount Zion into the Haram, via the causeway. The two elevated windows in the most projecting part of the Mission premises (above which there is also a smaller one,) give light to the *hachmeh*, or dispensary of the Mission. The dis-

tant hill seen over the city wall, by the Mugrabin Gate, is the top of one of "the mountains round about Jerusalem," on the south.

THE GREAT CAVERN QUARRY.

The citizens of Jerusalem tell marvellous tales about its subterranean passages, galleries and halls; and that there are many passages perforating the city in various directions, is expressly stated in JOSEPHUS. The Talmud also mentions that "there were not a few caves in the city hollowed out of the rock;" but this subject having but slightly engaged the attention of explorers, we have as yet but little reliable information on this point. Of the various subterranean passages mentioned by JOSEPHUS, or incidentally alluded to in the Bible, some were designed for the conveyance of water, whilst others were clearly intended for use in time of war.

Our author describes a very large cavern, partly natural, but mainly artificial, being evidently a quarry from which immense quantities of stone had been cut for building purposes, unknown to Europeans, which he explored recently in the night.—The location of this cave, just outside the city wall, is shown in the engraving. This cave is upwards of three thousand feet in circumference, supported

POOL OF BETHESDA.

Immediately adjacent, on the north, was unquestionably situated the "Armory of Solomon," or "the house of the Forest of Lebanon," and just in the rear, in the direction of the Tower of Hippicus, was the "house of the High Priest." This spot was subsequently occupied by the Crusaders, who, if we may form a judgment from present indications, crowned it with a magnificent church, in one

by great numbers of rude natural pillars. Numerous crosses on the wall indicated that though unknown to Christendom of the present day, the devout Pilgrim or Crusader had been there. The extra-cyclopean stones in the south-east and south-west corners of the Temple wall were doubtless taken from this quarry, and carried to their present position, down the gently inclined plane on

rollers—a conjecture which at once solves the mystery that has greatly puzzled travelers in regard to the difficulty of transporting and handling such immense masses of rock, and explains to us under stand why they were called "rolling stones" by Ezra.

POOL OF BETHESDA.

This pool is situated between Patriarch street and the Latin Patriarch's residence, and though entirely surrounded with houses, as shown in the engraving, can at all times be seen by ascending to the top of the Coptic Convent, or any of the shops bordering upon it. Its average breadth is about one hundred and twenty-six feet, and its present length two hundred and fifty-two feet; but was formerly longer. Its depth below the average surface may be eight or ten feet, perhaps more; but it is considerably deeper at the southern than at the northern extremity. It derives its supply entirely from the Mamilla pool, and usually has from two to six feet of water; though it sometimes becomes entirely exhausted late in autumn. The water is drawn up to a considerable height at great expense of labor by two stout Fellahin, and sent across the street over a large stone arch to supply a bathing establishment—which being lower than the pool, might easily be supplied with a small leaden pipe acting as a syphon. But such a device as this, emanating from Christians, the Simon-pure Moslem spurns.

OSTER WILLOWS.—Will you, or some of your correspondents, inform me through the columns of your paper where I can get some *Oster Willow Cuttings*, and how to cultivate and prepare them for market? Also the best soil for growing them, and price per ton?—H. J. W., *Clarence, N. Y., 1853.*

We do not know any one now advertising *Oster Cuttings* for sale, but we presume plenty can be had. The Willow delights in a moist, mucky soil, but experience has proved that it cannot be grown successfully in stagnant water. It requires depth of soil, richness and moisture—a well-drained swamp, therefore, is just the thing, and even if overflowed in the winter and spring, and occasionally in summer during heavy storms, it may be used advantageously. Heavy, retentive upland soils when deeply worked are suitable for the Willow. Some years ago we saw on the grounds of C. N. BEMANT, near Albany, a fine lot growing on soil that appeared dry enough for corn. The deep prairies of the West seem prepared by nature for the especial growth of the Willow. Some varieties will bear more water than others, as the *Long-leaved triandrous Willow* will flourish on a soil so soft that plowing is impracticable, and requiring no other care than keeping down the weeds, but on the same soil the *Purple Willow* would scarcely grow.

The ground for the Willow should be well plowed and dragged, and, if the soil is not naturally rich, a good dressing of manure should be plowed under. There appears to be a good deal of difference of opinion as to the distance at which to plant cuttings. Eighteen inches in the row, and the rows three feet apart, is recommended by some, while others prefer them three feet each way. The cutting should be from seven to twelve inches in length, according to the stiffness of the soil. If the soil is heavy, seven inches in length will be long enough. After planting, the ground must be kept cultivated, until the Willow gets such a start as to shade the ground, and prevent the growth of weeds.

Willows may be cut as soon as the leaves fall in autumn, or any time during the winter. As soon as cut they should be bound up in small bundles, with the lower ends even, when they may be stood up on end, and allowed to remain until spring. As soon as the weather becomes warm in the spring, the bundles must be stood in water an inch or so, and allowed to remain in this position until the buds start, when they will peel easily. This will be the latter part of May or early in June, depending somewhat on the situation and season. Peeling has always been done by hand, and it is a slow operation, as an expert hand cannot peel one hundred pounds a day. A machine for peeling has been invented which is advertised to peel from one to two tons a day. Two tons per acre is considered a fair crop. After peeling they are thrown into water, then dried, so that they will not mildew, when they are tied in bundles, and are ready for market.

The last time we inquired particularly about the price of Willows in the New York market, they were worth \$100 per ton. A gentleman, who has grown a good many Willows, informed us that the cost of cutting and peeling a ton is about \$30.

YOUNG RURALIST ON THE POTATO QUESTION.—Father has given me permission to write you a few lines, about planting potatoes in drills, with one eye in a piece, as recommended in one of the *RURALS* published last spring. He planted one bushel and three quarts of Whig Potatoes, (cut up one eye in a piece,) ten inches apart, in drills three and a half feet apart. The crop from this seed was thirty bushels of very large, smooth potatoes, nearly all of a size.

Of the same kind of seed, in the same field, he planted in hills four feet apart, about two bushels and a half, cut once in two, and got about fifteen bushels of inferior potatoes.—E. D. V., *Belle Valley, Minn., 1853.*

BOYS.—Form the habit while young of employing all your time usefully. Never be unemployed. The land is full of idlers striving to live without labor. It is not to be supposed that you are never to take recreation; this is a useful—it is necessary; but if it comes after a hard study or prolonged labor, it will probably be healthful and moderate. An honorable mind, in the desire of more relaxation, will not go forth in forms of mischievous exertion. It is not to be supposed that a boy is to be a man, much less an old man; but, in the midst of his mirth and hilarity, he may be innocent and amiable.

The News Condenser.

— Charles Dickens, the English author, is coming to America.

— A San Francisco letter says *Frankie* river is almost unheard of.

— England is taxed to raise a revenue of five hundred million dollars.

— The most populous city in Texas is Galveston, with 3,666 inhabitants.

— Sam Jones, the Seminole Indian Chief, died, recently, in Florida.

— English insurance companies lost \$1,555,900 in the great fire at Valparaiso.

— The present population of San Francisco is estimated at 75,000 or 80,000.

— A movement is in progress to erect a monument to Dr. Kane, in New York.

— In Boston, last year, 903 drunken people were assisted home by the police.

— The total number of British troops now serving in India, is close upon 100,000.

— In China a man can obtain a divorce from his wife if he can prove she is jealous.

— Fifty thousand gallons of wine were made in the state of Connecticut last year.

The Cleveland Plaindealer proposes to get Cuba by wapping New England for her.

— A lady has presented Lord Shaftesbury with £5,000 or the poor people of Hull, Eng.

— Joseph Solas, one of Napoleon's soldiers, died in Boston, a few days since, aged 97.

— A Galveston paper says the camels there carry 400 and 1,600 pounds with ease.

— The 10th of January, 1774, 1843, 1856, and 1859 are on record as remarkably cold days.

— The value of materials of war in France is given at 631,000,000 francs or \$128,200,000.

— The cost of each letter sent to San Francisco by the overland route, is sixty-five dollars!

— The number of delinquent tax-payers in Philadelphia is something over eleven thousand!

— It is stated that in Minnesota there are among the residents 25,000 more males than females.

— There were received at the Dead Letter Office last year 12,491, containing altogether \$59,913.

— One hundred thousand hides a month are shipped from the La Platte River, South America.

— At New York, on the cold Monday, a Broadway stage driver was frozen to death on his seat.

— The Panama Railroad is 63 miles long, and cost \$8,000,000. It earns 13 per cent. per annum.

— The committee on Commerce have decided to report a bill repealing the fishing bounty lands.

— The official estimate of the cost of printing the Pacific Railroad Report is one million dollars.

— Thursday, April 7th, has been appointed as a day of public fasting and prayer in New Hampshire.

— Petitions are in circulation in Michigan asking for restoration of the death penalty in that State.

— Plans and estimates for prisons for the territories have been prepared for presentation to Congress.

— The total value of all personal property returned for taxation in the city of Cleveland is \$6,252,890.

— The whole of the Queen's British regiments now serving in India are armed with the Enfield rifle.

— Two members of the Chicago bar have decided to settle a dispute by an appeal to the code of Honor.

— Nema Sabib is believed to be dodging the British cops in India, under the name of Tanjia Toquel.

— Registry laws are now pending in the Legislatures of New Jersey, Michigan, Illinois, and New York.

— Ten young men have been arrested and held to bail in Philadelphia, on a charge of street lounging.

— A white owl which measured five feet from tip to tip of its wings was shot lately in New Britain, Conn.

— The richest man in Louisville, Ky., is James Guthrie. His property is assessed as worth \$1,382,050.

— The mail station on Concha river, Texas, has been attacked by the Comanche Indians and 80 mules run off.

— A woman in Pittsburgh advertises to take in dirty children, as well as soiled linen, to wash. What next?

— Our gold crop is at the rate of a million and a half per week, or seventy-seven million of dollars per annum.

— The Canadian authorities, it is now understood, will not demand Deputy Marshal Tyler for trial in their courts.

— Three hundred suits for divorce are said to be now pending in the Supreme Court of the New York State.

— It is said that slaves are diminishing in Fairfax, Virginia, and that there is an influx of Northern tiers.

— It is announced, almost officially, that in the spring France will join Spain in a naval expedition against Morocco.

— The Kansas Legislature, now in session at Lawrence, it is said, will pass a bill to abolish slavery in that territory.

— The Massachusetts Railroads have paid \$1,600,000 dividends during the last six months, between July and January.

— It is estimated that after any considerable fall of snow in New York, \$5,000 are paid for clearing it from sidewalks.

— A contract has been concluded with certain parties to clean the streets of New York, for five years, at \$345,000 per annum.

— During the last year one hundred and five whaling sales were entered at New Bedford, with cargoes valued at \$5,299,204.

— The story that the "Susan" filibusters were to remove old and comfort in Honduras proves to be wholly untrue foundation.

— The Florida Legislature has repealed the law prohibiting for the incarceration of free negro sailors while their vessels are in port.

— Gerard Stuyvesant, a descendant of the old Dutch governor of that name, and a wealthy citizen of New York, died a few days since.

— Accounts from St. Thomas of the 7th inst., mention James W. Herbert, Esq., U. S. Consul at that port, died on the morning of that day.

— There are now 700 convicts in the Auburn State Prison, a large majority of whom are young men, their ages varying from 18 to 30 years.

— It is said that a proposition for the sale of Sonora to Chihuahua has been received from President Miramón. The price is sixteen millions.

— Major Samuel Barnes, for a long time editor of the *Western Clipper*, died a few days since, at the age of 71. He was a soldier in the war of 1812.

— The cost of construction and equipment of the railways in the U. S. amounts to \$1,050,555,570— money that to break down any other country in the world.

HOW THE MONEY GOES.

How goes the Money?—Well, I'm sure it isn't hard to tell: It goes for rent and water-rate, For bread and butter, coal and grate, Hats, caps, and carpets, hoops and hose— And that's the way the money goes!

How goes the Money?—Nay, Don't everybody know the way? It goes for bonnets, coats, and caps, For silks, muslins, velvets, crapes, Shawls, ribbons, furs and furbelows, And that's the way the money goes!

How goes the Money?—Sure, I wish the way were something fewer, It goes for wages, taxes, debts, It goes for presents, goes for bets, For paint, pomade, and eau de rose, And that's the way the money goes!

How goes the Money?—Now, I've scarce begun to mention how; It goes for laces, feathers, rings, Toys, dolls, and other baby things, Whips, whistles, candles, bells, and bows, And that's the way the money goes!

How goes the Money?—Come, I know it doesn't go for rum; It goes for Schools and Sabbath-schools, It goes for charity—sometimes; For mislans, and such things as those, And that's the way the money goes!

How goes the Money?—There! I'm out of patience, I declare; It goes for plays, and diamond-pins, For public alms, and private sins, For hollow alms, and silly shows— And that's the way the money goes!

Entered according to act of Congress, in the year 1853, by D. T. Moore, in the Office of the Clerk of the District Court for the Northern District of New York.

ALICE AND ADELAIDE; OR, THE TRUE AND THE FALSE.

BY MRS. MARY J. HOLMES.

(Continued from page 85, last number.)

Chapter IX.—The Figure on the Heartthrob.

"Twas a strange, strange sight, that statue standing there so silently, and that blind old man trying in vain to penetrate the darkness and learn who it was that stood there beside him. Raising himself, at last, in bed and stretching out his arm, he touched a hand colder even than his own, for guilt and fear had chilled the blood of him who remained immovable, while the trembling fingers passed nervously over the face, through the hair, down the side, until they reached the left hand, from whose fore-finger a joint was gone! That missing joint, though we have made no mention of it heretofore, was well remembered by HUCO WARREN, and it needed but this proof to tell him who was there!

"William Huntington," he hoarsely whispered, and falling back upon his pillow he wiped the drops of perspiration from his face, for the presence of that man, coming to him thus, awakened all the bitter memories of the past. "WILLIAM HUNTINGTON," he gasped, "why are you here on this night of all others, when my lost wife seems present with me, and my ruined hopes pass in sad review before my mind. Say, have you come to add the last drop in the brimming bucket?"

There was a moment's silence, and then falling upon his knees, WILLIAM HUNTINGTON made answer to the man he had so wronged. "I come not to insult you, but rather to seek the forgiveness which I know I do not merit. Only say that you forgive me, Mr. WARREN, let me once hold your hand in token of reconciliation, and then do with me what you will. A life within a felon's cell is preferable far to the remorse which I have carried with me for two long, dreary years. Say, will you not forgive me?" he continued, and the strong man's voice was choked with tears.

"Forgive you, WILLIAM," Mr. WARREN replied, "I might perhaps forgive you were my fortune all you wrested from me, but when I think of my lost HELEN, my heart is turned to steel, for you killed her, WILLIAM HUNTINGTON, you killed my precious wife."

"Yes, yes, 'twas my base act which killed her, it is true, still I have made you some amends. I saved your daughter's life, you know, else I had never dared to seek your face again," said Mr. HUNTINGTON, interrupting him.

"You saved ALICE's life?" the excited man rejoined, and the hand which had withdrawn itself beneath the bed-clothes, now came forth again, feeling eagerly for the bowed head on which it rested forgivingly, while he continued, "It was you, then, who took her from the river and laid her in my arms,—you who saved me from a darker night than any I have ever known. Yes, WILLIAM, because you did this good to me, you are forgiven, fully, freely forgiven,—but why have you not told of it before? Where have you been, and did your family know aught of this?"

"My family know aught of this?" repeated Mr. HUNTINGTON. "Can it be I am deceived?" and then with the shaking hand still resting on his head, he told how he had wandered far and wide, seeking rest and finding none, for ever present to his mind was a white-haired, sightless man, weeping over his pale, dead wife.

In the far off California land he had dug for gold, vainly hoping by this means sometime to make amends for the ruin he had wrought. At last, as the burden of remorse grew heavier to bear, he sought his home to see once more the faces of his wife and child, hoping, too, that the forgiveness he so much desired might be obtained.

"I found them here," said he,—"found my wife and ANNE working hard and secretly, lest the world should know how poor they were. I met

my daughter first, and, Heaven forgive me if I do her wrong, I thought she was not glad to see me. I questioned her of you, and learned that you were here, too, and very poor. You were fully determined, she said, to revenge yourself on me, should I ever be found, and she urged me not to let my presence here be known, until she had tried to procure for me your forgiveness. My wife did not seem to understand your feelings, for she had never seen you, and she wished me to remain, but my daughter's fears, and my own dread of a convict's fate prevailed, and trusting to ADELAIDE's promise that she would eventually obtain your pardon for me, I left them again and became a second time a wanderer. I intended to take the cars at West Oakland, and was following the course of the river when, pausing for a moment to rest, I saw you approaching, and hid behind the siders, one moment resolving to throw myself at your feet, and again fearing to do so, for guilt had made me cowardly and weak. The rest of that day's incidents you know. I saved your daughter's life, but I dared not speak, lest I should be betrayed. My wet clothes made it necessary for me to return to the house, where I told what I had done, and asked if this would not atone. My wife said yes, but ADELAIDE was fearful still. She would see you herself, she said, and she did see you that very day, but you refused,—the law must take its course," you said; "even though I saved a hundred lives."

"Never, so help me Heaven," Mr. WARREN exclaimed. "Such words as those never passed my lips, and till this moment I knew not who it was that saved my child. Forgive me, WILLIAM, but she lied,—that girl ADELAIDE. There was treachery in her voice when she sat at my feet and asked me not to tell of your misdeeds, lest disgrace should fall on her. People thought her mother was a widow, she said, and she would rather they should not know that you ran away to escape a prison home."

"Oh, ADELAIDE,—my child,—my child,—why did you thus deceive me?" the wretched father groaned, while Mr. WARREN continued, "I never tried to find you, WILLIAM, or sought to do you harm; but go on and tell me where you have been since that time."

"I remained at home a day or two hiding from the sight of men," Mr. HUNTINGTON replied, "and then one night I went away, thinking to make for my family a home in the distant west, where you would never find me. But no spot could be home to me with that load upon my mind, so at last I determined to see you myself, and beg for your forgiveness. They think me far away, my wife and ADELAIDE, for I only passed a moment at their door. Looking through the half closed blind I saw your daughter there and knowing that you must be alone I hastened on, entering your dwelling while you slept, and now it remains for you to do with me what you will."

"Nothing, WILLIAM, I shall do nothing, only raise me up, my breath is going from me," Mr. WARREN gasped. The faintness he had experienced once before had returned again, brought on by the excitement of what he heard, and Mr. HUNTINGTON, when he saw the corpse-like pallor stealing over his face, feared that he was dying. He was not afraid of death, but the world he knew, was a suspicious one, and he would rather the man he had so wronged should not die alone with him. Just then he heard without a footstep coming near, and thinking it must be ALICE, he hurried to the door, exclaiming, "Be quick, your father I fear is dying."

In a moment the person thus addressed stood at Mr. WARREN's bedside, and when the fainting man came back to consciousness, he whispered softly, "God bless you, Mr. HOWLAND, for coming here again!" Yes, it was RICHARD HOWLAND, who stood there side by side with one whom he readily recognized as the stranger who had saved the life of ALICE WARREN. He had started for the party, going through the Hollow as the shortest route, and was passing Mr. WARREN's gate, when the words "Be quick, your father I fear is dying," arrested his attention, bringing him at once into the presence of the blind man whom he had so long neglected.

"I did not know you were so ill," he was about to say, when ALICE stood within their midst.

"Father," she cried, bounding to his side, "are you worse?" and then as her eye fell upon Mr. HUNTINGTON, the hot blood stained her face and neck, for she knew who he was, and marveled much that he was there.

"ALICE," said Mr. WARREN, "I have forgiven WILLIAM HUNTINGTON because he saved your life though he dared not let us know it then, for ADELAIDE had said I thirsted for revenge. He has suffered much, my child, and you, I'm sure, will sanction my forgiveness."

It was in vain that ALICE attempted to speak, so astonished was she at what she had heard, and, misinterpreting her silence, Mr. HUNTINGTON advanced towards her, saying, imploringly, "Hear me, young lady, and you will perhaps be willing to forgive."

Then very rapidly he repeated in substance the story he had told her father, touching as lightly as possible on ADELAIDE's duplicity, but still making the matter plain to ALICE and clear to him, who, with clasped hands and wildly beating heart, listened breathlessly to the strange tale he heard.

RICHARD HOWLAND was undecieved at last, and the girl he had almost loved was revealed to him in her true character, as an artful, designing woman. The father, who he supposed was dead, stood there, a living, breathing man, identical he was sure with the agent of whom he had often heard, and, worse than all, the people, against whom she had breathed her dark insinuations, were innocent of evil,—the wrong was on the other side, and he had been her dupe,—had even thought it possible to call that girl his wife. His heart how he loathed the very idea now that he knew her guilt, and how his conscience smote him for having ever wronged in thought the helpless old blind man and his gentle, fair-haired daughter. They had suffered, too, from his neglect, but he could make amends for that, and his heart went out in pity towards ALICE as he contrasted her former life with her present dreary lot. The party was forgotten, and while ADELAIDE, in most impatient mood, watched each fresh arrival, he, for whom she watched in vain, smoothed the tum-

bled pillow, bathed the burning brow, or brought the cooling draught, and then spoke words of comfort to the weeping ALICE, who read upon his face, and that of Mr. HUNTINGTON, a confirmation of her fears.

But not that night did Mr. WARREN die, though the physician, for whom Mr. HUNTINGTON was sent, would give no hope. The disease had assumed a most alarming form, he said, and Mr. HOWLAND's hand rested pityingly on the bowed head of the young girl who was soon to be an orphan. The morning came, and then, as it was necessary for him to go home for a time, he left both father and child to the care of Mr. HUNTINGTON, promising to send down one of his domestics, and to return himself ere long.

Chapter X.—Revelations.

The morning train from Albany had thundered through the town, and Mr. HOWLAND was about returning to the Hollow, when hasty footsteps were heard within the hall, and in a moment his sister stood before him. She had traveled night and day since leaving Milwaukee, she said, but she didn't mind it at all, she was so impatient to be at home and tell him what she'd heard, and, without so much as untying her bonnet, Miss ELINOR continued, "I told you all the time they were impostors,—but men have so little sense. I'm glad I ain't a man, though if I were, no woman would ever impose on me as that ADELAIDE has on you. Why, instead of taking music lessons, as she pretends to do, she goes up to Springfield after work, and the satchel, you more than once have carried for her, had in it vests and shirts, and mercy knows what—tell me that wasn't a wrist-band I saw under the lounge. I guess I know a wrist-band. They are just as poor as they can be, and sew for Mr. LINCOLN's store, in Springfield, for Mrs. LINCOLN's cousin told me so. I met her in Milwaukee, and when she knew I was from Oakland, she spoke of ADELAIDE, and asked me if I knew her. I told her yes, and then she asked if she were married yet, saying she hoped she was, for it seemed a pity that a stylish-looking girl like her should be obliged to sew for a living. Of course I questioned her, learning what I've told you, and, worse than all the rest, ADELAIDE made this lady believe that she was going to marry a very wealthy man, who had a most delightful home, with one encurance, which she should soon manage to dispose of, and that encurance was a dried up old maid sister! Do you hear that, RICHARD HOWLAND! A dried up old maid sister! THAT MEANS ME!" and the highly scandalized lady walked up and down the room, upsetting, in her wrath, both her traveling basket and band-box, which last, in a measure, diverted her attention, for no woman, whether married or single, can think of anything else when her "meeting bonnet" is in danger.

Picking up the box and assuring herself that its contents were unharmed, she continued, "Why don't you say something, RICHARD? Are you not surprised at what I have told you?" "Not particularly," he answered, and coming to her side he repeated the story he had heard from ADELAIDE's own father, so long supposed to be dead.

"The rollop! The jade!" ejaculated Miss ELINOR. "I understand her perfectly. She wished to keep up appearances and make her father stay away until she became your wife, and you couldn't help yourself. Dried up old maid, indeed! I'll teach her to call me names. But what of Mr. WARREN and little ALICE? I'll go to them at once," and notwithstanding her recent fatiguing journey, the energetic woman started for the Hollow, saying to her brother who accompanied her, "I am determined upon one thing, RICHARD. If Mr. WARREN dies, ALICE will live with us and have the best chamber, too. Poor little creature, how she must have suffered."

They found both Mr. WARREN and ALICE asleep, but Miss ELINOR's kiss awoke the latter, who uttered a cry of joy at the sight of her friend and benefactress. The sick man, too, ere long, awoke, but only to doze again, and as the day wore on he continued in a state of stupor, from which it was difficult to rouse him. Just before the sun was setting, however, consciousness returned, and he asked for ALICE, who in a moment was at his side. Winding his arm lovingly around her neck, he prayed that the God of the fatherless would not forsake her when she should be alone.

"I am going from you, ALICE," he said, "going to your mother, who has waited for me all the day, and the pain of death would scarce be felt did I know what would become of you."

"Tell him, RICHARD," whispered Miss ELINOR, and advancing to the bed-side, Mr. HOWLAND said, "Your daughter shall live with me when you are gone."

"God bless you," came feebly from the dying man, while the fair head resting on his bosom was for a moment uplifted, and Mr. HOWLAND never forgot the grateful, glad expression of the soft, blue eyes which looked into his face.

"I, too, will care for ALICE so long as my life is spared," said Mr. HUNTINGTON, who had been there all the day, and again from the white lips a faint "God bless you" came.

Slowly towards the western horizon sank the setting sun, and when at last his farrowed beams looked into that room of death, they shone on the frosty hair and still, white face of one who was no longer blind, for to him the light of a better world had been revealed, and the eyes so long in darkness here were opened to the glories of the New Jerusalem.

Every necessary care was bestowed upon the dead, and then, leaving the orphaned ALICE in Miss ELINOR's arms, with Mr. HOWLAND standing near and speaking to her an occasional word of comfort, Mr. HUNTINGTON started for his home, walking slowly, sadly; for his heart was full of sorrow,—sorrow for the dead and sorrow for his only child, who had so cruelly deceived him. What her motive was, he could not guess, unless it were that she dreaded the disgrace his presence might bring upon her, and when he thought of this, he half resolved to leave her forever, but love for his wife prevailed, and with an aching heart he kept on his way.

Restless and impatient ADELAIDE had passed the day in wondering what had happened to Mr. HOWLAND and why he was not at the party. She had confidently expected him there but he had disappointed her, and the lace dress with which she hoped to impress him was worn for naught. "Parties were boring any way," she said, "and she hoped she should never attend another so long as her name was ADELAIDE HUNTINGTON!"

In this unamiable mood she fretted until late in the afternoon, when old PEACOCK, who had been sent on an errand to the village, returned, bringing the news that Mr. WARREN was not expected to live, and that she saw Mr. HOWLAND entering the door as she passed. Then, lowering her voice to a whisper, she continued, "Right up against the window was a man's head, which looked so like your father that I stopped a little, hoping he would turn his face one side, but he didn't, and I came along."

"My father," repeated ADELAIDE, "isn't within a hundred miles of here."

Still, the idea troubled her even more than the news of Mr. WARREN's illness, and after old PEACOCK left the room, she turned to her mother, saying, "Wouldn't it be mean if father had come back and gone to see Mr. WARREN?"

"I suppose it would be right, though," returned her mother, while ADELAIDE continued, "Right or wrong, nobody wants him turning up bodily just yet, for Mr. HOWLAND is so squeamish about a little deception that my chance of winning him would be rather slim, if he knew father was not dead as he believes him to be. If I secure him before he finds it out, he can't help himself, and I wish he'd either propose or let it alone. I declare, mother, I think it is your duty as a prudent, careful parent to ask what his intentions are. You can tell him there is a great deal of talk about his coming here so much, and unless he is serious, you prefer that he should discontinue his visits, hinting of course, that you fear my affections are already too deeply enlisted for my future happiness, should he not be in earnest. Say, mother, will you tell him this when he comes again?"

Mrs. HUNTINGTON at first refused, but ADELAIDE's entreaties finally prevailed, and it was decided that when Mr. HOWLAND next visited them, he should be questioned concerning his intentions.

"Oh, I hope he'll come to night," said ADELAIDE, and feeling confident that he would, she made some changes in her dress,—smoothed her glossy hair, and then, just as it was growing dark, lay down upon the lounge, building castles of the future, and wondering if she should be ADELAIDE HUNTINGTON one year from that day!

As she lay there thus, she heard the gate,—a heavy footstep was coming up the walk, and thinking "it must be he," she assumed a half reclining posture, which she fancied was careless and graceful,—and then awaited the appearance of her expected visitor. He did not ring,—and she heard his step within the hall. Nearer and nearer he came, his hand was on the knob, and as the door swung back the large black eyes which turned at first so eagerly in that direction, flashed their surprise and anger, not on RICHARD HOWLAND, but on WILLIAM HUNTINGTON, who keenly felt the coldness of his welcome. [Concluded next week.]

LARD and why he was not at the party. She had confidently expected him there but he had disappointed her, and the lace dress with which she hoped to impress him was worn for naught. "Parties were boring any way," she said, "and she hoped she should never attend another so long as her name was ADELAIDE HUNTINGTON!"

In this unamiable mood she fretted until late in the afternoon, when old PEACOCK, who had been sent on an errand to the village, returned, bringing the news that Mr. WARREN was not expected to live, and that she saw Mr. HOWLAND entering the door as she passed. Then, lowering her voice to a whisper, she continued, "Right up against the window was a man's head, which looked so like your father that I stopped a little, hoping he would turn his face one side, but he didn't, and I came along."

"My father," repeated ADELAIDE, "isn't within a hundred miles of here."

Still, the idea troubled her even more than the news of Mr. WARREN's illness, and after old PEACOCK left the room, she turned to her mother, saying, "Wouldn't it be mean if father had come back and gone to see Mr. WARREN?"

"I suppose it would be right, though," returned her mother, while ADELAIDE continued, "Right or wrong, nobody wants him turning up bodily just yet, for Mr. HOWLAND is so squeamish about a little deception that my chance of winning him would be rather slim, if he knew father was not dead as he believes him to be. If I secure him before he finds it out, he can't help himself, and I wish he'd either propose or let it alone. Say, mother, will you tell him this when he comes again?"

Mrs. HUNTINGTON at first refused, but ADELAIDE's entreaties finally prevailed, and it was decided that when Mr. HOWLAND next visited them, he should be questioned concerning his intentions.

"Oh, I hope he'll come to night," said ADELAIDE, and feeling confident that he would, she made some changes in her dress,—smoothed her glossy hair, and then, just as it was growing dark, lay down upon the lounge, building castles of the future, and wondering if she should be ADELAIDE HUNTINGTON one year from that day!

As she lay there thus, she heard the gate,—a heavy footstep was coming up the walk, and thinking "it must be he," she assumed a half reclining posture, which she fancied was careless and graceful,—and then awaited the appearance of her expected visitor. He did not ring,—and she heard his step within the hall. Nearer and nearer he came, his hand was on the knob, and as the door swung back the large black eyes which turned at first so eagerly in that direction, flashed their surprise and anger, not on RICHARD HOWLAND, but on WILLIAM HUNTINGTON, who keenly felt the coldness of his welcome. [Concluded next week.]

Wit and Humor.

A STRICT TEMPERANCE MAN.

WE were accosted the other evening, says the editor of a Boston paper, by a gentlemanly-looking man, evidently balancing a clever sized brick in his castor.

"I say, mis-mister, will you be kind enough to tell me the way to Broadway?"

"No Broadway here, sir; this is not New York."

"Oh! ah! ah! yes, that's a fact. Well, I beg your pardon—your pardon—pardon; show me to Fourth street—Mil—Miller's Hotel."

"Now you're in Philadelphia, old boy. Wrong again."

"Ha! ha! well, I'm darn'd confused, that's a fact. All right. Please to tell me whether its left or right I take to Holiday street?"

"That's a street that ain't got this way yet. Perhaps you are thinking of the city of Baltimore."

"Well, where the deuce am I, stranger, anyhow?"

We told him Boston.

He jammed his fists into his pockets, after hitting his hat a smash, and stepped out, observing: "Well, I'm darn'd if I follow this temperance caravan any longer."

SEEING THE ELEPHANT.—When Cousin Ichabod first saw him at the show, he exclaimed, with mute astonishment:—"Then that's the reel managerer—the identical critter itself! Wouldn't tew on em make a team to draw sun with. Ain't he a scroger!" Ichabod went hum and related what he had seen.

"I seed," said he, "the genewine managerer—the biggest lump of flesh that ever stirred. He had tew tails—one behind, t'other before." Philosophers call the fore one a pronobscus. He put one of his tails in my pocket and hauled out all the gingerbread—every pocket. What d'ye think he done with it? Why, he stuck it in his own pocket, and began to fumble for more."

AIN'T IT QUEER?—An old lady was highly delighted and edified by a view of the vessels on Long Island Sound towing their boats astern.

"L-a-w-s-a-massy!" exclaimed the innocent old soul, "how perfect is all the works of nature! Even the great big ships have all got their little ones runnin' along after 'em just as playful as lambs."

POLITICAL GRAMMAR.—It is a curious fact in the grammar of politics, that when statesmen get into place, they often become oblivious of their antecedents, but are seldom forgetful of their relatives.

A LITTLE DIFFERENCE.—"What has been your business?" said a judge to a prisoner at the bar. "Why, your honor, I used to be a dentist—now I am a pugilist; then I put teeth in—now I knock 'em out."

NICE PHRASES.—In Wisconsin they call a bribe a "pecuniary compliment," and in Mississippi we notice that slavery is spoken of as "economic subordination."

YOUTH'S CORNER.

MISCELLANEOUS ENIGMA.

"A Patient Wife wanted"—you're joking my honey, As if you were worth such a wonderful blessing; Nay! mend your own coats, sir, and count your own money, Or try, good sir farmer, you talent at guessing, In just eighteen letters my mind I'll declare, You may guess them, and claim the reward if you dare.

Put my 6th, 1st, 17th, with my 16th, you'll have What all prudent ladies are careful to save; My 2d, 14th, 7th good husbands will use, Or aet wife most surely their tempers will lose; My 8d, 11th, 2d I should make when I lacked, Whether prudence forbid it or not (that's a fact!) Yet with 5th, 4th, and 7th, I could be quite content, If prudence demanded wherever I went; My 15th, 1st, 10th, and 16th, I declare Without blushing, is something that I never wear; My 9th, 4th, 13th, 15th on Mondays you'll find In kitchen, but 'tis not at all to my mind; My 1th, 9th, and 14th I relish, at least, At breakfast or supper, at party or feast; And now, if you're pleased with myself and my rhyme, Put mention the 12th, 11th, 18th next time, Black Rock, N. Y., 1859. A DESPERATE DAMEL.

SURVEYING QUESTION.

A SURVEYOR wishing to measure a piece of land having five sides, commenced at the first corner and ran due east 40 perches to the second corner; thence south-east 50 perches to the third corner; thence due south 60 perches to the fourth corner; and thence south-west 70 perches to the fifth corner. When he arrived at the fifth corner he found that he could not measure the fifth side on account of a deep swamp being in that line. Required the course and distance from the fifth corner to the first corner or starting point, and the number of acres contained in the lot.

RIDDLE.

FAR in the east an ancient fabric stood, Hard by the banks of a majestic flood, There dwelt a preacher, as we understand, Though good, not great, yet by the Lord's command He preached repentance to the guilty soul Till tears of anguish down his cheeks did roll. His clothing rare, no kind of cloth composed, No skins of beasts did e'er his frame enclose. Although he never did e'er sin commit, Yet in Christ's kingdom he shall never sit. When the last trumpet through the earth shall sound, He still shall sleep within the burning ground.

Homers, 1859. W. C.

PUZZLE.

DEAR RURAL:—The following letters are inscribed over the Decalogue in a church in England: presvryprctmrvrkphsprepln.

Required the vowels, which, if properly placed, make a complete sentence. E. W. Coomer, N. Y., 1859.

Answer in two weeks.

ANSWERS TO ENIGMAS, &c., IN No. 471.

Answer to Miscellaneous Enigma:—Hope keeps the heart whole.

Answer to Mechanical Problem:—Four and nine-tenths miles per second.

Answer to Riddle:—The whale that swallowed Jonah.

Answer to Charade:—Brig-ham Young.

Answer to Puzzle:—Two 25 cent pieces and two half cents.

Moore's Rural New-Yorker,

THE LARGEST CIRCULATED

Agricultural, Literary and Family Weekly,

IS PUBLISHED EVERY SATURDAY BY

D. D. T. MOORE, ROCHESTER, N. Y.

Office, Union Buildings, Opposite the Court House, Buffalo St.

Agents in New York and Boston.

Subscription.—O. M. SAXTON, Agricultural Book Publisher, 35 Park Row, (opposite Astor House), New York.

Wholesale, (to supply Periodical Dealers, &c.)—DEXTER & BRO., 14 Ann St.,—ROSE & TOLSEY, 103 Nassau St.

Advertisements.—R. M. PRITTENGER & CO., No. 119 Nassau St., New York, and No. 10 State St., Boston.

TERMS, IN ADVANCE:

TWO DOLLARS A YEAR.—\$1 for six months. To Clubs and Agents as follows:—Three copies one year, for \$5; six, and one free to club agent, for \$10; ten, and one free, for \$15; sixteen, and one free, for \$22; twenty, and one free, for \$28; thirty-two, and two free, for \$40, (or thirty for \$37.50), and any greater number at same rate—only \$1.25 per copy—with an extra copy for every Ten Subscribers over Thirty. Club papers sent to different Post-offices, if desired. As we pre-pay American postage on papers sent to the British Provinces, our Canadian agents and friends must add 15¢ cents per copy to the club rates of the RURAL. The lowest price of copies sent to Europe, &c., is \$2.50—including postage.

THE POSTAGE OF THE RURAL is only 8¢ cents per quarter to any part of this State, and 6¢ to any other State, if paid quarterly in advance at the post-office where received.

ADVERTISEMENTS.—Twenty-Five Cents a Line, each insertion, payable in advance. Our rule is to give no advertisement, unless very brief, more than six to eight consecutive insertions. Patent Medicines, &c., are not advertised in the RURAL on any conditions.

PUBLISHER'S SPECIAL NOTICES.

crease its length; if it was soft wood it was put together on the double beryl principle, B; if hard wood, it was done on the ship-lap "gain and key plan," A, as shown in accompanying illustration.

FIG. 2.—HARD AND SOFT WOOD SPLICE.

The Timber is usually small for such a building, but its strength is amply sufficient. The girts to which the siding is nailed, being only three feet from centre to centre, render it, with its thorough bracing, almost as inflexible as iron. The Siding is pine, planed, matched, and afterwards battened and painted.

FIG. 3.—SECTION OF ROLLING DOORS.

The Doors are of pine, and hung on rollers at the top. The frames are two inches thick, put together with iron bolts that run the whole width. The panels are an inch thick, fitted into a groove at the top, but outside of the rail at the bottom, as seen in fig. 4, causing all water to flow from them, and yet have the appearance of a panel door.

The Windows have sashes that hang near the lap, the bottom pushing outwards, as shown in fig. 4, and are glazed. They have to be fastened open, but they fasten themselves shut.

FIG. 5.—CUPOLA AND CORNICE.

The roof is nearly flat on the top, for fourteen feet, sloping seven each side of the centre—surmounted by a Ventilating Cupola, (figure 5), and two Ventilators on Emerson's Plan, with ornamental brackets, figure 6. This portion of the roof is covered with Russell's Patent Roofing, laid upon inch hemlock, well nailed to joists 2x12 inches. The slope from the centre is only four inches each way, but water runs from it readily, and from its exposed situation snow cannot accumulate in winter.

FIG. 6.—VENTILATOR.

The other portions of the roof are of spruce shingle, laid upon inch hemlock, with a steep pitch for the greater part of its length, and eaves out at the eaves to give a greater projection from the building with the same amount of roofing, and give a finished look to the design, as seen in figure 7.

The eave troughs are built with the other portions of the roof and form the cornice. The eave troughs from the cornice form an ornamental bracket, and running down the corner of the building, give an additional finish.

FIG. 7.—MAIN CORNICE.

The Barn has a projection, as seen in figure 8, and, also in the elevation, that not only adds to the finish of the siding, but protects the masonry.

The approach to the doors on the west is graded to a rise of one foot in ten, and extends to within eight feet of the main building. The protection wall is about four feet in height and two feet thick, sloping against the bank.

The area between the protection wall and the building is bridged, giving a free circulation of air to the basement, as seen in the sectional drawing.

The cost of the entire structure was not far from \$1,200.

ABOUT WOOL—CORRECTION.

MEANS, Eds.:—In the RURAL of January 1st is an article under the caption of "heavy fleeces," from me, which I wish to correct. It makes me say the age of one of the bucks was one year, and of the other one year less eight days, when I intended to give that as the age of the fleeces. The statement as corrected will stand as follows:

No. 1. Age of sheep 8 years; age of fleeces 1 year.	
No. 2. " " " " " " 1 year less, 8 days.	
Combined weight of carcasses	208
" " " " " " of wool in diet	28
" " " " " " of wool cleansed	12

Thus showing that my sheep are of small size instead of large, as would be inferred by the previous article. The position I take is that a Merino sheep of small or medium size, carrying but a moderate quantity of animal oil, will produce more pure wool in proportion to the weight of carcass than those of a large size, and carrying a large quantity of animal oil and dirt, and consequently be more remunerative to the grower.

This question will bear much enlargement and comment, and I wish to introduce the subject to the attention of wool growers in time for them to go into the cleansing and weighing process at the next clip. We can hardly expect that dirt mixed with our wool will long continue to sell well, though I must confess it has sold extremely well of late years. Indications seem to show that manufacturers are getting their eyes open to this "wooden nutmeg" kind of business. I don't know as this achievement in cleansing is anything very extraordinary, as I have cleansed and weighed but one fleece before, and don't doubt but I may be beaten. I hope I may, for my desire is to improve my flock by a new cross, as I before stated. Will not those who have paid attention to this subject, communicate with the RURAL, and give more light to those who are in the dark. How much wool will grow on a hundred weight of mutton? A. Y. BAKER.

Urbana, Steuben Co., N. Y., 1859.

THE APIARY.—WINTERING BEES.

EDS. RURAL:—In the RURAL of Nov. 13th, is an article on the above subject from T. L., of Cattaraugus Co., N. Y., asking for information from others in regard to their management. In the course of my experience in bee-keeping, I too, have found that the art of wintering bees successfully, is truly a great desideratum, more losses occurring at this season of the year, in this vicinity, than from all other sources combined. But I do not attribute the cause of this mortality among bees to sudden atmospheric changes, as does your correspondent T. L. Indeed, I consider these changes of the temperature of the atmosphere in winter very often beneficial to them. If the cause is as T. L. thinks, the remedy would be to protect them from these sudden changes by wintering them in dark rooms or bee-houses. To describe how these houses should be built, and their management therein, would occupy more space than should be taken up by this article. He will find all these things fully and ably discussed in the writings of Mr. QUINCY, a work which should be in the hands of every intelligent bee-keeper, for in this, as in all other things, the most intelligent man will succeed the best. The word luck in bee-keeping is the same as luck in other things—that is, intelligence combined with diligence. The remarks in regard to atmospheric changes in spring and summer are correct, and can no more be remedied than we can prevent a drouth and hinder the sun from parching the earth and scorching our crops of grain and grass, except by keeping the entrance closed as much as possible during the early spring months, to prevent the chilling of the young brood, and doubling all swarms in the fall that have not honey sufficient to winter them, it being well known that two small swarms, with perhaps 12 or 15 pounds of honey each, if wintered separately, would be lost, but if both swarms with their contents be placed in one hive they will winter well.

But I have said that I do not attribute the loss of bees in winter to sudden changes in the temperature of the atmosphere. What, then, is the cause of this great loss of bees in winter? This loss is sometimes truly alarming. In the winter of 1855-6 I have no doubt but that half the bees in this vicinity were lost, and in that winter there were no sudden changes—for about three months, there was but very little variation in the temperature of the atmosphere, the thermometer ranging generally from zero to 20 above, and during all that time the temperature was below the freezing point.

There is always more or less moisture given off by every good swarm of bees. This rises in the upper part of the hive and in winter condenses and freezes among the combs. If the temperature rises high enough to thaw it will do no harm, but if no thaw occurs it will keep on increasing until

the whole hive, excepting where the bees are clustered, will be a frozen mass of ice, and the bees eat all the honey in their immediate vicinity and then die of starvation in the midst of plenty. Many bee-keepers do not examine their hives often, and in the spring, when the frost is all thawed out, they find the bees all dead, plenty of honey in the hive, and ignorantly attribute their loss to their want of luck. The remedy would be either to winter them in rooms or bee-houses sufficiently warm to prevent the moisture from freezing, or by ventilation permit the moisture to escape. But it is rather a difficult matter to ventilate the common old-fashioned box hive. There are hives, however, that can easily be ventilated, but they have the misfortune to be patented, consequently I am not permitted to describe or name them here. I do not state positively that this is the cause of your correspondent's want of success, but only suggest that it may be. If he will state at what season of the year his losses occur, and what the condition of his hives when he first discovers his bees are dead, we can then perhaps give the true cause and the remedy, for how can a physician prescribe for a sick patient without knowing the disease. I would here state that I am not in any way interested in patent bee-hives, only as I have purchased the rights for my own individual use, and if T. L. wishes to make any inquiries and will direct a letter to me with a stamp to pre-pay one in return, I will inform him what my experience with them has been. C. C. WILSON.

Newfane, Niagara Co., N. Y., 1859.

EXPERIMENTS WITH MUCK.

EDS. RURAL:—Having about two acres of tamarac swamp adjoining high, warm, loamy land, and feeling desirous of trying the effect of muck upon it, in January, 1857, after tramping the snow into the mud and water, and letting it freeze, I sent my man and team in, and hauled some 150 or 200 loads upon an adjoining lot of fourteen acres, leaving it in small heaps suitable for spreading. It covered about one-half the lot. In April I covered the other half with barn-yard manure. The muck being wholly pulverized and fine by frost, I spread both and plowed it in. The result was a good crop of corn, beans and potatoes. It was hard to tell which side of the field was the best, the muck fertilized or manure.

Again, in 1858, sent a man and team into the swamp and took from the ditch (from three to five feet deep) sufficient to cover $\frac{1}{2}$ of a nine-acre lot, of similar soil, and in like manner as the other lot, finishing out with barn-yard manure. This muck lay in heaps until the first of June. Around the heaps and along the tracks where the sleigh ran with the water dripping off, the grass was a darker green and twice the size of adjoining grass. I plowed planted, and cultivated beans in the usual way—they completely covered the ground. The result was another good crop. In this case I gave the muck preference over the other manure. The past fall I have plowed a part of the bean stubble, and sowed wheat, which looks well. Being fully satisfied with the experiments of the two previous years, and the double benefit of draining the swamp and fertilizing the fields, I shall go on doing likewise the present year, leaving the barn-yard manure for other fields. The labor of taking direct from the ditch to the field (without drawing to the barn-yard and mixing with other manure, then redrawing,) being much less than any other method I have seen described, accounts for my sending you this sketch. A. PHIPPS.

Eagle Harbor, N. Y., 1859.

Inquiries and Answers.

CANNON.—Are the Large White Carrots as valuable for feeding to stock as the Red? They produce much better, and, if equally nutritive, must be the best.—J. A. S., Glen Morris, C. W., 1859.

THE White Belgian Carrot produces the largest crop, but is supposed to be less nutritious than some of the smaller varieties. We do not know of any experiments that prove this. If this is so, we still believe the larger varieties are the most profitable for field culture, and in addition to the above, would recommend the Allingham and Long Yellow.

RAINING WATER.—Can water be taken from a well 18 feet deep to within 2 feet of the top, thence on a level 10 rods, then 3 feet perpendicular, with a common suction pump?—L. T., Attica, O., 1859.

A common suction pump will raise water about thirty feet. The resistance on the level is very little, so that you might elevate the water about thirty feet. In the case presented you have to raise it only fourteen.

ORCHARD GRASS SEED.—Will you please inform me where I can find Orchard Grass Seed? I would like to sow eight acres with it if I can procure the seed. Please give me the price per bushel if you can.—Geo. R. R., Schiplo, N. Y., 1859.

Orchard Grass can be procured in this city, and, we presume, of the seed dealers generally. The price is about \$3 per bushel. The seed is very light, only weighing from twelve to fourteen pounds per bushel; and about two bushels of seed is recommended to the acre.

SOWING TIMOTHY SEED.—I wish to be informed through the RURAL with regard to sowing Timothy Seed, the quantity per acre, and in what proportion of clover, to a sandy soil?—YOUNG FARMER.

This inquiry we will not undertake to answer in a few lines. It embraces important questions, such as the propriety of growing Timothy to any extent on a sandy soil, and of sowing Clover and Timothy together, which we leave for our practical readers to discuss. From eight to twelve quarts per acre are usually sown.

R. B. E., Seneca Co., N. Y.—In turning under a crop of clover upon sandy soil, we would prefer that it should wait somewhat—if plowed in while in a green state, the decomposition is so rapid as to throw off much of its valuable properties. What say those who have experimented?

MACHINERY FOR MAKING DRAIN TILE.—H. W., Ripley, N. Y.—Don't know where to be had—manufacturers should let the people know.

Rural Spirit of the Press.

Regularity in Feeding Stock.

In commenting upon the importance of regularity in the feeding of stock, a correspondent of the *Maine Farmer* mentions two different ways in which farmers of his acquaintance feed their cattle. Farmer A. feeds his stock regularly; he gives his cattle their fodder at a given time, and in exact proportion. After they have eaten their allowance, they lie quietly down, chew their cud in peace, and wait with ease until the time comes for them to have another feeding. The fodder thus given does them double the good by being given with regularity; the cattle are healthy, in good order, and thrive better than though a different course was followed. Farmer B. comes into his barn—no matter what time in the day—and scatters over a little dribble of hay to his cattle. They eat it up, and if in a half hour he chances to go into his barn again, the cattle are standing up, and, as they hear him enter, begin to twist, strain and reach for a fuddering of hay. Farmer B. thinks they must be hungry, so of course gives them a little fuddering. The consequence is, when any one enters the main floor, if the cattle are lying down—which is seldom the case—they instantly jump up and wait for the small portion of hay to be given them. Fodder thus put over to cattle does them no good; they are thin and half starved all the time. As I have said before, it needs no argument to show the superiority of a regular and uniform system of feeding stock. Every-day examples like these two are of more importance than a whole column of arguments founded on ignorance.

Are Swine Self-Sustaining?

THE *Maine Farmer* has been discussing this question somewhat, and in a recent paragraph remarks:—"If not self-evident, it is believed that a sufficient number of experiments have been made, to establish the fact, that swine are self-sustaining animals, and that pork is the cheapest meat raised upon a farm. The hog is a working animal, and if supplied with sufficient materials for the first ten months of his life, will produce a sufficient quantity of the best of manure, to be equivalent to his value, giving him two months to rest from labor, and to grow fat. Generally at one year old is the best time to kill. A word as to breeding.—It is quite common to breed from young sows, say fall pigs, to come in with a litter of pigs when one year old; a practice to be utterly condemned, and if continued in the same family for a few generations of swine, they will be found to dwindle down from three to four hundred hogs, to two or three hundred. It is much better to keep the sows three or four years, and even much longer—they have been known to have been kept some fifteen years to advantage. The hog is some years, in his natural state, in coming to maturity. It is a fact well known, at least to every Irishman from the old country, that pigs from old sows will grow into hogs some thirty or forty pounds heavier than those from young ones."

Hoofs of Young Horses.

Says the *Ohio Farmer*, we saw recently an instance of the ill effects resulting from the neglect to shorten the excessively long hoofs of young horses. A colt, with unusually long hoofs, had in his play stepped upon some hard substance, and broken off the front part of the hoof of one foot to the quick. The accident was attended with some bleeding, and excessive lameness, the poor fellow being unwilling to put his foot to the ground. Ten minutes' work would have saved the animal much pain, and the owner might have had the profit of three months' growth, instead of having it arrested for that period. But the occasional breaking off of a part of the hoof is but a trifle when compared with other mischiefs resulting from the same cause. When the toe is too long the strain on the fetlock-joint is greatly increased, and permanent injury to the suspensory ligament of the foot often follows. Young horses frequently have wind-galls, and other evidences of sprains, before they are put to work, and in ninety-nine cases out of a hundred these are where shortening of the toe has been neglected. On some gravelly and stony land and hard roads, the hoofs will wear fast enough, as nature evidently intended they should, but if horses are kept on smooth turf their feet must be kept short by artificial means.

The Potato Disease.

THE Royal Agricultural Society has awarded a purse to Dr. LAING, of Ipswich, for a paper on the Potato, its cultivation, production and disease.—The conclusions at which he arrives are:—"That the disease is of a fungoid nature, increased in virulence by atmospheric causes. That all manures are injurious, saving only lime and salt. That the earliest potatoes in ripening should be exclusively grown. That earthing up repeatedly with fine earth is the only effectual preventive to the ravages of the disease." In a review of Dr. LAING's article, the *London Gardener's Chronicle* remarks:—"These opinions are much the same as those which have been repeatedly expressed by ourselves, with the exception of recommending lime and salt as a manure, and trusting to frequent earthing up. But we must express our entire dissent to the author's statement that disease never originates in the lower portion of the stem where it adjoins the root. We can only say that during thirteen years that we have studied the phenomenon of this singular malady we never saw an instance to the contrary."

To Destroy the Turnip Fly.

MR. WIMBALL, of Adermaston, England, has taken out a patent for destroying the turnip fly and other insects injurious to crops, and it may be useful in the same manner for destroying the cotton fly, and the wheat midge in our country. The apparatus consists of a small furnace placed on a small wheel-barrow, the fire being operated by a revolving fan blast, through a strap from a pulley on the wheel shaft. On the top of the furnace is a tube chimney bent downwards and capable of being turned in any direction. Sulphur is thrown, in small pieces, from time to time, on the fire, and the blast directs the gases thus generated through the bent smoke tube among the plants on which the insects are operating. "This appears to be a useful invention," remarks the *Scientific American*, "and one not expensive or difficult for any farmer to carry out into practice."

Agricultural Miscellany.

TO CORRESPONDENTS.—We have a large number of excellent communications on file for publication, and which will appear as soon as possible—the most practical, important and seasonable having precedence. In order to give them publicity, we are obliged to condense many favors of friends—a liberty we would by no means exercise had we "ample room and verge enough" to give in full.—Those whose articles are abridged, or deferred, will please note and accept this explanation, with our thanks for their valuable favors.

A LAW PROPOSED TO PREVENT FRAUD IN SEEDS.—FIRMAN FISH, a member of Assembly of this State, from Jefferson county, has introduced into that body a bill "to require growers and sellers of garden-seeds to mark packages with the name of growers, date of growth, description, weight," &c., under a penalty of fine or imprisonment for misrepresentation. We have not yet seen the details of this bill, but we understand they are quite strict. There may be a necessity for some law on this subject, but, we think it would be better to have this matter regulated by the laws of trade. Our seedsmen, we hope, before long will vie with nurserymen in their enterprise, and give us the purest and the best that the world affords.

But this is a delicate matter to handle, and our law-makers must be careful, or they will commit some ridiculous blunders. The bill, we understand makes a fine of \$50, or imprisonment for three months, or both, the penalty for selling seeds that are not true to the name with which they are labeled. Carry out such a law and our seedsmen would all be in prison in less than a year. Some kinds of seeds mix very readily; indeed nothing but the greatest care will prevent mixture, and this care, our seed-growers have not learned to exercise, nor will they learn it in a day. Buy at any of our seed-stores, packages labelled *Long Green Cucumbers*, and not one seed in a thousand will prove true. The same may be said of all our winter squashes. Scarcely a pure specimen can be found at the seed-stores or elsewhere. This evil we hope to see corrected, but greatly doubt whether it can be by law. The largest portion of our seed is imported from Europe. These are not always pure, and would it be just to hold our seedsmen responsible for the mistakes or frauds of foreign dealers? Much of the seed, too, sold in this State is put up in other States, and we know not how a law could be framed to reach this case. We shall discuss the question more at length in a future number.

ITALIAN BUCKWHEAT.—ITALIAN BLOOM GRASS.—CHINESE BUCKWHEAT.—HENRY GRAY, of Avoca, Steuben county, presented us with a quantity of seed, the like of which we have before received from different sources, under all of the above names. This seed, in appearance, somewhat resembles the *Hungarian Grass* seed, though more nearly the *Cunary seed*. Mr. G. sowed the seed on two acres last spring, and the yield was over seven tons. It is not all threshed out, but if the whole should yield as well as the few sheaves threshed for trial, the product would be at least one hundred bushels of seed to the acre. Horses and cattle are very fond of it, and eat up both head and stalk. The form of the head is something like Broom Corn, and the specimens we have now before us are about four feet in height, the straw thick, tender, short-jointed, sheathed with leaves, of which there are great abundance. The seed weighs 80 pounds to the bushel, and some persons say that for pancakes it is equal to Buckwheat. Mr. G. sowed the 3d of June, and cut with the reaping machine the 3d of August. From this account we should say it would be excellent for fodder.

SEED TRADE OF BOSTON.—The last issue of the *Boston Journal* states that the seed trade of that city amounts to three millions a year. This includes grass and grain seeds. Among the sales are ten tons of turnip seed, and the same amount of beet seed. In the small article of mignonette, five hundred pounds are required to supply the annual demand.

EASTERN CHAUTAUQUE AGRICULTURAL SOCIETY.—At a meeting of the citizens of the towns of Ellington and vicinity, on the 24th ult., for the purpose of perfecting an organization for the promotion of Agricultural interests in the towns of Ellington, Poland, Gerry, Charlotte and Cherry Creek, in the county of Chautauque, an instructive and interesting address was delivered on the subject of agriculture, by WORTHY PUTNAM, Esq., which was eminently calculated to inspire the farmer with an interest and feeling adverse to that of going to mill—as did the Dutchman—with a grist in one end of his bag and a stone in the other. A Constitution and By-Laws were adopted, and officers chosen for the term of one year, as follows:—President—NORMAN M. CARPENTER; Vice-President—CARY BRIGGS; Secretary—ALBIO S. BROWN; Treasurer—ALLEN BAGG, Jr.; Directors—For the town of Ellington, Anson Crosby, Jesse H. Dean; for Poland, Elihu Gifford, G. Wait; for Cherry Creek, Nelson Frost, Warren Parsons; for Gerry, Barny Phelps, Levi Terry; for Charlotte, William M. Wagoner, Alonzo Stephens. A vote of thanks was tendered to Mr. PUTNAM, for his very excellent address.—ALBIO S. BROWN, Sec'y, Ellington, N. Y.

SCHUYLER CO. AG. SOCIETY.—The Annual Meeting of this Society was held at Watkins, Jan. 6th, at which there was a larger attendance than at any previous meeting, and the utmost good feeling and interest prevailed. The election of officers resulted as follows:—President—GREEN DENNETT, Dix; Secretary—S. W. SACKETT, Catharine; (Burdett P. O.) Treasurer—THOS. EVANS, Watkins. Also, one Vice-President, one Manager and one member of the Executive Committee from each town, which comprises a board of three in each town.

ORANGE CO. AG. SOCIETY.—Officers for 1859.—President—ALBIO GOLDSMITH, Blooming Grove; Sec. Secretary—JOHN C. MCCORMELL, Goshen; Cor. Secretary—DAVID A. MORTON, Montgomery; Treasurer—WM. M. SAYRE, Goshen.

THE Annual Meeting of N. Y. State Ag. Society is to be held at Albany, Wednesday next, Feb. 9th.

HORTICULTURAL

ANOTHER FAILURE WITH DWARF PEARS.

We have no desire to give undue attention to *Dwarf Pears* to the exclusion of other and valuable matter, but the question comes up under so many guises that it seems impossible to avoid discussion, unless we surrender the field. We hardly kill one falsehood—prove one story to be a garbled report of the facts, and made to speak falsehoods—ere another and another is started, with as much assurance as though a score of their kind had not been killed before them.

In the January number of the *Horticulturist*, is an article signed "S. B. P., Flushing, L. I.," which means, of course, S. B. PARSONS, of that place. It has a strange heading, for such an article, namely, "*Horticultural Courtesy*." The author complains of C. M. Hovey, the editor of *Hovey's Magazine*, for his supposed want of courtesy, and of *Horticultural Editors*, in general, with the exception of the editor of the *Horticulturist*, whom he seems to consider a model. Now, we agree with him that it is important editors should regard the "courtesies and amenities recognized among gentlemen," and we think it is fully as important that correspondents, when they are writing for the press, should tell the truth. But we suppose this matter of courtesy was only introduced to produce a fog—as a kind of cover to the main statement, which we give below, and which we have no doubt was relied upon as a regular broadside for the enemy:

"What is the whole history of this Dwarf Pear controversy?"

"Some nurserymen and amateurs about Boston were successful in growing Dwarf Pears in their gardens, under high culture. A nurseryman on Long Island, charmed by the results he saw at Boston, planted ten years ago an orchard of four acres of Dwarf Pears. He plowed deep, manured highly, (about \$100 of stable manure to the acre,) selected trees of the best quality of the five best sorts recommended by the President of the Massachusetts Horticultural Society, and gave them, throughout, full garden culture. The first two or three years were highly encouraging. The trees grew so luxuriantly, and bore so abundantly, that he considered the question settled, and wrote an article for the *Horticulturist*, accompanied by an array of figures to prove that orchards of Dwarf Pears were profitable beyond all previous calculation.

"This article was widely copied, and inserted in a book on Fruits prepared by a well known Nurseryman at the West, whose sales of Dwarf Pears were doubtless largely increased by it, for people will be taken by figures, however deceptive they may sometimes be. A year or two subsequent to this, however, the writer's orchard began to flag. Being rather a poet, it was cared for in every possible way, fed, nursed, trimmed, and trained, but all was of no avail, and the writer, after ten years, was forced to admit that he was mistaken, and to feel that in common honesty he was bound to tell it to the public, although a part of his business was to sell dwarf pears. He did tell it. He was preceded and followed by others who told the same story—men from Pennsylvania, New York, and elsewhere, who had expended large sums upon Dwarf Pear culture, and who had no possible interest in giving a false impression."

This "nurseryman on Long Island," who "planted an orchard of four acres of Dwarf Pears," and who "wrote an article for the *Horticulturist*, accompanied by an array of figures to prove that orchards of Dwarf Pears were profitable beyond all previous calculation," was Mr. PARSONS himself—though we must say we cannot find in the article the great array of figures he now writes about. The "book on Fruits," in which he says the article was copied, was *Barry's Fruit Book*, although, in truth, Mr. BARRY copied but about twenty lines, designed to show Mr. PARSONS' method of manuring and cultivation, but more particularly the manner of planting a mixed orchard of standard and dwarf trees, for Mr. P. planted standard trees twenty feet apart, and between these, dwarfs ten feet apart. Whether Mr. B.'s sales of Dwarf Pears were largely increased by copying that twenty lines, we cannot say, but it seems to us that Mr. PARSONS would be the most likely to be benefited by such a notice of his operations. The remark, therefore, is entirely gratuitous, hardly consistent with the "courtesies and amenities recognized among gentlemen," with which Mr. PARSONS pretends to be so much in love, and certainly very much out of place in an article on "*Horticultural Courtesy*."

In the article referred to by Mr. P., and published in the *Horticulturist* of January, 1851, he says: "Of the varieties on quince I have planted only six. *Glout Morceau*, *Vicar of Winkfield*, *Louise Bonne de Jersey*, *Winter Nalis*, *Lawrence*, and *Bourre d'Arenberg*." The reader will please bear in mind the varieties.

This pear orchard of four acres was planted, Mr. P. tells us, ten years ago, being in 1840. In January, 1851, his famous article containing the "deceptive figures" was published, having been written in 1850. "A year or two subsequent," (in 1851 or '52,) the "orchard began to flag." He "fed, trimmed, nursed and trained, but all was of no avail," and this fact, with a Roman integrity, and a moral heroism truly surprising in this degenerate age, after ten years, he felt constrained to tell, "although a part of his business was to sell dwarf pears!"

Now we are not informed whether the trees are living or dead, or if dead, whether killed by blight or mice, or "constitutional obstinacy." In 1851 or 1852, they "began to flag," and that is all we are permitted to know of the matter. But, how of the standard trees? In that orchard of four acres there were 440 standard trees, and they would be now ten years planted and with the feeding, and nursing and training that Mr. PARSONS describes should be beautiful trees, and some of them producing fruit. Surely they were not as obstinate and ungrateful as the dwarfs? Do let us hear of your success with the standards.

So much for Mr. PARSONS' statement. Now for the statements of others. We are informed by an intelligent nurseryman of New Jersey, who often

THE WHITESMITH GOOSEBERRY.

The *Gooseberry*, when well grown, is a delicious fruit, and in England it is the staple summer fruit, prized and enjoyed alike by rich and poor. Those who have traveled in that country in the summer season, observed the thousands of bushels exposed for sale in the markets and at the fruit stores, noted the cheap rate at which they are sold, and tasted the rich berries, will at once admit this fact. In early spring, when not much larger than peas, they are used for pies, tarts and sauce, and they are in demand for these purposes until ripe, in July, when they are excellent for the dessert. Mr. LONDON very truly remarked, "as a luxury for the poor the gooseberry is the most valuable of all fruits, since it can be grown in less space, in more unfavorable circumstances, and brought sooner into bearing than any other."

Unfortunately, our climate is not so well adapted to its growth as the moist climate of England, though in the more northern and eastern part of the country it succeeds pretty well, especially if planted on strong soils. In Northern Illinois, a few years since, we were surprised to find the gooseberry growing in perfection, without the least sign of disease. If this is general in the West, it should be known, and we hope some of our Western readers will give us information on this point.

The best gooseberries we have are English sorts, and they are generally attacked with a mildew, when less than half grown, which entirely destroys the fruit, and this disease appears to be more general and destructive on light or shallow soils, and therefore it is always best to plant on strong, deep soils. A thick moulding, also, is of advantage, and in the *RURAL* of last year, we gave some successful experiments with sulphur.

The *American Seedlings* are not subject to this disease, but, as yet, they are inferior to the English. Before long we hope to be able to announce some American varieties that shall rival the English in quality. *Houghton's Seedling* is the most generally cultivated of American varieties. The *Mountain Seedling*, grown by the "Shakers," of New Lebanon, is a very productive, early sort, of fair quality. Mr. CHAS. DOWNING has raised a seedling which is represented as superior to either of these, but we have not yet seen it.

The English Catalogues contain lists of hundreds

visited this orchard, that for a several years it was well cared for, at least so far as manuring and working the ground was concerned, but even then the trees were allowed to over-bear, to breaking down; and after the first few years the ground was almost entirely neglected, and weeds, weeds, was the order of the orchard. A gentleman who was gardener for Mr. PARSONS at the time, confirms this statement. The names of these gentlemen we can give, with the particulars of their statements, should it become necessary.

Our readers will remember that in 1851 or 1852, this orchard "began to flag," and that the owner could not stop this "flagging," by any means tried, until at last, ten years after, (in 1859,) he felt constrained, against his own interest, to inform the public of the melancholy fact. Now read the following advertisement which we cut from the *Horticulturist* for August, 1854, two or three years after the flagging commenced:

DWARF PEARS.

S. B. PARSONS, of Flushing, Long Island, offers for sale his orchard of Dwarf Pears, which is described in "*Barry's Fruit Garden*." They are removed for building purposes, and are in fine growing and bearing condition. They consist of:
VICAR OF WINKFIELD and GLOUT MORCEAU, eight and nine years old, \$2 each.
LOUISE BONNE DE JERSEY, four to six years old, 75 cents each.
BEURRE D'ARENBERG, FIG, and LAWRENCE, three years old, 50 cents each.

They are now growing luxuriantly, and can be seen on the premises, which are accessible by railroad and steamboat from New York eight times per day. August 1, 1854.—3L

"In fine growing and bearing condition,"—are now growing luxuriantly!—in August, 1854!—Sold off because the land was valuable for building lots five years ago—in 1854. The same varieties—the very orchard "described in *Barry's Fruit Garden*," so that there can be no mistake. The orchard broken up, and the trees advertised in 1854, with which he now claims to have had ten years experience (since 1840,) and failed! The trees that commenced flagging in 1851 and could not be saved, are advertised in the autumn of 1854 as being in fine growing and bearing condition, and growing luxuriantly! Did not the cause of truth—the public good—require it, we would not

of prize sorts, and they are divided by color into four classes, red, yellow, green and white. We give, above, a drawing from nature, of one of the hardiest and best of the white varieties, the Whitesmith. In this connection, we also give an article from Prof. CORROCK, of Buffalo, showing his plan of preventing mildew.

In the December number of the *Horticulturist* a method is described for successfully growing the *Gooseberry* free from mildew, by the application of a species of *mulch*, i. e., two shingles, or pieces of board, having a notch cut out of each the size of the stem, to lay upon the ground, the stem of the tree growing through the centre—the surface being boarded to the extent of the branches. This method, I believe, originated with myself thirteen years since, and was brought before the Buffalo Horticultural Society at that time. Instead, however, of using wood, I gave the preference to bricks, simply laying them upon the surface of the soil after digging and raking smoothly in the spring. From eight to sixteen bricks are needed, according to the size of the bush. My experiments were confined to six varieties of the *Lancashire Gooseberries*, viz., *Crown Bob*, *Whitesmith*, *Roaring Lion*, *Iron Monger*, *Top Sawyer*, and *Hearts of Oak*. With these varieties it answered to a charm, and I am happy to find it proves useful elsewhere. My object in noticing this method at present, may perhaps be a slight touch of vanity, in having conferred even a trifling benefit to the success of horticulturists. About the same period I had proved to a demonstration, by experiments with spent tan-bark, that it made an excellent mulch for Strawberries, which has been generally adopted, although it fought its way somewhat slowly, until Mr. DOWNING fully endorsed it. But the funniest part of this matter was, after four or five years use of it, among the members of the Buffalo Horticultural Society, a gentleman of our neighborhood famed for his *Island Pear Orchard*, but more particularly touched with the *cacoethis scribendi*, when a bit of good capital can be made, although he had for years ridiculed its use, suddenly, in the spirit of universal philanthropy, wrote an article in the *Horticulturist*, commending its value, and without the least qualification, claimed the priority of its use! Longsight, near Buffalo, 1859. W. R. CORROCK.

thus expose the facts. Is there not a fair man among all the enemies of dwarf pears—not one who can tell the truth, the whole truth, and nothing but the truth. Have they all combined and conspired together as one band of brothers, with ANTIAS as their Patron Saint?

WINE AND THE OPORTO GRAPE.

EDS. *RURAL*:—In answer to your inquiry about grape vines, I will say I have about half an acre of ground set to *Oporto* vines, sixteen feet each way, trained on wires attached to posts. They are eight years old, and have not had the best of care until the past year. Trimmed late in the fall or winter. Last spring I plowed the ground as near the vines as I thought best, and spaded the rest all over.—Planted potatoes between the rows and kept the ground mellow and clean. The vines grew finely, and hung full of grapes. A few vines did not bear on account of a little bug which eat the leaves and blossoms off as fast as they came out. I looked over all the vines twice and three times a day, and killed them or we should not have had any grapes. The bug was the size of half a small pea, the color of a green fly, and jumped like a flea. From forty-eight vines I made fifty-four gallons of wine—the real juice of the grape, not one-third water as some make wine—and fifty bushels of potatoes from the half acre. I have another vine of the same kind, from which I picked seven bushels of grapes last fall. I have six different kinds of grapes, and the *Oporto* is the best of either of them for wine, and better than any other grape that I am acquainted with. In conclusion I want to say a word about the *RURAL*. I have always thought it an excellent family and agricultural paper, but think it has improved half in appearance this year. Clyde, N. Y., Jan., 1853. A. DEVEREAUX.

REMARKS.—We know nothing of this *Oporto* grape, but from what we have heard of it, should judge it is a native, requiring a good deal of sugar to make wine. The wine sent us was altogether too sweet for our notion of a wine. Still, though these native vines are hardly worthy of the name, they are but very slightly intoxicating, and contain no poisonous admixtures.

EVER-BEARING STRAWBERRIES.

MESSES. EDS.:—It appears, from the debates before the American Pomological Society, at their fall meeting, that one of the members observed that he had never known a perpetual Raspberry or Strawberry, though he had tried several claiming these qualities. And in the *RURAL* of October 23d, you speak of having received strawberries in September and October, and intimate that this is the greatest claim that has been made to the Ever-Bearing Strawberries in your latitude. I write to inform you that I have Strawberries that are entitled to the name in the strictest sense of the word. Last spring I set out three dozen of very delicate plants; they blossomed without forming many leaves; and before frost had ceased, the first blossoms were all killed, but that made no difference with them; they immediately threw out more blossoms and bore fruit week after week continually, until frost came in the fall; by covering them slightly some ripened after the first frost. I lifted a couple of bunches that had borne fruit all summer and planted them in a box of rich earth, kept in the sitting-room, and they have continued to bear thus in the winter.—They are now covered with fruit in all the different stages of growth, from the blossom to the ripe berry, though the fruit is not more than half the size it was in the garden. I send you a specimen. The fruit is of medium size, and sweet enough, of considerable flavor, and colors for some time before it ripens. I had the bed slightly covered with tan-bark; and this prevented the runners from readily taking root; but so hasty are they to bear that the runners will blossom, and have readily ripened fruit without being rooted at all. Whether they will produce enough to make them profitable for a market gardener, I will not take upon me to say—but sure I am that to the amateur they will be a delightful acquisition, as their hardiness and ever-bearing property has been fully tested for some years. M. McC.

Frankfort Springs, Pa., Dec., 1853.

REMARKS.—We fear the bright hopes of our correspondent are doomed to disappointment. Is it a seedling, or an old variety? It looks like the common wood strawberry. Try it another season.

METHOD OF KEEPING GRAPES.

EDS. *RURAL*:—Having seen several articles in your excellent paper of late, as to the best manner of putting up grapes for winter use, I will explain my own way of keeping them, which with me has been a perfect success. Having the past season an abundant yield, (some thirty bushels,) mostly *Labeilas* and *Cataubas*, I concluded to save some for winter use if possible. I put up only the *Labeilas*, which were very large and fully ripe. I picked them carefully on a dry day, selecting the finest clusters. Cut out all imperfect or bruised grapes, and then, having prepared caudle boxes by pasting paper over them, put in a layer of clean, fine cotton batting, then a layer of grapes, so as not to have the clusters touch each other, then a layer of batting, and so on, until the boxes were filled. Put batting on top and nailed on covers tight, then papered over cover and all, with stout paper, safely to secure from air, and put them into a chamber and kept them there, where had been no fire this winter. During the very cold weather two weeks since, some in a box that was open for use, froze, while those unopened were safe. After winter set in I spread bed-quits over the boxes.

By this mode, we have had, all winter, fine, plump and fresh grapes for use. A few days since I opened a box which were pronounced excellent by some neighbors who eat of them. I will assure your readers that it is easily done, and will well repay by affording both family and friends, during winter, a delicious and healthy fruit.

Wampsville, Mad. Co. N. Y., 1850. R. H. AVERY.

THE HUBBARD SQUASH.—I think you will agree with me that my article, in the *RURAL* of the 22d ult., offering to distribute seeds of the *Hubbard Squash*, has been appreciated, when I tell you that on the first four days I received and answered over two hundred letters, sending seeds to all, though not as many as I would gladly have done. At this rate you see my stock will soon be exhausted, for as I had but nine squashes, my number of seeds was not large; but as long as they last they go cheerfully. I hope each one will be fortunate in raising, at least one, that they may thus procure seeds for a larger growth next year. And to secure this end, I would recommend to all to start plants in a hot-bed, or in boxes in the house, that they may get a good start, which will protect them from bugs, and insure an early maturity. It is with reluctance that I thus early beg for quarter; but before this is published I shall undoubtedly have have more orders than I can fill. I shall hope to hear the result from some, at least, who thus eagerly seek for this excellent squash.—J. E. NORTH, South Cortland, N. Y.

REMARKS.—Those who do not procure seeds from Mr. N., can obtain them from other sources noticed in the *RURAL*. A few shillings cannot be expended in a better way than in procuring a supply of the seed of this superb squash. We hope every person who procures these seeds will make a special effort to keep them pure. Plant as far as possible from everything of the squash and pumpkin family. Our old varieties of squashes have become so mixed that it is almost impossible to obtain any sort pure.

PLANTING FRUIT TREES.—Is it a good practice, as some recommend, to put stones in the bottom of the hole, when planting a fruit tree?—H. H. D., Black Hawk, Wis.

REMARKS.—There is no advantage claimed for this plan, that we know of, except that it prevents the roots from going down beyond the proper influence of light, air and warmth. We consider the plan objectionable, and where the surface is kept rich and mellow, no evil will result from the roots going down. The roots of a tree are the feeders, and in their search for food they sometimes go far and wide. By keeping the surface mellow and rich, the growth of the roots is encouraged near the top of the ground. By watering a plant we can keep its roots near the surface, while a plant that is never watered, will send its roots far down in search of moisture.

PICKED-UP DINNERS.

EDS. *RURAL*:—Please say to MARK that the best way to get rid of picked-up dinners on washing-day, is to use the washing fluid called *Economy of Time*. We have used it for two years in our family, and could not be induced to wash without it under any circumstances, as it saves both time and labor.—The fluid is prepared in the following manner:—Take one pound sal soda; half a pound unsalted lime; put in one gallon rain water, let it boil twenty minutes, skim off the scum that rises, then set it away to cool and settle. Pour off all that is clear, and bottle. Whenever you wish to wash, gather your clothes the evening before, soak them over night, adding a very little weak lye to the water in which they are soaked. In the morning wring them all out, rub soap on the wrists and collars of the shirts, and all other articles that require it, sheets and pillow-slips excepted. Put as much water in your boiler as usual, and again add a small quantity of lye, (lye saves soap,) then put one tablespoon full of this fluid into the water, and put in the clothes. Let them boil half an hour, then take out and wash them thoroughly through one suds. If there are more clothes than can be put in one boiler, dip out some of the suds and add cold water enough to make it luke-warm, adding half a spoonful of the fluid. After the clothes are all washed, put them into the boiler with clear water, let them come to a boil, then take out, and they are ready to be wrung and hung up.

This suds does not injure calico, as many suppose, more than soap does. New calicoes and flannels should never be washed in anything but clear water and hard-soap, and dried where they do not freeze.

The bits of dry, hard bread are made palatable by being broken or grated finely, and put in a pudding dish in alternate layers with finely chopped apples. Put a little butter, sugar and spice between each layer, pour a little hot water over it just before setting it in the oven; bake one hour—serve with cream and sugar. In summer you can use berries or fruit as a substitute for apples, then you can have fifty-two excellent puddings, all on washing-days, for they can be made early in the morning, and left to put in the oven at the proper time for picked-up dinners. MARIA.

Niagara City, N. Y., 1850.

HOW THEY MAKE COFFEE IN FRANCE.

A cup of French coffee seems to have the effect to put Americans into ecstasies; yet few of them are thoughtful enough to obtain from their French brethren the process by which the delicious beverage is decocted. Of this few is a Buckeye writing from Paris, under date of Nov. 9th, who supplies the desired information:

"While at Mr. Morle's, his good lady very kindly initiated me into the art of coffee-making. In the first place it is scorched in a hollow cylinder, which is kept constantly revolving over a slow fire, and not a grain of it allowed to burn. Secondly, it is ground very fine, and thirdly, when it is to be used, a portion of this is placed in a finely perforated pan or cup, which exactly fits into the top of the boiler, coffee pot, or vessel you wish to use. Boiling hot water is then poured on, and it percolates gradually through, carrying with it all the essential principles of the coffee. As soon as percolation is completed, the pan is removed containing all the grounds, and then boiling hot milk is added to the infusion, and your coffee is made. It is brought on the table in bowls, with a knife and spoon, and a little willow basket of bread. The servant then places by your plate a tea dish, on which are two or three lumps of white sugar, always of a certain size, and you sweeten to your liking. In no instance is your coffee boiled, and this is one reason why the *café au lait* and *café noir* are so much admired by all who take them. If you will try this mode, I am sure, in a few experiments, you will succeed in getting it right, and possess yourself of a luxury which will add very much to a breakfast on a cold morning—try it."

HOW TO COOK A HUSBAND.

The time has arrived in the year for the preparation of many good things, and I have no doubt but that the following will prove to be one of the most valuable in the catalogue of recipes. To cook a husband, as Mrs. Glass said of the hare, you must first catch him. Having done so, the mode of cooking him, so as to make a good dish of him, is as follows:

Many good husbands are spoiled in the cookings; some women go about it as if their husbands were bladders, and blow them up; others keep them constantly in hot water, while others freeze them by conjugal coldness; some smother them in hatred, contention, and variance, and some keep them in pickle all their lives. These women always serve them up with tongue sauce. Now, it cannot be supposed that a husband will be tender and good if managed in this way; but they are, on the contrary, very delicious when managed as follows:—Get a large jar of faithfulness, (which every good wife has on hand,) place your husband in it, and set him near the fire of conjugal love; let the fire be pretty hot; especially let it be clear, but above all let the heat be constant. Cover him with affection, kindness, and subjection, garnished with modest and becoming familiarity, and spice with pleasantry, and if you add kisses and other confectionaries, let them be accompanied with a sufficient portion of secrecy, mixed with prudence and moderation. We would advise all good wives to try this recipe, and realize what an admirable dish a husband makes when properly cooked.

The most graceful principle of dress is neatness, the most vulgar is preciseness.

BRING FLOWERS.

BY SPENCER F. TOOLEY.

Bring flowers that bloom when morning's early light
Tinges with brightness the blue arch above,
And place them where the infant flower bright
Bloomed for an hour in purity and love.
Through by the wind's low whisper swept away,
Yet it will shine throughout eternity.

Bring flowers to place on childhood's restless brow,
And twine with leaves of laurel all around
That little heart we all do prize so now,
Since he with an immortal soul is crowned.
Wishing to ramble where bright rivers flow,
He left this world, and to yon heaven did go.

Bring flowers to strew around the grave of youth—
Flowers that grow in summer by the way—
For he who plucked the opening buds of truth,
Has from this field of learning gone away.
Eager to find where Wisdom's rubies lie,
He went to search beyond the distant sky.

Bring flowers to lay within the narrow grave
Where a madman's sturdy frame is sleeping low—
Fire, storm, and tempest he did nobly brave,
And conquered every dark and dreaded foe;
Well did he battle in this world of strife,
And he has gone to take the prize of life.

Bring flowers that bloom when evening shadows fall
Around the day that is forever past—
Which covers form and feature with a pall,
And lays them gently in the grave at last.
Tis then the aged calmly take their rest,
And when the morning comes wake with the best.
Marshall, N. Y., 1859.

PLAIN TALKS TO AMERICAN WOMEN.—No. III.

BY MRS. M. P. A. CROZIER.

We come now to consider more particularly those treasures of affection, those blossoms of love, without which a home the most perfect in all other respects is as a world without flowers, or a Heaven without angels. Fain would we spare parents, if possible, the agony of an untimely separation from these cherished objects of their care, by trying to point out some of the principles upon which their physical education should be conducted. Perhaps we shall say nothing but what has been said many times before, but if, by a new utterance of old truths, we shall reach any minds that have not heretofore been enlightened by them, it will not be in vain that we speak.

With an unnatural course of life, so prevalent as it is in our country, who can wonder that children are born ill, and that in every stage of mortal existence, health is the exception, and disease the general rule? Who can wonder that the grave of the young form so large a proportion of the habitations of the cities of the dead? Mother, would you preserve your loved ones to the joys of life, see them attain a vigorous maturity, and become a blessing to the world? Be true to the simplicity of Nature. When you receive from the hands of the loving Father the gift of a beautiful child, consider that it is a weak, delicate thing, to whose organization a single error in management may be fatal, and by all your love for the dear one, exert yourself to understand and obey the laws which govern that organization. If it is born healthy, endeavor to preserve its health; if diseased, husband its small vitality with the greatest care, lest the spark of life be soon extinguished, and your soul mourn because of the succeeding darkness. It is so sad a thing to bury the babe of one's affection, that it would seem that every true mother's heart would eagerly seek for information as to how this may be done, and as eagerly apply that information when known. Your child is born—what are you to do with it?

1. *Clothe it properly.* Regulate the amount of its clothing in such a manner as to secure it sufficient warmth, and at the time so dispose it that no part shall be denied the access of fresh air, or be compressed so as to prevent a free circulation of the blood, and the free movement of every muscle of the body.

2. *Let the atmosphere which it breathes be uncontaminated by poison.* The blood cannot be purified by foul air, and if at every inspiration are inhaled elements antagonistic to the system, how long, think you, will it take for the little body to become laden with disease—how long to ere your heart will be agonized by its cries of pain? There are many sources of atmospheric impurity, and one of the most prolific, one most likely to affect us, is the human body itself. At every expiration of the lungs are thrown off large quantities of poison, which, if re-inhaled, become a source of disease. This is sure to be done, unless thorough ventilation is secured. If you long confine your children to rooms to which the fresh air can have no access, you are slowly, but as surely, poisoning them as though you mingled arsenic or strychnine with their food.

The following, from the *Scientific American*, forcibly illustrates the subject of "Air Poison," that although it has, we believe, once appeared in the *Rural*, it would seem proper to call attention to it again in this connection:

"People have often said that no difference can be detected in the analysis of pure and impure air. This is one of the vulgar errors difficult to dislodge from the ordinary brain.

The fact is that the condensed air of a crowded room gives a deposit, which, if allowed to remain a few days, forms a solid, thick, glutinous mass, having a strong odor of animal matter. If examined by the microscope, it is seen to undergo a remarkable change. First of all, it is converted into a vegetable growth, and this is followed by the production of multitudes of animalcules—a decisive proof that it must contain organic matter, otherwise it could not nourish organic beings. A writer in *Dickens's Household Words*, in remarking upon

this subject, says that this was the result arrived at by Dr. Anstie Smith, in his beautiful experiment on the air and water of towns, wherein he showed how the lungs and skin gave out organic matter, which is, in itself, a deadly poison, producing headache, sickness, disease or epidemic according to its strength. Why, if a few drops of the liquid matter, obtained by the condensation of the air of a foul locality, introduced into the vein of a dog, can produce death by the usual phenomena of typhus fever, what incalculable evils must it not produce on those human beings who breathe it again and again, rendered fouler and less capable of sustaining life with every breath drawn! Such contamination of the air, and consequent hot-bed of fever and epidemic, is easily within the power of man to remove. Ventilation and cleanliness will do all, so far as the abolition of this evil goes; and ventilation and cleanliness are not miracles to be prayed for, but certain results of common obedience to the laws of God."

Nor can the lungs properly perform their office of purification if they have not sufficient space to work in. Observe the action of these organs when your child is undressed, and consider whether, when confined by those tight bands which you have been accustomed to pin around it, a sufficient amount of air, even if it be pure, can be inhaled to change once in two or three minutes all the dark blood of the body, laden with waste matter, into bright red blood fit for the nourishment of the system. To expect such a result under such circumstances, is like expecting that a train of cars will go at the rate of forty miles an hour, while every movement of the locomotive is impeded by some obstacle that will allow it to exert but half the required amount of power; or like expecting a man to do a full day's work with his hands and feet in irons; or the Israelites to deliver the usual tale of bricks without straw. Let, then, this truth be yet more deeply impressed upon your mind—that the lungs must have pure air and plenty of room, or the body will be its own destruction.

We reserve further remarks upon Physical Education to a future article.

HOOPS.—FEMININE APPAREL.

As the merits and demerits of the hooped skirts are under discussion, I will give my experience. I think the majority of women are apt to follow any new fashion to the utmost extreme it can be carried, and thus create a disgust among sensible and moderate people, and gradually, however good in itself, it gets into disrepute. So with hoops. Most ladies were not satisfied with a convenient-sized skirt, but expanded to such monstrous proportions as utterly to disfigure "the human form divine." Those who have worn small-sized hoops have scarcely been noticed, and have realized all the benefits such a skirt can possess—lightness and ease in walking. I have found them excellent to walk in, but much in the way, and very inconvenient when sitting or riding—not so much in the cars as in a carriage, or wagon of any kind. And about the house they are frequently in the way, especially at the table, and often I almost decide to abandon them, tho' I have never worn them large, but of sufficient size for beauty or convenience.

Many ladies have no sort of regard to their height in regulating the size of their hoops, and we often see a short, plump woman, so expanded as to resemble a great pumpkin, with a head set on it. But taking all the "inconveniences and disadvantages" into consideration, it is my opinion that so long as we must be burdened with so much skirt, hoops are an advantage, and they never have been half so absurd as the sweeping, trailing dresses. Why not abuse them? I'll help with all my powers. Any woman knows the terrible, dragging, wearying of these skirts—or no, not any woman—for some have never tried them—but we can see how they feel as well as look.

I think we wear too many skirts—too much cloth in them—and, finally, I do not like skirts. What could a man do, burdened as we are? How could they go up and down stairs, sweep, scrub, &c., bound around with yards and yards of cloth? Men wear his clothes thickest and heaviest about his chest and vitals; woman leaves these comparatively unprotected, and wears her clothes around her heels! If there is any other way that we females can be decently clothed, without our burdening skirts, I, for one, will say amen!

Mrs. JANE CHURCHMAN.

A BEAUTIFUL SMILE.

A BEAUTIFUL SMILE is to the female countenance what the sunbeam is to the landscape. It embellishes an inferior face, and redeems an ugly one. A smile, however, should not become habitual, or insipidity is the result, nor should the mouth break into a smile on one side, the other remaining passive and unmoved, for this imparts an air of deceit and grotesqueness to the face. A disagreeable smile distorts the lines of beauty, and is more repulsive than a frown.

There are many kinds of smiles, each having a distinctive character—some announce goodness and sweetness; others betray sarcasm, bitterness and pride; some soften the countenance by their languishing tenderness, others brighten it by their brilliant and spiritual vivacity. Gazing and poring before a mirror cannot aid in acquiring beautiful smiles half so well as to turn the gaze inward to watch that the heart keeps unsullied from reflection of evil, and illuminated and beautified by all sweet thoughts.

Then there is a woman's sweet laugh, than which there is not a natural grace more bewitching. Its sound has been pleasantly compared to that of flutes on the water. It leaps from her heart in a clear, sparkling rill, and the heart that it reaches feels as if bathed in a cool, exhilarating spring! It runs the pulse of lips into poetry, it flings showers of sunshine over this darksome world in which we are traveling, and it glides with light and brightness all that it touches.—*Selected.*

When we record our angry feelings, let it be on the snow, that the first beam of sunshine may obliterate them forever.

THE RAIN THAT COMES IN WINTER.

O, the rain that comes in Spring-Time

A promise brings of flowers,
And it whispers in its falling
Of the merry woodland bowers,
Where the leaves shall quicker open—
Where the birds shall sooner sing,
And the buds, for its welcome kiss,
Shall be less time blossoming.

O, the rain that comes in Summer,
Comes with a blessing down,
And gladness faces greet it,
Though the skies may seem to frown;
For the earth shall bloom the sweeter,
And faster grow the grain,
And all beauty be completer,
For the gentle Summer rain.

O, the rain that comes in Autumn
When the leaves are turning red,
When the shadows are around us,
And shadows overhead;
Brings but a touch of sadness—
Comes as it should come then—
And seems to sigh for the dying
A fitting requiem.

But the rain that comes in Winter—
O, the cold and dismal rain—
In its coming, comes like sorrow,
And it thrills the heart with pain;
Struggling forth from the ice-clouds—
Falling on frozen folds—
To the soul no joy, to the valleys
No harvest of good it yields.

Alas! for the ice in bosoms
Where once beat the heart of love,
Wee! for through frozen channels,
The pulses no longer move.
Tears, bitter tears of anguish,
Fall—but they fall in vain—
Alas! for the rain in Winter—
The cold, damp, dismal rain.

Hastings, N. Y., 1859. ROSALIA.

Choice Miscellany.

Written for Moore's Rural New-Yorker.

HERE AND THERE JOTTINGS.

NUMBER TWO.

The Home of Many Memories.

"Thirty years old!" Well, well, the sober days have come at last, providing the triteness of the couplet

"At Ten a romp—Twenty, wild,
Thirty, tame—If ever."

will endure a thorough test. How the years move on. The ticking clock marks out the seconds to our dull ears and we comprehend these minimum records—months glide away, and Father Time turns his furrows so inaudibly, so noiselessly, we make no note of his progress, until, starting from the reverie, the unpleasant truth is realized that we are growing old. What a blessed order is that of Nature which requires all things in her realm shall be performed quietly, serenely—in the calm majesty of silence. Says a writer upon this subject:—"So day steals into night through the crimson curtain of twilight—so the golden gates of dawn swing round noiseless as the portals of heaven. Even the beat of the heart is muffled, that we may not know how fast it struggles out." From the building of the oak to the rolling of the world, there is no click in the machinery. There is no noise save of helpless waves, or the rent air groaning with the lightning's bolt, or now and then the play of volcano's valves, or of the puny cries of insects or men in all this world of ours.—The past is dumb—the future is silent, and the present makes but a slight ripple, like the trailing of a steamer on a quiet sea."

Of ten our boyhood's day have we stood by the knees of the aged listening to their tales of "the olden time"—when sunny locks clustered around brows whereon winter's snows had long found a resting-place, and we, involuntarily, queried "shall these things be unto us?" Oft, while gazing upon the bent form and tottering step of the earth-wearied one—he who was willing to bid the earth good-night and enter upon his heavenly mission with a glad good-morning greeting to his lips—have we thought shall "aged and alone" be written over against us as we approach the Valley? Many there be who

—Are only waiting
Till the shadows are a little longer grown,
And He who "doeth all things well" will soon wrap around their tired senses the mantle of forgetfulness, saying, "Come Home."

"Thirty years old!" Almost one-half of the "three-score and ten" have fled forever, and the eyes that so fixedly watched the pole-star above the horizon of the Future turn lovingly to the Past, for fond thoughts are calling, "back! back!" A new land is thrown open, and though its portals are not golden-hued by the skillful fingers of Fancy, still beautiful prospects and harmonious sounds may please the eye and gratify the ear, as they come forth from the Home of Many Memories. "It Might Have Been!"

For how many a life may these four simple words form a fitting epitaph. "It may be," is the rallying cry of youth as a rose-tinted sky spreads before the vision. "It will be," is the chosen watchword of maturer years, and manhood's physical and mental development are bent to the task. "It might have been," is the echo of age. Standing between two eternities—the past and the future—bopes buried, aspirations crushed, strength departed, bodily infirmities increasing and weighing down the spirit, olden memories throng the brain, and from the soul's depths, fraught with bitter anguish, pours forth the life-history—"It might have been." Such, however, is not the necessity of humanity. Sound social philosophy and genuine morality would work out a nobler destiny leaving to mankind a purer and holier record. He who rules the elements "created man in His own image," giving him "dominion over the earth and

all things therein"—making him not only monarch in the world terrestrial, but the arbiter of his own fortune in the land of "The Hereafter." When the love of self has been kept in abeyance to the great moral principle comprised in Universal Brotherhood—when truth and justice are the incentives to action—when proper views and estimates are taken of the immortal in our nature and we conform thereto, "It might have been," becomes the vision—"It is," the real, and the soul revels in the attainment of the end for which it was created.

Winter's Light and Shade.

One of the New York city religious weeklies recently stated that "a perfect furor existed throughout the county for mammoth sleigh-rides, sumptuous suppers, and brilliant dancing parties. One or two hundred couples on a sleighing excursion is an every day affair." How bright the coloring in this picture of "upper ten" cosmopolitan life. With those who carry pocket-books possessed of negotiable linings, "It snows" is but the synonym of the "good time coming," and the fleecy messengers are bearers of gaiety. But what of the "lower million?" Alas, that there should be those who dread the rigors the storm ever bears in its train. The same wild blast that wafts the joyous laugh and merry song of the fortune-favored, will crystallize the tear upon the cheek of poverty—will wing the orphan's sigh and widow's moan to the feet of Him who commanded, "love thy neighbor as thyself." While the silver bells

—Tinkle, tinkle, tinkle,
In the icy air of night,
ringing out a gladsome rhapsody, we should remember that no light, no fire, may be tolling the death-knell of him who, in the sight of God is our brother.
JOHN BARLEYCORN, JR.
"Look-Out Farm," W. N. Y., 1859.

THE MIND OF CHILDHOOD.

THE high privilege, the honor of writing for children is but little understood. Is it not a beautiful thing to call out the first bloom, to inhale the morning fragrance of the immortal soul-flower? Is it not a great thing to trace the first words on the soft, white tablets of the mind, where they will harden and remain forever? O, those earliest teachings!—how the soul treasures them, and holds them dear and sacred through all the changes and labors, distracting cares and more distracting pleasures of life! The mind cannot grow proud and strong enough to expel them, nor can the heart harden and contract till it crushes them. I have heard, somewhere, the story of a faithful servant of a banished lord, who cut into a young tree on the old estate, and hid under the bark some small, but precious jewels belonging to his master.—Years went by, and the young exile returned an old man. The steward was gone, but his lord knew well the secret of his deposit. Where the young tree stood, now towered a thrifty oak, with bark hardened and roughened by time; but well had it kept its trust and its treasures, though the tough wood had closed over them, and no eye could guess their hiding place. The tree was felled, and in its very heart its gems were found—not a point broken, not a ray wasted, they flashed up to the light of the old brightness, and made glad the heart of the master.

Ever so safe an investment is knowledge in the mind of a child; truth there lodged is a life-long deposit. Though that mind may tower and expand, and put on rough defences against the world, it still has its little unsuspected jewels; and that heart but holds them closer and closer with its strengthening fibres, till the hour when the master comes to look for them.—*Grace Greenwood.*

UNCONSCIOUS INFLUENCE.—The very handling of the nursery is significant, and the petulance, the passion, the gentleness, the tranquillity indicated by it, are all re-produced in the child. His soul is a purely receptive nature, and that, for a considerable period, without choice or selection. A little further on, he begins voluntarily to copy everything he sees. Voice, manner, gait, everything which the eye sees, the mimic instinct delights to act over. And thus we have a whole generation of future men receiving from us their very beginnings, and the deepest impulses of their life and immortality. They watch us every moment, in the family, before the hearth, and at the table; and when we are meaning them no good or evil, when we are conscious of exerting no influence over them, they are drawing from us impressions and molds of habit, which, if wrong, no heavenly discipline can wholly remove; or, if right, no bad associations utterly dissipate. Now, it may be doubted, I think, whether, in all the active influence of our lives, we do as much to shape the destiny of our fellow-men, as we do in this single article of unconscious influence over children.—*Bushnell.*

KINDNESS.—A well-meant act of kindness shown towards one who is superior in station, however trifling in itself, is always felt to be of real value. Such tokens are always well received, and tend greatly to promote that heartiness of kindly feeling which it is so important to maintain between the different orders of society. Those in humble life should, therefore, consider and cultivate this practical manifestation of good will towards the more elevated. While, on the other hand, the high in station may do as much, or more, good, by the character of their personal acts of benevolence, as by any amount of almsgiving. The feelings, the tastes, the circumstances, the position of our humbler brethren, should be respected in every work that is undertaken for their benefit.—*Rev. F. W. Naylor.*

TRUE JOY.—That is the true and chief joy which is not conceived from the creature, but received from the Creator, which, being once possessed thereof, none can take from thee; whereto all pleasure, being compared, is torment, all joy is grief, sweet things are bitter, all glory is baseness, and all delectable things are despicable.—*Bernard.*

HUMILITY ever dwells with men of noble minds. It is a flower that prospers not in lean and barren soils; but in a ground that is rich it flourishes and is beautiful.

WHITE ROBES.

BY BARRETT WOODS.

THUS are they which came out of great tribulation, and have washed their robes, and made them white in the blood of the Lamb.—*Rev. 7: 13.*

White, for heaven's infant hands!
Passed they not spoken from the earth away,
Pale blossoms lying in the nerveless hands,
Pure kisses lingering on the precious clay?
Earth's lily-bells transplanted, sweet and lowly,
White robes for them, for innocence is holy.

And for the young, pure white!
They loved the Master much, and for His sake
Life's vainest loves and laurels cast from sight;
Now in the heavenly places they awake
Celestial music, and palm-branches bearing
They who are worthy, walk white raiment wearing.

And they who, gathered in
From the hot ranks of mid-life's battle-field,
Bring trophies of their victories over sin;
The tried and tempted with their foreheads sealed
With the Great Name; the heroes, martyrs, sages—
White robes for the redeemed of countless ages.

There venerated hands
Are bathed in founts of far-distant youth and bloom;
Bent form and furrowed brow and trembling hands,
And silvered hairs pass not beyond the tomb;
Led by the Master through deep tribulation,
White robes await them,—garments of salvation.

Gathered from orient climes,
And western shores, and tropic forests deep,
From polar winters,—and from ancient times
Down to the last fair babe that fell asleep!
By suffering purified, perfected, blest,
And gathered into everlasting rest.

O, suffering Lord, through Thee
Whose blood alone can make the crimson white!
Looking in pity on our strivings, see
The weight of sin, and make the burden light.
Our robes of righteousness are poor and vain
Baptize us in that fount that leaves no stain!

Our Faith, Hope, Charity,
Inspire, inform, till they grasp heavenly things,
Till the whole human brotherhood shall lie
In the benignant shadow of their wings;
So purify and bless until there be
White robes at last for even such as we.

[Monthly Religious Magazine.]

TRUMP IN DEATH.

It was morning, bright and beautiful. In a small room whose thickly curtained windows admitted but so much light as was required that his friends might minister to his wants, upon his couch, lay an old, white-haired man. Upon the once handsome face was traced many a deep furrow, plowed by time and care, yet his countenance was lighted by a smile, sweet and holy. The fever which had for days burned in his frame, taking away all power of mind and giving delirium wild and powerful, had been subdued, and he lay in all his weakness, sleeping calmly. Noiselessly his attendants moved about the room, and by his side, almost breathlessly, watched his only relative—a much-loved daughter. It was the hour that would tell who should be conqueror—life or death.—Rouder, have you never witnessed such a scene? Have you never in breathless anxiety gazed upon a loved face at such an hour, and prayed, "spare, Lord!"

The hour was passing swiftly, and no change in the aged man. Sweetly he seemed to sleep as an infant on its mother's breast. The daughter grew hopeful as she listened to his regular breathing, so like one in health. She pictured to herself the recovery of her loved father, and joy once more filled her long sorrowing heart. She hears a whisper, and comes nearer to catch the first word uttered. The emaciated hand falls upon her head, and blessing her he murmurs, "be faithful here—meet me in Heaven." Then, opening the closed eyelids, he said, "God calls me home; I have fought the good fight, I have kept the faith, I shall wear the crown," and, shouting victory, he expired. Fond heart, where now are thy hopes so lately cherished?—he, thy earthly counsellor and guide, thy only loved one, sleeps in the arms of death—sleeps never to waken.

For many years had this faithful minister of God stood on the walls of Zion warning perishing sinners to flee from the wrath to come, and pointing them to a crucified and risen Savior. Many, many souls had been touched by his eloquent appeals, and, seeing their malady, had applied to, and been healed, by the Great Physician. His work was now done—his labors were ended.

A Christian's death-bed! There is something in that scene of victory over the last foe,—that surrender of the last enemy,—which makes the beholder desire the grace which can give a triumph so glorious. Death, the conqueror, is there conquered. Truly we are deprived of the forms of our loved ones, but by the eye of faith we behold them safely anchored shouting victory, victors, over death.

Reader, ponder well the hour of thy dissolution. See to it that thou art prepared to vanquish thy life-enemy. Put not afar off the hour of thy preparation, for thou knowest not but ere another morning dawns thou may'st be summoned to the spirit-land. Is it thy desire to meet the messenger calmly and peacefully? then live in the performance of all thy duties—cherish the good and ignore the wrong—love thy God with all thy heart—and in that day thou shalt hear the sentence, "Well done." Castle Farm, N. Y., Jan., 1859. NELLIE.

THOSE who are faithful in well-doing, need not fear those that are evil-doing, for they have a God to trust to who has well-doers under the hand of His protection, and evil-doers under the hand of His restraint.

NORMA is further than earth from heaven; nothing is nearer than heaven to earth.

THE TRAVELER.

Written for Moore's Rural New-Yorker.
LETTERS FROM A HUNGARIAN.

NUMBER TWO.

GRAN, Hungary, Aug., 1859.

DEAR FRIEND MOORE:—In my last, I concluded with a brief description of "social life in Berlin." Were I to describe the city itself, with its numerous palaces, theatres, galleries of art, educational institutions, and other celebrated objects, I would have to write a book—and that would contain nothing new. For what "Correspondent from Prussia" has not already amply described all those magnificent edifices? And how many of the readers of the "dear RURAL" have not already perused them to their own satisfaction? Nay, let me rather turn away from the massive walls of royalty and aristocracy, and peep a little more into the inner life of this most populous city of Germany. With a population of half a million, of whom about 15,000 are Catholics, and 15,000 Jews, (the rest is Evangelical), the city of Berlin forms a well regulated unit, so thorough is the municipal supervision in every department. This is especially favorable to the stranger, who cannot, amidst such regulations, be overreached in any respect. Suppose you arrive at one of the depots of Berlin, and wish to ride to any part of the town. You need not bargain with a stubborn coachman, but you take your seat at once in one of the numerous hacks outside the depot, and tell the driver where you wish to go. The latter then gives you a ticket upon which is stamped the fare and the date. If you wish to know whether your ticket is stamped with the proper amount, compare it with the "Tariff" (rates) attached to the back, right opposite your seat. If, for example, your ride continues no longer than half an hour, the fare is five *groshen*, (about a shilling American money.) This "tariff" also distinctly declares that if the driver demands a farthing more than the fixed rates, or does not give you a ticket with the proper amount stamped upon it, he forfeits the fare, besides being liable to a fine. So, too, if you wish to ride from one part of the city to any other, you cannot be cheated out of your money, the rates being all printed inside. By the way, it should be remarked that hacks and omnibuses are one-fourth cheaper than in America.

Great care, too, is taken that not only the principal streets, but all the lanes and alleys be kept clean throughout the year. But what interested me most of all, was the arrangement for extinguishing fires. In the case of a fire, no bells are rung, no alarm sounded through the streets; but notice is immediately telegraphed to all the principal engine-houses. Whereupon, the officers, who are stationed there continually, give notice to the firemen in the neighborhood. These, however, do not draw the engine, but are seated on two long benches, the engine and firemen being all drawn by horses. None but firemen are allowed to accompany the engine, or to save the furniture of the burning house. In case any one, who is not a member of a company, should venture to save any furniture, he would be regarded as a thief. The firemen are all duly sworn, and must be honest men. If any one of them is convicted of any crime or dishonesty, he is excluded from the privileges of a fireman. And thus it happens that a fire arises and is quenched before any one is aware of it. These particulars I learned from a friend of mine, who is himself a fireman, and who expatiated on the advantages of such a system. There is but one thing which would look rather ridiculous to an American fireman—and so it seemed to me, though I never ran with an engine myself—that a company of about two dozen men should comfortably sit on the engine and take an easy ride, instead of taking hold of the engine themselves, and hasten to the fire. As in many other things, so in this respect also, our Americans are more practical, and "go ahead;" for, one afternoon, as I saw these engines running to a fire, they did not go half as fast as our engines, notwithstanding the former are drawn by horses,—and no wonder, for how can two horses carry at full speed a heavy engine with a load of two dozen firemen? Some of the engines I noticed carried with them a large, stout barrel on a little wagon attached behind the engine.—This I at first supposed to be filled with powder to be used in case a building needs to be blown up.—But on inquiring, I was told that it was only filled with water, which is used in case some time elapses before the hose is attached to the "fire-wells" at the corners of the streets.

It thus happens that while with us "speed" is the first requisite—speed in acting, speed in traveling, speed in everything—precision and steadiness characterize, in Berlin, and in Germany generally, every undertaking and every arrangement. This may be best illustrated by the German railroads.—If a road is built, there is no haste; but every inch of ground is carefully laid out, and every creek spanned by a stone bridge, and should the least irregularity be found in any structure, it must be built over again. Thus an accident like that disastrous one which happened last spring on the Central road, near Ulm, is here a physical impossibility. Besides, when the road is fully built, the fastest train never runs more than 20 miles an hour, while the ordinary speed is only about 16 English miles. And, more than all, watchmen are continually stationed all along the road, who follow every train to the next watch-house—and particularly at every crossing, where, on the approach of a train, the watchman barricades the road. The locomotives have no bells; but whenever it is necessary to give notice of the approach of a locomotive, the watchman rings a bell attached to a post. The depots are generally out of the city, the track never passing through the latter; and there standing on the track is strictly prohibited.

Having thus described the precautionary measures taken to prevent accidents, I might as well, once for all, describe the mode of traveling by rail-

road, and the arrangement of the cars. Most trains are composed of three classes of "wagons" (cars.) The first is a small car with velvet cushioned seats; these are generally engaged for a single aristocratic family. The second class cars are divided into five apartments, each of which contains seats for only eight passengers. The third class cars are also divided into five apartments, but differ from the second in not having a partition-wall between the several apartments, and in not having the seats cushioned, there being, besides, ten seats in each apartment. Each apartment has an entrance on both sides of the car, there being but two long sofas (in the second class,) or benches, (in the third) facing each other in every apartment.—Movable backs are unknown here. Nor is there any room provided for any necessity of nature,—neither is there any ice-water (or water of any kind) to be had inside the cars. When you are once inside, you cannot go out unless you ask the conductor to open the door—he alone having the right to do so. The conductor never enters the car, but sits outside, always on the look-out. He demands the tickets a little before the train starts; thus avoiding the unpleasant task of stopping the train for the sake of putting out (as sometimes happens in America) a delinquent passenger. But, notwithstanding all this precaution, it seems rather strange that smoking is allowed in the cars; and considering how much all classes (clergymen and professors included) are addicted to smoking, you need not be surprised if, after dozing for a while, and dreaming about cloud-lands, you find your dreams realized, not knowing whether your head is swimming nearer heaven or earth. There are but few apartments in the second class cars devoted to non-smokers. But, notwithstanding all these inconveniences (to the German they are, no doubt, *conveniences*) the price of traveling is very high, the average price for a single English mile being about 5 cents with the first, 3½ with the second, and 2½ with the third class. On some roads, as between Berlin and Breslau, there are fourth class cars, where the passengers are obliged to stand, unless they have seats of their own. If I may give some practical hints, I would advise all travelers to take the third class during the warm season, as the cars of the second class are then intolerably hot. This I experienced on my way to Berlin from Hamburg; after that, on my way to Hungary, I combined economy and convenience by riding in the airy apartments of the third class.

But enough of German railroads. It is time for me to commence fulfilling my promise, and write something of the land of my birth—the land of the brave Magyars. Having obtained permission from the Austrian Ambassador in Berlin to travel all over Austria, I left the gay capital, passed through the second royal city of Prussia, Breslau (in Upper Silesia), reached the Austrian boundary at Oderberg, (where we stopped two hours for refreshment, revision of passport and visitation of baggage,) and there heard the first Austrian music enlivening the supper-table. About 9 P. M., we started and traversed through the Moravian Territory, of the beauty of the scenery of which I cannot give you a description, it having been a very dark night. At last, on the morning of the 23d July, my heart beat high as I noticed the blue hills of the Carpathian range looming up in the distance, and why?—because there, beyond that range, lies the sunny land of Hungary, that played so great a part in the memorable year of '48, that fought so valiantly for the precious birthright of man, till treachery alone snatched it from its already firm grasp. Add to this the feelings which must needs spontaneously spring up in the heart of him, who, after a lapse of full ten years, sees his original fatherland, and longs to embrace once more the dear relatives it still contains; and you need no longer wonder that my pulse beat with a quickened throb at the sight of those Carpathian Mountains.

On we sped through the very fruitful fields of Marchfeld, where, in 1260, King OTTOCAR, of Bohemia, defeated the Hungarians, while he himself was afterwards slain in a battle by RUDOLPH, of Habsburg. The scenery was most picturesque—woods and hills in various forms gradually came to view, till at last we hurried through the tunnel, (1,800 feet in length,) and before us lay Presburg, (the former capital of Hungary,) charmingly situated on the Danube, at the foot of the Minor Carpathians. Here we stopped for breakfast, and for the first time heard the lively airs of Hungarian music.

A few hours more, and I was in the arms of my eldest brother, in the city which stands at the head of this letter. Gran (in Hungarian *E. Szigom*, from the Latin *Strigonium*), contains only 15,000 inhabitants, but is celebrated as being the birth-place and residence of St. STEPHEN, (A. D. 1000,) the first Christian King of Hungary. Gran, on this account, is still the chief residence of the Clergy, and numbers among its edifices the palace of the Hungarian primate, and a magnificent church, built after the model of St. Peter's in Rome, a description of which I will give you in my next.

SIMON TUSKA.

AMERICA IN THE OLD WORLD.

A TRAVELER walking along the streets of European cities, will notice at the shop windows, "American Overhauls," or "American Sewing Machines;" in the theater bills he will read the name, "American Comedienne;" in the bookstalls he will meet Stowe, Harland, Wetberell, Prescott, Barnes and Hodge; at the bookstands, Dwight, Williams, Cheever, Sprague, Spring; further on he passes "the American Photograph Gallery." Henry Russell draws crowds to hear him sing about "Life in America." On the hustings, Lord Palmerston tells something borrowed from the Americans. In the churches, Dr. Guthrie extols the American educational system. At a meeting for the Irish missions, Professor Miller and Dr. Cooke tell how the Irish flock over to America and learn independence. Go to a Missionary meeting, and Dr. Andrew Thompson eulogizes the American Missionaries, Elliot, Brainerd and Grant. Go to a Temperance meeting and you will be sure to hear of the Maine law. Go to the Free Church General Assembly, and you hear them speaking of the American Missions in Turkey, or of the great American revival. Go

to the procession of the Queen's Commissioner to the Established Assembly, and you will find the dragons trotting off to the American tune of "The Old Folks at Home." Go to Glasgow Cemetery and you will meet with a funeral motto from Longfellow. Go into private families, and you will hear the lady of the house singing at the piano the American song "Excelsior," and the little girl calling her sister "Topsy!" and, not to be tedious, if you go into the London Times' rooms, you will find that journal printing its slanders on the United States upon How's American Printing Press.

Written for Moore's Rural New-Yorker.

SCARLET FEVER:

NITRATE OF SILVER A SPECIFIC.

MEANS, EDS.:—I should not venture to risk my reputation, as a judicious and skillful physician, among my acquaintances, and to contradict WASSER in the presence of the "million" readers of the RURAL, by thus boldly stating the above proposition, did I not consider that the claims of humanity demand it: and that I am abundantly warranted in giving publicity to it by my own experience of its truth for a number of years. I trust no apology is needed for asking the insertion of this article in the RURAL because it is, *par excellence*, the Family Paper of the day, and who, if not the families of the land, are interested in knowing what will rob that dreaded scourge, the Scarlet Fever, of its horrors? But I will avoid further preface, except to say that the few and simple directions as to its use must be most "religiously" observed, in order to secure the full benefit of the remedy.

Dissolve ten grains of Nitrate of Silver (commonly called lunar caustic,) in one ounce of soft water—rain, or snow water, or distilled water is best—hard water—water that contains lime or other mineral substances—will decompose the nitrate and destroy its efficacy. Give of this solution from one to twelve drops, diluted with a teaspoonful of soft water, in a glass or teacup, proportioned to the age of the patient and the urgency of the symptoms. It should never be put into a copper-plated, or German silver spoon.

If the symptoms are very urgent, and are not alleviated in from two to six hours, repeat the dose. It is seldom, if ever, necessary to give more than one or two doses and the patient is speedily and certainly cured, if the disease has not been previously aggravated by bad treatment. Avoid irritating food, drinks, and medicines, and give only mild diluent drinks, of which, slippery elm is the very best, being both food and medicine. Never give cathartics, even the most mild, in Scarlet Fever, or in any case when the tongue is red or has small bright points of a scarlet color, like miniature strawberries, on the point and along the edges.—Scarlet and Erysipelatos Fevers are always preceded and accompanied by this appearance of the tongue; and by this it may be known when cathartics and irritants should be avoided, and the nitrate of silver alone administered.

These are called Eruptive diseases—that is, after several days of fever, and various painful symptoms, usually attended by soreness of the throat, an eruption, more or less accompanied with redness and swelling, appears upon the skin. But the disease is of a constitutional nature, and the eruption is only an attendant symptom in its more advanced stages. Its beginning is in the lining membrane of the throat, stomach, and bowels, and its presence or threatened attack, may always be known by the above described appearance of the tongue. This lining membrane is known by several names. It is called the nervous, (because it is abundantly supplied with nerves,) the mucous, (because its surface is in health always moist with mucous,) and the villous (because it is shaggy,) coat or membrane. It is merely a continuation of the skin which covers the body, "reflected," or turned in at the lips and nostrils, and lining all the cavities of the body which have an outward opening. In its nature it is very similar to the skin, which sympathizes closely with it, and this accounts for the eruptive stage of the disease, when it is suffered to run its course.

But this treatise on anatomy and physiology is long enough for present purposes,—and what I ask of the readers of the RURAL is, when the scarlet fever visits your vicinity, or you have reason to fear that it will, "throw physic to the dogs" or the doctors, go to an honest and careful druggist, ask him to give you an ounce vial—to cover it with a piece of gummed paper, so as to exclude the light, (for exposure to the light will after a time decompose and destroy the value of the medicine,) to put into it ten grains of nitrate of silver. Tell him you do not want nitrate of tin, or any other metal, but pure nitrate of silver—fill the vial with rain water, and you are armed with a remedy, which, if given with a careful observance of the above directions in the earlier stages of the disease, will, I believe, never fail to check its career, almost immediately. I have myself tried it in a great number of cases, and never yet know it to fail, and a friend to whom I recommended its use, remarked, "it killed the disease" on trial in two cases in his family.

Now, I am not communicating this for the instruction of my medical brethren, although I have no objection to their profiting by it if they will, or even to their criticising it to their heart's content. But I write "pro bono publico," and after long conviction that it is my duty to do so, and after having been often reminded of that duty by paragraphs in the RURAL and other papers, chronicling the death of whole families—sometimes of 6 or 7 children in a few days, or weeks—by this terrible scourge. It is indeed a dreadful disease among the lambs of our households, and often have I heard physicians, in their impotence, express their dread of it, and call it "a horrible disease," and "worse than the

Small Pox." Under the usual treatment of the profession it is indeed so. What I ask of all is—for your own good, give the remedy a fair trial. Sodus, Wayne Co., N. Y., 1859. W. D. COOK.

In connection with the foregoing, we give the annexed paragraph, clipped from an English journal. The course of treatment recommended may clash with the views of W. D. C., in some respects, but as we obtain valuable knowledge only by conflict of opinion—and as the diseases spoken of are a constant source of excitement and fear to parents—any light that can be procured and made available will be hailed by the fathers and mothers with intense gratification:

"SCARLATINA AND MEASLES.—Mr. WITT, member of the Royal College of Surgeons, has published a pamphlet, in which he states that bicarbonate of ammonia, is a specific for the cure of Scarlet Fever and Measles. He cites Dr. PEARL, of Liverpool, and other Practitioners, who have never lost a case out of hundreds, since adopting this remedy. Two drachms of the bicarbonate of ammonia are dissolved in five ounces of water, and two table-spoonfuls of the solution given every two, three, or four hours, according to the urgency of the symptoms. No acid drinks must be taken, but only water, or toast and water. The system is to be moved by a dose of calomel, if necessary. The room must be well ventilated, but the patient protected from the slightest cold or draught. Gargles should also be employed for clearing the throat.—The ammonia seems to counteract all the poison which causes Scarlatina, and also acts upon the system by diminishing the frequency and, at the same time, increasing the strength of the pulse."

The Reviewer.

SUNSHINE; or, Kate Vinton. By HARRIET B. MCKENNA, author of "Twilight Musings," etc. Philadelphia: Lindsay & Blackiston.

This is a charming volume for the young, and especially worthy of careful perusal and consideration by those of the gentler sex. In the guise of fiction, the author imparts much valuable instruction and advice—her avowed aim being to present a youthful Christian, in the midst of much infirmity, still "adorning the doctrines of God, her Saviour, in all things." The heroine is perhaps too devoted, unselfish and perfect for a true type of earthly mortality, yet the lesson taught must have great influence upon the attentive reader, as the moral and elevating tendency of the unpretending volume is unmistakable. In her preface the author remarks that "in order to divest religion of that aspect of gloom which many worldlings are disposed to throw around its path, the chief character has been described as peculiarly joyous and happy, and therefore the book has been called *Sunshine*. In the bright atmosphere which she spreads everywhere around her, it is designed that the usefulness of true piety should be held up for the imitation of the young; and, in the strong contrast presented between the glitter of worldly pleasures, and the calmer joys of religion, to exhibit the excellence and superiority of the latter, as the source of the purest and most elevated happiness. We can cordially commend "Sunshine," and believe none can read without receiving benefit. Sold by DEXTER.

PALESTINE PAST AND PRESENT. With Biblical, Literary, and Scientific Notices. By Rev. HENRY OSBORN, A. M. With original illustrations and a New Map of Palestine, by the Author. James Challen & Son: Philadelphia.

This is a book of 500 pages, in a style very much like the *City of the Great King*, by the same publisher. The paper is of the very best quality, and the type large, clear, and beautiful. It is embellished with about sixty wood engravings, two steel plates, five chromographic engravings, and a map of Palestine. The steel and wood engravings are in the highest style of the art, but the chromographic, or color-printed plates, are unworthy of the work. Perhaps they are done as well as they can be in this country, but they are far inferior to the English, and should not be admitted in a work of this excellent character until our artists have acquired more skill. This book is invaluable to the Bible student, and particularly so to Bible Class Teachers and Sunday School Superintendents. Indeed, the young, unless their tastes are sadly vitiated, will find the book far more enchanting, and certainly more useful than any novel. We shall give extracts from this work, with some of its fine engravings in the RURAL, before long. E. DARROW & BRO., Rochester, are the publishers for this part of the country.

SIN WALTER RALEIGH AND HIS TIMES, with other Papers. By CHARLES KINGSLEY, author of "Hypatia," "Two Years Ago," etc. Boston: Ticknor & Fields—1859.

BEARING the above title we have a book of nearly 500 pages, containing, altogether, eleven articles, on as many different subjects. A majority of these have made their appearance in the *North British Review*, *Fraser's Magazine*, &c., as Essays Biographical and Scientific—two take the form of connected narratives—four, "Alexandria and her Schools," are adapted to the form of Lectures. Those acquainted with the previous efforts of the author will be gratified on observing the neat form in which these "Miscellaneous" are draped; while the young man, who desires the attainment of an easy, clear, and concise style of expression, will find a careful perusal or study an exercise of much value. For sale by DEXTER.

CHRISTIAN STEWARDSHIP. A Treatise on the Scriptural Obligations, Methods, Measures, and Privilege of Systematized Benevolence. By Rev. J. ASHWORTH, of the East Georgia Conference. Auburn: William J. Moses.

This is a small book of some 180 pages, the author of which is now pastor of a church in this city. It was written, in compliance with a proposal made by the Tract Society of the Methodist Episcopal Church, to give \$500 for a prize essay on the subject of Systematized Benevolence—one of the most important themes for consideration in Christendom, at the present time. Among a great number of works offered for the prize, this was selected by the committee as one of the best five. Judge McLEAN, of the United States Supreme Court, one of the committee, selected this as the best of the five. No award, however, was made at the time. The reading of this work will benefit all, even the most liberal, and to the mean, and stingy, and selfish, if not entirely beyond the reach of grace, we would advise a thorough perusal of this arousing appeal without a moment's delay. The above work can be had of the author and at the book-stores.

THE USE OF TRIALS.—It is not in the light and sunny places of the wilderness that the traveler most sweetly reposes. It is under the shadow of a great rock, or in the depth of a sequestered valley; and it is so with a Christian. The sun of prosperity withers our joys, and changes the green leaves into the sickly colors of autumn. Adversity is like the winter, which prepares the ground for the reception of the seed, and for the rich and glowing luxuriance of spring-time.

YOUNG RURALIST.

FACTS ABOUT RAIN, SPRINGS, &c.

1. Are the lakes and springs supplied by water from rain and snow, which penetrates the earth's surface so as to form the depolarities below? 2. Are the springs and lakes upon the tops of mountains supplied with water by the means of rain? 3. Why are not deserts supplied with water as other portions of the earth's surface? 4. Why is the water of springs fresh that occur near the ocean? 5. Can any one explain and give the reason why these things are as they are?—H. T. ALLOTT, Prattburg, 1859.

1. Springs, and hence, streams and lakes, are supplied by the fall of water in rain and snow, and this water, except that flowing from the surface, or carried up by evaporation into the atmosphere, sinks into the earth. This has been the theory for half a century, and is considered to be fully sustained.

By measuring the quantity of water from the clouds, in numerous places, various facts were ascertained—as that most water falls within the tropics, less as the place is further from the equator, and of course that the evaporation is much the greatest in the lower latitudes where most water falls, and where most water is needed. This was the first important result from the use of the rain gauge.

By a careful measurement of the large rivers, it appears that they do not discharge as much water into the ocean and internal seas as falls in rain and snow, and that a large quantity of water must of course be employed by nature for the common operations, especially of the vegetable world.

Thus it was settled that the clouds afford the quantity of water adequate for all the needed purposes, while abundance would remain for the supply of springs, fountains, rivers and lakes.

Evaporation must consequently be a mighty operation. It was ascertained that the oceans, seas, lakes, and streams, as well as the surface of the land, send up the full supply of water, for the wants of man, and animals, and plants, and earth. So philosophy sustains the declaration of Scripture on the waters, as "they go up by the mountains" as vapor; "they go down by the valleys unto the place (the oceans) which thou hast fast founded for them. He sendeth the springs into the valleys. He watereth the hills from his chambers (clouds). Again, "all the rivers run into the sea; yet the sea is not full; unto the place from whence the rivers came, thither they return again."

No other power is known by which the ocean may send its treasures over the mountains as well as the valleys, and none other is needed.

The penetration of the surface water into the earth is proved by obvious facts. Springs flow with larger stream when the surface abounds in water; if they have dried up, they flow again at the fall rains. As the rocks are formed over a great part of the earth in extensive strata which dip below the surface, water passes into and between the strata, so often brought to light by artesian wells. The well at Louisville, Kentucky, is 2,080 feet deep, and is supplied by water which must pass between the strata on higher ground many miles distant, and hence its water flows from a pipe, 170 feet above the surface. Water will not rise above the level of its head. The artesian well is fully accounted for; but it could not be if there was no connection between the surface-water and the rocks into which the boring has penetrated.

2. The springs and ponds on mountains are supplied in the same way. These are not at the summit, but more or less down the side. On the west side of Mt. Washington, in the S. W. part of Massachusetts, is a pond, or small lake, in a valley some hundred feet below the summit. A stream flows from it much of the year, but varying in quantity, with the fall of rain and melted snow; at times the stream is very small. Many others have a similar situation, and present similar facts. Sometimes ponds or lakes have springs at their bottom, and at some distance from the shore, by which much water is emptied into them from the adjacent strata of rocks.

3. The earth is watered very unequally, even in the same latitudes, and some deserts are destitute of rain. Such exist on different continents over and about which the currents of the atmosphere and winds bring no clouds to deposit water.—Such is the great desert of Sahara. Even on some portions of the oceans there falls very little rain, and on others great quantities, as they are affected by local causes of various kinds, by which the atmosphere brings to them or bears from them its waters. This, too, is the general answer to the third question. The particulars would fill columns, some of which will recur to the inquirer.

4. The waters of springs near the ocean are fresh, because they are fed from the sources on the land, which have only fresh water, because the clouds send down fresh water. Even evaporation from the ocean leaves the salt behind, as it does at Syracuse, Salina, &c., whether the evaporation is by the heat of the sun or the fire of the furnace. In these and many other places, are salt springs, which are of limited extent, and do not salt the waters in the streams, so as to be perceptible. Yet, on the whole, the salt is carried into the ocean and left there in the great rise of water, which next appears as clouds. It is too well known to need more than an allusion, that the lakes and seas which have no outlet, and are supplied by rivers, are always salt; as the Dead Sea in Palestine, the Caspian Sea, the Sea of Aral, and the Salt Lake of Utah. The Mediterranean has a strong current flowing at the surface from the Atlantic into it; but it has an under current of heavier salt water flowing out at the Straits of Gibraltar into the Atlantic, as is shown by the hulls of vessels, sunk in the Bay of Gibraltar, being thrown upon the coast of Morocco.

The marine petrifications found over middle and western New York, prove that our rocks were once under the ocean, and hence the ocean has retired, or rather the rocks have been raised upwards. The great Lakes were, in all probability, salt water ages ago. As they have an outlet, and receive streams of fresh water, their saltiness has disappeared by their flow into the ocean. If Lake Ontario were to be made into ink at once, the colorless rivers which flow into it, would in a few years remove all the ink to the ocean, as first remarked by Dr. S. L. MITCHELL, of New York.

The old notion that the salt waters of the ocean were filtered into fresh, in passing through the earth, and thus rising by capillary attraction to the surface, formed and supplied the springs, was long ago given up for several reasons.

No experiment in filtering salt water made it fresh. The dirt or earthy particles were removed, but the water continued salt. Capillary attraction will raise water in a tubule, but will hold it there, so that it cannot run out of an orifice or over the top, and thus a spring be formed.

No necessity remained for this opinion, because the rains and snows gave all the water which the operations of nature required, as has already been shown.

5. Finally, The "reasons why these things are," seems to be accessible, and easy of apprehension. We hope W. T. A. will be satisfied.

ROCHESTER, N. Y., FEBRUARY 5, 1859.

Affairs at Washington.

The House Committee on Indian Affairs have unanimously agreed on a bill relative to the Olion Reserve in Kansas, known as the New York Reserve, embracing 2,000,000 acres of land, and all pre-empted by whites. Its details have not transpired, but it is understood that it was satisfactory to both to settlers and Indians, and that it was settled—all the settlers had obtained titles after one year.

A letter from Superintendent Neighbors, dated Austin, Texas, Jan. 10th, addressed to the Commissioner of Indian Affairs, mentions that a band of white men from El Paso county had stolen into a camp of Indians, known to be remarkably peaceable, massacring several of them, besides wounding a number of their companions. It is supposed that in consequence of this outrage, the Indians will commence indiscriminate war on the border settlements.

The Secretary of the Treasury, in a recent document sent to the House, suggests an invitation from the United States to the commercial countries of Europe to meet in a representative body, for consultation on a uniform currency, uniform weights and measures, and a uniform system of commercial statistics; being of the opinion that this reform would be favorably received and probably adopted by each of the countries as represented. He says our own government occupies a position both political and commercial, which would justify it in taking the lead in this matter.

The Indian office has received despatches from Minnesota stating that hostilities are again threatened by the Sioux and Yankton Indians. Prompt measures have been taken by Gen. Denver.

The Herald correspondent says the Spanish Minister has declared, while speaking of the Thirty Million Appropriation, that if the money was granted, he would demand his passports.

DEATH OF EX-GOV. SLADE.—William Slade died recently at Middlebury, Vermont. Mr. S. commenced public life as a clerk in the State Department at Washington, under Adams and Clay. In 1841, he was chosen a Member of Congress from Vt., and served in the House with distinction through three terms, retiring in 1847, when he was chosen Governor. He was twice, we believe, re-elected to the latter post, and then retired, devoting the remainder of his days in good part to the removal of female teachers of Common Schools from New England to the new settlements of the West.

THE ICE TRADE ON THE HUDSON. Several new ice houses have been erected on the banks of the Hudson during the present winter. They have all been or are in the progress of being filled. The season thus far has been unusually favorable. The Kingston *Advertiser* says there are already, in that neighborhood, about 100,000 tons of ice gathered valued at half a million of dollars! If these statistics are correct, it is safe to say that more than 100,000 tons are already stored on the banks of the Hudson, above Newburgh—worth more than a million and a half of dollars! This is certainly a very large and some crop.

New York Legislature.

SENATE.—The special committee to investigate the unclaimed dividends of Savings Banks, Messrs. Opdyke, Law and Pond, reported the unclaimed dividends, with remarks that some owners were known. On motion, Mr. Law's report was ordered to be returned, with a reply that it was evasive, and requiring a proper answer.

The State Engineer reported that the expenses of lengthening the chambers of the canal locks, so as to admit the passage of boats 120 feet long would be \$1,264,000, and take three or four years, if practicable at all. He recommends rather an extension of foundations and rebuilding head-works, which could be done, and would materially add to the present capacity.

ASSEMBLY.—The resolution requiring information as to the number of employees on the Canal and their salaries for 1848 and 1858 was passed. Also, the concurrent report approving and endorsing the Canal Board Memorial to Congress.

In Executive Session James M. Cook was confirmed as Bank Superintendent, and Messrs. Seymour, Patterson, and Green as Commissioners of Quarantine.

The bill to reduce the capital stock of the Rochester Bank, and the bill relating to the term of office of the Treasurer of Monroe Co., was passed. The Comptroller reported the amount of arrears on taxes on Indian land at \$427,000.

The reports of the Superintendent of Public Instruction and Idiot Asylum, were received.

Mr. Ruggles presented the Legislature an able report on the condition of the divisions of the Erie Canal.

Congressional Proceedings.

SENATE.—The "purchase of Cuba" came before the Senate, and Mr. Slidell, of La., from the Committee on Foreign Affairs, to whom was referred the bill making appropriations to facilitate the acquisition of Cuba by negotiation, reported at considerable length, strongly urging the passage of the measure. He considers its ultimate acquisition a "fixed fact by the United States—a purpose resulting from political and geographical necessities which have been recognized by all parties and administrations, and in regard to which the popular voice has been expressed unanimously." Senator Seward, as the representative of the minority of the Committee, also reported. Mr. S. "thought the proposition to buy Cuba now unwise and ridiculous, and characterized its purchase as much of a necessity as that offered by the auctioneer, in the play, who thought it might come so handy." The discussion on the report was postponed until Jan. 31st.

The final vote upon the Pacific Railroad bill resulted in its defeat by a vote of 38 to 20.

A bill was passed providing for the payment of the expenses of investigating committees of the House.

The Secretary of the Navy was directed to furnish all information in regard to Lieut. Craven's survey for the Atrato Ship Channel.

Resolutions calling for the correspondence of Mr. Nugent, Special Agent at Vancouver's Island and Columbia, also directing the Secretary of War to lay before the Senate a report of Col. Wright's campaign against the Indians in Oregon were adopted.

HOUSE.—Mr. Chapman, of Pa., from the Judiciary Committee, reported a bill punishing the forging and counterfeiting of military land warrants; certificates of location or purchase, &c.; or knowingly uttering or circulating the same, by a punishment of not less than three months' imprisonment in the Penitentiary. Passed.

The House adopted a resolution calling on the President for the report of Mr. Nugent, special agent to Vancouver's Island.

Mr. Phelps, of Mo., introduced a bill appropriating \$10,000 to pay the witnesses before the several Investigating Committees. Mr. Readan, of Texas, offered an amendment providing that hereafter not more than 10 cents per mile shall be paid to the officer for the distance actually and necessarily traveled in summoning witnesses. The bill passed with the latter amendment.

A resolution was adopted calling on Secretary Cobb for the actual and probable receipts from customs and public lands, for the current and next fiscal years.

FROM BUENOS AYRES, RIO JANEIRO, PARAGUAY, AND MONTVIDEO.—Dates from Rio Janeiro to Dec. 28, Buenos Ayres to the 9th, and Paraguay Nov. 30th, and Montevideo Nov. 15th, have come to hand. Considerable excitement prevails at the latter place about our Paraguay expedition and the idea of a South American league against the Americans was openly broached. From Buenos Ayres we learn that Urquiza's life was in danger from a fit of apoplexy. From Paraguay we learn that Lopez was actually making preparations for war. He is said to have 8,000 or 10,000 troops highly disciplined and commanded by English and French officers. The fort of Humaita was perfectly mounted with fine artillery and the garrison was composed of the flower of the army. Lopez was loud in his determination to yield nothing to the United States. The source of the above, it should be mentioned, is unfavorable to the United States.

FROM THE PLAINS.—Passengers by the Overland mail report fine weather and good roads. The Indian agents at Fort Yuma had returned from the Mohave villages without accomplishing the release of the women and children mentioned as captured in a previous report. The Indians were very hostile. Much excitement existed at Carson Valley respecting the laws of Utah, and meetings have been held taking strong grounds against the jurisdiction of Utah, and requiring the Utah Probate Judge to abstain from the exercise of the duties of his office. Other meetings favored the Utah authorities, but also favored separation from the Territory.

DEATH OF PRESIDENT, THE HISTORIAN.—A telegram from Boston, 25th ult., brings the melancholy intelligence of the death of Wm. H. Prescott, from a stroke of paralysis. Mr. P. had been in usual health up to the moment of his death.

Old World Matters.

The *Arabia* arrived at Halifax on the 28th ult., and the *Arago* at New York on the 29th, with one week's later intelligence. We make the following condensation of news:

GREAT BRITAIN.—The English Parliament had been summoned to meet on the 5th of February. It is rumored that the British Chinese Squadron was to be augmented by twelve sail of the line. The depression on the London Stock Exchange continued until the 13th, when the excitement greatly subsided, under the more satisfactory accounts from the continent. More confidence was shown in all departments, and consols left off at an advance of $\frac{1}{2}$ ¢. The London *Times* estimates the depreciation in public stocks on shares in the European market in consequence of Napoleon's policy, at thirty millions sterling.

FRANCE.—Among the rumors from Paris is one that Gen. McMahon is to command the army in Italy, and that 30,000 men of the Austrian contingent are to cross over to Italy. The *Constitutionnel* has one article, admitting that there are serious difficulties between France and Austria concerning the Danube and Servia, but says war is only possible in the event of the rupture of treaties. Prince Napoleon had gone to Turin to espouse the Princess Clotilde, daughter of the King of Sardinia. The impression seems to prevail that this would secure the support of France to Victor Emanuel in becoming King of Italy. The Paris correspondent of the *Times* says that the French Marshals are charged to take command of the great military districts, and all Generals on leave of absence are ordered to their posts. He also says that Walewski has protested against the ominous impression that appears to rule supreme, and determined to retire from a scene where moderation is no longer listened to. All the Emperor's ministers are said to be in favor of peace, and the industrial population of France look with aversion upon war.

AUSTRIA.—The people are represented to be well pleased with the spirit displayed by the Emperor in regard to France and Sardinia. Twenty-seven thousand men were on their way to Italy. The Porte having acknowledged the down state of things in Servia, there is no question of Austrian occupancy in that quarter, and the treaty of Paris is not likely to be broken by the intervention of that power.

ITALY.—Many persons were leaving Milan every day. The police had to efface from the walls such inscriptions as "Death to the Germans." The troops were greatly excited, and strict discipline was necessary to prevent excesses. The advance guard of the Austrian reinforcements had reached Milan. Additional guns had been mounted on the citadel, directed against the city. A Milan paper of the 8th, says the chances of revolt were diminishing daily. It was thought Prince Napoleon's presence in Italy would lead to unmistakable demonstrations.

TURKEY.—A telegraph cable has been laid to Constantinople. Another collision between the Turks and Montenegrins had taken place, with some lives lost on both sides.

COMMERCIAL.—Breadstuffs.—Richardson, Spence & Co. quote flour dull and nominal. Western Canal 19@20; Philadelphia and Baltimore 20@21; Ohio 21@22; Wheat firm at the opening, but dull at the close. Red Western do. 60@61; white do. 60@61; white southern 70@71. Corn quiet but steady. Mixed 24; yellow 26@28; white 33@34. *Provisions.*—Messrs. Bigland, Althya & Co., Richardson, Spence & Co., James McHenry & Co., quote beef in better demand, but at a decline, on the middling and lower grades of 40¢. Pork firm and holders demanding an advance. Lard firm but quiet; sales for 60¢ and 60¢. The best fine qualities, had advanced 1¢. Tallow advanced 1¢ with a good demand. South American 52@53.

A FLEET OF PROPELLERS.—A late issue of the *Buffalo Courier* remarks that no less than fifty-three propellers are being built for navigating our canals next season. The most of them will be ready to "take up a position" by the first of June. Engineer Richmond estimates that the six feet of water which will be found in our Canals next season, will be ample for steam navigation. With the successful application of steam power, and the final completion of the Canals by the spring of 1860, and the adoption of such a revenue tariff as will secure the carrying trade, we may hope that our system of internal improvements will prove sufficiently successful to relieve itself from the weight of taxation with which it is now burdened, and in time fulfill the high destiny it is designed to accomplish, that of furnishing the cheapest and best channel of communication for the immense commerce constantly finding its way eastward to the sea board.

CANADIAN FINANCES.—The finances of the Canadian Government, it seems, are not in a flourishing condition. In 1854, with a revenue amounting to \$1,200,000, the expenditures were only \$750,000. In 1858, with a revenue amounting to \$1,500,000, the expenditures had increased to \$2,350,000, showing a deficit of \$850,000. The Montreal *Herald* charges the present Ministers with corruption and extravagance, and says that they have brought the country to the verge of bankruptcy. It also accuses them of spending, without any authority from Parliament, the \$700,000 repaid by the Great Western Railway Company, though the debt for which the money was paid still stands against the Province.

THE POPULATION OF VIENNA.—According to a recent enumeration, the population of the city proper of Vienna—the portion comprised within the walls—is 553,000, being an increase since 1856 of 79,000. By including the immediate suburbs the number amounts to 663,000, which is still further augmented by counting the military—20,000 men—and the inhabitants of the suburban villages beyond the line of the city; making the total population of Vienna 723,000.

WHAT A REPORT OF A BANK FAILURE WILL DO.—The *Observer* says that "a bet was made at Albany on Wednesday, that of a large crowd of applicants for relief at the office of the Overseer of the Poor, at least half a dozen had money in the Savings Bank; and to test the matter, a report was circulated that the Commercial Savings Bank had failed. In an instant thirteen of the beggars were rushing madly to the Bank, in order to save their money from the wreck."

News Paragraphs.

Most of the vessels which left Detroit, Cleveland, &c., for Liverpool, laden with various products, have returned; and the owners are so well satisfied with their ventures that the trade is to be continued.

Tax people of Gratiot county, Michigan, are represented as being in a very destitute condition, and an appeal has been made to the Legislature for aid. There are about 1,000 families in the county, and of these not more than one-quarter, it is believed, have the means of subsistence until the next harvest. An almost total failure of the crops assigned as the cause of the existing want.

The Leavenworth *Times* (Kansas) publishes a letter giving an account of a conflict between a party of men under Capt. Brown, and a posse under the Deputy U. S. Marshall, near Paoli, Dickens county. Five of Captains Brown's party and the Deputy and two of his assistants are reported killed. The account is not vouched for, and is probably exaggerated.

The telegraph line is completed to Leavenworth, Kansas, making a continuous connection from that city to New York. The first through message was received at the Herald office on the 25th ult.

The St. Paul (Minnesota) *Times* complains of the absence of snow in that State—scarcely any having fallen since the early part of December. The weather has been so mild that out-door labor has been in progress all winter. An absence of storms, with almost continued succession of bright, clear days, is another feature of the present season.

During the past year Lynn has manufactured more than 18,000,000 pairs of shoes. The shoe business of Massachusetts is valued at \$40,000,000 a year, and one-half the shoes made in that State are manufactured in Lynn—so the thriving city of Lynn annually manufactures \$20,000,000 worth of shoes.

The mortality in New York last year reached the very large amount of 24,492 deaths, which, in a population of 700,000, is one death in every 20 of the population. Among the deaths are nearly fifteen thousand children.

The Great Salt Lake of Utah seems to be the strongest and purest brine fountain known. Capt. STANBURY records that he saw millions of bushels of salt crystallized on its western borders, and that he made use of the unstrongened water successfully to cure beef.

According to official dispatches there are 100,000 armed men determined to oppose Turkish rule in Servia. Somewhat urgent requests had reached Constantinople for reinforcements. The Porte has augmented the Ottoman forces in Candia by 5,000 men. The agitation amongst the Christian population is increasing throughout the Turkish empire.

India is 2,400 miles long, and 2,000 broad; the population, which is equal to that of all Europe, numbers 180,000,000. They speak fourteen distinct languages, besides numerous widely differing dialects.

The Cincinnati *Gazette* states that one of the physicians of that city has a patient afflicted with the "blue line" on the gums, and "blue face," which were caused by the use of hair dyes having for their bases sugar of lead and nitrate of silver.

Water seem to be going down hill pretty fast at Watbury, Conn. A party of young people there last Monday enjoyed sliding down a hill half a mile in length, which they accomplished in one minute and forty-six seconds. At one of the "thanker marms," the sled jumped eighteen feet.

From the Pacific Side.

The Overland Mail, with San Francisco dates to the 21st of Dec., arrived at St. Louis on the 24th ult., and the steamer Illinois, with the mails of Jan. 5th, at New York, on the 28th. The Illinois brought \$1,200,000 in treasure.

CALIFORNIA.—San Francisco markets very dull for produce. The China and East India stocks rapidly accumulating. Gold is coming in more freely. The President's Message by the Overland Express, reached San Francisco only two days in advance of its receipt by the Panama route.

VICTORIA.—The dates from Victoria are to the 23d of December. The Frazer is open again and late discoveries had increased the faith in the richness of the gold fields in that region.

OREGON.—The Oregon Legislature had been occupied for several days in discussing a proposition to adjourn sine die, inasmuch as a State Legislature had been elected, and the probabilities were that Oregon would soon assume the reins of self-government.

THE ISTHMIANS.—The Costa Rica Congress, in extraordinary session on the 2d of December, ratified the Bello treaty with slight modifications. Gen. Lamar's manifesto to Nicaragua had created some sensation throughout Central America, while the firm conduct of Mr. Buchanan in relation to filibusters was fully appreciated.

SOUTH AMERICA.—Serious riots had occurred in Lima and Callao, in consequence of the importation of ready-made houses from the United States, which the workmen attempted to prevent the landing. The mob and guard came in collision, when several on both sides were killed and wounded. President Castillo ordered a detachment of troops to the scene, when another collision took place, in which several were killed. Finally, a Commissioner was appointed by Congress to treat with the populace, which resulted in the introducing into that body a measure decreeing that after the 1st of August, 1859, all manufactured goods shall pay a duty of 20 per cent. tariff; that all raw materials shall be admitted free. Both cities were put under martial law during the riots.

HOW THE MONEY GOES.—It is said that the gross frauds have been detected by the House Military Committee in the Oregon War Debt. The debt is about six millions, and the Committee believe that only about one million is justly due. Some of the charges are outrageous; pistols \$35 each, muskets \$125 each, oats \$5 per bushel, hay \$120 a ton, and other things in proportion.

The News Condenser.

—A project is entertained of a Crystal Palace in Boston.

—The apple crop of Oregon, the past year, sold for \$500,000.

—Out of 13,856 teachers in Pennsylvania, 12,351 are natives of this State.

—A thunder storm was experienced at Milwaukee, on Thursday week.

—The oyster trade of Maryland is estimated at \$4,000,000 per annum.

—The Burns festivals all over the country have been grand affairs this year.

—Some of the papers of West Florida are agitating annexation to Alabama.

—Mr. Frederick Cook, of Catskill, N. Y. has a sleigh which was built in 1776.

—A treaty of peace has been concluded between the U. S. and Navajo Indians.

—Mr. Morphy is about to play, blindfolded, twenty games of chess at one time.

—Railroad and other stock seems to be on the rise. Beware of bulls and bears!

—It is expected that the Emperor Alexander will visit Queen Victoria in May.

—The Jersey men are agitating the subject of abolishing the Court of Chancery.

—Phillip Jesse died at New Garden, Va., on the 1st of December, aged 120 years.

—There were 4,856 deaths in St. Louis during 1858—an average of 363 each month.

—Sixty miles of railroad have been made in the city of Philadelphia within one year.

—A steam carriage has been invented in Connecticut, which runs twelve miles an hour.

—The Bill repealing the ten per cent. interest law has passed the House at Columbus, Ohio.

—Lord Lyons, the new British Minister, is expected in Washington the last week of this month.

—The French Senate and Legislative body were convoked by imperial decree, for the 7th inst.

—Seven children in the family of Mr. Slade, of Cleveland, Ohio, died of scarlet fever within a week.

—It is said that of the twenty-five members of the Illinois Senate, only one was born in that State.

—There are one hundred and seventy-eight pupils in the Deaf and Dumb Asylum at Philadelphia.

—As far South as Wilmington, Del., on the 10th ult., the thermometer stood at 10 degrees below zero.

—John La Montain proposes to start from Boston and cross the Atlantic in a balloon next summer.

—Wheat, barley, and beans, but not corn, are to be admitted into Portugal, free of duty until May next.

—An effort is being made in Philadelphia to re-establish, for the third time, a line of foreign steamers.

—Armed bodies have already begun to infest the Tehuantepec transit, attracted by the prospect of booty.

—Seven episcopates were excommunicated from the Congregational church at Lee, Mass., Sabbath before last.

—A bill to encourage gambling has passed the Delaware House of Representatives, in the form of a lottery grant.

—An "Old Bachelors' Convention" is announced to be held in New Haven, Conn., in the latter part of February.

—By law the census of the United States will be taken in 1860, and Congress is already moving in the matter.

—The first steam gun-boat, built for the U. S. Navy, is to be launched at the Philadelphia Navy Yard, in a few days.

—From the Upper Michigan mines the past season, 6,000 tons of copper have been shipped. Value nearly \$3,000,000.

—Mrs. Mary Taylor, of Lee, Mass., had a surprise party of her fifteen children, on her 100th birthday, January 9.

—Col. Benton's furniture is to be sold at auction. His property is estimated to be insufficient to discharge his liabilities.

—There are 8,500 seamen now in the United States Navy, and 1,905 marines. The total number of vessels is eighty-eight.

—Gen. Houston, now in his sixty-fifth year, has signified his intention to retire from public life on the 5th of March next.

—It is said that some enterprising Yankee has engaged Chas. Dickens to undertake a course of readings in this country.

—The Mobile Advertiser opposes the acquisition of Cuba in any way, as being injurious to the interests of the Southern States.

—It is estimated that 1,000 deck hands and deck passengers have been lost overboard from the *Mississippi* steamers the past year.

—Mr. Bond, an eminent astronomer and director of the Cambridge Observatory, died at Boston, on the 20th ult., aged 79 years.

—Orders had been issued in France to prepare two more frigates for sea immediately, and ten other vessels of war with all dispatch.

—The members of the Maine Legislature have a concert of sacred music every morning, fifteen minutes before the House organizes.

—It is expected that the Empress-Dowager, of Russia, will accompany the Emperor Alexander in his proposed visit to London and Paris.

—During the last year \$72,209 12 in fees were ordered paid by the Board of Supervisors, to the Sheriff of New York city and county.

—A new society, called the City Tract Society, auxiliary to the American Tract Society at Boston, has just been formed at Hartford, Ct.

—The late severe frost has seriously injured the iron tubes of the Victoria bridge at Montreal, twisting them by the contraction produced.

—On Wednesday week the receipts of the N. Y. Custom House were \$300,000, the largest amount received in one day since August, 1857.

—The bill to exclude minors, under the age of 14, from the New York theatres, unless accompanied by guardians, has passed the Senate.

—The shock of the explosion of Dupont's powder mill at Wilmington, Del., was very seriously felt at Philadelphia, thirty miles distant.

—The Hudson river is open between Peekskill and Poughkeepsie, and sloops and schooners are running between Sing Sing and New York.

—We find in an exchange paper the statement that seventy-two white females were married to negroes in the State of Massachusetts last year.

—A new Board of Heraldry had been appointed in France, in consequence of the report of

THE SAILOR-BOY.

BY J. A. FARRIS.

There was a little sailor-boy,
Who sailed the ocean wide,
And he was very brave and bold,
And he was very true and kind.
To seek the treasure on the shore,
And the sailor-boy was true and kind.
The treasure was a little box,
Which he found on the shore,
And he was very brave and bold,
And he was very true and kind.
No starlight gleamed forth from the black clouds,
And the sailor-boy trembled high and low,
The sailor-boy was true and kind,
And he was very brave and bold.

To the college on shore,
Reached the ocean's wild roar,
A mother's heart aching,
A mother's eyes filling
With tears for the sailor-boy, who was true and kind,
With tears for the sailor-boy, who was true and kind.

On the black, moonless air,
Hear the voice of her prayer,
Like sweet music stealing,
Her words revealing,
"Have mercy, oh, God! for the tempest is wild,
Speak peace to the winds and shelter my child."

But the storm hurried by,
And the waves mountain high,
Unheeding her weeping,
The frail vessel sweeping
Down, down 'mid the din of the breaker's hoarse roar,
Cast the sailor-boy, drenched on a desolate shore.

And the salt sea-wood around,
And the winds piping loud,
Or mournfully sighing
A wail for the dying,
Was all the rude world the sailor-boy shared,
While to rustle bleached the bones, by the shore's side.

But the mother, at home,
Long prayed he might come,
The beacon light burning,
For white sail returning,
And knew not till many years slowly dragged by,
That her boy had reached safely the Haven on high.
Independence, N. Y., 1859.

Alice and Adelaide;

OR,

THE TRUE AND THE FALSE.

BY MRS. MARY J. HOLMES.

(Concluded from page 44, last number.)

Chapter X.—Revelations.

"Father!" she exclaimed, "where did you come from?"

"I came from Mr. Warren's," he answered.

"He is dead, but I have been forgiven, and can once more walk the earth a free and fearless man."

"Adelaide," he continued, and in the tone of his voice and gleam of his eye there was something which made the guilty girl tremble, "I have heard that of you which fills me with grief. Oh, my child, how could you so shamefully deceive me?"

"What do you mean?" she asked in well-feigned surprise, for she would not admit anything until she knew how far she was implicated.

Very briefly her father repeated to her what he had heard from Mr. Warren, and then awaited her answer. At first she thought to deny the charge, but she dared not give the lie to one then lying dead, not far away, so she remained silent, trying in vain to frame some excuse with which to appease her father, and also to find some way of again binding Alice to secrecy, so that Mr. Howland should never hear of her falsehoods. He would, perhaps, excuse her deception with regard to her father, when she told him, as she should do, that she had done it for the sake of her mother, who could not endure to have the matter known, and if the rest were kept from him, all might yet end well.

"At that moment she remembered what Peter had said, and with a faint voice, she asked, 'Does any one know this but yourself?'"

"Mr. Warren's daughter knows it," he returned.

"And the young man—Howland is his name—knows it, too, for he was there all night, and heard my conversation with Alice."

"Mr. Howland!" Adelaide fairly screamed, and in the terrified expression of her face, the motives for her conduct were revealed to her father, who rather enjoyed than otherwise the passionate tears of anger and mortification which she shed, at finding herself thus betrayed to one whom she had loved as well as such as she could love.

"I understand you perfectly," said Mr. Howland, "and I am glad to hear that you are weeping on the lounge. And your punishment is just, for a child who can so shamefully deceive as you have deceived me ought never to be the wife of a man like Mr. Howland. I will not speak you further with your guilt," he continued, "for your sin has found you out, and I leave you to your own reflections."

So saying, he passed on in quest of his wife, whose welcome to the repentant man was far more cordial than that of his daughter had been. Adelaide was indeed sorely punished, for all hopes of winning Mr. Howland were gone, and the days were now, she experienced, more and more, that the way of the transgressor is hard.

The story of Mr. Howland's existence and return to his family circulated rapidly, and with it, hand in hand, went the rumor of his death. It had once done to the blind man, who by the presence of Oakland, was known to be dead, than he had been in life, for this came a crowd, his funeral being given at the white face of the

dead, and then staring curiously at the dark-browed stranger, who was said to be William Howland. Adelaide was not there, for Miss Elton, a very little given to gossip it may be, had kindly remembered her, and numerous were the exaggerated stories about her concerning the deception she had practiced both upon her father and the villagers. Like most people she had one so-called friend, who dutifully kept her posted with regard to all that was said concerning her, and, completely overwhelmed with shame and mortification, she resolved to keep herself secluded at home, where she vented her disappointment in harsh language and bitter tears, particularly when, on the day succeeding the funeral, she heard that Miss Elton had taken Alice to live with her.

But little did Miss Elton care for her anger. The world to her was brighter now than it had been for many years, and with something of a mother's love, her heart went out towards the orphan to whom she had given a home. Adelaide, however, was not forgotten, and the good lady was certainly excusable if, when riding with her protégée, she did frequently order Jim to take them round to High street, bidding him drive slowly past the house of the Howlands. But if, in this way she thought to obtain a glimpse of Adelaide, she was mistaken, for the young lady was never visible, though safely hidden behind the curtain, she, herself, seldom failed to see the carriage, and the little figure in black which she instinctively felt would some day be her rival.

The bitterest drop of all in Adelaide's cup of mortification was the knowledge that Mr. Howland had once thought to make her his wife, for he told her in a letter written three weeks subsequent to Mr. Warren's death. It is true he had never committed himself by words, but he had done so by actions, and honor demanded an explanation. So he wrote at last, and though it was a most polite and gentlemanly note, its contents stung her to her inmost soul, and casting it into the fire she watched it as it turned to ashes, feeling the while as if her own heart were charred and blistered with its load of guilt and shame. There were no more trips to Springfield now, for concealment of labor was no longer necessary, and the satchel Miss Elton taunted her brother with having carried so often lay useless upon the closet shelf.

"I'll die before I'll do that—father may support us," Adelaide had said when her mother suggested that they take in sewing from Mr. Howland's store.

And Mr. Huntington did do his best towards maintaining his family, but popular opinion was against him. He had defrauded his employer once, he might do so again—and so all looked upon him with distrust, making it sometimes very hard for him to procure even the common necessities of life. His health, too, had become impaired, both by exposure and the mental anguish he had so long endured, and night after night his labored breathing and hacking cough smote painfully on the ear of his wife, whose love no circumstances could destroy.

One morning, towards the middle of February, he left them as usual, but was soon brought back with a broken limb, which he had received from a fall upon the ice. For him to work was now impossible, and Adelaide no longer objected when her mother proposed that Peter should be sent for sewing to Mr. Howland, who gave it to her readily, manifesting much concern for Mr. Huntington, whom Peter represented as being in a most deplorable condition.

Two or three days afterwards as he was leaving the store he received a message from the sick man, who wished to see him, and in a short time he stood at the bedside of Mr. Huntington, who told, in a few words, why he had been sent for.

"They could not keep that house,—they must rent a cheaper one, and if no tenant for the Brown House in the Hollow had been obtained, would Mr. Howland let him have it? he would try hard when he got well to pay the rent," and the strong man's eyes filled with tears just as little Alice Warren's had done when words similar to these escaped her lips.

"Yes, he could have it," Mr. Howland said, and the sum he asked for it was just what Mr. Warren had paid,—then fearing lest Adelaide by chance should enter the room, he hastened away, pondering upon the changes which a few short weeks had brought to the happy girl, who, when she heard of her father's arrangement, flew into a violent rage, declaring she would "kill herself before she'd live in that little shanty."

But neither her wrath nor yet her tears could shake her father's determination, and when the first April sun was set, and the warm spring moon was risen, wretched, hopeless and weary, Adelaide Huntington crept up to her bed beneath the rafters, covering her head with the sheet, lest she should see the white-haired, night-dreaded specter, which, to her disordered fancy, seemed haunting that low-roofed dwelling.

Chapter XI.—Natural Consequences.

It is summer again,—the leafy month of June,—and in the spacious, well-lit grounds of Richard Howland, hundreds of roses are blossoming, but none so fair and beautiful to the owner of those grounds, as the rose which blossoms within the house,—the bright-haired, gentle Alice, who, when the grief-laden clouds of adversity were overshadowing her life, dreamed not that she again could be as happy as she is in her new home. The grass-grown grave in the quiet valley is not neglected, nor he who resteth there forgotten, but though his tears fall often on the sod, she cannot wish that blind man back in a world which was so truly dark to him.

And Alice has learned to be happy in her luxurious home,—happy in the tender love which Miss Elton ever lavishes upon her, and happy, too, in the quiet brother-like affection of him who seems to her the embodiment of every manly virtue. He does not talk often with her, for Richard Howland deals not so much in words as deeds, but in a thousand little ways he tells her how much he loves her. And that is all that he has, for he is a man who has no words, but his deeds are his words, and his words are his deeds. And when at last the maiden lifted up her head, it plumed its wings for flight and flew away, singing as it flew, "She's won—she's won."

know, when returning home at night, how wistfully he glanced towards the window where Alice was wont to sit, and if they did know it, they could not fathom his meaning, for when the golden hair and bright young face were there, he always turned aside, lingering without as if within there were no maiden fair, whose eyes of blue played wider notes upon his heart strings than the dark, proud orbs of Adelaide had ever done. Even he does not know he loves her, so quietly that love has come,—creeping o'er him while he slept,—stealing o'er him when 'woke,—whispering to him in the dinky counting-room, and bidding him cast frequent glances at the western sky, to see if it were not time that he were home. He only knows that he is very happy, and that his happiness is in some way connected with the childish form which sits before him like a sunbeam, filling his home with light and joy. It had never occurred to him that she might sometime go away, and leave in his household a void which no other one could fill, and when one day, towards the last of June, his sister said to him, "Alice has received a letter from an old friend of her mother, asking her to take charge of the Juvenile Department of a young ladies' Seminary in B—," he started as if he had been smitten with a heavy blow.

"Alice teach school!" he exclaimed. "Alice go away from me—from you, I mean. Preposterous! She don't, of course, think of accepting the offer!"

"Yes, she does. I'd no idea she had so much decision," and Miss Elton's scissors cut quite a hole in the embroidery on which she has worked ever since we knew her. "I remonstrated when she told me she should return an affirmative answer, but it did no good. She never intended long to burden people on whom she had no claim, she said. She would rather be independent, and she was very happy here, she felt it her duty to earn her own living, now that an opportunity was presented."

"Emin her own living," repeated Mr. Howland, "just as though she cost anybody anything. There is some other reason, and if I didn't know you as well as I do, I should be inclined to think the fault was with you. Maybe you do sometimes scold her, Elton!" and he fixed his eyes inquiringly upon his sister's face.

Miss Elton had striven hard to restrain the tears which thoughts of parting with her favorite induced, and thus far she had succeeded, but when she heard her brother's remark, they burst forth at once.

"Alas, Alice!" was all she could articulate, as with a deeply injured air she left the room, while her brother, coming in, hurried off to the store, where he remained three days, trying to think how it would seem to him when he knew that Alice was gone.

"It didn't seem at all," either to him or to his clerk, for never before had he been so irritable and cross, finding fault with the most trivial matters,—chiding the check-boy for moving too fast, and the head clerk for moving too slow,—refusing to trust the widow Simcox, whom he had trusted all his life, and making himself so generally disagreeable that the young men in his employ were not sorry when about 5 o'clock, they saw him start for home.

"I'm glad he's gone, any way, darn him," muttered Check, who had been, perhaps, the greatest sufferer, and with a most contemptuous whistle he looked after the retreating figure of his master.

Alice was not in the yard,—not in the parlor,—not in the house. He knew it by that undefinable feeling which we experience when the one we love the best is absent. "She had gone to walk by the river," so Miss Elton said, when questioned, asking him in the same breath why he didn't come home to dinner.

"I was not hungry," he replied. "The prospect of losing Alice has taken my appetite away. Do you think she would stay with us, if I were to adopt her as my daughter?"

Miss Elton didn't think anything. She had not quite forgiven his unjust remark in the morning, and failing to obtain satisfaction from her, he started in quest of Alice, who, he was sure, would listen favorably to his plan of adoption. The tree where she and her father sat on that afternoon when she had come so near to death, was her favorite resort, and here he now found her thinking of the coming time when she should be gone. It had cost her a struggle to decide the matter, but it was best, she thought; she could not always be dependent, and that very night she would answer "yes." But why that sigh, fair Alice? Is it that you so much dread to leave Miss Elton, or has the brother won a place within your heart? She could not tell. She only knew that when she thought of leaving Mr. Howland the pain was harder to bear.

"I shall miss them both so much," she unconsciously said aloud, "I shall miss them both—but him the most."

"Why then do you go?" came to her startled ear, and Richard Howland stood before her.

Springing to her feet she blushed and stammered out something about the watch dog Ponto whom she should miss! But it would not do. Mr. Howland was not to be deceived, and in her tell-tale face he knew the watch dog Ponto meant himself!

"Alice," he said, "sit down with me upon the bank and tell me why you wish to leave us."

Alice obeyed, but neither of them spoke until Mr. Howland, growing suddenly very bold, wound his arm around her waist and drew her to his side.

"Twas the first time in his life he had ever found himself in a position like this, and though it was very novel,—very strange,—he liked it; he forgot, too, all about the adoption, and bending low, so that in case of an emergency, his lips could touch her cheek, he whispered, "Alice—"

But what else he said the murmuring river never told, neither the summer air which lifted the golden tresses falling o'er his arm, nor yet the little bird, which from the overhanging bough looked archly down upon them, shutting its round, bright eyes with a knowing look as if it understood that scene. It did understand, and the sight of them sitting there thus brought to mind the dainty nest up in the maple tree where its own loved mate was waiting, and when at last the maiden lifted up her head, it plumed its wings for flight and flew away, singing as it flew, "She's won—she's won."

That night Alice, instead of Mr. Howland, was missing from the table, and when Miss Elton sought her in her room, she was surprised at the abruptness with which the young girl threw her arms around her neck and whispered, "I am happy,—oh, so happy!"

Then, with the twilight shadows gathering around, Alice told her story to the wondering lady, who in her joy forgave her brother for his unjust insinuation, and folding the orphan girl lovingly within her arms, she told her how gladly she should welcome her as a sister. It was known ere long all over town that the wealthy Mr. Howland was to wed the blind man's daughter, and the rude brown rafters of the cottage in the Hollow never witnessed so fierce a storm of passion and of tears, as on the night when first to Adelaide came tidings that the man she so much loved had given himself to another. To William Huntington, however, the news brought joy and gladness. He had recovered from his broken limb, but his health did not improve, and now he seldom left his home. Still he did whatever he could do for his family, and the little yard in front of his house was filled with flowers, which he tended with the utmost care and sold in small bouquets to such of the villagers as wished to buy. When he heard that Alice was to be a bride ere the summer days were gone, he set apart his choicest flowers, watching them with jealous care and experiencing a childish delight in thinking how he would form a rare bouquet, worthy of her to whom it should be given.

There was no reason why the marriage should be delayed, Mr. Howland said, and so one balmy eve, when the harvest moon was in its infancy, St. Luke's Church was filled to overflowing, and the same man who, over Hugo Warren's grave had read the burial service, now spoke the solemn words which made one flesh of two. And when the rite was ended and Alice was a bride, from the three towers of Oakland there rang a merry peal, for Mr. Howland was greatly honored by the citizens who thus would keep his wedding night.

Across the grassy meadow, up the wooded hill, and down into the Hollow, floated the music of those bells, awakening an answering note of joy in every heart save that of the wretched Adelaide, who, grinding her teeth together, fled to her lonely garret and stuffed cotton in her ears, so as to shut out the hateful sound, which told her of her rival's happiness. Anon, and from the rocky heights which overlooked the town, and from the village green, there shone a lurid light. Bonfires had been kindled by the workmen from the factory and shop, and among the boys who danced around the blazing fire, none threw his hat so high or cut so many antics as did the little "check" who, in his bran new suit, the gift of Mr. Howland, forgot his grievances on that memorable day when his master tried to see how it would seem to live without ALICE WARREN.

From her window Adelaide looked out upon the scene, shedding bitter tears of envy and of rage; then wishing she had never seen the light of day, she sought her solitary pillow and cried herself to sleep, while the song and the dance moved joyously on, and the gentle bride, in her robes of white, looked lovingly up to him who was her all in all. Nor were the inmates of the Brown House in the Hollow forgotten by Alice in her prosperity. From Mr. Huntington she had received a beautiful bouquet; 'twas all save his blessing that he had to give, he said, and Alice prized it the more when she knew how carefully he had watched each opening bud, shielding them alike from storm and noon-day heat.

"I will remember him for this," she thought, and as the days wore on, many a timely gift found its way to the brown cottage, where it was sorely needed, for as the fall advanced Mr. Huntington grew worse, and to the other labors of his family was added the task of ministering to him and providing for his wants.

As yet no rent for the cottage had been paid, and Miss Elton, when she remembered the ugly name which Adelaide had called her, secretly wished she might be turned into the street. But her brother was more forgiving, and when Alice's nineteenth birthday came he gave her the Brown House in the Hollow, telling her playfully that she must collect the rent of her own property!

"And I would do it, too," spoke up Miss Elton, who, nevertheless, was just as sure then of what Alice intended to do as she was next morning when she saw upon her sister's writing desk a receipt in full for the rent, and heard that sister bid a servant take it with sundry other things to the Brown House in the Hollow as a New Year's Gift from her!

Sure 'tis more blessed to give than to receive, and the prayer which the sick man breathed for Alice Howland was worth far more to her than the pultry sum which she had lost by doing what she did. Adelaide, too, was softened, for the pang of poverty were beginning to be keenly felt, and when the servant turned to go, she said to him with quivering lips, "Tell Mrs. Howland that I thank her!"

Another year has nearly gone, and from the windows of the cottage there shines a glimmering light, while gathered round the hearth three lonely women sit. They are now indeed alone,—the bed in the corner is empty,—the husband and father is gone. When the last May flowers were blooming and the voice of spring was on the hills, strong men carried him out into the open air, just as they carried the blind man, and in the village churchyard, not far from Hugo Warren's grave, they laid the weary down to rest. Mr. Huntington had saved the life of Richard Howland's wife, and for this reason his family were not neglected, though Miss Elton took good care that not enough assistance should be given them "to keep the trollop, Adelaide, from working."

In Richard Howland's home all is joyous and glad, and though the curtains of one room are dropped, and the blinds are closely shut, 'tis only because the fussy old nurse will have it so, and not because the young orphan lying there is in any danger now. In the rosewood crib there sleeps a sturdy boy, and the bottom of his cambric skirt is trimmed with the veritable embroidery which we have often seen in the hands of Miss Elton, who calls herself the baby's "Aunt" fifty times a day. She had fully expected that it would bear Air

seams, but it proved a *Rainy Trotwood* affair, and when the Christmas bells are ringing and the star of Bethlehem gleams on the walls of the old brick Church, she will stand as sponsor for the little boy, to whom, in memory of the blind man now singing to the praise of Bethlehem's child, will be given the name of "Warren Howland." Brockport, N. Y., 1859.

MISCELLANEOUS ENIGMA.

I am composed of 17 letters.
My 1, 12, 11, 9 is an island in the Mediterranean Sea.
My 8, 4, 5, 6 is said to be indispensable to every man's happiness.
My 14, 8, 4, 18 is the surname of a U. S. Senator.
My 15, 9 is a river in Italy.
My 1, 2, 8, 9, 8 is an agricultural implement.
My 14, 16, 17 is a kind of liquor.
My 10, 2, 17, 13 is a town in Eastern Massachusetts.
My 7 is a consonant.
My whole is a stupendous (?) machine for crushing sorghum!
Pittsburgh, N. Y., 1859. H. H. O.
Answer in two weeks.

GRAMMATICAL ENIGMA.

I am composed of 24 letters.
My 1, 6, 8, 18 is a verb.
My 13, 9, 5, 19 is a conjunction.
My 11, 4, 2, 10, 19 is an adverb.
My 8, 21, 13, 5 is a preposition.
My 13, 20, 23, 7 is a pronoun.
My 8, 10, 19, 12 is an adjective.
My 8, 14, 23, 22 is an adverb.
My 17, 22, 11, 4, 10, 24 is a conjunction.
My whole is an old saying.
Hillsboro, Ill., 1859. M. V. V.
Answer in two weeks.

RIDDLE.

I am composed of letters five,
Of syllables but one,
Yet into words, if you but strive,
I'll easily run.
Do but erase my 5th and 1st,
A beverage I become.
But not to quench a scorching thirst,
With no affinity for rum,
Next but hide my 1st alone,
Two stately steeds you see,
Impatient to be gone,
As steeds are wont to be,
Now but reverse these letters four,
The main support of life am I,
Though life's in me no more,
'Twas lost without a sigh.
My 5th and 2d now displace,
And see, my billows swell and surge,
Through all the watery space,
To earth's remotest corner.
Withdraw my 2d now from sight,
I'm made with many a stitch,
Yet yet both by day and night
I'm on the backs of poor and rich.
My 2d and 5th are at displace,
And your uncle's name you see,
Your uncle he is, though never his face
Has been seen by you or by me,
My whole, though mighty and strong,
Is man's obedient slave,
For him I must toil the day long,
Nor respite or rest I have,
O'er the land he sendeth me,
Alike through heat and snow,
'Tis to the uttermost parts of the sea,
As he bids I am bound to go.
Knoxville, Tenn., 1859. Oltu.

Moore's Rural New-Yorker,
THE LARGEST CIRCULATED
Agricultural, Literary and Family Weekly,
IS PUBLISHED EVERY SATURDAY BY
D. D. T. MOORE, ROCHESTER, N. Y.
Office, Union Buildings, Opposite the Court House, Buffalo St.

Agents in New York and Boston.
Subscription:—C. M. SEXTON, Agricultural Book Publisher, 25 Park Row, (opposite Astor House), New York.
Wholesale: (to supply Periodical Dealers, &c.)—DENTON & BROS., 14 Ann St.;—ROSS & TOLSEY, 103 Nassau St.
Advertising:—S. M. POTTENGER & CO., No. 119 Nassau St., New York, and No. 10 State St., L. S.

TERMS, IN ADVANCE:
Two Dollars a Year—\$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for \$3; Six, and one free to club agent; for \$10; Ten, and one free for \$15; Fifteen, and one free, for \$22; Twenty, and one free, for \$26; Thirty-two, and one free, for \$40; (or Thirty for \$37.50), and any greater number at same rate—only \$1.25 per copy—with an extra copy for every Ten Subscribers over Thirty. Club papers sent to different Post-offices, if desired. As we pre-pay American postage on papers sent to the British Provinces, our Canadian agents and friends must add 12 1/2 cents per copy to the club rates of the RURAL. The lowest price of copies sent to Europe, &c., is \$2.50—including postage.

THE POSTAGE ON THE RURAL is only 3 1/2 cents per quarter for any part of this State, and 5 1/2 cents to any other State, if paid quarterly in advance at the post-office where received.
ADVERTISEMENTS:—Twenty Five Cents a Line, each insertion, payable in advance. Our rule is to give no advertisement, unless very brief, more than six to eight consecutive insertions. Patent Medicines, &c., are not advertised in the RURAL on any conditions.

PUBLISHER'S SPECIAL NOTICES.

THE MONEY WE RECEIVE,—fills on all solvent Banks in the U. S. and Canada taken at par on subscriptions to the RURAL, but our agents and other friends will please remit New York, New England or Canada money when convenient. For all amounts over \$15 we prefer Drafts on either New York, Philadelphia, Boston, Albany, Rochester or Buffalo (less exchange), payable to our order—and all such drafts may be mailed at our risk.

Those who are forming large clubs, can forward the names and money for a part, and complete the lists afterwards—receiving the same gratuity, when completed, as if all were mailed at once.

In ordering the RURAL please send us the best money conveniently obtainable, and do not forget to give your full address—the name of Post-Office, and also State, &c.

MOORE'S RURAL NEW-YORKER,
AN ORIGINAL WEEKLY
RURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,
With an Able Corps of Assistants and Contributors.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, Usefulness and Variety of Contents, and unique and beautiful in Appearance. Its Conductor devotes his personal attention to the supervision of its various departments, and earnestly labors to render the RURAL an eminently reliable Guide on all the important Practical, Scientific and other Subjects intimately connected with the business of those whose interests it zealously advocates. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate and beautiful Engravings, than any other journal,—rendering it the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.
For Terms and other particulars, see last page.

HINTS FOR FEBRUARY.

THE weather of the present winter, thus far, has been quite remarkable. Although we refer to "weather notes" for proof of the fact, we think it risk nothing in stating, that for the twenty years past we have not experienced a winter with as many mild and sunny days. So remarkably warm has it been, as a general thing, that three or four degrees of frost for a day or so, would set every one complaining at the severity of the cold. To-day, (February 2d,) everybody, and ourselves among the rest, seems to think it remarkably cold, and we were very much surprised to find that the thermometer showed only 4 degrees of frost. The only really severe days of the present winter were January 9th and 10th. On the afternoon of the 11th the mercury went down to about 10 degrees below zero, and this degree of cold, very much to the surprise and regret of our fruit growers, destroyed the blossom buds, and blasted the hopes of many growers of the peach in Western New York. The ground has been bare of snow nearly the whole winter, and the almost incessant freezing and thawing will no doubt prove injurious to winter wheat and other fall-sown crops. Some of the strawberry beds, we observe, have suffered from this cause.

The work of the present month is more of the head than the hands. All plans for the coming summer should be perfected, and all seeds purchased. Now you have time to think over carefully what you will want, and make the necessary selections with proper care. If you delay this until spring, you will buy in a hurry, and, perhaps, something that you would not had you more leisure, some things will be forgotten, and much time wasted. If you have kept, as every farmer should, a memorandum book of wants, intentions, &c., it will prove a great help in making out a list of the articles you will need before work commences in the spring. Above all things be particular and purchase only the very choicest seeds, for "what a man sows that shall he also reap." Aim to get a little better seed every year, if possible.

Those who persist in growing winter wheat, notwithstanding late discouragements, and wish to seed with clover, should sow next month, after a slight fall of snow, before the spring frosts are past. Clover, now, however, is usually sown with some spring crop, as oats or barley.

The wheat fields will, no doubt, suffer quite sufficiently by the almost constant freezing and thawing the past winter, and to prevent still greater injury, it would be wise to look well to the open drains and ditches, and provide proper means of escape for the surface water.

The implements and tools of all kinds should be put in order. Half an hour's labor now may prevent the loss of a day just at the busiest time, and a great deal of vexation and ill-humor.

The fences, too, are always in order, at a leisure time, because they are almost always out of order. The rails are a good deal like shirt-buttons, constantly getting off, and causing trouble. Some extra rails, if not on hand, should be cut, and hauled home the first snow. And if you have a good chance, do substitute a gate for a set of bars.

The fire-wood, we suppose, is all procured, cut up, and nicely stacked up in the wood-shed, so that the women will have it convenient, and you will not be compelled to leave work in the spring, and hurry off and get up a load of wet stuff that will not burn, but will put the whole house out of

humor, cause late meals, cross looks, and a deal of mischief. A cord of the poorest wood you can get, nicely split up and stacked under cover for six months, will burn well—almost as good as the best.

The horses, of course, like their owner, have been recruiting all the winter, getting ready for a hard summer's work. This is not the time to stint them. They will well repay for all the extra care they get in the winter. A little exercise and good feed will enable them to go through their season's work in good heart.

We believe in good living for all cattle, but cows about this time should receive particular attention. If you want fat and thrifty calves, take care of the cows. If the time is near at hand when any cow in the herd is about to "come in," separate her from the rest, and give her good quarters—free from confinement of the neck or head. Where cows are stabled accidents are frequent, and even when at liberty watchfulness should be exercised on the part of the farmer. The only use in keeping cows is for their yield of milk and butter, and they will be remunerating just in proportion as they are well provided with the right kind of food. The grist must be put into the hopper, or the mill works in vain. Good feed is required by the cow in abundance, or she cannot manufacture good milk in large quantities.

These hints we might extend, but we have given enough to excite attention to the necessity of making due preparation for the coming working season, which is all the prompting our intelligent readers will need.

FODDER, HOW TO SAVE IT, PRICE, &c.

GOING into south-western New York a week or two since, I endeavored to find out whether people—I mean cattle—were likely to be short of fodder. I discovered that those who wanted to buy had an overwhelming sense of its abundance and prospective cheapness! while those who had it to spare were troubled at their neighbors' dreary prospects—they were afraid it would be very high before spring. Seven dollars a ton is the prevailing price of hay. At Oramel, and other villages, it was worth eight dollars, while at Olean it is current at ten and eleven. Those conversant with the market observed the price go up as the mercury went down, on the long-to-be-remembered cold Monday, Jan. 10th. The decided upward tendency of the market, when winter made its first emphatic demonstration, showed that people are ready to be alarmed. The thaw is an opiate which a north-wester can blow away any time in two hours.—Boreas is great at Somerset, and two months and a half of foddering time is long enough to make up the average of cold, which, indeed, the law in the case gives us reason to expect will be made up. I found more persons buying fodder than I expected, though I had not estimated the hay crop as high as many did. The cold, wet spring, succeeded by very hot, dry weather, could not be favorable for grass upon heavy or hard pan lands—the cold weather kept it back, and the hot weather baked the ground. You see I belong to the—which is it, "bears or bulls?"—at any rate I have a ton of hay to sell and would like to write up the price of fodder if I can—a superfluous spasm of conscience has let that out, and it may stand.

I'll tell you, Mr. Moore, how the scoundrels who want to get my hay cheap could still succeed—of course, I expect you to withhold the secret from my customers, after the fashion of the politicians who get up an eastern and a western edition of their speeches. Just for novelty, I thought I would "divide the Union" the other way.

Here's the recipe for cheapening fodder. Cover the cracks of the stables and sheds with strips of boards, ventilating, of course, at the proper time and in a proper way. Set up slabs, plank, boards, or rails in front of open sheds to keep out the wind when it gets round on the wrong side—leaving one or more places for the cattle to go in and out at—tighten up with straw, &c. This last arrangement gives turbulent animals a better chance to look where they are loose, and makes it proper, as indeed it generally is, to confine such ones.

I observed that my friend BENJ. FRANKLIN (not the old philosopher but the new, of Allen, Allegany Co.,) kept up the good old fashion of putting knobs on the horns of his cattle, and I wish here to certify to my high appreciation of the plan—perhaps my friend Capt. Dorr's moosies are an improvement. Mr. FRANKLIN bakes a potato and sticks on the horn for a short time, then takes it off and screws on the knob with pinchers, and it stays. This is a part of my recipe; for the more comfortable and quiet cattle are, the less fodder they require.

There is another suggestion which it mortifies me to make, and if my eyes were not remarkably good I should distrust their evidence of the necessity of making it. I have read of an ancient people who provided no punishment for parricide because they could not believe any one could ever

commit it, so I, except from compulsion aforesaid, would not believe it necessary to advise against leaving animals to sleep—to stay in the open field in a climate when ten to twenty degrees below zero is a possibility and a frequency. Though essentially orthodox concerning depravity and such like, I was not prepared to believe that men would sacrifice their own interests in committing so great a wrong, but they do.

I sent word to a man whose cattle were in such straits, that "I would tell him of an investment that would pay five hundred per cent!"—that is almost up to the demands of an Iowa money shaver, or the expectations of a California emigrant. "Procure some slabs, boards, or rails, and rest one end on the ground and the other on poles supported by crotches six feet high. Inclose a yard big enough for your cattle with this kind of shed, if you shouldn't conclude to make a better one, and the five hundred per cent. is yours." There is material for sheds everywhere—evergreen boughs, straw, refuse hay, &c., can be used to tighten up with when rails or poles are employed.

The poorest fodder should be fed in the coldest weather, but if it is quite poor, give a full supper of something better. It is poor economy to let an animal get low in flesh—a state of hunger is a state of unrest and is productive of needless waste, besides a weak animal must have the best of fodder, it would die on what would keep a thrifty one in fair condition.

I believe it would pay, with suitable conveniences, to warm the water which stock drink in cold weather, at any rate, they should have a plentiful supply of water, and the nearer "milk-warm" (animal heat) the better.

When will men learn that in a timber country wood is cheaper than hay? The fact is well established, and everybody should know it, that in cold weather a vast amount of fodder is consumed in keeping up the heat of the system. Warm food, warm drink, and warm stables, therefore, make less fodder necessary to sustain animal heat.

I will mention another consideration, but I do it modestly, deferentially, and with due respect to a very large class of "practical" men who are evidently opposed to me. I was about to say that if you neglected to provide good "racks and manglers," and put your fodder where it would be run over and trod into the mire and filth, it would stand something of a chance to get damaged. Feed often, feed just enough, and feed in good, strong, deep, capacious manglers.

Touching prices, I will say that in Western Central New York, hay is about six dollars, and seems to be in good supply, and so are corn stalks.

IMPROVED BREEDS OF CATTLE.—AYRSHIRES.

THE issue of the RURAL for Jan. 15th, gave a representative animal of the Alderney breed of cattle, and we now purpose presenting our readers with specimens, which, according to the best authorities, are connected with them by blood. It is agreed that the modern Ayrshires are the production of a union of the Holstein, or Teeswater Short-horns, and the Alderney's, with the ancient stock of the county of Ayr, Scotland. Owing to this combination, they rank among what is known to stock growers as a "made-up-breed." Their introduction is of comparatively recent date, as Ayrrox, who wrote in 1816, remarks "that one century ago there was no such breed in Scotland."

PORTRAIT OF AN AYRSHIRE BULL.

The most recent, and, at the same time, the best description of the Ayrshires we have seen, is that given in the North British Agriculturist, from which we condense the following:—"The head of both male and female should be small, rather long, and tapering towards the muzzle, which should be darker than the color of the skin. The eye large, lively, but not too prominent. In both bull and cow the jaw-bone should be strong, and open behind to admit of the throat being fully developed where it passes from the head into the neck. The horns should be small, clean, crooked, and placed at considerable distance from one another at the

setting on. The ears rather large, and orange tipped in the inside. The neck long, slender, tapering towards the head, and having the appearance of hollowiness; the skin and throat loosely attached to the lower part of the neck. The point of the wither or shoulder should be thin.—The shoulder blades should be close above, with a very slight covering of muscle. They should be developed outwards to the point of the shoulders and should appear to the eye as detached from the structure of the chest. The chest, fore quarters, and neck, should be light. The hind quarters large, and somewhat heavy, the back straight, gradually widening from the point of the shoulders towards the hook bones. These should be wide, raised at the points, and presenting a somewhat scraggy look. The ribs towards the pelvis should be wide and circular. These, with the joints, should appear open. The carcass should gradually deepen towards the hind quarters, and these should be deep. The length of quarters should exceed the breadth between the hocks. The quarters with the pelvis should be roomy—the buttocks square, and somewhat fleshy—the distance between the top of the tail and the hock joints should be extreme.—The hock joints should be broad, as well as the legs above and beneath these joints. The legs short, somewhat delicately formed at the joints as well as at the fetlocks, and the animal should appear short-legged. The feet should be round, somewhat large, and strong. The tail should be set on rather at a curve than at right angles. It should be long, tapering towards the point, and the quantity of hair at the point should be moderate.

The form of the milk vessel is of paramount importance. It can scarcely be too capacious. It should be placed well forward on the belly, and appear behind the line of the thighs. It should have

a somewhat square form, but not low, heavy, nor loose, nor fleshy. The color of the udder is by some also deemed of great importance. It should be rather white than brown, except the color of the skin be wholly brown or black. The milk veins should be large and prominent. The teats should be placed wide apart, rather small, and pointing outwards. Next in importance to the form of the udder, is the touch. The skin should be thin, having the soft feel of a fine kid glove. The hair should be soft, and somewhat woolly. The color should be distinct; dark red, or approaching to black, are both fashionable. The colors, if two,

PORTRAIT OF AN AYRSHIRE COW.

should be arranged in blot or small patches; light fawns are not uncommon, but are not deemed handy; some are beautifully spotted with red on a white ground. The very light colors, approaching to white, are objectionable."

In the breeding of Ayrshires the chief object is to supply the dairy with good and profitable milkers, and for this specialty they are, probably, more highly esteemed than any other breed. Speaking on this point, YOUTT remarks:—"The excellency of a dairy cow is estimated by the quantity and quality of her milk. The quantity yielded by the Ayrshire cow is, considering her size, very great. Five gallons daily, for two or three months after calving, may be considered as not more than an average quantity. Three gallons daily will be given for the next three months, and one gallon and a half for the succeeding four months. This would amount to more than 850 gallons; but allowing for some unproductive cows, 600 gallons per year may be the average quantity annually from each cow." The writer just quoted, estimates the quality of the milk, for butter or cheese-making, much lower than any other authors, calculating one and one-half pounds of butter to three and one-half gallons of milk—an average of 257 pounds to each cow, per annum—and to twenty-eight gallons of milk, with the cream, a yield of 24 pounds of cheese, or 514 pounds yearly.—The figures here given are certainly extraordinary, when we remember that, according to the statistical report of 1845, the average yield of butter in our own State was less 80 pounds, and of cheese, 40 pounds, to each cow. In the sketch of the dairy farm of Hon. ZADOC PRATT, as given in last volume of the N. Y. State Ag. Society's Transactions, (1857,) the average yield of milk per cow, from 1st April to 1st of December, was 636 81-100 gallons, and of butter 130 pounds. "These cows," says the

AYRSHIRE COW, "AYR."

The form of the milk vessel is of paramount importance. It can scarcely be too capacious. It should be placed well forward on the belly, and appear behind the line of the thighs. It should have

Report, "were above the ordinary dairy cows in the State, and showed good judgment in their selection. Their appearance indicated the best of care, so absolutely necessary to the healthfulness and profit of the cows."

It may be well to give a few facts concerning the products of Ayrshire cows in our country, as recorded in an *Essay upon "Dairy Stock,"* by Samuel Howard, Esq., one of our cows imported by J. P. Cosmo, of Watertown, Mass., gave in one year 2,361 quarts of milk, bear measure. The first Ayrshire cow imported by the Massachusetts Society for Promoting Agriculture, in 1831, afforded sixteen pounds of butter per week, for several weeks in succession, grass being her only food. Several cows imported or bred by Huxsore and Brooks, of Jeff. Co., N. Y., have equaled if not exceeded this. Although the breed has not had a thorough trial in this country, yet, so far as an opinion can be formed from the experiments which have been made, it is thought that no breed has given more satisfactory returns, as dairy cattle, than the Ayrshires. From close and long continued observation, and from all the evidence that can be gathered, Mr. Howard thinks their adoption by our dairymen would secure the following advantages over our common stock:

1. A greater quantity of milk, butter, and cheese, for the food consumed. 2. Greater uniformity in the general character of the stock, from its inherent or hereditary qualities. 3. Better symmetry and constitution, and greater tendency to gain flesh when not giving milk.

Our "representative" bull was owned and exhibited at the N. Y. State Fair by E. P. Paxton, of Albany, in 1840, and received the first premium in his class. The cow "Ayr"—same owner—was called one of the most perfect animals of her kind, and is said to be well delineated by the engraving. We consider our "portrait," however, the best general representation of this valuable breed.

UNDERDRAINING HARD-PAN.

Eds. RURAL:—A man who is in quest of a farm, and has the cash in his pocket to pay for it, will of course prefer dry land rather than wet, other things being equal. His aim will be to purchase lands which are dry, best located, most fertile, and can be had for the least money. But it must be borne in mind that comparatively few of us are now at liberty to make our selections—that nearly the whole area of this eastern country is now in the hands of individual owners who, for various reasons, choose to remain where they are—that though a few may sell out because of considerations like those urged by H. T. B., yet even they must sell to somebody, and, therefore, the question will still remain to be considered—how shall the land be treated?

To this question there seems to be two answers. The advocates of underdrainage say, if you are settled for life, with no expectation of changing your location, set about improving your home by overcoming any natural obstacles to profitable farming you may have to encounter. Have it for a purpose "to dress it and to keep it." If it is dotted with pine stumps, have them into durable fence as soon as possible; if it is wet, drain it; if it is covered with briars and noxious weeds, wage a war of extermination; using for such purposes any surplus means and time you may have, instead of squandering both in shallow display, or giving the money into the hands of cut-throat managers of soulless corporations to be dissolved into nothingness in a day.

The other class say, nay, it won't pay! Look around and find a better place, where you can live easier and can get larger returns for less labor! Forego early associations and the graves of kindred, and go West, or, if you must keep your land, devote it to grazing—it will grow grass if it is wet! In any event, be very careful and situated in your outlay, for that part of mother earth you occupy is hard-pan, and an ungrateful hag who is sure to cheat you if you trust her for a dollar! You can get grass, as it is—got that, and be content!

As if owners of hard-pan could live on grass! Speaking for them, I beg to say that they want as good things as do the cultivators of alluvial bottoms—and they have them. H. T. B. was once in these regions and he was not confined to this one article of diet, as he must recollect, unless possibly his head and his heart (it was in his younger days) were so full of what usually fills the heads, if not the hearts of thrifty bachelors, as to make him oblivious to his fare. We cannot even feel, in regard to so restricted diet, as did a friend, of codfish, when he said he could get along with it very well for sixty or seventy meals, but shouldn't like to be confined to it!

But it won't pay to drain hard-pan land, says our friend. I respond, begging his pardon, it will pay! I have made between seven and eight miles of stone underdrains, and every rod has paid, or will pay when it has been down two years. That which was first made, has paid more than once. I would not have them up for twice their cost. My land is "hard-pan," ten miles from market, sixteen from the county seat, and such a disarray of stone above the sea level that even *Sorghum* will not mature—yet the ditcher pays! They would pay if I wished to sell! They will pay to sell or to keep—pay in both the pleasure and the profit of culture—pay either for grain or for grass! And, somewhat familiar with the region of Northern Steuben, without the fear of H. T. B. before my eyes, I avow, as my settled conviction, that there is very little if any land hereabouts so wet and spouty and poor, that I would not sooner undertake to make interest from it with the added cost of underdraining, if judiciously done than to undertake to do it in its existing state at its present appraisal value.

Now, what is judicious underdraining? H. T. B. in his last issue, says that the stone should be fifty rods apart, and the ditcher should be a foot wide, and the ditch should be about 15 feet apart! Is it not a little strange, that the thing further into the ground every time it figures? Let me give him a fact.—Upon the farm of one of our friends, there were perhaps 200 acres of hard-pan, as he now wishes to have it, as he has been through, as to have used \$2,000, and now, after a year, it is a poor piece of land, and that of that land would now be profitable for both winter

wheat and corn. Not one-half was so before, and that part was in disconnected knolls, and ridges, and patches—here and there. And if \$20 per acre would have accomplished this, would the investment have been an injudicious one, when a single bushel of wheat, a couple of corn or barley, and three or four of oats increase, would provide for the interest of the outlay? But instead of any such stupid additions, I have 143 tons, thirty and even sixty dollars worth of wheat per acre more than the land could possibly have produced without the drains.

Do you say this is mainly assertion—we want facts! What have we to combat but assertion, I ask? Experiment after experiment has been published, all in support of draining. East, West, North and South send up concurrent testimony. Who begins to drain a farm and gets sick of it? Who has ever drained judiciously and afterwards condemned the practice? If there is such a man in the wide universe, I beg of him to come up to the support of H. T. B.

Prattburgh, N. Y., 1850.

"PROFITABLE FARMING."

Eds. RURAL:—Will you allow me to comment briefly upon the communication of Mr. CHADDOCK, of Genesee Co., (RURAL, Jan. 8, 1850,) criticising some "Hints on Farm Improvement," given in your paper last August. Perhaps it may appear out of place for me to do so, but it seems that my last was the means of calling out his present valuable article, by inciting him to read again the "Hints" above mentioned.

The basis of "Farm Improvement" as stated by you, is the same as that of Mr. C.'s "Profitable Farming," viz., "the use of every available means to secure a large amount of manure." Here we heartily agree. But Mr. C. would have the whole farm brought at once into profitable cultivation. It should be, if the "available means" are large enough—otherwise it seems to us that it will be "attempting too much," and thus injuring the success of the enterprise. Better, as you advise, undertake to grow profitable crops as far as you grow any, than spread too thinly your labor and manure over a large farm.

You say make all the manure you can, then divide the farm (the tillable part, I suppose) into fields appropriate to the amount of the same. Mr. C. objects to this, and thinks it would be better to divide the main farm into five or six fields any way. Suppose one has one hundred acres tillable land, he should divide it into six fifteen acre lots, allowing ten acres for orchard and small fields near the barn. This will do it he makes over three hundred loads of manure, if half this or less, as many hundred acre farmers do, the course pointed out in your "Hints" will much sooner improve the farm.

For a farm of one hundred acres, devoted to mixed husbandry, ten or twelve fields seven and a half to nine acres in size, will be none too many, at least until farms are improved considerably beyond the present standard. As the product increases (and it will increase if every field cultivated receives due attention,) the amount of manure will increase, and soon two fields may be devoted to a single crop, often to the great convenience of the farmer. The farm will become truly profitable, as Mr. C. says, only when all the land is brought under systematic and thorough cultivation. His system of rotation is a very good one, but the tenor of his communication, would rather discourage farmers of small means from attempting "Farm Improvement," while I conceive your "Hints" to have been peculiarly well calculated to further that desirable end.

A YOUNG FARMER.

Niagara Co., N. Y., Jan. 1850.

AGRICULTURAL MATTERS IN IOWA.

It is RURAL:—It may not be uninteresting to your readers to learn something of the doings in our State in regard to agriculture. We have had, during the week, two Agricultural Boards in session—the Board of Directors of the State Ag. Society, and the Board of Trustees of the Iowa State Ag. College and Farm. The former embraced representatives from twenty County Societies from all sections of the State. There were, however, delegates from only about one-third of the Societies organized in the State. The proceedings were the same that usually occupy the Annual Meetings, embracing the election of officers, location of the Fair, and the formation of the Premium List, all of which elicited much interest, both in and out of the body. The officers elected for the present year are:—President—W. T. FISHER, of Mahaska Co. Vice-President—W. W. HAMILTON, of Dubuque Co. Secretary—J. H. WALLACE, of Muscatine Co. Treasurer—ROBERT SEEVERS, of Mahaska Co. Oskaloosa, Mahaska Co., where the Fair was held last season, was selected as the point for the Fair this year. Davenport and Iowa City were competitors. Essays on various agricultural subjects were read and discussed during the evenings.

The Board of Trustees of the Agricultural College had a very interesting meeting, the importance of the objects, such as the location of the farm and the election of officers, brought together a large number of persons to witness its deliberations. Six or seven proposals to donate lands and money for the farm, from as many counties, were received and acted upon. Those, together with such others as may be received previous to the 1st of May next, were referred to a committee of three, who are entrusted with the examination of the sites, and who are required to report thereon at an adjourned meeting of the Board on the 6th of June next, when the location will be made. The election of the President of the Institution was postponed to that meeting. A committee was appointed to correspond with parties throughout the Union in regard to the selection of competent persons to fill that responsible office, and the professors of the College. The Committee are the Hon. G. W. F. SHERWIN, of Sioux City, SHELTON, of Muscatine, and W. D. CARR, of Des Moines. Applicants may address either of these gentlemen. W. D. Wilson was re-elected Secretary, and RICHARD GAINES Treasurer.

Des Moines, Iowa, 1850.

A LUCKY ON.

SHEEP FOR MUTTON.

Eds. RURAL:—There seems to be quite a commendable zeal manifested in the improvement of wool-growing sheep, a zeal which results in the benefit of the farmer if not the manufacturer, and while to a large class of our farmers the fleece will be the most important item, yet, with the present price of mutton, and the frequent calls for mutton sheep, there may be another class who may find it to their advantage to turn their attention more particularly to the raising of sheep for slaughter. It would be of benefit to those who wish to turn their attention to the raising of this kind of sheep, if there could be some well conducted experiments, with two or three of the best breeds, ascertaining the amount of food consumed—the amount of mutton produced—the adaptation of the breed to our climate—the difference in price of mutton, if any—the difference in price of fleece, &c., so that the most profitable breed (all things considered,) might be selected. I have, for three years past, kept a small flock of South-Downs which have more than answered my expectations. Such has been the call for breeding purposes I have not been able to mature any for mutton. I weighed, a few days since, three ewes, which were awarded the first premium at our late County Fair. One two-year-old, which raised a lamb last summer, weighed 137 lbs., one yearling, 131 lbs., one do. 128 lbs. I think some of my yearlings gained, on grass, 50 lbs. I could receive \$7 per head for my ewes for mutton. I sold one lamb, less than 6 months old, whose quarters weighed 12 lbs. each; 1 buck lamb 4 months old, weighed 97 lbs.; sold one yearling wether, weight 130 lbs., at 5 cts. per pound, or \$6.50. I have none for sale now. I intend to weigh some in April, and again in November, and may give you the figures.

East Bloomfield, N. Y., 1850.

A CORN.

POTATO EXPERIMENT—LIGHT WANTED.

Eds. RURAL:—In No. 464 of the New-Yorker an article headed the "Carter Potato" attracted my attention, particularly as it seems that Mr. CARTER's experiment in raising potatoes from the seed has produced quite a different result from any experience of my own. The year 1843, as we all know, was the first when our potatoes rotted, and a few years after everybody felt uneasy as to the prospect of entirely losing this very valuable vegetable. In the spring of 1846 I sowed some seed taken from the balls of the "early blue potato" which produced small white potatoes, from the size of a pen to that of a large white bean. In 1847 I planted these in due season and raised a comparatively good crop of white potatoes, seeming perfectly sound, and free from disease. In 1848 I planted my whole crop, feeling quite sure of having produced a new variety of potatoes—as the seed was taken from a blue variety and had produced, so far, a white one. The year 1849, in our neighborhood, was a year of blight and rot, and my new variety, on which I had placed all my hopes, shared the same fate of the others—that is, a proportional part rotted, but to my great surprise I found that every potato, remaining in a somewhat sound state, had changed from a white to the old original blue color. By this alteration they incurred my displeasure to such a degree that I mixed them with their predecessors without paying any more attention to them. Will RURAL readers throw some light upon this, to me, dark subject?

Luzerne Co., Pa., 1850.

Inquiries and Answers.

CARTER OIL. BRAM:—I would like to inquire through the columns of the RURAL, something about the *Carter Oil* Bean, whether it can be profitably raised in Western New York, the kind of soil it requires, and what machinery is necessary for expressing the oil? *Carter Oil* is the best thing I have ever tried for oiling boots with; with one good application I have worked day after day in the water, with perfectly dry feet.

BLACK-EYED PEAS.—I received a few *Black-Eyed Peas* from one of our subscribers last year, and should like to be informed of their intrinsic value, as I see they are quoted at a higher price than any other in the market.—A. T., South Bristol, N. Y., 1850.

THE *Caster Bean* grows best in a rich, mellow, deep soil, and is cultivated like corn. It attains the height of from four to six feet, and the product of beans is from 20 to 30 bushels an acre. The oil is extracted either by boiling and skimming, or by bruising the berries and subjecting them to a great pressure, which makes the best oil, known as *cold pressed*. If any of our readers have had experience, or can give any information to our correspondents, we hope they will do so. The *Black-Eyed Pea* is very much like the common *Marrowfat*, but is said by some to be more productive.

CARROTS GOING TO SEED.—Will you, or some of your correspondents answer through the columns of the RURAL the following questions? What is the cause of carrots going to seed the first year of sowing, is it in the seed, or what? I sowed nearly a quarter of an acre of the *Long Orange Carrot*, and about three-fourths of them have gone to seed. I thought it was owing to the seed I procured, which was perhaps taken from the first year's growth, the same as the seed on mine.—H. T., Galt, C. W., 1850.

In this matter we will simply make a few suggestions. The object of all vegetation is self-propagation—the perfection of the seeds for future plants. If the carrot is sown early, in a warm, quick soil, and the root arrives at maturity during the warm, growing weather of September, there is a disposition to go on to the perfection of the seed. The remedy indicated is to sow so late that the root will not arrive at maturity until the growing season is over. Here the seed will not mature in one season, from seed, nor do we think it will at any place from which we obtain carrot seed. Seed should be raised from well-grown, smooth roots, but that the seed is not always at fault, we have evidence in the fact that the same seed under different treatment, produce quite different results.

CHEERING IN WINTER.—Some one asked in the RURAL how to churn in cold winter weather. We always beat sweet milk hot and put it in the churn before putting in the cream, or after. About two quarts of milk to three gallons of cream.—W. A. BRAGG, Aurora, N. Y., 1850.

Rural Spirit of the Press.

Cabbages for Cattle.

THE Worcester *Palladium* recommends cabbages for cattle as easier raised than roots, and quite as good. For milder cows they work wonders; and the loose leaves may be advantageously plucked to be fed in fall and early winter. In planting, in hoeing, and in gathering, cabbages require less labor than carrots. Of the comparative value of the crops, we are not aware. Raising a patch of cabbages for the cows, however, would "pay" almost any farmer.

Preserving Butter.

A PATENT has been secured by W. Clark, of London, Eng., says the *Scientific American*, for the following method of preserving butter:—The butter is first well beaten in the usual manner after churning, then placed between linen cloths, and submitted to severe pressure for removing whey and water. It is now completely enveloped or covered with clean white paper, which is coated on both sides with a preparation of the white of eggs, in which 15 grains of salt is used for each egg.—This prepared paper is first dried, then heated before a fire, or with a hot iron, just prior to wrapping it round the butter. It is stated that butter may be kept perfectly sweet without any salt for two months, when thus treated, if placed in a cool, dry cellar. The submitting of butter to pressure, as described, is a good plan, and one which we recommend to all our farmers. They can easily practice it with a small cheese-press.

Vermont Premium Corn.

AT the Annual Meeting of the Vermont Ag. Society, held at Middlebury on the 6th ult., a sample of King Philip corn was presented by Hon. H. S. MONROE, of Shelburne, the yield of which averaged upwards of 117 bushels per acre. The following statement—to which affidavit was made—will exhibit the mode of culture:—"I enter three acres of corn for premium, which was raised in the following manner:—The land was a hard, stony soil; had been in meadow five years. I covered about two-thirds of the ground with rotten manure in the fall of 1847; and the balance of the piece with new fresh manure, drawn in the winter, and plowed in about the first of May, from eight to ten inches deep. I harrowed it well, and planted it with King Philip Corn, on the 15th of May, three feet by three and a half feet apart, and about six kernels in a hill. It was cultivated and hoed twice, well; cut up the second and third week in September; stood up in the lot, and stood until the latter part of October, before husking. I husked from three acres, five hundred and seventy bushels, which measured, when shelled, nineteen quarts to the bushel, and weighed thirty-five and one-half pounds to the bushel—making 20,335 pounds by weight, and 238 bushels and fourteen quarts, by measure."

Dairies and Bone Manure.

AN English paper in commenting upon this subject remarks that the Cheshire dairy farmer, by the free use of bone manure laid on his grass lands, makes his farm, which at one time, before the application of bone manure, fed only 20 head of cows, now feed 40! In Cheshire two-thirds or more, generally three-fourths, of a dairy farm are kept in perfect pasture, the remainder in tillage. Its dairy farmers are commonly bound to lay the whole of their manure, not on the arable, but on the grass land, purchasing what may be necessary for the arable. The chief improvement, besides drainage, consists in the application of bone manure. In the milk of each cow, in its urine, in its manure, in the bones of each calf reared and sold off, a farm parts with as much earthy phosphates of lime as is contained in half a hundred weight of bone dust. Hence the advantage found in returning this mineral manure by burning grass lands. The quantity of bones now commonly given in Cheshire to an imperial acre of grass land is about 12 or 15 cwt. This dressing on pasture land will last seven or eight years; and on moved land about half that period. But the grass land once boned and kept under pasture is never so exhausted as to be as poor as it was before the application.

Old Sheep for Mutton.

IN an article on the "Care of Sheep—Mutton," &c., the *New England Farmer* discusses the propriety of slaughtering at the early age common among Americans, and remarks that "in Great Britain, where so much use is made of mutton by all classes, from the peer to the laborer, great attention has been accorded, not only to the production of the greatest quantity, but also to the best quality of mutton. After so long a series of efforts and experiments, it is but reasonable to suppose that very many important discoveries have been made in this particular branch of rural economy, and that the business of fattening, in all its details, is there more thoroughly understood and practiced than in any other country. It appears, indeed, to be universally conceded by agricultural writers of England, that sheep of great size and rapid growth will not give so fine mutton as smaller animals, and those which are longer in coming to maturity. This axiom may, in fact, be regarded as constituting the genuine secret of the success which so markedly attends the efforts of the British herdsmen and flock-masters in fattening their animals for the market. The Leicesters, consequently, are less valuable—being large and of quick growth—than the 'South-Downs,' which are of a more diminutive size, and much longer in coming to maturity. A late writer on this subject, says:—'A sheep to be in high order for the palate of an epicure, should not be killed earlier than when five years old, at which age the mutton will be rich and succulent, of a dark color, and full of the richest gravy; whereas if only two years old, it is flabby, pale and flavorless.' In this country, mutton rarely attains the age of four years, and hence, probably, the reason why the article known by that name is generally so poor compared with the English article. Wethers of good size, and of a breed disposed to take on fat readily, are often marketed at two or three years old; but it would be for the breeder's interest to keep them at least till they were five years old, as he would then be able to offer a very superior article, and to secure a price accordingly. There is no meat superior to good mutton; it is wholesome, and possesses a flavor equal, if not superior, to the best beef."

Agricultural Miscellany.

ADVICE GRATIS.—To all and sundry people who have any extraordinary productions for sale—whether fast horses, big cattle, aquash seed, Egyptian millet, bee-hives or rat traps—we beg to suggest that the best way to accomplish their object is to advertise and pay therefor. We are about through even reading long articles cracking up stock, seeds, &c., which the writers have for sale, and as to publishing such elongated and extravagant puff of their own wares, we ignore the idea altogether. We admire patriotism, and wish to advance improvement, but prefer to encourage merit and modesty, rather than brass and self-interest.

"NATIVE AMERICANISM" AMONG THE CATTLE BREEDERS.—At a recent Legislative Agricultural meeting, held at the State House, Boston, the chairman, J. W. PROCTOR, Esq., after announcing the subject—"Breeds of Cattle adapted to Mixed Farming"—named the several well known breeds of imported cattle, or "blood stock," and then invited attention especially to the old "Red Stock," or what he termed "Native Stock." A comparison was instituted in which the Natives seemed to meet the greatest favor, Mr. P. concluding as follows:—"But it is said the pure-blooded animals only can be confided in to produce their like, and here hangs the burden of the song. Of this I do not profess to be experienced. I cannot understand why the connection of a fine Yankee bull with a fine Yankee cow is not as likely to produce a fine calf, as though the animal came from one of the Islands of the British Channel. I think much of this talk about purity of blood is mere gab." Mr. P. was supported in his views by Mr. J. C. MONROE, a native of Ayrshire, England. Mr. M. favored the idea that the best native stock raised here would be as well adapted to this region as any imported stock, in the same manner as the Ayrshires were adapted to the country where they were produced. The cause of deterioration in American stock, was the too early use of male animals for procreating purposes. It was not customary in Scotland to thus employ them before they had attained an age of three years. Here is a subject worthy of consideration—what say RURAL readers to the above positions?

AGRICULTURAL BOOKS, &c.—In copying an article on this topic from the RURAL—wherein we spoke of the lack of good books on Agriculture, and the want of proper criticism—the editor of the *Boston Cultivator*, who had previously alluded to the subject, makes the following pertinent remarks:—"We are pleased to see that the subject has attracted the attention of some of our contemporaries, and should the agitation of the matter result in bringing about a reform, it will be highly gratifying to the true friends of improvement. The making of books has been profitable, but with authors and publishers, the question—What will sell? has been the governing idea, rather than—What is true? The praiseworthy desire of the people to obtain knowledge is abused, and their ignorance and credulity made use of to take from them their money. It is a matter of regret that so large a portion of the agricultural press has lent its aid to this imposture by its indiscriminate praise of books, or by its silence in regard to errors which it should have corrected. In some instances this may be accounted for on the ground of want of proper knowledge by the conductors of the press; in others, even a less creditable cause seems to have prevailed—a contemptible tendency, prompted by the hope 'That thrift may follow fawning.'"

HONOLULU SQUASH.—We are indebted to Mr. I. W. BINGHAM, of Macedon, N. Y., for a specimen of squash, stewed and dried, without sugar or other additions, which is certainly a vast improvement in flavor and sweetness upon anything in the way of undiluted squash that we ever before tasted.—Mr. B. says this is a new variety, and thinks it casts all other squashes in the shade. The seed was from Honolulu, and hence he calls it Honolulu squash. It has a russet skin, is nearly globular, and the average weight is about 25 pounds.

THE POTATO DISEASE.—The Massachusetts Board of Agriculture appointed a committee some time since to test a number of the reputed remedies for the potato rot, and we see by the *Boston Cultivator* that a partial report has been made. Twenty prescriptions were tried and all have failed. The \$1,000 premium, which called forth these so-called specifics, still remains with the Board, and the "itching palms" will have to try again.

RACKS AND MANGERS.—Some inquiry has been made through the columns of the RURAL for racks and mangers that will keep cattle from wasting their feed. If the stall is narrow enough to keep them from turning around, and short enough to keep them from stepping back, there will be no necessity for anything better than old-fashioned manglers. A stall ten feet long, including manger three feet wide, if not used for milking, about the area for middling-sized stock. A door at the end of each stall, opening under a shed, is a very convenient way for keeping the manure under cover. They need no fastening and have no chance to disturb each other. If "Farmer B." will put his calves in a stall six feet long and two feet wide, he can feed corn fodder in his stable without losing a mouthful—there will be no need of having a V shaped place to put the head into the manger.—G. WIOUT, So. Alabama, N. Y., 1850.

SENECA Co. AG. SOCIETY.—Officers for 1850:—President—ORRIN SODTWEIG. Vice-President—Truman Boardman. Treasurer—John D. COE.—Secretary—Charles Senteil. Directors—Michael Hoster, Jos. Wright, Lyman T. Crowell, John V. Grove, Ira Johnson.

PROGRESS!—The last number of the *Vas Farm Journal* contains at least seven articles that originally appeared in the RURAL, but only one of them is credited! The Journal is evidently determined to reciprocate the good opinion we lately expressed of it, but, while we admire its taste, we cannot commend the manner of its "abstractions."

HORTICULTURAL

THE NEW GRAPES.

Nothing connected with horticulture gives us more pleasure than the attention now given to the culture of the grape, and particularly to the production and dissemination of new varieties. A word of caution, however, seems just now to be needed to prevent disappointment. It is not wise to turn our back upon an old and well-proved variety like the *Isabella*, for wherever it will ripen it is to our notion an excellent grape, if properly grown, large, showy, hardy, a good bearer and keeper, in fact having many good qualities and very few bad ones. Neither should persons think that every seedling they raise, or that any vine they happen to be in possession of, differing from this variety or the *Catawba* and *Clinton* is better, or a great acquisition. Not more, perhaps, than one out of a thousand of the seedlings raised will prove even as good as the *Isabella*. Too much confidence must not be placed in the descriptions of these new sorts, for there is getting to be quite an excitement on the matter, and we notice that some of them are described in very glowing terms by persons who can have but little acquaintance with them—perhaps having seen the fruit only once,—and in many cases describing them from what others say and write. Scores of sorts are now well spoken of, that ten years hence will be regarded as utterly worthless. The *Delaware* we are satisfied stands at the very head of the new grapes. Its quality no one can complain of. We regret that it is so small. Its size will detract from its value for market. The *Diana* we think destined to be popular. The *Hartford Prolific*, though having some faults, is a good sort to plant where the *Isabella* will not ripen. The *Rebecca* is of fine quality, and we have hopes that it will prove hardy, and worthy of general cultivation. Much further than this our experience and observation at present will not allow us to go.

RE-GRAFTING VIRGALIEU PEAR TREES.

Messrs. Editors:—Your correspondent, "CHRYMUNO," in the *RURAL* of January 29th, says he has a lot of 150 White Doyenne pear trees, that produce cracked and worthless fruit, and inquires what kinds you would advise him to graft them with. You say, "we would graft the White Doyenne with the Duchesse de Angouleme, Louise Bonne de Jersey and Bartlett." Do you understand your correspondent to say that the trees that he wishes to re-graft are on the quince root, if so, then I have nothing more to say. But if they are standard trees, or, in other words, on pear stocks, then I must, with all due respect, beg leave to differ with you.

I believe it is generally conceded by the most experienced fruit growers, that the Duchesse de Angouleme is worthless, unless worked on the quince, and the Louise Bonne de Jersey, I have always supposed, was better when worked on the quince, than when on the pear. Allow me to suggest to "CHRYMUNO," that if his trees are on the pear stock, he can graft them with no better kinds for market or other purposes, than the Bartlett and Onondaga. The latter sort, when the trees are young, sometimes produces fruit that is lacking in point of quality, but when the trees are of good size they produce a noble market fruit, that always commands the highest price.

I regret to inform you that the cold "snap" of the 10th and 12th of January, has blighted our hopes and expectations of getting a crop of peaches and apricots. However, we had a good crop of peaches last season, which is some consolation, and will the better enable us to wait with patience for the good time in the future. WM. TOMPKINS.
Germantown, N. Y., Feb., 1859.

REMARKS.—Our correspondent is quite right in his remarks about the Duchesse de Angouleme. Our advice was given for dwarf trees. We don't know of anything that makes a finer tree than the Bartlett double worked, as we suggested "CHRYMUNO" should do with some of his Virgalieu.

ORCHARDING AT THE WEST.

Messrs. Editors:—In your remarks upon the communication of Mr. H. P. KIMBALL on *Orcharding in Illinois*, in a late number of the *RURAL*, you say that his experience does not agree with your observation, and call upon the fruit growers of Illinois for the facts. Now, his experience agrees so exactly with mine, and that of others in this section, that I, though not a resident of Illinois, am induced to add my testimony by way of corroborating the facts elicited by his article. We have not had so decided a failure here as in Illinois, but that the seedling does better than grafted stocks is manifest everywhere, and men of observation are acting upon the advice of Mr. KIMBALL, and others, to plant seedlings. They make a third more growth in a given time, and bear well, and we are glad here, if we get anything that bears the name of apple. Top-grafting has not been done much yet, but cannot fail to do well and be the surest way to obtain an orchard at the West. Indeed, I am of the opinion that if it were practical to plant the seeds in the orchard, and never subject the tree to a transplanting it would be better still. But, the next thing to this is to obtain young seedlings not over three years old, and plant in the spring. The recommendation of BARNY, and other Eastern nurserymen, to plant in the fall will not do at the West. Oakbrook, Wis., Jan., 1859. R. C. WOOD.

REMARKS.—We are happy to receive the opinions of practical men at the West, but we would be still more happy to receive the facts on which these opinions are founded. We have published one article from a Western fruit grower in opposition to the conclusion of Mr. KIMBALL, and our present correspondent goes even further than Mr. K., in his regard for seedling trees.

RED CANADA APPLE.

In compliance with the request of a correspondent, we give an engraving of the *Red Canada Apple*. The drawing we had taken from nature a year or so since, and it is a good representation of a fair or medium size specimen. This apple is recommended by the American Pomological Society for particular localities, and is highly prized as an orchard fruit in Ohio, Michigan and other places in the West, as well as in Western New York. Mr. THOMAS says it succeeds equally well in New England, New York and Ohio, but we believe it is not now as popular in the Eastern States as it was some years ago. The tree is thrifty, though making a slender growth, and is very pro-

CULTURE OF THE GRAPE.

Messrs. Editors:—The interest that has been awakened of late years on the subject of *Grape Culture*, seems to call for a liberal space in your *Horticultural Department*. Two years ago the demand for young vines, to set in vineyards, was so great that the market was bare of them, and the demand could not be met. Now, it will be clearly understood how important it is to be well posted upon the following subjects, viz:—*What is the most perfect arrangement for Trellis? What form is best for the vines? What kind of pruning? When is the best time for it to be done? What is the best culture? The best manure? When is the fruit fit to gather?—and, the best way to keep it in a fresh state the greatest length of time?* I think, the Lord will, we may safely calculate on fresh Grapes eight or ten months, if not the entire year, and but a small per cent. of loss on them, compared with other fruits. For years I have been saying to the hundreds (that have been to see the beautiful crops of fruit that have grown on my old vines), that had the first settlers of these United States known the value of the *Grape Vine* and its fruits, and what was more important, how to manage it for profit, there would at this time be more bushels of grapes consumed by the thousands of readers of the *RURAL* than there is of any other kind of fruit.

I have seven acres set to vines two years next spring, that I am preparing to build trellis for, and I wish to have the arrangement the most perfect, as to cheapness and durability, to get the greatest yield per acre, of the most choice fruit. I therefore send you my conclusions on the above subjects, hoping they will bring to your sanction the voluntary contributions of the best vine dressers in the country, that we may have the benefit of each others experience.

I design to have all my vineyards enclosed with a board fence. The vines are set four feet from the fence on all sides, which gives space between the fence and first rows for the horse and cultivator to pass between them. The vines are set one rod apart, each way. For the outside row I shall make a trellis all round the vineyard, excepting the gateway between that and the next row, for the purpose of giving a chance to cart manure to any part of the vineyard, or the team and cultivator to pass from between one trellis to the next. In all cases I consider it very important to have the trellis stand east and west, except the outside rows on the east and west sides of the vineyard. The reasons why, I shall more fully explain when I come to treat on summer pruning.

First, *What form is best for Trellis to meet the wants of the Vines*, from the time they begin to bear till they are fifteen or more years of age? It is necessary to keep vines thin to get perfect fruit. My conclusions for trellis are these, get cedar fence rails or poles, six inches in diameter at the but, and set them 2½ feet in the ground. Use three wires and one slat, the first wire 16 inches from the ground, (as fruit nearer the ground is covered with dirt in a heavy shower,) above that another wire, then a slat to the posts at a proper distance, to rest the ladder against, and at the top another wire. For slats chestnut is best—as it is durable, straight-rift, and free from knots—sawed 4 inches wide and 1½ inches thick. It is actually necessary to have one tier of slats to keep the wires from sagging. When the trellis has been built six or eight years, some of the posts will begin to be weakened by decay, when that occurs, take about No. 10 wire, stretch it north and south, across the top of the trellis; get some stout spikes made by a

smith, and drive them into the top of each post.—The wire should be wound around them to keep it from slipping. Now, acres of trellis built in this way will last as long as the vines remain in bearing, if nearly all the posts are rotted off, providing the outside posts on the north and south sides are firmly braced with long braces reaching from their tops, and spiked to the bottom of the posts, on the adjoining trellis. The outside posts should be kept stout at the ground by adding short posts when needed, and two bolts through the tip of them and the old posts. This arrangement will give additional space to the vines, by stretching wires on the north side and parallel with the trellis, on a plat as near the next trellis as possible, without shading the fruit on it.

Some will say this trellis is too high, but there must be space for the team and the vines. I use a ladder made of strips of 1½ inch pine plank, four inches wide at one end, 3 inches at the other end, one round at each end, then steps of inch boards, straight on the back side, but a circle on the front side, so that they are 6 inches wide in the centre. It is light and I can stand on it all day and prune, or pick fruit about as easy as I can on the ground.

ALVIN WILCOX.
West Bloomfield, Ontario Co., N. Y., 1859.

THE ALLEN RASPBERRY.

I would ask, as a pomologist, why it is that old and established varieties of fruits should so frequently be brought up under new names? As though the nomenclature of specific varieties were not, in themselves, sufficient for all practical purposes. Years since there was, perhaps, an excuse for this sort of confusion, from fruits grown in certain localities losing their labels. But is this any good reason why the name of the grower should be appended, and the fruit forthwith ushered before the public as something new? We need not enumerate instances of this kind. They have been, in times gone by, legion. Is it not time that this loose system should be abandoned? Is the variety better for its new name?—or, rather, should we not, so far as possible, correct this evil, and "give unto Cæsar the things that are Cæsar's?" I had hoped the time had gone by for attempting to make new capital out of old cloth.

Here, then, is a case in point. Mr. L. F. ALLEN grows a *Raspberry*—an old and well-established variety. Being desirous of growing the plants and fruit for market, at the same time entirely unfamiliar with the habits and character of this fruit, he first claimed that it was the *Hudson River Antwerp*, and brought it to me for examination. It was not difficult to prove the error, inasmuch as the color of the canes were opposite, his being red, while the *Hudson River* variety has a white or yellow-colored cane. Upon examining his plants, at his request, on the "Island," I at once assured him (as I previously knew,) the variety was a common one in Ohio, that I had it in my grounds, and had tried to exterminate it for years, with but poor success. It is, in fact, the "false Red Antwerp," as almost universally propagated through the west for the "Red Antwerp," until the past few years. It has all the characteristics of that variety,—canes, strong and rampant, often inclining to branch—blossoms very freely and sets but little fruit; needs neither winter protection or summer support!

The history of the *Allen Raspberry* is this:—Some years since, W. H. SOTHAM, the Hartford breeder, of Black Rock, purchased, with other shrubs, &c., a large stock of this variety of raspberry from F. B. ELLIOT, of Cleveland. Wm.

SOTHAM presented some of the canes to Mr. ALLEN, and others. The balance were sold to MASON & LOVING, nurserymen, of Buffalo, and by them, have been scattered through our neighborhood. My neighbor, Col. HONGE, grows it, and described it as the same in the *RURAL* some time since. I know no good reason why we may not as properly call it the *Sotham Raspberry*, or the *Elliot Raspberry*, as the *Allen Raspberry*. Some vague remarks have been made as to its being obtained from the garden of a gentleman deceased. This is sheer gammon. This raspberry was never in that garden, as is asserted by one who well knows, and it is a lame attempt to wrap in mystery a simple fact most readily controverted. Now, so far as the name goes, the variety, if valuable, is valuable still. I cannot see that its new name can render the plant more prolific. If I did, I would certainly cultivate mine over again. In multiplying they are exceedingly prolific, but in fruiting, I consider them far inferior to the genuine red, or *Hudson River Antwerp*, the *Orange*, and others, and should, I hold, retain its old, but honest cognomen, "False Red Antwerp." W. R. COPPOCK.
Longsight Place, Buffalo, 1859.

THE WINTER AND ITS EFFECTS.

EDS. *RURAL*:—Our winter thus far has been a most singular one, the discrepancies in relation to ordinary seasons in this climate are striking and manifold. The utter inability of human philosophy to form, or even suggest any systematic laws that govern meteorologic physics, allows every one to fumble in the dark for causes, and one suggestion is as good as another, as to any applicability to present and future effects.

The presumption that our climate is going through the incipient grades of a radical change, or that the Comet has distributed some of its incandescent particles through our atmosphere, is just as good philosophy, as the suggestions and presumptions of your clerk of the weather, or the learned lucubrations of Lieut. MAURY.

The most remarkable anomaly that I propose to notice, is the present appearance and probability of the utter ruin of the blossom bud of the peach, and the consequent failure of the coming season's crop.

It has ever been held that from 15° and below under zero, was fatal to that production, and the experience of forty years in this region, sanctions the rule without any exception, as far as my advice goes; but the 10th and 11th of January, with the thermometer at 10° and some indicating 11°—which was the lowest point in my neighborhood by several instruments—has killed every bud on over 150 trees that I have examined.

In former years 9°, 10°, 12° and 14° below zero was not uncommon, and one year as low as 19°, 20°, with good crops. Some persons attempt to account for it by suggesting the influence of the warm weather, in swelling and developing the bud; but that is not the cause, as far as I have observed, for the buds are as close and firm up to the present time as I have ever noticed them.

The whole day of the 11th of January was below zero, but fell very fast after noon, till at 4 o'clock it was 10° below, and so remained till 9, when it commenced rising, and at midnight it stood 6° above; by which it appears that the extreme cold was of but short duration. Now, from what causes this inexplicable effect has resulted, when under the same circumstances, with respect to temperature and exposure, a totally different result was found to exist, is a very abstruse problem to explain, at least to my mind. L. B. MARLY.
Monroe Co., 1859.

GENESEE VALLEY HORTICULTURAL SOCIETY.—This Society held its annual meeting at the Court House on the 7th instant. The Treasurer's report showed the finances of the Society to be equal to its obligations, although the debts incurred during the past season have been larger than usual.

The feasibility of holding weekly or semi-monthly meetings and shows of the Society was discussed at some length, and finally referred to the Executive Committee, who will probably to some degree, carry the proposition into effect. The following officers were elected for the ensuing year:—President—SELAH MATTHEWS; Vice-Presidents—W. A. REYNOLDS, L. A. WARD, ISAAC HILLS; Secretary—C. W. SEELYE; Treasurer—F. W. GLENN. The Executive Committee of the present year is to consist of the President, Secretary, D. D. T. MOORE, P. BARNY and JAMES VICK.

MANURE FOR FRUIT TREES.—Will you inform me through the *RURAL* what is the best kind of manure for pear trees, apple trees, and grape vines, when the best time to apply it, and how much? Also, whether ashes, leached or unleached, are good, and how to use them?—R. W. BUDICK, Alfred, N. Y., 1859.

Well-rotted, but not washed-out, stable manure is the best manure we know of for all these purposes. Apply it either in the spring or fall. There is little danger of an over-dose. Ashes, in small quantities, are good, and should be applied to the surface, but not allowed to touch the bark.

NAPLES TOWN HORTICULTURAL SOCIETY.—The Annual Meeting for the election of officers, and an exhibition of various fruits and flower seeds, sorghum syrup, native wines, preserved fruits in cans, &c., was held on the 29th of January. There was a beautiful display upon the tables, which excited the admiration of a large and appreciative audience. A very appropriate address was delivered the Rev. M. PUNNOROTON. The following officers were elected for 1859:—President—JOHN B. JOHNSON; Vice-President—ELIAS SIMONS; Secretary—SEYMOUR H. SETTON; Treasurer—AMOS STODDARD.

FLOWER SEEDS.—AGAIN.—In answer to the inquiry of R. B. of Preston, C. W., I would state that I have had some experience in cultivating flowers from seeds purchased of several of our most respectable seedsmen, and have been the most successful with those purchased of J. M. THORNTON & Co.,—the seeds being good of their kind, and never failing to grow.—R. B. E., Ayres, Pa., Jan., 1859.

WILL "A. S. P.," who writes about the *Gravenstein Apple*, and other matters, please give us the County and State where he resides? Without this the facts stated are of little value.

ABOUT CRULLERS.

Messrs. EDS.:—Seeing a request in the *RURAL* for a recipe for Crullers, and being willing to add a mite to the Domestic Department, I will send mine, that I have used for years, and think it very good:

One egg; 1 tablespoon of white sugar; 1 tablespoon of lard, (I generally use three times this amount at once,) add a little salt—mix in flour sufficient to roll out well. Roll quite thin—make them in every possible manner, and fry in clean lard—so that they may be white—and do not brown them.—Mrs. E. W. V., Out West, 1859.

CRULLERS.—One teacup of sweet milk; one of sugar; two eggs; one tablespoonful of butter; one of cream tartar; one teaspoonful of soda—cut very thin and fry.—N. M. T. M., South Alabama, N. Y., 1859.

EDS. *RURAL*:—For the information of "A house-keeper, Out West," and lovers of good Crullers in general, I send you the following recipe for making what I know to be a first-rate article. One pint of sweet milk; one teaspoonful of soda; two do. cream tartar; two teacupfuls of pulverized sugar; half a pound of butter; two eggs; flour sufficient to knead. Will those who try it give their opinion?—D. J. S., Staten Island, N. Y., 1859.

CRACKERS, FARMERS'S PIE, &c.

EDS. *RURAL*:—As I happen to be writing to you, wife thinks she will send you some good recipes for cooking:

CRACKERS.—One pint basin of water; 1 teacup butter; 1 large spoonful sour cream; saleratus, half teaspoonful—mix very hard.

FARMERS'S PIE.—Take sweet apples, pare, cut, and stew, when done, stir to pieces, or sift them, and when cool, thin with milk, bake with one crust—eggs and spice to suit the taste.

CREAM GINGERBREAD.—One tumbler sour cream; 1 do. molasses; 1 teaspoonful saleratus; 1 do. ginger; ¾ do. salt. Make stiff as pound cake.

BUCKWHEAT SPIN CAKE.—Two eggs; 1 cup of sugar; beat well together; 1 large spoon saleratus; ¾ cup of butter; ¾ cup buttermilk, and flour to make it a little thicker than common cake. Erie Co., Penn., 1859. J. F. H.

HOW TO PRESERVE YOUR FURS.

Furs, says a writer in one of the New York papers, who seems to be thoroughly familiar with the subject, should never be put away for the summer and forgotten, as they so frequently are; and next to being shut up from the air, their greatest enemy is damp. If from the wearer being exposed to rain, they become wet, they should always be dried at a moderate distance from the fire immediately; and in warm weather, when not required for wear, they should never be shut in a box or drawer for more than a few days at a time, and every few weeks they should be shaken and beaten.

The more delicate skins require somewhat more delicate treatment. The best plan is, probably, not to pack furs away, but to let them lie in a drawer or wardrobe that is constantly being opened so that they meet the eye frequently, and being thus often in sight, it is easy, at convenient opportunities, to have them taken out and beaten—or, at any rate, shaken and tossed, and thoroughly exposed to the air. It is common to hear it remarked, that the moth gets into furs—as if the insect actually migrated from one locality to another; the probability is, however, that furs and woollens are animal substances, endowed with a vital principle, which develops itself into the living organisms through the decay of its material shape. Cleanliness and airing are, therefore, absolutely essential.—Selected.

CHICKEN PIE.—In answer to request in a January number for chicken pie, I send the following:—Make the crust of sour cream, saleratus, salt, and roll about one-fourth of an inch thick—line the pan, have the chicken boiled tender, lay it in the pan, and between each layer sprinkle flour, pepper, salt, and plenty of butter—add a part of the water the chicken was boiled in, so as to nearly cover—then lay over the crust, and bake half an hour in a slow oven. Take the rest of the water the chicken was boiled in, and make a gravy with flour and butter.—A FARMER'S WIFE, Mason, Mich., 1859.

A HANDY COVER FOR THE FLOUR BARREL.—Housekeepers generally cover their barrel of flour with a cloth loosely thrown over the top for protection from dust, &c., consequently it is always coming off, and mice are not kept out of the barrel. To prevent this annoyance, take the top hoop, after the head of the barrel is removed, and sew in white cloth; it makes a nice, convenient and firm cover, thus protecting the flour from dirt and vermin.—A SUBSCRIBER, Brandon, Vt., 1859.

A SIMPLE REMEDY FOR BRONCHITIS.—A writer in the *Baltimore Sun*, who has been afflicted severely in his family by that appalling disease, bronchitis, has found relief from the following remedy:—"Take honey in the comb, squeeze it out and dilute with a little water, and wet the lips and mouth occasionally with it." It had never been known to fail, in cases where children had throats so swollen as to be unable to swallow. It is certainly a simple remedy, and may be a very efficacious one.

SPONGE GINGER CAKE.—One teacup molasses; 4 tablespoons of butter or lard; 1 teaspoon of ginger. Stir this with flour until it will receive no more, then add 1 teacup hot water; 1 teaspoon saleratus. Stir and bake.—MRS. P., Orion, Oak Co. Mich.

BRIDAL WISHES.

BY W. W. WYATT.

May gentle breezes waft your boat;
May clear and sunny weather
Make shining pathway as ye float
Down life's stream together,
May all things prove so fair and bright
You'll always bless your marriage night.

Quicken and along your way
Where many boats have grounded;
But not a bark was ever lost
Where love and faith abounded.

Let faith be your anchor and love be your guide,
And fearless of danger your life-boat will glide.

Clouds may rise in the night-time
With tempest of trouble and sorrow,
Cast anchor! and wait for the sunrise,
It surely will come with the morrow.

Be the night never so dark still gleaming afar,
You may see the clear light of your own guiding star.

So start on your voyage with laughter and song,
You have entered the life-boat together;
With the anchor of faith and the guiding star too,
Come fair or come cloudy weather.

Your own hearts shall make the pathway all bright,
God smile on your pleasant embarkment to-night!
Hochester, N. Y., 1859.

Written for Moore's Rural New-Yorker.

A WORD TO THE GIRLS.

"MOTHER, how old is ELLEN BROWN?"

"I believe she is nearly eighteen—just about your age, CARRIE. Why, my daughter?"

"O, nothing in particular. I called at Mrs. Brown's yesterday, and ELLEN was very proud because she had just finished making a suit of clothes for her little brother. She said she had cut and made them, every stitch, herself, and they fitted and looked just as nicely as if they had come from the tailor's shop."

"But some one assisted her, CARRIE?"

"O, yes. Her mother had a tailoress there a week who cut some patterns for her, and then she watched her about her sewing; or, I mean, ELLEN noticed how the tailoress did everything, and she said she resolved to learn how to do it herself—and she says it is the nicest kind of sewing on light cloth, such as people use for children's clothes, and she would rather work on it than on factory, or on calico, or any cotton good."

"But, CARRIE, ELLEN's father is abundantly able to hire such work done. How came she to busy herself about it? It is not likely she will ever have occasion to be a tailoress, and go out to earn her living."

"That is the oddity of it mother, and so I told her; but she is the funniest girl I ever saw. She says she does not care if her father is able to support her in idleness—how did he get his property? By hard labor and close application to business for many years, and she is not going to sit down and fool away her time over embroidery, and before the mirror, and make a ninny of herself, because her father is rich! O, it was fun to hear her talk. But, after all, mother, it made me half ashamed of myself, and I am not sure but she has the right of it. I never was much acquainted with ELLEN, for she does not go into company a great deal, but she is always well dressed and well behaved. I knew her father was wealthy enough, but somehow, I never thought much about her."

"Yes, CARRIE, the Browns are quite independent as to property, and Mrs. Brown is very much of a lady, but I believe confines herself among her children and family cares more than most women choose to."

"And, mother, that makes me think of some other things. ELLEN said she had persuaded her mother to cut out a half dozen shirts for her father and brothers, and she was going to make them all herself, so as to learn how. She knows how to cut and make dresses now, and she said, besides, she was going to learn to do and to superintend all kinds of housework. You know, mother, she has been at school almost constantly till within a few weeks, and now she says she has come home to help her mother, who is growing old, and is weary with the care of such a large family, and she is going to relieve her and fill her place as much as possible, so her mother can rest and recruit. She said she could take the whole charge of the boys' wardrobe, and keep it in order, and could keep her own as it should be, and could take charge of the parlors, and closets, and see to the chambers and cellars, so her mother need not run up and down stairs—and, mother, I'm sure I don't know what all she isn't going to do, and she looks so cheerful and happy. One thing I do know, her father and mother are just as proud of her, and seem to think she is the greatest treasure in the world! O, mother, I wish I were half as smart and good!"

"Well, well, daughter, you are quite excited, really—shedding tears, I declare! ELLEN is a dear, lovely girl, and I am heartily glad you have seen the beauty of her conduct, and I trust you will in time become as clear and useful as she is."

May it not be said to other girls who read this, "Go and do likewise?"

QUESTIONS.

THE MEMORY OF A MOTHER.—When temptation appears, and we are almost persuaded to do wrong, how often a mother's words of warning will be recalled to mind and the snare broken. Yes, the memory of a good mother has saved many a poor mortal from going astray. Long years may be growing over the hallowed spot where all her earthly remains repose. The dying leaves of autumn may be whirled over it, or the chill white mantle of winter cover it from sight, yet the spirit of her, when he walks in the right path, appears and gently sadly mournfully, calls to him when wandering off into ways of error and of crime.

PROVERBS make foul work of fair faces.

EDUCATION AND INFLUENCE OF WOMAN.

We select the following beautiful picture from a recently published address of Richard V. Cook, Esq., of Columbus, Texas, on this subject. It will touch the heart of the reader. We seldom stumble upon so well expressed an idea of woman's true mission.

I fancy a young man just emerging from the bright elysium of youth, and commencing the bright journey of life. Honest, noble and gifted—the broad world to his warm hopes is the future scene of affluence, fame and happiness. Under his active energies, business prospers, and, as a consequence, friends come about him. Ere long he meets a sensible and amiable girl, who wins his heart, and who loves and trusts him to return. He does not stop to ask what the world will say about the match in case he marries her. Not he. The world is kicked out of doors, and the man determines to be the architect of his own happiness. He does not stop to inquire whether the girl's father is rich in lands, and slaves, and coin; but he marries her for that most honest and philosophic of all reasons—because he loves her. He builds his house in some quiet spot, where green trees wave their summer glories, and where bright sunbeams fall. Here is the Mecca of his heart, towards which he turns with more than Eastern adoration. It is a green island in the sea of life, where rude winds never assail, and storms never come. Here, from the troubles and cares of existence, he finds solace in the society of her who is gentle without weakness, and sensible without vanity.

Friends may betray him, and foes may oppress; but when towards home his weary footsteps turn, and there beams upon him golden smiles of welcome, the clouds lift from his soul—the bruised heart is restored, and the strong man made whole. I see the man fall into adversity. Creditors seize his property, poverty stares him in the face, and he is avoided on all hands as a ruined bankrupt. When he sees all go—friends, credit and property—grief-stricken and penniless, he seeks his humble home. Now, does the wife desert him too? Nay, verily! When the world abandons and persecutes the man, she draws closer to his side, and her affection is all the warmer because the evil days have come upon him. The moral excellencies of her soul rise superior to the disasters of fortune. And when she sees the man sit mournful and disconsolate, like Themistocles by the Household Gods of Admetus, hers is the task to comfort and console. She reminds him that misfortune has oft undertaken the wisest and best; that all is never lost while health and hope survive; that she still is near to love, to help and encourage him. The man listens, his courage rallies, and the shadows flee from his heart; armed once more, he enters the arena of life. Industry and energy restores him to competency, fortune smiles upon him, friends return, and

"Joy mounts exulting on triumphant wings."

Again the scene shifts. I see the man stretched weak and wasted on the bed of sickness. The anxious wife anticipates every wish and necessity. Softly her foot falls upon the carpet, and gently her hand presses the fevered brow of the sufferer. Though the face gives token of her own weariness and suffering, yet through the long watches of each returning night, her vigils are kept beside the loved one's couch. At last disease bequeaths the fortress of life; and the physician solemnly warns his patient that death is approaching. He feels it too, and the last words of love and trust are addressed to her who is weeping beside his dying bed. And, in truth, the last hour hath come. I imagine it is a fit time to depart; for the golden sun himself has died upon the evening's fair horizon, and rosy clouds bear him to his grave behind the western hills! Around the couch of the dying man, weeping friends and kindred stand, while the minister slowly reads the holy words of promise: "I am the Resurrection and the Life, saith the Lord; he that believeth on me, though he were dead, yet shall he live; and who so liveth and believeth in me, shall never die." Slowly the clock marks the passing moments, and silently the sick man's breath is ebbing away. Slowly the cold waters are rolling through the gateways of life. And now, as the death damp is on the victim's brow, and the heart throbs its last pulsations, the glazed eye opens and turns in one full, farewell glance of affection upon the trembling weeper who bends over him; and ere the spirit departs forever, the angels hear the pale wife whisper—"I'll meet thee,—I'll meet thee in heaven!"

CHEERFULNESS.—As often as I hear the robin red-breast chant as cheerfully in September, the beginning of winter, as in March, the approach of the summer, why should not we (think I) give as cheerful entertainment to the hoary, frosty hairs of our age's winter, as to the primroses of our youth's spring? Why not to the declining sun in adversity, as (like Persians) to the rising sun in prosperity? I am sent to the ant to learn industry; to the dove to learn innocence; to the serpent to learn wisdom; and why not to this bird to learn equanimity and patience, and to keep the same tenor of my mind's quietness, as well as at the approach of calamity's winter, as of the spring of happiness?—*Warwick.*

Our happiness depends very much upon the estimate we form of life, and the effort we make to bring ourselves into harmony with its laws. There are some who are unhappy on system—from weakly adopting a philosophy which lifts all beauty from the face of things, and imbues all their thoughts with a coloring of sadness. These look too much to the negative of things. With them, present joys are ever darkened by the shadows of future griefs.

Look Up.—So long as we confine our vision to mere natural laws, we keep ourselves upon the level of the animal creation, which never look above its instincts and the supply provided for them—which never go back to the sources or causes of things in themselves, or in the world around them. So long as we look merely to human agencies in the events of life, we keep ourselves upon the level of the temporal and the finite, never rising higher than the measure of human imperfection and frailty.

THE WORLD IS TOO MUCH WITH US.

Written for Moore's Rural New-Yorker.

BY CLARA AUGUSTA.

The world is too much with us!
We labor for its gain,
Forgetful that a moment of gold
Would never ease a pain!
And not Gaiety's diamonds,
Fresh from the midnight mine,
Could win one ray of heavenly peace
Down from the source divine!

The world is too much with us!
Our cry from birth is "Wealth!"
We hurry on, regardless
Of happiness or health,
To pile up gloated treasures,
Increase our stocks and lands,
Forgetful that a beggar man
Holds out his holy hands!

The world is too much with us!
Friendship we scorn and slight;
No time for sentimental trust—
On, onward in the fight!
We woo the coquette, Fortune,
With e'er unsated thirst—
Push by our fellow mortals
To grasp the bubble first!

Al! all this life is not too long
To labor and enjoy!
For little play and all hard work
Made JACKY a dull boy.
Then let us spice our toil with smiles,
Our lives with cheerful days,
And through the whole lift up our hearts
In our Creator's praise!

TRAVEL.

If we accept as true what Mr. JOHN M. DANIEL, late Minister to Sardinia, says, that "the chief enjoyment of travel is in anticipation and memory," and if his neglect to indicate whether the expectation of seeing or the satisfaction of having seen foreign countries affords the greatest pleasure, leads us to conclude that, at least, with reference to this particular object, these two states of mind are equally agreeable, those of us who journey for the gratification of curiosity, will be puzzled to know when to commence our tour of observation.—Doubtless, the majority of persons who go abroad make improvement as well as pleasure the aim of their wanderings; they look upon travel as an easy and entertaining way of gaining knowledge—an elegant means of education—and to this class of tourists it is surely of some consequence, not so much at what time of life, as at what stage of culture their travels occur. Another class of travelers, like the LIVINGSTONES and TAYLORS, who undertake journeys, perhaps less for self-improvement than for the purpose of contributing to the general enlightenment, are still further bound to choose the most favorable period for making their explorations—the time when the advantages of education, combined with the faculty of observation and the power of bodily endurance, shall enable them to make their travels of the greatest public benefit.—Mere pleasure seekers—people who go abroad not out of any curiosity to see objects of interest in other lands, but because they enjoy the excitement of change from place to place, and find it irksome to remain at home, and others who visit foreign countries because it is fashionable—a stereotyped expedient—to create a sensation in their own little world, and to gain social *clat*—these will never recognize the need of any intellectual preparation for travel; and, as with the object they have in view, the outfit required is evidently of a material nature, they may set forth whenever they obtain the necessary means for the prosecution of their journey.

There is a certain advantage in traveling in early life sure to be fully appreciated by those who are impatient of study and in haste to see the world, and another and more decided advantage in putting it off later. In the former case, one enjoys longer the remembrance of what he has seen and heard in foreign lands, and so far as he has profited by his opportunities, the benefit extends over a longer period of his life,—in the latter case, he may see and hear to better purpose after his taste has been formed by study, his mind enlarged by reading, and his judgment ripened by years and experience. Indeed, speaking with all the positiveness that a lack of personal experience allows, the young who go abroad thinking to find in travel a compensation, much more an over-balance for the advantages of regular school discipline, must, so far as the solid results of the experiment are concerned, be disappointed. There is no denying that actual observation of persons and places gives even a superficial traveler a certain superiority over the most diligent, stay-at-home reader; but a comparison of the sums of knowledge gained by two persons of equal natural abilities, one of whom has spent his youth in systematic endeavor to learn what he could of the history, language, literature, laws, &c., of different nations, the other in passing from one country to another, dependent on guide-books to tell him what he wanted to see, picking up what information he was able under the disadvantage of unsettled residence and the more serious difficulty of learning at the same time facts and the vehicle of their communication—such a comparison will show largely in favor of the former.

The place which an intelligent person assigns to travel, in his plan of culture, will have an important influence in determining the amount and quality of preparation he will deem necessary. If he look to a leisurely progress through foreign countries as a sort of supplementary education—an opportunity to review what he has previously learned of the various nations of the earth, under the favoring circumstance of actual presence in the scenes and among the people to which that knowledge relates,—he is very likely to be satisfied with

a less thorough acquaintance with the geography, history, domestic and public economy, language, &c., of the countries he proposes to visit, than he will wish he possessed when he finds himself in a strange land and undertakes to realize the full benefits he expected from his journey. If he admit the idea that the past history, no less than the present condition of any country, may be studied to better advantage on its own soil than thousands of miles away, he will be pretty certain to make that belief an excuse for hurrying over his historical readings, assuring himself that he shall repair all omissions, most profitably, during the intervals of leisure he means to indulge in on his travels. Pleased with the romantic prospect of reading the literature of a people under its native skies, he will jealously abstain from anticipating any share of the delight he promises himself from the master-works of Poetry, Fiction and Philosophy of a language, lest previous acquaintance impair the effect of the perusal he looks forward to enjoying under such happy conditions. In this way, between calculations of policy and sentimental considerations, he heaps up a formidable amount of reading to be disposed of at a time when he has a great deal else to occupy his attention; and when, indeed, it cannot be properly accomplished without changing the character of his stay abroad from a journey to a residence. For a traveler, even when not hurried, always finds plenty of employment for his eyes in looking about and learning what the country through which he passes is at present—an investigation of its past is not included in the legitimate objects of travel—but as all the knowledge we can gain of the history of a country before seeing it, will unquestionably help us to appreciate its present condition, any one contemplating a foreign tour will do well to consider the expediency of getting ready before he starts.

STICK TO IT.

Yes, "stick to it," whatever may be your calling, and success will inevitably crown your efforts.—There is no saying more true than that a "rolling stone gathers no moss." We may mark it where we will, those who are constantly changing, are obliged to change forever, while those who stick to their business always have something to stick to. Are you a mechanic and does labor sometimes seem tiresome?—put away such thoughts, take hold with renewed courage and "stick to it"—you will feel better, the bread that you earn will taste sweeter. Are you a farmer, and do you often think there is an easier way to earn a living than by the sweat of the brow?—yours is a great mistake, the farmer is really the most independent man in the world, his fortune is secured in the fruitful soil—his is an honorable calling. Are you a student?—be never discouraged, "stick to it," there are many priceless gems concealed in the casket of knowledge which will be yours if you only persevere.

Yes, stick to your business young man—let not a false glitter draw you away—there is everything done at the present time to disparage labor—any way to get rich and not work for it. Still, no one fails to see that those are the most successful who stick to their business in spite of wind or tide—no character is more despicable than the undecided man—one who sits on the fence ready to jump either way is not worthy the name of man. In all our endeavors we should always find out the right way, and then "stick to it."

Cayuga, N. Y., 1859.

AMELIA.

MEN OF LITERARY GENIUS.

Tasso's conversation was neither gay nor brilliant. Dante was either taciturn or satirical.—Butler was sullen or biting. Gray seldom talked or smiled. Hogarth and Swift were very absent-minded in company. Milton was very unsocial, and even irritable, when pressed into conversation. Kirwan, though copious and eloquent in public addresses, was meager and dull in colloquial discourse. Virgil was heavy in conversation. La Fontaine appeared heavy, coarse and stupid; he could not speak and describe what he had just seen; but then he was the model of poetry. Chaucer's silence was more agreeable than his conversation. Dryden's conversation was slow and dull, his humor saturnine and reserved. Corneille in conversation was so insipid that he never failed in yawning; he did not even speak correctly that language of which he was such a master. Ben Johnson used to sit silent in company and suck his wine and their humors. Southey was stiff, sedate, and wrapped up in asceticism. Addison was good company with his intimate friends, but in mixed company he preserved his dignity by a stiff and reserved silence. Fox in conversation never flagged, his animation and variety were inexhaustible. Dr. Bentley was loquacious, so also was Grotius. Goldsmith "wrote like an angel, and talked like Poor Poll." Burke was entertaining, enthusiastic, and interesting in conversation. Curran was a convivial deity. Leigh Hunt was "like a pleasant stream" in conversation. Carlyle doubts, objects and constantly demurs.

CHARACTER.—The differences of character are never more distinctly seen than in times when men are surrounded by difficulties and misfortunes. There are some who, when disappointed by the failure of an undertaking from which they had expected great things, make up their minds at once to exert themselves no longer against what they call fate, as if, thereby, they could avenge themselves upon fate; others grow desponding and hopeless; but a third class of men will rouse themselves just at such moments, and say to themselves, "The more difficult it is to attain my ends, the more honorable it will be;" and, this is a maxim which every one should impress upon himself as a law. Some of those who are guided by it, prosecute their plans with obstinacy, and perish; others, who are more practical men, if they have failed in one way, will try in another.

BOOKS.—Books are standing counsellors and preachers—always at hand and always disinterested; having this advantage over oral instructors, that they are ready to repeat their lesson as often as we please.

FAITH ETCHINGS.

Come ye that are weary and o'er-laden
With this world's toil and care,
Repose awhile, and give the task you're taken
To God and holy prayer.

The bow o'er-strung will lose its elastic tension—
The mind o'er-charged will fail—
Except that heaven receives its daily pension,
Our works will not avail.

Fair days are often crowded out of season,
And we are wont to chide—
Tis prayer alone can bring us back to reason,
And help our grief subside.

Each couch of sickness, fraught with pain and sorrow
Finds glad relief in death,
Why mourn we, then? it may be, on the morrow,
God may require our breath.

Nay, mourn not! but with saddened hearts uplifted
Reveal our earthly woe,
And ask to have our sin from virtue sifted,
And we prepared to go.

And then our path with roses shall be blended,
Though some may have a thorn,
Our march with music sweet will be attended,
And faith our lives adorn.

RAMBLING THOUGHTS.

"Go ye into all the world and preach the Gospel to every creature."

WHAT is the Gospel? Very crude notions are entertained on this point. We hear of a *Temperance Gospel*, an *Anti-Slavery Gospel*, &c. "Do unto others as ye would that they should do unto you," is a Gospel command, says one. How absurd! It is no more Gospel than is an edict of an earthly potentate. It is simply *law*! As such, it is a reflection of the mind, will, and character of a perfect JEMOYAN, in the light of which we see our fallen state. As if all within the lids of the Bible is Gospel! "God so loved the world that he gave his only begotten Son that whosoever believeth on Him might not perish, but have eternal life," is Gospel. This, and this only, is. But how few, comparatively, accept this definition in its Divine simplicity, and hang their hopes alone on the word of promise. And how many public teachers, even, seem to "darken counsel" in efforts to mingle Law and Gospel, which should ever be held clear and distinct. Will not another LUTHER be needed to rescue the doctrine of justification by faith alone, from the rubbish and darkness of the *legalism* of our day? Repentance, and faith, and love, are held up as *conditions* of our acceptance, when the offer "is without money and without price." If *love must precede acceptance or justification*, and is itself the fulfilling of the law, is there not room for "boasting"? How much more Scriptural to place repentance, love, and all good works as *fruits* of faith, and our justification upon the one only ground of "faith in our Lord Jesus Christ," and that, not in the light of a *condition*, upon the compliance with which we are accepted, but because through it, that is, faith, which is given us, do we approach the forgiving mercy of God, for the reason that *through no other medium can we*. This is all against our natural heart, which greatly desires to have a part in the matter; "to work out its own salvation with fear and trembling," in the sense in which these words are sometimes taken. We are thus justified through "faith alone." We give to God the whole glory of our salvation. The creature is humbled, and God is exalted. Christ becomes to us our "ALL in ALL." And we draw large measures of comfort from the Divinely proclaimed truth, "blessed is the man to whom God imputeth righteousness without works."

This simple Gospel is the Divinely appointed instrumentality for the reformation and conversion of the world. No other will succeed, or even approximate to success, else is that not true which God hath spoken. But how is this truth contemned even in the Church! See how many are full of legal reasonings and immersed all over in reformatory schemes of man's devising, which have for their foundation either the selfishness of the heart or hatred of the truth, and which never did nor never will renovate a single heart, not being for such purpose adapted or designed! And it is a lame defence of them to say that they subserve the purpose of "preparing the way" for the Gospel, after it has been announced from Heaven that "I am the way." In the estimation of this class, the Gospel is a weak and insufficient instrumentality, and must needs be coupled with legal codes and penalties, and even made to hold a subordinate place to their own vain measures. Of old, "it was to the Jews a stumbling-block, and to the Greeks, foolishness;" and eighteen centuries later it is regarded in the same light.

NEGLECTING SALVATION.—Most of the calamities of life are caused by simple neglect. By neglect of education, children grow up in ignorance. By neglect, a farm grows up to weeds and briars; by neglect, a house goes to decay; by neglect of sowing, a man will have no harvest; by neglect of reaping, the harvest will rot in the field. No worldly interest can prosper where there is neglect; and may it not be so in religion? There is nothing in earthly affairs that is valuable, that will not be ruined if it is not attended to, and why may it not be so with the concerns of the soul? Let no one infer, therefore, that because he is not a drunkard or an adulterer or a murderer, that he will be saved. Such an inference would be as irrational as it would be for a man to infer that because he is not a murderer his farm will produce a harvest, or that because he is not an adulterer therefore his merchandise will take care of itself. Salvation would be worth nothing, if it cost no effort—and there will be no salvation where no effort is put forth.

EDUCATIONAL

THE DOMINICAL LETTER.

As an explanation of the meaning and use of the Dominical Letter is seldom found in any book or paper, perhaps an article respecting it may not be uninteresting to many RURAL readers. The writer heard it explained by one of his teachers some years since, but has never seen an explanation in print, though some old arithmetic is said to contain one.

The first seven letters of the alphabet are used for the purpose of determining the day of the week, or month, without referring to a calendar or almanac. Let us observe, in the first place, how these letters are applied to the days of the year.—The first day of the year is designated by the letter A, the second by B, the third by C, and so on, repeating the letter for every seven days. Now, by continuing thus through the year, and noting the letters which fall on the first days of the months, we shall find that they occur in the following order, A, D, D, G, B, E, G, C, F, A, D, F. These twelve (seven different) letters constitute the basis of reckoning for any year. A always designating the first day of January, D the first of February, D the first of March, and so on. The following couplet will assist in remembering their order:

At Dover Dwells George Brown Esquire,
Good Carlos Finch And David Fryer.

Let us now consider how the seven letters are applied to the days of the week. Since A always designates the first day of the year, it necessarily designates the days of the week on which it occurred, also; B the day following, and so on. If the first of January occurs on Friday, then A will designate Friday, B Saturday, &c.; if on Tuesday, then A will designate Tuesday, B Wednesday, &c. We see then, that the same letter designates different days of the week in different years, but the same day of the week throughout the same year.

By knowing the letter designating a particular day of the week, we know at once the letters for the other days of the week. The letter designating Sunday is the one fixed on from which to reckon. It is generally given in the Almanac, and is called the Dominical (*dies Domini*, Lord's day, or Sunday), letter.

Since the day of the week on which the first of January occurs is designated by A, the day following by B, &c., we readily ascertain the Dominical letter, as it is the one falling on Sunday. Thus, when the first of January occurs on Wednesday, the letter falling on Sunday is E, which is the Sunday or Dominical letter for the year. The first of January this year occurred on Saturday, and the Sunday or Dominical letter is B. Now, on what day of the week will the 4th of July occur? By the couplet, the 1st of July is G. Then the 4th is C, or Monday. On what day will Christmas occur? The 1st of December is F; then the 22d is F, and the 25th B, or Sunday. Again, it is the second Wednesday of May, what day of the month is it? The 1st of May is B, or Sunday, then Wednesday is the 4th, and the second Wednesday the 11th. It is the third Friday in October, what day of the month is it? The 1st of October is A, or Saturday, then Friday is the 7th, and the third Friday is the 21st.

The Sunday, or Dominical, of 1857 was D. Then the 1st of July being G, the 4th was C, or Saturday. The 1st of May being B, was Friday. Then the first Wednesday was the 6th, and the second the 13th. There are two Dominical letters for leap year. The first letter is used for the first two months; and the second, which is the letter preceding the first in the order of the alphabet, is used for the remaining ten months, and compensates for the additional day in February. The Dominical letter of any year is the letter preceding, in the order of the alphabet, the Dominical letter of the preceding year.

House of Refuge, Rochester, N. Y., 1859.

SCHOOLS FOR MECHANICS.

CAN there not be a system of education adopted for the express benefit of the practical mechanic? The few schools now in existence do not meet their demands. From the apprentice to the journeyman, and from the journeyman to the master, are encountered the whims and prejudices of an ignorant set of copyists, relying upon the say-so of this, that, and the other; issuing rules without reason, they live and die utter failures in the knowledge of true mechanism. What, then, can be expected of the scholar who is dependent upon such teachers?—The worse than lost months and years of the apprentice tell the tale in too strong language to be misunderstood. But the question arises, how can it be otherwise, as in this case, practical as well as theoretical knowledge is essential? Establish schools combining the advantages of both,—employ scientific men to lecture upon subjects bearing directly upon this branch of education,—in short, do something to lift us as a class out of this horrible pit of misery, and place us where the light of science can shine in upon the every-day labor of the most humble mechanic. Then shall the dull monotony of the workshop be exchanged for new volumes of thought, and the old fog notions that have rode us like a nightmare, shall be thrown to the winds, while the useful and ornamental, with one consent, will join hands, and science, the parent of both, shall guide them in their onward course.

West Andover, Ohio, 1859.

T. E. K.

EDUCATIONAL MATTERS IN WASHINGTON.—Senator Wilson has ascertained that at Washington, D. C., where there are 10,697 children between the ages of five and eighteen, 8,828 are in private schools, 2,400 in public schools, and 5,069 are in no schools at all. With a population of 65,000, and a real estate valued at \$30,000,000, there is but \$20,957 expended a year, and all the school-houses are not worth \$40,000.—Miss Teacher

THE STEAM FIRE-ENGINE.

THE STEAM FIRE-ENGINE is becoming a successful and therefore popular "institution" in many cities, and is destined, we think, to take the place of ordinary machines, and human muscle, so long used to check and extinguish conflagrations. It possesses many advantages over the old fire-engine, with hand labor—such as greater power, capacity, &c.,—and must, moreover, exert a radical moral influence by dispensing with firemen to a great extent, who are not, we regret to say, always the most peaceable and exemplary specimens of mankind. Though a great consumer of water, the Steam Fire-Engine *don't drink rum, swear, nor voluntarily break the Sabbath*—three items worthy of consideration, and likely to be appreciated in many cities where rowdy firemen abound, and not unfrequently control the department.

The Steam Fire-Engine (Holly's Patent Rotary Engine and Pump,) above represented, is a Western New York production, and one which bids fair to add to its reputation in the line of valuable inventions and manufactures. It is manufactured at the extensive "Island Works" of SILSBY, MANDERS & CO., Seneca Falls, N. Y. Three sizes are made, which are thus described:

No. 1, throws 1 two-inch stream, 200 feet; 1 one-and-a-half-inch stream 230 feet; 2 one-and-a-quarter-inch streams, 200 feet; 4 one-and-a-quarter-inch streams, 165 feet. Weighs 10,000 pounds.

No. 2, throws 1 one-and-a-half-inch stream, 230 feet; 2 one-and-a-quarter-inch streams, 200 feet; 4 one-inch streams, 175 feet. Weighs 9,000 pounds.

No. 3, throws 1 one-and-a-half-inch stream, 180 feet; 2 one-inch streams, 175 feet; 1 one-and-a-quarter-inch stream, 230 feet. Weighs 7,000 pounds.

The above distances are made with a steam pressure of from 35 to 60 pounds. A working pressure of steam is generated in from five to ten minutes, and a steady pressure of steam maintained for constant playing for any length of time.

These Machines have now been a long time before the public, and have been exhibited in different cities and approved by the first Engineers in the country. The whole arrangement of the Machine is in special reference to the greatest degree of simplicity, safety, portability, durability, and efficiency. The construction of the boiler is such as to generate steam very readily and with perfect safety, as the tubes are always full of water, the fire passing around instead of through them, leaving a large space for the accumulation of steam.

The very low pressure of steam necessary to drive the Engine, viz: from 20 to 50 pounds to the square inch, although it is capable of sustaining a pressure of 150 to 200, renders the boiler doubly safe."

These Western New York Fire-Engines are now in use in several cities—Boston, Chicago, St. Louis, &c., and are highly commended by the press and authorities of those cities. Having seen one of them operated in this city, last season, we might speak from personal observation of their great power, capacity, &c., but prefer quoting from journals whose editors have had frequent opportunities of witnessing their work when in contact with the devouring element. Chicago has four of these Steam Fire-Engines which have given great satisfaction. The *Chicago Daily Democrat* of Dec. 13, 1858, in a long and highly commendatory notice of the Steam Fire-Engine—speaking of it as "one of the greatest and most important improvements of the age"—says:

"On Thursday night last a fire broke out in a very valuable brick block on State street, in our city. Almost before the alarm bell had rung out, the writer of this was on the spot, and found the steam-engine ready to commence work. The result was that the fire was drowned out in a few minutes, having been confined almost entirely to the store or apartment in which it originated, but which was very badly burned, showing that the element had gained great headway before it was discovered."

The *Chicago Tribune* of the 12th ult., thus notices a recent fire in that city:

"The alarm of fire was given at five minutes to five, P. M. Within five minutes thereafter the 'Island Queen' Steam Fire-Engine was in position, and in ten minutes three Steam Fire-Engines were on the ground. I stood for a whole hour and saw an immense stream thrown from the 'Long John' engine on the rear of the fire. I stood for another hour watching a magnificent stream thrown high above the roof of the three-story corner building—the water falling upon the composition roof in a splendid parabola, and flooding over the eaves in catenars."

In noticing a fire in that city, the *Boston Herald* of the 13th ult., says:

"A fire occurred this morning in the four-story granite building, Federal street, and goods to considerable amount were destroyed. * * It had gained considerable headway, and had probably been burning for a

long time. An alarm was immediately given, and the engines, including the 'Lawrence' and 'Eclipse,' the new Steam Fire-Engines, were soon on the ground. They were at once set to work, and the flames were subdued after about an hour's hard labor. A second alarm was given, calling together the entire department, including the engines from South and East Boston. The 'Lawrence' machine, which was stationed at a reservoir near Franklin street, did not work very well on account of a scarcity of water in the reservoir and the dryness of the suction hose. The 'Eclipse,' the rotary machine built at Seneca Falls, N. Y., was placed at a hydrant in Federal, near Milk st., under the direction of Assistant Engineer Hubbard, and worked admirably. In eight minutes after she arrived upon the ground, she had a stream upon the fire, and continued to work well all the time. She prevented the flames from spreading to the buildings in the rear, and thus saved much valuable property from destruction, paying for herself many times over."

A trial of one of these engines was had in Syracuse a few days since, which proved very satisfactory. The *Daily Courier* says:—"On the arrival of His Honor the Mayor and Common Council, the machine was 'fired up,' and at the close of four and a half minutes was throwing a beautiful stream through an inch and a half nozzle. At this trial, a constant horizontal stream was kept up for half an hour, that wet about 200 feet of ground. Two streams were then put on, and gave good satisfaction through an inch and seven-eighths pipe."

—We will not attempt to give a particular description of the Steam Fire-Engine, our main object being to direct attention to an improvement worthy of chronicling, and which we believe is destined to create a great physical and moral revolution in the Fire Departments of our larger villages and cities. The engines now manufactured—and we believe there are two or three different patents—may not yet be perfect, but the fact is established that steam can be substituted for muscle in this highly important department of labor, and the final result cannot be doubted. It is a source of congratulation, also, that Western New York—so recently an uninhabited wilderness—should invent and manufacture so valuable a machine, and furnish it to such an old-time city as Boston, the emporium of the "Universal Yankee Nation" of inventors and manufacturers.

tions having sunk with the ground, to fill up the cavity left by the extracted soil.

In Virginia there are beds of salt, and the Salmo Mountains, in Oregon, are capable of affording large quantities of the same material. The brine springs of Salina and Syracuse are well known, and from about forty gallons of their brine, one bushel of salt is obtained. There are also extensive salt springs in Ohio. The brine is pumped up from wells made in the rock, and into which it flows and runs into boilers. These boilers are large iron kettles set in brickwork, and when fires are lighted under them, the brine is quickly evaporated. The moment the brine begins to boil, it becomes turbid, from the compounds of lime that it contains, and which are soluble in cold, but not in hot water; these first sediments are taken out with ladles called "bittern ladles," and the salt being next disposed of from the brine, is carried away to drain and dry. The remaining liquid contains a great quantity of magnesia in every form.

"But how did this salt come into the rock?" is the natural query, and the wonder seems greater when we recollect that salt beds are found in nearly every one of the strata composing the earth's crust. This fact proves another, that as a majority of these salt beds, have come from the lakes left in hollows of the rocks by the recedence of the sea, the sea has through all geological ages been as salt as it is to-day. Let us take Great Salt Lake as an illustration, it being the largest salt lake in the world, but by no means the only one, as such inland masses of saline water are found all over the earth, but as ours is the greatest in extent, it will form the best example. It is situated at an elevation of 4,200 feet above the level of the sea, on the Rocky Mountains, and has an area of 2,000 square miles; yet, as high as it is, "once upon a time," as the story book of our juvenility used to say, it was part of the sea, which retired by an upheaval of the rocks, and that great basin took its salt water up with it. Should this in time evaporate, and its salt be covered with mud and sand, and the land again be depressed—then, at some distant future

age, the people would be wondering how the salt got there, little thinking that the Mormons ever built a city upon its shores when it was a great salt lake. There are also, however, salt rocks, taking their place in regular geological series with other rocks, interspersed between red sandstone, magnesian and carboniferous strata; these we can only account for, as we do for other stratified rocks, viz., that they were deposited from their solution in water or carried mechanically to the spot where now found by that noble liquid. We fear we shall be accused of an attempt to put our readers in pickle, so will stay our pen, hoping they will remember these bits of information when next they say, "The salt, if you please."—*Scientific American*.

THE SCIENCE OF GOING TO BED.—The earth is a magnet, with magnetic currents constantly playing around it. The human body is also a magnet, and when the body is placed in certain relations to the earth these currents harmonize, when in any other position they conflict. When one position is to be maintained for some time, a position should be chosen in which the magnet currents of the earth and the body will not conflict. This position, as indicated by theory, and known by experiment, is to lie with the head towards the north pole. Persons who sleep with their head in the opposite direction, or lying cross-wise, are liable to fall into various nervous disorders. When they go back to the right position, these disorders, if not too deeply impressed upon the constitution, soon vanish. Sensitive persons are always more refreshed by sleep when their heads point due north. Architects, in planning houses, should bear this principle in mind.—*Selected*.

WE sleep, but the loom of life never stops; and the pattern which was weaving when the sun went down, is weaving when it comes up to-morrow.

ALL men who do anything must endure a depreciation of their efforts. It is the dirt which their chariot wheels throw up.

YOUNG RURALIST.

QUESTIONS ABOUT THE MILKY WAY.

A ROUNG correspondent, in Oswego county, asks the following questions about the *Milky Way*:

1. Why does the galaxy appear in different positions, and of different brightness, in different seasons?
2. Is this change a regular revolution?
3. Why is it not visible in the evening in the month of May?

THE *Milky Way* is a belt, from four to twenty degrees broad, round the heavens, and of very different brightness in its parts. When the splendid star in *Lyra* is on our meridian, just south of the zenith, about the middle of August, this belt of whiteness lies from N. E. to S. W. The *Milky Way* always passes through the constellation *Cassiopeia*, in which is the W, a group of five stars, about thirty degrees from the Pole star, and it can be traced through *Perseus*, *Auriga*, *Orion*, to the feet of *Gemini*, and thence onward in the same direction south of the equator. It is this peculiar trace through the constellations that makes a difficulty in apprehending the apparent motions and positions of this belt, by some minds.

From the daily revolution of the earth on its axis from west to east, the stars, and of course, the *Milky Way*, appear to move round daily from east to west. Follow the motion of *Cassiopeia* through several hours of a clear evening, and this motion of the *Milky Way* will be obvious. And, as *Cassiopeia* is always above our horizon, the W is always visible when the sky is cloudless in the evening and night, because its distance from the pole is less than our distance from the equator; or, in other words, our place is 43° from the equator, and the W is only about 30° from the pole, so that some portion of the *Milky Way* will be visible with *Cassiopeia*. Because *Cassiopeia* thus appears to revolve from E. to W., the position of the *Milky Way* will be different at different hours.

From the annual revolution of the earth round the sun from W. to E., the constellations appear to move annually over our heads from E. to W.—Hence the *Milky Way* must have this revolution, and be on our meridian at different times in the year. But it is obvious that this motion of the *Milky Way* must be as regular as that of the sun or other stars. In three months it must complete one-fourth of this apparent annual revolution. The ancients knew this in all certainty, and its varying yet definite positions at different times. When W is directly west of the pole star, as seen in February, the *Milky Way* lies from N. N. W. to S. S. E.; and when W is due east of the pole star, the course of it is N. N. E. to S. S. W.

In the months of July and August, September and October, the most splendid part of the *Milky Way* is visible in our latitude. It is then truly magnificent. But in May the sun and this most splendid part of the belt rise and set together, and this part can be only partially seen for several weeks. But as the sun sets with this belt at the west, the opposite portion of it rises in the east; yet it has so much less splendor that it is little noticed, and many seem not to consider it at all.—In fact, then, some portion of the *Milky Way* may be seen every clear night in the year.

The irregular outline of this belt and its obliquity to the equator, ecliptic, and meridians, probably gave rise to the ancient myth, that when PHAETON undertook to guide the chariot of the sun, and could not manage the steeds and keep them in their true course, the sun set the heavens on fire, and the mighty conflagration left the *Milky Way* to be the perpetual memento of its desolating power.

Magnificent is the discovery by astronomers, that this white and beautiful belt is the mingled light of myriads of stars and suns too remote to be seen except in a large telescope. HENSCHEL reckoned that in one-quarter of an hour 116,000 fixed stars, in one part of the *Milky Way*, passed over the field of view. The larger telescopes, like Lord Rosse's, have shown multitudes more.

The name of this belt, among the Greeks, is in one form of it, *Galaxy*, the Milk-belt or circle; in the Latin, *Via lactea*, the *Milky Way*. In ages so remote, the *milky splendor* seized upon the minds of men, as the distinguishing property by which to designate this Wonder of the Universe. C. D.

Rochester, Jan., 1859.

INFORMATION WANTED.

I AM now seventeen years old, having always lived in in Lapeer and St. Clair counties, Michigan, with the shingle rivers and lumber men. My father being a disipated man, I am like a stray dog without home or master. I have an opportunity to bind myself to a farmer during my minority. Will you, or some of your numerous subscribers, advise me as to pay, and how much I should get? Some say work by the month, from place to place. I saw in your issue that FRANK had asked questions which you had answered. Please favor me.—WOLFEINE, Muncie Co., Mich., 1859.

REMARKS.—It is difficult to answer such questions without knowing more of the circumstances. But we will say a few words that may be useful to our young friend. By working from place to place by the month, you may perhaps get a little more money than by binding yourself to a farmer, but we fear the money is all the good you would get. You would make a very bad bargain in binding yourself to some farmers, even though at twenty-one you would find yourself well dressed, with a thousand dollars in your pocket. By engaging with an intelligent, industrious, enterprising man, of good principles and correct habits, with an interesting, amiable family, and a *now*, you would make an excellent bargain, though you merely obtained a living. At the end of four years, unless there was something wrong with yourself, you would come out a *man* in body, mind, and heart, ready for the struggle of life. Your great object now should be, not to make money, not to make an easy living, but to make a man.

NEVER open the door to a little vice, lest a great one should enter also.

Affairs at Washington.

The special agent of the Treasury Department despatched some time ago to investigate matters connected with the California Mint and Custom House, has laid his report before the Secretary. It charges gross mismanagement and abuse, as existing in all the departments in California.

From the Pacific Side.

About 100,000 sheep were met on the desert. Many had been lost from fatigue and scarcity of food. At Apache Pass they encountered large piles of rocks in the road, supposed to have been placed there by the Indians under MAGGIDAZ.

MEXICAN NEWS.—The details of the Mexican news by the Tennessee at New Orleans, is received.

NEW YORK LEGISLATURE.—Our Legislature is very busy just now, doing nothing. We learn that a bill for a canal tax of three-eighths of a mill, to be used as follows:—Erie enlargement, \$420,150; Oswego Canal, \$140,640; Cayuga and Seneca, \$68,615; Black River, \$63,780; Genesee Valley, \$12,700; Champlain, \$44,115; to pay interest, \$125,000; has been reported, and there the matter rests.

The St. Louis *Republican* publishes a letter from Salt Lake, the 14th, stating that Judges Sinclair and Grubb have left the territory in the spring, satisfied that their presence as federal officers, in administering the law, is merely farcical. The letter adds that there is no loyalty to the Government among the Mormons—that while, to a certain extent, they respect the power of law, they neither recognize nor respect its spirit. Neither murder nor any other crime has been or can be punished.

KANSAS—THE GOLD MINES, &c.—A dispatch to St. Louis on the 3d inst., states that highly flattering accounts of the Kansas gold mines continue to

received. A rich quartz vein has been discovered at Ralston's Fork, twelve miles from Auraria, and shot gold abounds in several localities. The Port Defiance dates by the Santa Fe mail are to January 21st. They say that the Navajo Indians acknowledge losing 200 lives, 20,500 sheep and horses, the destruction of 1,000 huts, and an immense quantity of grain, altogether valued at upward of \$100,000, during the late war. Mr. Yoss, in a letter to the *Santa Fe Gazette*, intimates that there is a disposition to deal too harshly with these Indians, and says that if certain terms are exacted it will turn them from the pursuits of industry and agriculture—by which they now support a whole nation of 12,000 souls, and sustain 250,000 sheep and 60,000 horses—and make robbers and plunderers of them.

N. Y. STATE MEDICAL SOCIETY.—The Medical Society of New York commenced their fifty-second annual Meeting at Albany on the 1st inst. A Committee was appointed with instruction to report some method calculated to insure more general vaccination throughout the State. After consultation the Committee reported small-pox more generally prevalent in the State at the present time than ever before since the introduction of vaccination, and recommend that the Legislature should pass a law empowering the trustees in each school district to exclude from the benefit of public instruction, all who have not been vaccinated. The Society elected the following officers for the ensuing year:—*President*—Prof. B. Fordyce Baker, of New York; *Vice-President*—Daniel T. Jones, Orange; *Secretary*—Sylvester D. Willard, Albany; *Treasurer*—John V. P. Quackenbush, Albany.

DESTITUTION IN CANADA.—The Kincairdine *Commonwealth*, states that appalling distress prevails some sections of Bruce county. Hundreds of families are on the verge of starvation. Many of their best and thriftiest farmers are destitute of the means-with-all to carry them through till another harvest—the crops of the past year having almost proved an entire failure. We could enumerate instances where, even already, families are subsisting on a few boiled turnips, others on bread and water alone, and the supply so small, that it cannot keep body and soul together for many weeks longer.—Some have consumed everything in the shape of vegetation, and as their last resort, have slaughtered their oxen, which forms their whole sustenance.

MODIFICATION OF THE MASSACHUSETTS JURY SYSTEM.—Petitions have gone to the Massachusetts legislature for a law allowing Judges to accept a verdict from three-fourths of a jury in civil suits, when, in their opinion, the cause of justice would be served thereby. Judge NASB, of the Boston Superior Court, endorses the proposition. The general principle of the unanimity of the jury on a verdict is not proposed to be destroyed by it; but after long consideration, they fail entirely to reverse the Judge may, in his discretion, accept the opinion of three-fourths of them as a verdict.

FROM PARAGUAY.—Later advices from Paraguay, that Lopez was busily arranging and drilling troops, launching steamers, storing his magazines with munitions of war, and preparing to bar the waters of the Paraguay river with heavy chains. It is nearly time that something definite had come to hand concerning the action of this expedition.

The original Yankee clock manufacturer has hence, Seth Thomas died at Plymouth Hollow on the 29th of January, at the age of 75 years. He was the originator of the cheap Connecticut clock, which in its early day was considered the great invention of the age.

Lead mining has been prosecuted with vigor at Helena, Ill., the present winter. The stock of lead on hand at that city, amounts to 22,000 pigs, and it is thought that it will be increased to 40,000 pigs for shipment by the opening of navigation in the spring.

Old World Matters.

THE R. M. steamship Asia, from Liverpool Jan. 1, passed Sandy Hook on her way to New York, this evening—Monday. The following digest of news has been telegraphed.

GREAT BRITAIN.—The Austrian loan of £6,000,000 was announced for the London Money Market. Warlike rumors continued, and notwithstanding assurance assurances, the latest Continental correspondence say that confidence in the maintenance of peace was losing ground. Warlike preparations

tinued in France. It is again reported, but not proved, that Persigny would soon succeed Waldecki in French foreign ministry. The British Government was resolved to take sufficient measures to protect the English interests in Mexico. The *Times'* city article quotes the funds heavy and animated, and after regular hours experienced a further fall, owing to the statements about the Mexican loan and the contemplation of the navy estimates.

FRANCE.—There has been a partial recurrence of panic on the Paris Bourse. The reported offensive and defensive alliance has been concluded between France and Sardinia. On the 19th, the *Pa-*
ris made an article to the effect that the avoidance of war was not to be considered altogether certain. The

dition against the Insurgents in Algeria, was successful, tribes having made complete submission. The French garrison at Rome will shortly be reinforced by two regiments of the line. At the same time, in the belief of a coming war was decidedly increasing. Letters from reliable authority at Vienna, say there was not the least chance of insurrection. It was also stated that the sending of troops from Austria had been suspended.

USTRIA.—Accounts from Lombardy still speak of dissatisfaction, but no outbreak. Austrian reinforcements are pouring in. The amnesty for political prisoners in Naples is modified to require banishment to America. The edict provided that all persons taken in any flagrant attempt

for the safety of the State he immediately tried to call a council of war. Leading journals of Germany were exceedingly violent in an attack on the Prussian government, and urged the necessity of a better understanding between the Prussian, Austrian and German States. Popular demonstra-

of sympathy and loyalty greeted the Emperor Austria whenever he appeared in public. The New York News says:—Prussia has signified to France she would look not with indifference, but with anxiety, on any unprovoked attack on Austria by France.

GENERAL.—*Breadstuffs*.—Richardson, Spence & Co. flour dull and nominal. Wheat dull, with a noting tendency. Corn tending downward, and quotations barely maintained. Mixed 25@25.60; Yellow 25.50. *Provisions*.—Beef more active, but all quotations slightly lower. Pork firm at an advance of 1¢; Bacon dull; Lard dull at 56¢; Tallow firm; sales 25.36.

OM TURKS ISLAND AND ST. DOMINGO.—Turks
dates of January 20, are received. Heavy
since the commencement of the year. A
per centage of the salt had been wasted, and
likelihood of any more being gathered for three

ns. The stock on hand, 300,000 bushels, is at shipping ports. A vessel at Turks Island from au Platte, St. Domingo, reports that place in tolerable condition. Trade is very dull at Port au Platte, and confidence in President SANTA ANNA is low.

- The reformed Dutch Church have decided to occupy immediately the Missionary field opened in Japan.
- The New York Express says that there are nine ocean steamers lying idle at the wharves in that city.
- The bill to repeal the law allowing parties in interest to testify in civil suits, has been killed in the Assembly.
- United States stocks, of various kinds, to the amount of five hundred million of dollars, are held in Europe.
- A Glasgow paper says one thousand cab and omnibus horses are annually driven to death in the city of Glasgow.

— The use of the shower bath has been abandoned at Auburn Prison, except by advice of the physician of the prison.

— At a recent meeting in London, it was stated that 6 starved to death in that city in 1857; and in ten years next, 3,922.

—Vice-President Breckinridge has gone home to Kentucky, in consequence of the ill health of himself and family.

—A fiend in New York, on Friday week, threw liquor on his wife's dress and applied a candle to it—burning her to death.

— The Massachusetts railroads have paid, during the last six months, between July and January, \$1,600,000 dividends.

— The Erie Railroad Co. has backed down from the regulations requiring conductors to register the names of passengers.

Gen. Roble's success in Mexico makes the 64th change of government in that troubled country during the last 37 years.

— Miss Amelia Ross, aged 117 years, died last month in England. She lived in the regions of five sovereigns and four Great Britain.

— Fifteen persons recently escaped from the gallows in

- Since the issue of the first patent for the Sewing machine, in 1842, 235 patents have been granted for improvements on it.
- Connecticut has now engaged in the whale fishery

- A new telegraph line has been opened from Ohio to Cincinnati direct, via Michigan City, Lafayette, Indianapolis.

On the 21st ult., J. L. Nixon, a practicing physician Baptist clergyman, of Troy, Ala., was instantly killed by lightning.

The citizens of Bloomington, Douglas Co., Ill., recently passed an ordinance entitling women to an equal-
with men, position.

The Fire Commissioners of Baltimore have decided to contract for two more steam engines. They have ordered four of these engines.

The Virginia Committee on oysters estimated 12,000 bushels of oysters to be taken from waters of the Chesapeake bay every year.

A ball was recently given in New York for the aid of a professional thief who has recently experienced a series of misfortunes.

The christening of the twenty-sixth child of a hap-puple named Wonders, at Lierra, in Belgium, is col-lected in the foreign papers.

The Auburn Advertiser says that the State Prison at city is now nearly full of convicts—there being prisoners, and only 750 cells.

At a meeting for two days, the legislature of Louisi-

A young Indian girl hung herself near St. Paul, out of disappointment in an affair of the heart.

those fields that most need underdrains—doing the work economically by the aid of ditching plants, as they have time to spare from other work, and without expensive outside help. But give me a farm, and we have many such in little Seneca, that rests on a loose subsoil, which is a perpetual underdrain, as the mechanical structure of such soil, particularly if *clayey*, is always perfect and hygroscopic; needing nothing but a little asorted manure to give vegetation that early start in spring indispensable to the crop's victory over cold May, June, and the hot, dry July and August of the arid Western New York.

AN EXPERIMENT IN STOCK-FEEDING.

Eds. Rural:—At the request of some of my farmer friends, I send you the results of an experiment recently made by myself in feeding a grade Short-horn cow, which shows a good profit, and is another instance in proof of the extraordinary ease and rapidity with which the Short-horns take on flesh. This cow was three-fourths blood, and was four years old last spring. Has bred three calves, was a good milker, and was in a good flow of milk at the time I began to feed her. Being of rather a vicious nature, and not on very good terms of intimacy with some of my other cows, I concluded to "dry her off" and fat her, which I began to do on the 15th day of October last. I commenced with feeding pumpkins lightly, and soon fed heavy. She was allowed to run to the pasture with the other cows during the day, and was put up and fed at evening and morning, until the first of November, when she was put into close quarters, from which she was not taken until slaughtered. Fed pumpkins 20 days, and then fed some soft corn with them, feeding corn and pumpkins alternately. First December changed feed to meal, ground from corn in ear. Part of cob sifted out. Fed all the good hay she would eat, which was very little. Had water while fed meal. During time of feeding pumpkins she needed none. Was slaughtered 10th of January; weighed and sold as follows, viz:

For quarters	424 lbs., sold at 5 c	\$21.20
10 lb. corn	302 " " 6 c	18.12
10 lb. meal	91 " " 6 1/2 c	5.91
10 lb. hay	18 " " 10 c	1.80
Drum weight	1,000	Total value—\$50.03

Value of cow and feed as follows:

Live weight 1,100, worth	\$50.00
10 lb. corn, worth 20c. per bu.	3.00
20 lb. meal, worth 50c. per bu.	10.00
Hay and pasture	2.00

Whole cost—\$45.00
Balance in favor of feeding—\$5.03

I charge nothing for labor of feeding and killing. I think the value of manure for farm, together with the offal, will pay for that. This is by no means an extraordinary weight for a Short-horn cow, but considering her condition before feeding—time, and amount of feed, I think she equals, perhaps, exceeds, anything that has come under my observation.

Le Roy, N. Y., 1899. C. K. WARD.

THE FARMER'S LIBRARY.

How can a genuine and thorough farmer think his premises complete in all of its fixings and comforts without his library? Although it may be small, yet he should have a library to which he can go, to find food for the mind, as well as to the granary for food for the body. The library may not comprise within its walls all the classic lore of ages, bound in calf or morocco—its volumes may not be numbered by thousands or even hundreds. They may be few in number, but if few, more care should be used in selection. There should be found on its shelves works in History, Biography, Agriculture, Literature, Philosophy, Chemistry, Encyclopedias, Lectures, Speeches, &c., &c.—and there should also be some books of stories in history with a sprinkling of romance for a diversion. These all should have place in every Farmer's home, for they are as essential to the life and comfort of the inner man as food and raiment to the outer.

The library, if of the right nature, will have a tendency to keep the family united in spending its leisure hours and the long winter evenings around the family hearth-stone. How pleasant it is to visit with that family who are conversant with a well selected library. Books are the dead and living communicating with us, as it were, face to face. We owe all we are and shall be to men, manners, and not a little to books. We read the biographies of great men, and we aspire to be great and good also. We read of daring and wild adventures and we long to be one who shall discover some new islands, or continent; or do some wonderful thing worth writing in books.—We read of the rise and fall of Empires and Kingdoms, and we are astonished and confounded when we contemplate the amount of lives lost, the property destroyed, the world of sin and misery in ages past—and with history we come down to our present time. In the library the farmer finds material for thought—the mechanic, the tradesman, the school-boy—all find food for the mind in hours of leisure. Let every family have a library if it contains not more than ten volumes, these will answer as a nucleus. Add to it every convenient opportunity, and in a few years you will surprise yourself at the amount of reading matter before you in the form of a library.

Fluanna, N. Y., 1899.

H. A. W.

THE SECRET OF WINTERING STOCK.—It is a great mystery to me how some farmers winter their stock as cheap as they do.—keep them on wheat straw or marsh hay, without stabling, exposed to the storm, wind and weather, and still they seem to thrive,—at least, do not grow poor. I am inclined to think they occasionally get a few ears of corn, or a little meal, or a few roots of some kind; or, if kept on straw, guess it isn't more than half threshed. My cattle have a warm stable, plenty of good hay, cornstalks, some grain, watered regularly, and worked very little, still they seem to grow lean every day. Now, what is to be done? I have owned quite a number of cattle, but never could winter the way as cheap or as well as a good many do. Still, I take a great deal of interest in feeding and taking care of my stock. Will some one please give their experience? Perhaps they will advise some idea that I have not thought of, or practiced at all.—R. N. J. Adams, Mich., 1899.

PAST HUSKERS, AGAIN.

Messrs. Eds.:—Your correspondent, "Solon," in the first number of the present volume of the Rural, is down upon the fast huskers, and were it not for the mistake you made in dating my communication at Lyons, I should not notice it. The phrase "men of Lyons need not feel so pompous," &c., is giving to the denizens thereof a notoriety to which they are not entitled,—and I know not that they claim to have any "awful smart men;" still, no doubt, they raise good crops of corn, and husk from 20 to 60 bushels per day. My letter was dated at Rose, and stated that B. F. SHERMAN and Geo. SHERMAN, each husked 100 bushels and over, on the hill, in 12 hours,—that R. D. DICKINSON husked 75 bushels in ten hours, out of the stock—that the corn was all of the eight-rowed variety—the work fairly done—and the statements can be proved by good and substantial witnesses. Now, "Solon," as you have tried your hand at husking, and own up, "with humility," that 35 to 40 bushels was your day's work, and simply published the fact, it would have looked very well in the paper, but to retail the "big stories" of what your "sick men" can do "that lay by all winter"—and "the lazy farmers who meet at the stores on the corners"—comes with ill grace from one who cannot swallow simple facts. Geneva, Mich., must be a wonderful town. Your sick men should not take such over-doses, but be treated upon Homeopathic principles.

And now, my friend "Solon," as you put yourself upon your dignity in your closing remarks—"our profession does not admit of this fast work"—thus inculcating old foggy doctrines, a little jog from Young America would do you good. If we are to make *drones* of ourselves for the sake of keeping up the dignity of the profession, then let us cut loose and keep pace with the progress and improvements of the age, lay aside the old ill-constructed implements, and adopt the new, the go-heads—"educate the hands," and let it be understood that our profession is not to go in the rear, but always in the advance. Cast away your doubts and fears, "Solon,"—as you know it does not alter truths whether you can comprehend them or not—while I relate the fact that C. B. SHERMAN and three boys husked, in 65 minutes by the watch, 40 bushels of ears of corn, and two of the boys finding that they were a little too fast for the old man, and not knowing which of the two had the best wind, caused them to try their hand for 12 hours, less time to take their dinner.

In conclusion, let me say to "Solon" that we professional farmers lay great stress on pedigree, and the SHERMAN boys claim to be descendants of old ROBERT SHERMAN on the father's side, and ETHAN ALLEN on the mother's side, and, of course, never give up. Mr. DICKINSON, no doubt, has a good pedigree. He is your agent here—is "all alive"—and many think he is ahead. As to the husking of the Dent corn, 105 to 110 bushels, as stated by your correspondent, if it is as much work to husk that kind as it is the eight-rowed variety, then, certainly, we are in the shade, and, according to agreement, shall try again.

Rose, Wayne Co., N. Y., 1899.

THE OSIER WILLOW.

Messrs. Editors:—In a late issue of the Rural I notice an inquiry of "H. B. W." of Clarence, for *Osier Willow Cuttings*, &c. Your answer mainly accords with my experience, as to cultivation, &c., but I would advise him, if he proposes to cultivate Willows for market, to be careful and get the right kind, or he will be as ready as I have been to curse the vendors of miserable trash, by the time he has had a six months seige in grubbing and pulling at the worse than useless "scrags," that encumber his land, and harass his "phelinks." Two years last spring, I planted about three acres of willows, two-thirds *Salix Purpurea*, (or *S. viminalis* as some call it), the balance, *S. Triandra*. Should have planted other kinds recommended, but they were not readily obtained. The result is *S. Purpurea* is very time, and under all conditions, good. *S. Triandra*, not worth the powder to blow it up, on any soil, being short, scraggy, and every year a little more so.

Now, sirs, this variety, *S. Triandra*, with others, (some of which are nearly worthless), were recommended to be "very valuable" by some of the so-called "standard bearers in agriculture." But they have proved in this, as in too many other cases, only deceptive Jack Lanterns, to befool and be-quagmire the unwary. *Salix Purpurea* is the only variety worth cultivating in this country. If your ground is too wet for this variety, better expend your money in draining and fitting it, than for a variety of willow cuttings that you will wish, in less than two years, had been all concentrated in the Valley of Sodom on a certain occasion.—We have followed theory and guess work quite too long in agriculture,—let us have, in future, the stubborn facts by practical farmers.

Fulton, N. Y., 1899.

G. W. THOMAS.

CIRCULATION OF SAP.

Eds. Rural:—There is not, to my feeble comprehension, a subject so abstruse; so difficult of elucidation—and forming a rational and scientific explanation of causes—as the rising and circulation of sap in the vegetable structure. That a fluid, a little heavier than water, should leave its level and ascend one, or even two hundred feet, through the tubes and cells of an inert mass, unendowed with any function of animal vitality—nothing analogous to the mechanical pulsation of the animal heart—is, indeed, a mystery. Equally inscrutable are the causes that force the sap, after reaching the top-most twig, to turn about and again descend to the extremest root to form the layer of new wood.

Capillary attraction will not account for its rise, nor will gravity for its descent. What is the *modus operandi*—the cause—the prime agent of this peculiarity of vegetable nature?

It is a legitimate inquiry, as man, feeble man, labors to search the secrets of the arana of God's creation,—from the atomic structure of a grain of sand to the specific gravity of the planet Neptune.

W. Adams, Mich., 1899.

L. B. MANLY.

MAD ITCH.

Eds. Rural:—Seeing one or two articles on this disease in your paper, and having been a heavy loser by it, I have concluded to give you my experience. Several years since I fed my hogs with green corn in my cornfield, where I had a lot of cattle running. After I had been feeding them some weeks, my cattle were taken with what I afterwards found out to be Mad Itch. The first symptoms are a scratching and rubbing of the head, ears and neck; they will rub them until they become perfectly raw. In the meantime they suffer a great deal, which they show by running and bellowing in a piteous manner, after which death ensues. Before they die, their heads, necks, body and tongue swell, and the eyes become bloodshot. I think there is no cure for the disease, as I tried calomel, castor oil, lard, and all to no effect,—losing nine head in one week. The hogs chew the corn-stalks and get all the moisture out, when the cattle come along and eat the refuse, and it lodges in the manifold, becomes hard and dry, so that when you take it out and break it, you can press no moisture out of it at all. The manifold has two entrances, about three or four inches apart, both on one side, so that medicine can pass through without interfering with this substance—and that is what kills them. I cut open a good many of my cattle, and was convinced of the cause and effect—and since that time I have had further proof. A neighbor laughed at me for saying that they were killed in that manner, for he had fed his hogs and cattle together for many years, and had never lost one. Since that he has lost six or eight head in precisely the manner I did. I have heard of their having it in the dead of winter, by half starved hogs eating the dry fodder and dropping it, which the cattle afterwards consumed.

Saline Co., Mo., Jan., 1899.

BORDER REEFMAN.

REMARKS.—In a small work entitled the *Cattle Doctor*, Ex-Governor VANCE, of Ohio, writes that "the effect of cattle following hogs that are fed on green corn cut up and thrown to them when in the roasting-car state, is very fatal. The hogs will chew the corn-stalk, and extract all the sap, and then throw it out. These fibres, thus thrown out, with all the sap extracted, will be eaten voraciously by the cattle. It contains no nutriment to give fermentation to enable the animal to ruminate; and it thus lays dormant and inactive in the manifold, or the stomach; becomes perfectly compact and indigestible; creates fever, and in the end destroys the animal. Cattle destroyed by eating these fibres of the corn-stalk will first show the symptom by a wild stare of the eye, and in its first stages will frequently become cross, and even attack their keepers. They will then begin to rub the nose and head against the fence until the skin and flesh are torn and lacerated in a most frightful manner, and in the end die in great misery. I have lost many fine cattle in this way, and have never been able to save one thus afflicted. The entire symptoms are similar to what is called the Mad Itch, which I have no doubt is created by the same cause, by taking into the manfolds indigestible matter incapable of fermentation and rumination."

Inquiries and Answers.

TICKS ON SHEEP.—Will you, or some of your readers, tell me how to rid my sheep of ticks, which are, on some of the poorest lambs, taking their life by inches?—J. W. SALSBURY, Lyndonville, Ork. Co., N. Y.

Keep the sheep in healthy condition by furnishing plenty of good food—let them be under cover or in the open air as they may choose, and if the ticks still "cling closer than a brother," give a little Scotch snuff. Linseed oil is said to so lubricate matters that they incontinently slide into "oblivion waters." MORRILL recommends dipping in tobacco water—five pounds of poor tobacco will answer for 100 sheep. If the latter process is adopted, care must be taken that none of the decoction passes into the eyes or mouth.

OLD HAY VS. NEW.—Will the Editor, or some of the correspondents of the Rural, give the reason (if any,) why old hay is better for cattle and horses than new hay—or in other words, what particular atmospheric causes operate on hay that has stood over one season to make it better for feeding all manner of stock than hay put in stack,—say in July or August, and fed the following winter. The ground is assumed that both crops have been harvested in like condition, well cured and stacked in the meadow, or out door—a universal practice in the West with all the principal stock raisers.

All hay feeders in this country who are sharp enough to draw facts from experience, are free to admit that there is more nutriment in one ton of old hay, than one and a quarter new; hence I venture the question, and hope that you, or some of your numerous correspondents will give us some reliable cause for what we believe to be an undeniable fact.—J. W. K., Marshfield, Ind., Feb., 1899.

Our correspondent assumes the fact, that old hay is much more nutritious than new. Are our Western readers agreed on this point? Let us first ascertain whether it is a fact or not, before we undertake to account for it.

SOME WINE.—Last summer I made about sixteen gallons of wine, of Elderberry, and as age increased, instead of finding it the delicious wine I had expected, it has more the appearance of vinegar. I would like to inquire through the Rural if there is a remedy? And if so, what? Or shall I count it among the lost?—E. WARSAW, N. Y., Feb., 1899.

Your wine requires more sugar. There is not sufficient saccharine matter in the Elderberry to make wine without the addition of pretty large quantities of sugar.

OSIER WILLOW CUTTINGS.—In answer to an inquiry in the Rural, about willows, a correspondent informs us that a poor blind boy—Wm. I. CARR, of Barrington, Yates Co., N. Y.—has Osier Willow cuttings for sale at \$2 per thousand, with full directions for cultivating and preparing them for market. We hope that he will be benefited by this announcement.

FOWLS.—(W. G. H., Milton, Wis.)—We have already published most of the facts you want, and shall continue to give information on the subject.

INQUIRIES will please exercise patience—their communications are filed, and will receive attention as space permits.

Rural Spirit of the Press.

A Novel Use for Turnips.

The last number of *Life Illustrated* is responsible for the following:—"Everybody may not be aware that nearly all the pretended wine in this market (New York city) is a spurious concoction of cider, whisky, sugar, water, and villainous drugs; and that much of the sparkling champagne, which is sold at \$2 a bottle, is manufactured of turnip-juice instead of the juice of the grape. A few days since a freight train of the Erie Railroad brought to this city 20 barrels of turnip-juice, which will soon, no doubt, find purchasers who will eagerly guzzle it under the hallucination that they are enjoying themselves on the choicest of the imported article, the guzzlers, however, though cheated, are not robbed at all, for the turnip-juice article is actually the least injurious of the two."

Warming Water for Cattle.

Tus Somerset (Mass.) Telegraph states that Mr. PERIN MALBON, of that town, has devised a very curious and ingenious apparatus to warm the water for his cattle, as well as to prevent the ice from collecting in the tub. It consists of a small cast-iron chest, or box, about twelve inches square, made water-tight, fixed in the fire-place, in such a manner that one side of it forms so much of the back of the fire-place, and is exposed to the heat of the fire. The water of the aqueduct, in its course from the fountain to the yard, is made to pass into this box at one end, and thus becoming heated, passes out at the other end, and continues to the yard, which is across the road, and about six rods from the house. Mr. Malbon, previous to adopting this plan, had a good deal of trouble with the ice forming in his tub, but has very little of that kind now. He says that his cattle drink much more now they would if the water was cold, and he believes it to be more healthy for them. The calves enjoy it so much, that when let out to drink they will fight for the warm end of the tub.

What Kind of Sheep to Choose.

A WRITER in the New York Chronicle, while discussing the merits of different breeds of sheep, argues strongly in favor of the Merinos, as follows:—"It has been a sort of fashion for a few years past, to neglect the Merino and introduce the Leicestershire, or some of the long-wool breeds.—Those who favor this course plead in its behalf, that there is a chance of selling the lambs at from three to six months old, which, they say, is an item of much profit in sheep-keeping. They hold that selling lambs at that age, is a great consideration in the business. It may be so, but would it not be more profitable still to keep these lambs till they arrive at maturity, when they would be worth from four to six dollars apiece? The increased price would well repay the cost of keeping them. A Leicestershire should yield six pounds of wool each year for three years, till it reaches its greatest value, which, at thirty cents a pound, would amount to five dollars and forty cents. To this is to be added two or three dollars in the additional value of the sheep, making in all seven dollars and ninety cents, to say nothing of the lambs which it has borne in the mean time. If these were added to the value of the body and wool of the sheep, it would amount to more than ten dollars. One very strong objection to selling lambs is, that none but the best can be sold, and that causes a deterioration rather than an improvement of the flock. No Merino lamb should be sold. For three years, with the same keeping as the Leicestershire, they will yield eighteen pounds of wool apiece—which, at forty-five cents a pound, is six dollars and fifty cents. The increased value of the sheep meantime would be two dollars, which, added to the price of the wool, would be eight dollars and fifty cents. To which two dollars and fifty cents is to be added for the worth of the lambs, making in all eleven dollars from a Merino whose keeping has been one-third less than the Leicestershire.—Thus we gain both ways, in the cost of keeping, and in the amount obtained. The wool, body and lambs, from the Leicestershire, should bring \$15.33 to make the income from the food consumed, equal to that of the Merino."

Underdraining—"It Will Pay!"

In the fall of 1887, JAMES R. WALKER, of Springfield, Vt., being the possessor of a "piece of wet, cold, unproductive land," asked the question—"Underdraining—Will it Pay?" in the columns of the *New England Farmer*, and now, having experienced, answers his own query, as follows:—"At that time I had a presentiment that it would not be a paying operation, but as the land was nearly worthless, as it was, I resolved to underdrain it, which I did with stone, sinking the ditches about three and one-half feet deep. The bottom of the drains was constructed like an ordinary culvert, then filled with cobble stones to one foot of the surface; upon these stones, shavings or evergreen boughs were placed, to prevent the dirt from filling the interstices, then covered with dirt, reserving the sod for the barn-yard. The result, I will briefly state. The piece drained contained a little less than four acres. In 1887 it was mowed, and produced but two loads of poor, sour hay and brakes, hardly worth cutting, but it was an average crop for the land. Last spring the land was dry, and we were enabled to work it early in the season. We plowed under about twenty-five ox-cart loads of barn-yard manure to the acre, and planted with corn the 15th day of May. The ground was dry and in good condition for receiving the seed, while many pieces considered dry land were much too wet. The corn was planted three and a half feet apart each way, hoed twice, and received a top-dressing of plaster and ashes.—It was cut up the 10th and 11th of September, when it was found ripe and sound. We husked from the piece 440 bushels of ears, all merchantable corn. My neighbors concur with me in opinion that this crop is worth more than the aggregate crops that the land has produced for the last fifteen years.—It is now in a condition to produce abundantly for a series of years without any extra outlay. This crop has paid me the whole expense of underdraining, and I am so well pleased with the experiment, that I have had a number of ditches dug upon another piece adjoining, and intend to use drain tile instead of stone."

Agricultural Miscellany.

NEW YORK STATE AGRICULTURAL SOCIETY.—The Annual Meeting of this Society was held at Albany on the 9th inst. The Society having been called to order by Mr. President McCORM, the usual order of business was transacted. The Treasurer reported the entire receipts for the year to be \$18,356.27, and the expenses \$15,705.34—leaving a balance of \$2,650.93 on deposit at Albany Exchange Bank. The Society decided upon ALBANY as the location of the next Annual Fair, and elected the following Board of Officers for 1899:

President—A. B. CONGER, of Rockland.
Vice-Presidents—E. G. FAIR, of New York; O. S. WALNORTH, of Dutchess; Herman Wendell, of Albany; H. W. Beckwith, of Washington; B. N. Huntington, of Oneida; S. A. LAW, of Delaware; James O. Sheldon, of Ontario; T. C. Peters, of Oneida.
Corresponding Secretary—B. P. Johnson, of Albany.
Recording Secretary—K. Corning, Jr., of Albany.
Treasurer—L. H. Tucker, of Albany.

A resolution offered by T. C. PETERS, Esq., of Genesee, requesting the Legislature to provide for the taking of Agricultural Statistics with the next Census, was adopted. Mr. EMERY offered a resolution asking the Canal Board to lower the tolls on Agricultural Implements and Machines to not more than two mills, which was referred to the Executive Committee. A resolution offered by E. CONNELL, Esq., of Tompkins, approving of the standard adopted by the Society in deciding Premiums on Cattle, and recommending a strict adherence to the scale, was adopted. We shall probably be able to give the awards of Premiums on Farm Crops, &c., next week.

—Since the above was prepared for publication we have received the following from one of our contributors who was present at the meeting:

The Annual Meeting of the State Ag. Society was not as largely attended as usual, but comprised as numerous a collection of the earnest friends of Agriculture as any previous year. Albany being the point selected for the next Fair, the officers were selected with reference to that location. The President elect, Hon. A. B. CONGER, resides in Rockland Co., and is largely engaged in farming with reference to making it profitable. He has about one thousand acres in hand, and has made good progress thus far. He is a gentleman of wealth, education and refinement, and has filled important offices in the State. The Society will not suffer in his hands.

The usual show incident to the Winter Meeting was good, and the bulk of the premiums were taken by Lewis County. Some important measures were initiated. Among them, to procure a short, clean work on the Forage Plants, and Noxious Weeds, so illustrated as to enable the farmer to know the names of plants on their farms, useful or otherwise. Also to secure through the Assessors, a more perfect census of the Agricultural products of the State. The plan has been adopted in Ohio, and works to great advantage. Premiums will also be offered for the best experiments in feeding animals, and in using liquid manure. The time fixed for the Fair is in October; many of the Executive Committee thought it a month too late, but it is to be hoped that the wisdom of the majority will be fully demonstrated. Should the weather be favorable the indications are that we shall have the best Fair ever yet held.—F.

ONTARIO CO. AG. SOCIETY.—At the annual meeting of this Society, on the 2d inst., the following persons were elected officers, to serve for the present year:—President—WILLIAM H. LAMFORD, Gorham; Vice-Presidents—Benjamin F. Phelps, Bristol; John B. Cooley, Canandaigua; E. Bronson, East Bloomfield; G. Mason, Farmington; D. Pickett, Gorham; M. Parsons, Manchester; L. Chapman, Hopewell; D. D. Reemer, Naples; A. D. Vandusen, Phelps; Peter R. Pitts, Richmond; Jas. O. Sheldon, Seneca; Jas. Parnely, South Bristol; Peter Bennet, Victor; J. C. Peck, West Bloomfield; N. G. Hoppough, Canadice; Cor. Secretary—Gideon Angus, Canandaigua; Rec. Secretary—J. W. Holberton, Canandaigua; Treasurer—Jas. S. Cooley, Canandaigua.

WAYNE CO. AG. SOCIETY.—At the Annual Meeting of this Society, held at Lyons, on the 22d ult., the following officers were elected for 1899:—President—DEWITT C. VAN SLICE, Lyons. Vice-President—Daniel Jennison, Galea. Secretary—Henry P. Knowles, Lyons. Treasurer—Jas. V. D. Westfall, Lyons. Directors—Hiram G. Hotchkies, Lyons; B. R. Mumms, Sodus.

LODI (TOWN) AG. SOCIETY.—President—DR. LEWIS POST; Vice-President—Stephen D. Smith; Secretary—S. B. Mundy; Treasurer—M. B. Ellison; Directors—Peter E. Van Vleet, Tunis C. Osgood, Stephen V. Minor, O. B. Veselich, Richard Van Low, Daniel Bramble, Jr. A Summer Fair, for exhibition and sale of stock, to be held June 8th.

DRYDEN (TOWN) AG. SOCIETY.—Officers for 1899:—Pres't—JOHN P. HART; Vice-Pres't—P. V. Snyder; Sec'y—A. Snyder; Treasurer—T. J. McElheny; Directors—C. Bartholomew and H. A. George. Next Fair to be held Oct. 23d, 4th and 5th.

THE VICTORY AG. SOCIETY (Cayuga Co.) held its seventh annual meeting Jan. 10th. There was a full attendance. Officers elected:—President—PHILO CAMP; Secretary—D. L. Halsey; Treasurer—John T. Gregory.

NEW YORK HORSE MARKET.—A New York correspondent writes as follows of the horse trade:—"Few people have an accurate idea of the number of horses daily offered for sale in the horse markets of New York. Yesterday there were about 400 stabled at one of the markets in Twenty-fourth street, and that is about the average number daily on the market. There is, just now, considerable stir among buyers and sellers, and active inquiry for horses worth from \$125 to \$225. Matched horses—good ones—worth from \$600 to \$1,200, are also in demand, the demand being in excess of the supply. A large number of the horses arriving here by railroad are understood to be for Philadelphia, to operate the city cars. Another portion, Canadian animals, cheap but good, are for Virginia, where there is considerable call for them."

HORTICULTURAL.

FRUIT CULTURE IN MASSACHUSETTS.

At a recent meeting of the Legislative Agricultural Society of Massachusetts, the subject of "Fruit and the Culture of Fruit Trees" was discussed. Hon. MARSHALL P. WILDER being called to the chair, opened the discussion by saying that fruits, as articles of market value, were among the most important of the products of the farm, and as much so to the country as to the Commonwealth. Their cultivation had made great progress among us within the past fifty years. The crop in this State, in 1845, was valued at \$700,000. In 1855 its value was \$1,300,000. In 1860 it could not be less than two millions of dollars—more than the value of the wheat, oats, rye and barley in the State.—Such had been the results of pomological science in Massachusetts that her exhibitions sustained the highest rank. One gentleman who had had opportunity of judging said that he saw more choice fruit at one of our exhibitions here, than he saw at twenty in Europe, where, as in Germany, the greatest encouragement had been given to pomology by the government. The pear crop in this State was valued at \$100,000 per annum, and also demanded a full share of attention, with respect to kinds best suited to our soil, and to the most approved manner of cultivation. We had among us many varieties of pears adapted to our climate and soil, and of these varieties the Bartlett, Vicar of Winkfield, and others which he named, were well adapted.

The following were recommended as the six best varieties of apples:—The Williams, Early Bough, Gravenstein, Fameuse, Hubbardston Nonsuch and the Baldwin; and if twelve varieties were desired, the Red Astrachan, Rhode Island Greening, Ladies' Sweet, Porter and Tolman Sweet might be added.

For pears on their own roots the following were recommended:

Best pears on their own roots—Bartlett, Urbaniste, Vicar of Winkfield, Buffum, Beurre d'Anjou, and Lawrence.

For the best trees, add—Rostetzer, Meriam, Doyenne, Boussock, Belle Lorraine, Flemish Beauty, and Onondaga.

Best pears on quince roots—Loulou Bonne de Jersey, Urbaniste, Duchesse d'Angouleme, Vicar of Winkfield, Beurre d'Anjou, and Glout Morceau.

With regard to the conditions of proper cultivation of fruits, no great success could ever attend the labor of producing them unless it was conducted with a care equal or superior to what was spent on any other kind of production. One of the primary and most essential conditions had proved itself to be thorough draining, as through its operation the more troublesome diseases and parasitic affections were obviated. This thorough drainage, Col. Wilder insisted, was an absolute associate of success. He then made a few remarks on the great necessity of keeping the soils of orchards in a rich condition by manuring, and of planting the various descriptions of trees in the soils best suited to them. He repudiated the fashion of adopting too many foreign trees; for, as a general principle, trees and plants flourished better on the soil of their origin than they did in localities foreign to them. Col. W. recommended raising seedlings, as on them we would ultimately have our surest dependence for good, reliable fruit trees. We had, doubtless, a number of fine fruits already native to the soil—at the head of which stood the Baldwin apple of which 50,000 barrels were last fall exported, from this city. At a late meeting at Rochester, N. Y., the Baldwin had two marks of merit to one for any other kind, and the others which received the next highest commendations were the Rhode Island Greening, the Russett and the Tompkins County King.

He concluded by saying that he hailed with pleasure the wide-spread interest now manifested in relation to the cultivation of the Grape. The time, he said, was within the recollection of some present, when the Catawba and Isabella were first brought into notice. Hundreds of cultivators were now raising seedlings, and the day would soon come when our markets would vie with those of Italy, Sicily, and other grape-growing countries, where this luscious fruit is not only a luxury to the opulent, but the food of the humblest peasant.—Our native vines were attracting attention in Europe, and at a late convention in Belgium, our Catawba was pronounced superior to the best varieties of Rhine wine. Our own Concord grape, also, had attained great estimation among wine growers. For the substance of this report we are indebted to the *New-England Farmer*.

GRAPE CROP OF 1858, ON THE HUDSON.

Messrs. Editors:—The year 1858 will long be remembered by the farmer and fruit grower, as an uncommonly fruitful year in this section of New York. Corn, rye, oats, potatoes and hay never yielded more abundantly, and at the same time sold at remunerating prices. Apples, cherries, peaches, pears, grapes, &c., we have had in abundance—that is, all persons who gave their fruit trees anything like decent treatment.

No kind of fruit, however, makes such quick and sure returns for money and labor expended as the grape. When properly planted, pruned and cultivated, it is, in this part of the State, as certain a crop as Indian corn. It costs no more labor to attend an acre of grapes than of potatoes, and is far more pleasant to any one who loves good fruit, and certainly pays much better. Unlike most other kinds of fruit, it will hang for a long time, gradually improving in flavor, and suffer no injury from high winds, wet weather, birds or insects, which affords the grower ample time to pick and send it to market at his leisure. A mistaken notion seems to prevail among people, that the grape requires a great deal more care and attention than any other fruit. This is not so, unless in cases where they practice the renewal mode of pruning with mathematical accuracy, which I

hold to be unnecessary to produce grapes of good quality, and at prices within the reach of the middle classes of society, of which seven-eighths of the people who buy grapes are composed.

The grape, when planted in a soil of moderate fertility, is easily kept in proper shape, the wood is generally short-jointed and firm, which enables it to resist the intense cold which we sometimes experience in this latitude. I prune in November, put the vines down in a horizontal position, when a few shovelful of earth is all that is needed to keep them down, as the snow generally does that effectually. About the first of May the buds will be pushing briskly and uniformly all over the vines; they should then be taken up, and tied with care to a wire trellis in such a manner as to give the vine all the room that the trellis will admit of. I find the wire trellis the best adapted to the wants of the vine, as the wires are just the thing for the vine to cling to, which it does effectually. About the 1st of July the berries and clusters will be large enough to thin out the superfluous shoots and branches, and it is not uncommon to see from two to three fruit-bearing branches start from a bud. The weaker ones should be broken off about two inches from where they are united to the vine, leaving only one fruit-bearing branch at a place, and none should be allowed to ripen more than three clusters.

The bearing shoots or branches will generally sustain themselves without any support except from the vine, and need not be stopped or broken off, as is sometimes recommended. Nothing more is needed to ensure a good crop of grapes, but to work the ground enough to keep down the weeds and grass.

I commenced planting the grape for marketing about the year 1847, and have made annual additions to my vineyard, until now I have about four acres occupied mostly with grapes. The most of the vines produce annual crops of good grapes, which sold in the New York market last fall at prices sufficiently high to net me \$160 per tun.—Perhaps you will say that 8 cents per pound is a small price compared with what some of your western grape growers sold theirs for—but I wish to have it expressly understood, that I pick and send the grapes to market directly from the vineyard, in boxes which contain about twenty-five pounds, and that 8 cents is the average price, including both first and second quality. You will observe that we run no risk in having any of them spoil on our hands; neither do we lose any by assorting and storing, as those who practice that method, as a natural consequence must lose quite a percentage.

September 10th commenced picking the *Isabellas*, and sent to market three times a week, for about three weeks, which closed the season for that variety. October 1st commenced picking and sending *Catawbas* to market, and continued to pick and send the same as *Isabellas* up to October 20th, when we had the first frost sufficiently hard to injure grapes. The Valley of the Hudson seems to be admirably adapted to the grape, both in its fine soil, and peculiar exemption from late spring and autumnal frosts.

W. T. Germantown, N. Y., 1859.

Inquiries and Answers.

VEGETABLE PHYSIOLOGY.—I noticed in your paper of February 5th, in remarks on planting fruit trees, the statement that the roots of a tree were the *feeders*. I ask, inquiringly, if the roots have *mouths*, or how do they feed the tree? I thought the leaves fed our trees.—PERRY, Edinboro, Penn., 1859.

VEGETABLE physiology is a very interesting study, one in which the wisest can engage with pleasure and profit. Young men, who think there is nothing about the farm worthy of the great powers which they imagine themselves to possess, would do well to turn their attention to this subject, and they will find they have work for a lifetime.—an opportunity for honorable fame. By what process moisture is taken from the earth, and made to ascend the tallest trees, even to the most remote leaf, is a question which will furnish matter for investigation, and after this is settled to the satisfaction of the world, there are a score of others equally interesting, awaiting investigation and elucidation.

A tree is composed of several parts, roots, branches, leaves, buds, blossoms, &c., and all these have their several offices to perform. We give an engraving from Barry's *Fruit Book*, to aid in illustrating the few remarks we intend to make.

FIG. 1.

A, the collar. B, the main root. C, lateral root. D, fibrous. E, stem or trunk. F, main branches. G, secondary branches. H, shoots of one year's growth.

The Root is composed of several parts. The collar, (letter A,) is the point of union between roots and stem. The main root, (B,) usually penetrates the earth in a vertical direction. It is sometimes called the *tap-root*. The lateral roots (C,) are the principal branches or divisions of the main root, and grow in a more spreading, or horizontal position. The fibrous, or rootlets (D,) as they are sometimes called, are the fine hair-like roots. The extreme points of these are called *spongioles*, and

they are porous, and through them the food of the tree, derived from the soil, is mainly absorbed—they may be said to be mouths. They are composed of soft, newly-formed, delicate tissue.

In addition to these spongioles, the surface of newly formed roots abound with hair-like roots, in most cases invisible to the naked eye. These are so well described by Prof. GRAY, that we quote a paragraph:—"The absorbing surface of roots is very much greater than it appears to be, on account of the root-hairs, or slender fibrils, which abound on the fresh and new parts of roots. These may be seen with an ordinary magnifying-glass, or even by the naked eye in many cases; as in the root of a seedling Maple (Fig. 2 and 3,) where the surface is thickly clothed with them. They are not rootlets of a smaller sort; but, when more magnified, are seen to be mere elongations of the surface of the root into slender tubes, which through their very delicate walls imbibe moisture from the soil with great avidity. They are commonly much longer than those shown in Fig. 3, which represents only the very tip of a root moderately magnified. Small as they are individually, yet the whole amount of absorbing surface added to the rootlets by the countless numbers of these tiny tubes is very great."

FIG. 2. A piece of the end of the root magnified. FIG. 3. Seedling Maple, of natural size, showing root hairs.

The leaf stalk and the veins of the leaf are tubes, similar to the woody parts of the tree, and inside of these tubes is a pith similar to the pith in the branches, and connected with it. The upper and lower surfaces of the leaves are furnished with small pores. The pores on the under surface are the largest and these are the ones principally employed in absorbing from the atmosphere, while those on the upper surface are supposed to be principally employed in *exhaling*. It is the moisture exhaled from the leaves that causes a plant or branch to wilt when kept in a warm room, while the absorbing power of the leaves enables the plant to recover when sprinkled with water. A field of corn wilted in a hot day will revive in an hour under the refreshing influence of a shower. It is generally believed that the sap is taken up by the roots in a crude state, and passes into the leaves, where it receives certain modifications, becomes digested, and prepared to form the new wood required for the growth of the tree. We have not space at present to discuss this subject, but at some other time we will give it further attention.

THE WINTER AND DWARF PEARS.—I set out a large lot of Dwarf Pears last fall, and on pruning the same a few days since, I find that about one-third are black at the heart. Will such trees do any good? Would it not be better for me to pull them up and place good ones in their places? Would coal ashes be of any benefit to fruit trees?

I have some idea of taking *fresh stable manure*, placing the same in a hopper, and taking the drippings to place around my dwarf pears. Would it be of any benefit to the trees, and what quantity should I put around each tree, and what season of the year?—A. SUNDEN, Walnut Bottom, Ohio, 1859.

It is the unripe wood, we presume, that is most injured. In this the pith, which is the part blackened, is much larger than in the older and the more matured branches. Early in March, or as soon as the hard frosts are over, prune the trees again, cutting one or two buds closer than before, and we have no doubt they will come out all right next summer. The best way to apply manure to young fruit trees is to place a heavy coating on the surface. The soluble portion is washed into the ground by the rains in sufficient quantities to furnish sustenance as fast as the roots can appropriate it, and the balance may be forked in occasionally, and a new lot supplied.

FRUIT AND TREE CULTURE, &c.—Will you please inform me what books I need to give a thorough knowledge of Fruit Culture and the Nursery Business in general? Also, can you, or any of the readers of the *RURAL*, give me any information in regard to the culture, in this country, of the *Chinese Poppy*, from which opium is made? Has any one succeeded in raising it? I believe seeds of it were distributed through the Patent-Office a few years since.—A. SUBSCRIBER, Canandaigua, N. Y., 1859.

BARRY'S FRUIT BOOK will give more practical information about raising stocks, the propagation of trees, and the nursery business generally, than any other work. The history, description and quality of the different varieties of fruits may be best learned by studying *Downing's Fruits and Fruit Trees in America*. But after all, no reading will make a nurseryman, any more than the same course would make an editor or a builder. Observation and practice is necessary. The best nurserymen find that they are constantly learning.—The *Poppy* is not cultivated in this country or Europe for making opium, that we are aware of.

CUTTING GRAFTS.—I am a subscriber of your paper, and would like to be informed when it is the best time to cut cherry grafts, and how keep them after they have been cut, and the proper time to set them? Some say that they must be cut in February, some in March, and some say that they must be set in March. How should apple grafts be kept after they are cut, and when should pear grafts be cut? Last spring I set one pear graft in a Mountain Ash. It lived and did well on the start, but about the middle of the summer it dried up and died.—V. A. B., Kelloggville, N. Y., 1859.

GRAFTS may be cut any time in the winter, or before the buds start in the spring. They may be kept in a cool, dry cellar, by placing the cut ends

in sand, or they may be buried in a cool place, in a sandy soil, drawing the earth over them in a mound to throw off the water. The object is to keep the buds dormant, and yet not so dry as to shrivel up the scions. The stone fruits, as the cherry and plum should be grafted first, and as soon as possible in the spring.

WHAT PEAR TREES ARE BEST FOR A GENERAL ASSORTMENT.—I have been much pleased with the discussion about pear trees in your paper. I live in the extreme northern part of Illinois, near the southern boundary of Wisconsin. In the spring I wish to set out one hundred standard pear trees. I wish to get those that will supply me with pears as near the year round as possible. I, of course, want the earliest and the latest. I live near a good railroad depot, and of course must have some regard to those kinds that will sell the most profitably. My land is new, and I want to set out a durable pear orchard. I want no dwarf. What kind of soil is best? My place for an orchard is a sandy ridge, where oaks and hickory were found by the first settlers, and where oaks and hickory would soon cover the land again if left uncultivated. I have an abundance of clay near by, and also manure. Now, how should I fix my soil to set out my trees, and what variety of trees, and what number of each should I set out to get my orchard of one hundred trees?—A. BEGINNER.

Nothing but actual experience would enable us to say for a certainty what will succeed in your locality. We will name a few sorts that we know to be the hardiest, and just what we would plant were we in your circumstances, and with good hopes of success.

OF SUMMER SORTS we would have the *Beurre Giffard* and *Tyson*. The former is very hardy, and productive, and will endure as much cold, perhaps, as any early sort. The *Tyson* is one of the finest summer varieties, not quite as hardy as *Beurre Giffard*, but well worthy of a trial.

AUTUMN VARIETIES.—*Buffum*, ripe about the first of October. Tree vigorous and hardy, remarkably upright in growth. *Flemish Beauty*, a large, beautiful, melting pear. This is represented to us by letters from fruit growers at the West as being the most hardy variety ever introduced. *Snow's Orange* is a large, high-flavored pear; tree very hardy. One gentleman writes that out of a dozen varieties, (which we are sorry he did not name,) this is the only one which endured the past severe winters without injury. The *Seckel* is a slow grower, hardy, and we think well calculated to endure a Western winter. The fruit is the standard of excellence.—*Sheldon* is a most excellent pear, equal in quantity to the *Seckel*, and four times as large. Tree very hardy; think it would do at the West.

FOR WINTER, we can name only the *Lawrence*, with confidence. The light, oak ridges, we think, the best for fruit trees, at the West, and the only manure we would use, for a season or two at least, would be a dressing of the clay which you have near by.

A GRAPE FOR NAME.—Can you, or any Grape Cultivator, inform me the name of a grape of the following description? Rather small in size, round, pulp tough, closely packed to the stem. Juice as black as red could be made black, pretty tart, and when bespattered on linen, turns to a purple, quickly.—W. H. B. BARTON, Rochester, N. Y., 1859.

This is some little native, very evidently, but from the description furnished, could not give its name, if it has one.

CULTURE OF THE GRAPE.—NO. II.

What form is best for Grape Vines? Young vines should always be pruned back to two buds every autumn, until they get sufficient root to make a growth ten or fifteen feet in a single season. I have over the front door of my dining-room, on a flat, a vine that has been loaded with fruit for many years. Pass out at the back door of the cook-room to either the wood-house, well-house, or barns, and you pass under a thick sheet of *Catawbas*, *Clintons*, and *Isabellas*. These vines stand close to the walk, or over the fences. They rise with straight standards till they reach the flat made of wires, stretched from the house to the wood-house and well-house, on posts set firmly in the ground for them. They give beauty to the homestead, and profit, and are out of the way. I have vines set and coming along to cover all the space about my buildings, and the sidewalk in the highway also. Vines set under the eaves of the out building, or about the house, with proper care, bear bountiful crops of fruit.

But, What form is best for the Vineyard? I believe no one sets less than 100 vines to the acre. At the age of 10 years the root of each vine covers four rods of ground, but the vine is dwarfed back to one rod. Don't reason teach any one that plants, with such an unequal balance between roots and branches, will be injured. The demand for sap must be nearly equal to the supply to keep the vines thrifty. My two old vines covers one-sixteenth part of an acre; at that rate requiring only 82 vines to the acre. I recommend setting vines thick, as the tend gives a full crop as soon as they come into bearing, but shape them to meet their wants as needed. When vines begin to make a thrifty growth, I let a single sprout grow from 12 to 16 inches from the ground, and I also let a sprout remain. These two sprouts are shaped, by a stake with a strip across the top of it, for the base branches on the lower wire of the trellis. They extend to within a foot of the next vines, and are then bent and go to the top of the trellis. All the vines in the vineyard are treated in the same way, which makes two base branches on all the trellises. The advantages of this arrangement are—First, you can get your uprights with more accuracy from two base branches than you could from one. Second, if your vines are becoming too thick (as they will,) you can remove every other vine in the vineyard, with no alteration to make, only to fill up the trellis by new uprights from the base branches that are to remain. This will give two rods of ground for each of the vines left. Should the vines still become too thick, again remove them from every other trellis in the vineyard, and let the vines that remain extend on the flat over where they stood. That leaves 40 vines to the acre, eight more than my old ones require, at 10 years of age. In pruning and shaping base branches, let the laterals get a foot in length before you take them off. If they are pruned closer, the next year's fruit buds will be pushed forward, and the chance to get the uprights in their proper place be lessened. ALVIN WILCOX, West Bloomfield, Ont. Co., N. Y., 1859.

DOMESTIC RECIPES AND HINTS.

Messrs. Eds.:—Believing anything that will make pleasant and lighten woman's work ought to be made public, I send the following recipes and hints for your excellent paper:

CHEAP COOKIES.—One cup of cream; half a cup of butter; one and a half cups of sugar; 2 eggs; 1 teaspoonful of saleratus—mould as soft as you can; roll and bake in a quick oven.

MISS FELICIA'S SPONGE CAKE.—Two eggs; 2 cups of sugar; 2 cups of flour; half a teaspoonful of saleratus dissolved in two-thirds of a teacup of water, and a teaspoonful of extract of lemon; 1 teaspoonful of cream of tartar.

YANKEE YEAST, WITHOUT HOPS OR MILK.—Take 1 quart of warm water, stir in flour enough to make a thick batter, and set in a warm place to rise. It is an excellent substitute for sour milk in winter.

CHESSIRE CORN GRIDDLE CAKES.—To 1 quart of sour milk, add 1 egg well beaten; 1 teaspoonful of salt; 1 of saleratus,—thicken with Indian meal to the proper consistency. Bake them until they are done brown. Serve with butter and maple honey, and they are good enough for our President.

A NICE MODE OF SCOURING CUTLERY.—Take a good sized potato, wash it, and cut off one end, shave off your brick, have your cutlery perfectly dry, dip the cut end in the brick and scour with it instead of using a cloth. This mode will impart a lustre equal to whiting, and the daintiest lady can scour her own cutlery without soiling her fingers.

FRIED PORK is better for greasing griddles than butter, as the salt burns, and produces a disagreeable smoke.

CROCKERY, of all kinds, looks brightest washed in hot suds, rinsed in hot water, and drained in a wooden tray or bowl. It is economy also in saving of time.

TIN WARE should be washed in the same way, and dried by the stove.

TUMBLERS should be washed in cold suds with the hands, and rinsed in cold water, then turned on a cloth to drain.

It is good economy to put sugar skimmings into the vinegar barrel. The milk and eggs used in settling the sugar is no injury to the vinegar.

MRS. A. H. LINCOLN.
Rowe, Franklin Co., Mass., 1859.

PUDDINGS, CAKES AND COOKIES.

Eds. *RURAL*:—Having read and tried many valuable recipes from your paper, I thought to reciprocate the favor by sending a few in return:

STEAMED PUDDING.—One quart buttermilk; one heaping teaspoon of soda; a little salt; flour enough to make a very stiff batter; steam over boiling water an hour and a half. Serve with cream, sugar and nutmeg, or lemon. This makes a plain, good and cheap dish.

RICED PUDDING.—One teacup of rice; one of sugar; one of raisins; two quarts sweet milk; nutmeg; stir frequently while baking, until it begins to thicken,—this makes an excellent pudding.

GRAHAM CAKE.—One cup and a half sugar; a piece of butter the size of a butternut; one teacup of sweet milk; one-fourth of a pound of raisins, chopped; one teaspoon of soda, one and a half cups of flour,—bake in rather a quick oven.

COOKIES.—One cup of butter; two of sugar; one half cup of sweet milk; one teaspoon of soda; half nutmeg. M. E. PECK.
Port Byron, N. Y., 1859.

TO DYE PINK ON COTTON.—To every pound of goods take one ounce of lime, water enough to cover your goods, boil several hours, then take it out and drain. Take three-fourths of a pound of alum to two pounds of goods, water sufficient to cover it, boil one hour, then drain again. Soak one and a half pounds madder in vinegar over night, then put it into three pails of soft water, boil one hour, put in your goods, boil one and a half hours. If you wish it darker, let it remain in the dye longer. Your color will be much improved by putting six or eight quarts of wheat bran in a tub of soft water,—let it stand for eight or ten days, then take the clear liquor, and boil your madder in that.—LIZZIE W., Suspension Bridge, N. Y., 1859.

PRINTING FLANNEL FOR EMBROIDERY.—Draw the pattern on paper, then lay a pattern on a pillow, take a small needle, fasten the end of the needle in a cork, then prick the pattern where it is traced; lay it on the flannel. If the cloth is white, take Prussian blue and lay it on the pattern, and rub it hard with the hand—raise the pattern carefully, take a small camel's hair pencil to finish the work, using a paint composed of one teaspoonful of yellow gamboge, one teaspoonful white gum arabic, and one of rain water—mix thoroughly. If the flannel is colored, use the gum arabic for tracing.—N. M. T. M., South Alabama, N. Y.

SOFT SOAP.—As I have seen many good recipes, I send an aid in soft soap making, which I have used for several years.—Add five pounds of rosin to every barrel of soap—the stronger the ley the better—the rosin will prevent the hands from being sore when the soap is used.—CAROLINE, Empire State, 1859.

INQUIRY ANSWERED.—H. L. N.—A spoonful of whiskey to two pounds of flour of grown wheat will correct it. If much grown, use more whiskey, but no strychnine.—O. T. HOBBS, Randolph, Crawford Co., Pa., Jan., 1859.

EXCELSIOR CORN BREAD.—Seven cups corn meal; seven cups buttermilk; one cup wheat flour; half cup molasses; one tablespoonful ginger; one teaspoonful saleratus.—LIZZIE W., Suspension Bridge, N. Y., 1859.

MAKE HOME BRIGHT AND PLEASANT.

More than building showy mansions—
More than dress and fine array—
More than domes or lofty steeples—
More than station, power, and sway,
Make your home both neat and tasteful,
Bright and pleasant, always fair,
Where each heart shall rest contented,
Grateful for each beauty there.

More than lofty, swelling hills—
More than fashion's luring glaze—
More than manum's guided honors—
More than thought can well compare,
See that home is made attractive,
By surroundings pure and bright,
Trees arranged with taste and order,
Flowerbeds with their sweet delight.

Seek to make your home most lovely,
Let it be a smiling spot,
Where, in sweet contentment resting,
Care and sorrow are forgot;
Where the flowers and trees are waving
Birds will sing their sweetest songs,
Where the purest thoughts will linger,
Confidence and love belong.

Make your home a little Eden,
Imitate her smiling bowers,
Let a neat and simple cottage
Stand among bright trees and flowers;
There, what fragrance and what brightness,
Will each blooming rose display!
Here, a simple vine-clad arbor
Brightens through each summer day.

There each heart will rest contented,
Seldom wishing far to roam,
Or, if roaming, still will cherish
Memories of that pleasant home.
Such a home makes man the better,
Pure and lasting its control—
Home with pure and bright surroundings
Leaves its impress on the soul.

South Butler, N. Y., 1890.

Plain Talks to American Women.—No. 4.

BY MRS. H. P. A. CROZIER.

3. Give the child proper nourishment, and at proper intervals. Nature points out the food usually best adapted to the infant's nature, and if it is necessary, from disease, or otherwise, that any other be substituted, let it be of the simplest and purest quality. Nor does the child need to take nourishment every half hour. Think what an injury you are doing to the poor babe's stomach, when you keep it constantly laden with food! How soon would your own stomach cry out against such treatment—and think you the delicate organization of an infant can bear safely that which would soon subject you to all the horrors of indigestion? "But the baby cries—it must be hungry!" More likely it cries because its poor stomach finds it difficult to dispose of the load you have already given it! Writers differ a little as to how often a very young child should be fed, but once in two or three hours is sufficiently often, and when it is a year and a half old, perhaps earlier, it needs only the three regular meals a day. Simplicity of diet should still be observed as the child advances in years. How absurd to be continually stuffing a little child with sweets, and pastry, and stimulating meats, which even older persons would do well to let alone! Yet how often does it occur that the little darling, perhaps just able to totter around the floor, must have its stick of candy—which, by the way, is often poisoned with paint—nearly every time its father comes from town; must sit in his high chair at table and delight himself with a pork-rind, and have an occasional sip of mother's tea or coffee, and then, half a dozen times, perchance, before the next meal be treated with a piece of cake, or pie, or a lump of sugar to keep him quiet! Do any wonder that the years of human life are so often few? Rather wonder we that so many survive their treatment in infancy, and attain as vigorous a maturity as they do!

4. Don't drug your infants to death. A little judicious letting alone would vastly benefit the health of some children. In nine cases out of ten, perhaps, where some slight ailment affects your child, nature will, if allowed the opportunity, prove that she is a better physician than yourself. The natural power of the system will generally be sufficient to overcome the difficulty, unless it is very serious. In such a case call to your aid all the hygienic agencies at your command—those agencies which are necessary to preserve health, are most beneficial in its restoration. It is said that the celebrated French physician DAMOULIN, on his death bed, when surrounded by the citizens of Paris, who regretted the loss which the profession would sustain by his death, said:—"My friends, I leave behind me three physicians much greater than myself." Being pressed to name them, each of the doctors supposing himself to be one of the three, he answered, "Water, Exercise and Diet."

You do not, or you should not, give your child drugs to keep it well; they would be sure to defeat your object; beware lest that which would cause illness in a well child, should prove fatal to one already prostrate with disease. Many wise physicians have come to the conclusion, after long experience, that medicine does more injury than good. There may be instances where parents are ignorant of proper therapeutic means, and unable to avail themselves of the knowledge of others, that it would be most wise to administer it, but in all cases let it be sparingly, and with caution.

5. Allow your children a proper amount of sleep. Young children require a much greater amount than older persons. Dr. HALL remarks:—"Observation and scientific experiment constantly confirm the fact that the brain is not nourished and repaired during sleep. If, then, we have not sleep enough,

the brain is not nourished, and, like everything else, when deprived of sufficient nourishment, withers and wastes away, until the power of sleep is lost, and the whole man dwindles to skin and bone, or dies a madman. The practical inferences which we wish to impress upon the reader, are two:—1. By all means sleep enough; give all who are under your sleep enough, by requiring them to go to bed at some regular hour, and get up at the moment of spontaneous waking in the morning. Never waken up any one, especially children, from a sound sleep unless there is urgent necessity—it is cruel to do so. To prove this, we have only to notice how fretful and unhappy a child is when wakened up before the nap is out. 2. If the brain is nourished during sleep, it must have most vigor in the morning; hence, morning is the best time for study; then the brain has most strength, most activity, and must work most clearly."

6. One of the most important things to be observed in physical education is cleanliness. The office of the skin is so important in the physical economy, its agency, if unobstructed, so great in freeing the body of impurities, that when this is neglected, it soon becomes loaded with disease. This will be more manifest when we consider that, in the adult human system, the united length of the glands of the skin which drain the body of impurities amount to "nearly twenty-eight miles," and of course is proportionally great in the child. Then "how important the necessity of attention to the skin lest this drainage be obstructed"—how important that the clothing be frequently aired and washed, saturated as it becomes with these impurities. Frequent bathing and clean clothes, then, become necessary to health, and the cool bath, to which one may easily become accustomed by a gradual reduction of temperature in the water used, is considered more invigorating than the warm. In bathing a young child avoid chilling it. Uncover only a small portion of the body at a time, wash thoroughly dry, and cover it again; or, if you remove all the clothing, bathe very quickly, and immediately throw around it a warm blanket and rub briskly till dry.

"But," says one, "dirt is healthy; see those children who are always at play in the dirt—how tough they are!" Yes, but do not imagine it is the dirt that toughens them! It is far more likely to be the amount of exercise in the fresh air which they have. This every child should enjoy daily. Not that it is advisable to carry out young infants into the open air in mid-winter, but they should have fresh air made comfortable in the nursery. Those children who are old enough should be clad in such a manner as to be thoroughly protected, and then allowed daily to run out and gather all the healthful influences possible from the bracing air, and grow strong in the exercise of muscular power. And lest they take cold on slight exposure, let the atmosphere of your rooms be uniformly of a moderate temperature.

By observing these rules, parents in general may hope to see their little ones grow up as flourishing "olive plants" around them,—to see the beautiful bud of infancy unfold into a lovely blossom, and in due time may be looked for the fruit of a noble and healthful life. It may be a new idea to some minds that physical education has anything to do with moral; but we believe it will be found a just one. Without health, the child will naturally be peevish and restless, and moral aberration become the result of physical ailment.

SCHOOL GIRLS IN WINTER.

We wish to put in a special plea for the girls. Make their dresses short enough to swing clear of the snow and mud, and give them good water-proof boots, to wear to school. Yes, we insist upon it—they should have boots. Women's shoes of the present fashion are no more fit to be put upon country roads in winter, than an Indian's birch-bark canoe is fit to cross the Atlantic. Boots will not look quite so trim about the ankle, or step so lightly upon the floor, but they will do what is of more consequence—preserve the health to allow of these graces in after life, and to take a great many elastic steps that otherwise might be fewer, and those leading directly down to the grave.

Another thing we are glad to see coming in fashion: the ladies are learning to skate, and for this they must have boots. Now, girls, get each of you a pair of neat winter boots, and a pair of skates to fit, and the first ice that forms in your neighborhood, large enough, go out with your brothers, or somebody else's brothers, and learn to skate. Be prudent about it, and not overdo the exercise, and you will find it a capital medicine—next to horse-back riding.

The only way to bring about a race of healthy women, is to attend to the physical development of the girls before they are diluted in the false system of fashionable accomplishment, that fits them for nothing but elegant imbecilities.—Ohio Cultivator.

LITTLE GRAVES.

SACRED places for pure thoughts and holy meditations are the little graves in the churchyard, says a writer. They are the depositories of the mother's sweetest joy—half unfolded buds of innocence, humanity nipped by the first frost of time, ere yet a canker worm of corruption has nestled among its embryonic petals. Callous, indeed, must be the heart of him who can stand by a little grave side and not have the holiest emotions of the soul awakened to thoughts of that purity and joy which belongs alone to God and heaven—for the mute preacher at his feet tells of life begun and ended without stain; and surely if this be vouchsafed to mortality, how much purer and holier must be the spiritual land, enlightened by the sun of infinite goodness, whence emanated the soul of that brief sojourner among us? How swells the heart of the parent with mournful joy while standing by the earth-bed of lost little ones? Mournful, because a sweet treasure has been taken away—joyful, because that precious jewel glitters in the diadem of the Redeemer.

As it is the chief concern of wise men to re-trench the evils of life by the reasonings of philosophy, it is the employment of fools to multiply them by the sentiments of superstition.

SNOW.

BY LUCY LARCOM.

Loose, and still, and soft,
Flake after flake comes down,
Dimming the air aloft,
Flecking the oak-bloss brown;
Light as the fall of years
On a bead grown white in peace,
Light as the breath of the angel Death
When he whispereth of release.

White, and calm, and cold,
Under a sunset sky,
Glowing with red, aerial gold,
The unstained snow-drifts lie
Calm as the pulseless dead
In the grave-niche, cold and white,
With a kindling glow on each marble brow—
A glory of love and light.

Pure, and soft, and still,
Drifting down to the sea,
Melt the snows of the pearl-white hill
Into sunshine, silently.
Blue are the depths above,
Deep is the blue below,
White from the bay glides a sail away—
And a soul passed white as snow.—[Grayson.]

Choice Miscellany.

Written for Moore's Rural New-Yorker.

THERE IS WORK ENOUGH TO DO.

We often see men idling round,—men who appear to have no business,—men possessed of fine talents and good health, and whose idleness is unaccountable. But, say they, "there is nothing to do." Let us look about and see if this is true,—if the moving, bustling, hurrying world does not present some opening where these unfortunates may find that for which they so earnestly long.

Farming, the most extensive interest in this country, is in continual want of more laborers. From one end of the land to the other, the call is ever going forth for men to labor in the forest, in the field, in the workshop, and the factory; and yet these poor men are compelled to rest idly for the want of something to do. The truth is, they do not wish to do anything. They are watching for some chance by which they may gain what they wish without putting their own hands to labor; or, as MICAWBER says, "waiting for something to turn up." They are the drones of the hive. They imagine, as I heard one of their number say, that they are "born to a higher destiny" than to be content to labor in any low sphere, and they are looking for that higher destiny everywhere but in the hard blows of life. Most likely it is in the furrows of the farm, or in the anvil, and must be dug or pounded out. And then, "High Destiny" is not arrayed, when found, with the slippers and gloves of the idler, but has the brogans, the hard hand, and the bustling activity of the worker. There always was, there is now, and there always will be, enough to do for those who want to do it.

There is work enough for our ladies—rather than to spend their time in novel reading and poor embroidery—to try and open a wider sphere for their talents, and to fill it better than they do their present one.

There is enough for the philanthropist, to alleviate the sufferings of humanity; to feed the hungry; to give clothing to the poor and destitute; to give the means of a moral and intellectual education to the millions of poor children who are now deprived of these blessings; to find homes for the homeless, and to be a friend to the friendless; to win the drunkard from his ways, and restore him to his family. The thought is sublime, it far exceeds the power of the faded gods, whose bolts could shake the earth and cast down the stars, and "whose frown could darken half a world." It is taking the beast from the mire, breathing into it a noble spirit, and giving to the world "a man."

There is enough for the teacher to do, to instruct his charge in all that tends to make man or woman noble,—to inspire them with high and noble sentiments of what is worthy of ambition—to educate and give character to the next age when they shall be at the helm to direct.

There is work enough for the Minister of Christ to lead men from the paths of darkness and error, and show them the glory, the goodness, and boundless love of Him whose blessings they each day enjoy, and to bring them to love and serve Him better.

There is work enough for the farmer. His field is wide, and though he labored faithfully, yet he will find that there yet remains much to be done. He must educate himself. The arts, the sciences, mechanics, mathematics, and all that he can learn, will tend to improve the best of all professions.—Let no farmer say that his work is all done, and that he has nothing to do, while there is a spot on his farm that can be made better by draining, or enriching,—while his fences are not all in proper order,—while he has fruit trees that need pruning or cultivating; but let him—when he has sown his grain, and planted his corn—look and see if there is not some little thing still to do, and he will find it. His work, like woman's, is never done, and he be great or small, rich or poor, he may still find that he need not stand in the market-place "all day idle" for the want of something to do. SOLOX.

Caryon, N. Y., 1890.

AN OLD MAN'S ADVICE.—The Rev. Daniel Waldo, late Chaplain to Congress, says:—"I am now an old man. I have seen nearly a century. Do you want to know how to grow old slowly and happily? Let me tell you: always eat slowly—masticate well. Go to your food, to your rest, to your occupations, smiling. Keep a good nature and a soft temper everywhere. Never give way to anger.—Cultivate a good memory, and to do this you must always be communicative, repeat what you have read; talk about it. Dr. Johnson's great memory was owing to his communicativeness. You young men who are just leaving college, let me advise you to choose a profession in which you can exercise your talent the best, and at the same time be honest."

LANGUAGE AND ITS TINKERS.

THE "Professor," at the February Table of the *Atlantic Monthly*, has some large-hearted, sensible thoughts upon language. Here is a part of what he said:—"Language is a solemn thing—I said—it grows out of life—out of its agonies and ecstasies, its wants and its weariness. Every language is a temple, in which the soul of those who speak it is enshrined. Because time softens its outlines and rounds the sharp angles of its cornices, shall a fellow take a pickaxe to help time? Let me tell you what comes of meddling with things that can take care of themselves. A friend of mine had a watch given him, when he was a boy, a 'bull's eye,' with a loose silver case that came off like an oyster shell from its contents; you know them—the cases that you hang on your thumb, while the core or the real watch lies in your hand as naked as a peeled apple. Well, he began with taking off the case, and so on from one liberty to another, until he got it fairly open, and there were the works, as good as if they were alive—crown-wheel, balance-wheel, and all the rest. All right except one thing—there was a confounded little hair had got tangled round the balance-wheel. So my young Solomon got a pair of tweezers, and caught hold of the hair very nicely, and pulled it right out, without touching any of the wheels, when, buzzzzzz!!! and the watch had done up twenty-four hours in double magnetic-telegraph time!"

The English language was wound up to run some thousands of years, I trust; but if everybody is to be pulling at everything he thinks is a hair, our grand-children will have to make the discovery that it is a hair-spring, and the old Anglo-Norman soul's time-keeper will run down, as so many other dialects have done before it. I can't stand this meddling any better than you, sir. But we have a great deal to be proud of in the life-long labors of that old lexicographer, and we mustn't be ungrateful. Besides, don't let us deceive ourselves—the war of the dictionaries is only a disguised rivalry of cities, colleges, and especially of publishers.—After all, the language will shape itself by larger forces than phonography and dictionary-making. You may spade up the ocean as much as you like, and harrow it afterwards, if you can—but the moon will still lead the tides, and the winds will form their surface."

MENTAL LABOR.

Ten injurious effects of mental labor are, in a great measure, owing to extensive forcing in early youth; to sudden or misdirected study; to the co-operation of depressing emotions or passions; to the neglect of the ordinary rules of hygiene; to the neglect of the hints of the body; or to the presence of the seeds of disease, degeneration, and decay in the system. The man of healthy phlegmatic or choleric temperament is less likely to be injured by application than one of sanguine or melancholic type; yet these latter, with allowance for the original constitution, may be capable of vast efforts. The extended and deep culture of the mind exerts a directly conservative influence upon the body. Fellow laborer! one word to you. Fear not to do manfully the work for which your gifts qualify you, but do it as one who must give an account of both soul and body. Work, and work hard while it is day; the night cometh soon enough—do not hasten it. Use your faculties—use them to the utmost, but do not abuse them; make not the mortal to do the work of the immortal. The body has its claims—it is a good servant; treat it well, and it will do your work; it knows its own business; do not attempt to teach or force it; attend to its wants and requirements, listen kindly and patiently to its hints, occasionally forestall its necessities by a little indulgence, and your consideration will be paid with interest. But task it, and pine it, and suffocate it—make it a slave instead of a servant; it may not complain much, but, like the weary camel in the desert, it will lie down and die.—*Journal of Physiology.*

MUSIC AND FLOWERS.

Two gifts God has bestowed on us that have in themselves no guilty trait, and show an essential divineness. Music is one of them, which breathes over the gross, or sad, or doubting heart, to inspire it with consciousness of its most mysterious affinities, and to touch the cords of its undevoted, unsuspected life. And the other gift is that of flowers, which, though born of earth, we may well believe, if any thing of earthly soil grows in the higher realm—if any of its methods are continued—if any of its forms are identical there, will live on the banks of the river of Life. Flowers, that in all our gladness, in all our sorrow, are never incongruous—always appropriate. Appropriate in the Church, as expressive of its purest of most social themes, and blending their sweetness with the incense of prayer. Appropriate in the joy of the marriage hour, in the loneliness of the sick room, and crowning with prophecy the foreheads of the dead. They give completeness to the associations of childhood, and are appropriate even by the side of old age, strange as their freshness contrasts with the wrinkles and the gray hairs; for still they are symbolical of the soul's perpetual youth, the inward blossoming of immortality, the amaranthine crown. In their presence we feel that when the body shall drop as a withered calyx, the soul shall go forth as a winged seed.—*Rev. E. H. Chapin.*

HAPPINESS.—Now let me tell you a secret—a secret worth knowing. This looking forward for enjoyment don't pay. From what I know of it, I would as soon chase butterflies for a living, or bottle up moonshine for cloudy nights. The only true way to be happy, is to take the drops of happiness as God gives them to us every day of our lives. The boy must learn to be happy while he is plodding over his lessons; the apprentice while he is learning his trade, the merchant while he is making his fortune. If he fails to learn this art, he will be sure to miss his enjoyment when he gains what he sighs for.

It is more difficult to forgive an injury from a friend than from an enemy. Your favorite dog lying at your feet, pains you a great deal more than a similar assault from a strange dog.

SABBATH MUSINGS.

AN ENTREATY.

BY ANNE P. BROWN.

Cast thy bread upon the waters and thou shalt find it after many days.—Ecc. 11: 1.

Cast thy bread upon the waters,
It shall not be lost,
Though upon Time's billowy ocean
It is tossed.

Cast it forth with trust implicit
In God's marvellous ways,
And most surely thou wilt find it
After many days.

Cast it forth—be not reluctant—
Wait not till the morrow's dawn—
Ere then the time to thee allotted
May be gone.

Cast it forth—be it thy mission
To succor earth's oppressed,
And relieve the broken hearted
From sad unrest.

Cast it forth! O, point the sinner
To that Savior's love,
Where life and peace is freely purchased,
And a home above.

Cast it forth, and rich rewards
Freely shall be given—
For thou thy Savior has laid up
Sweet rest in heaven.

THE DEATH OF THE YEARS.

"For he sang of what the world will be
When the years have died away."—TANNISMAN.

We contemplate this material body and find it mortal—merely the dwelling-place of the soul.—We look abroad over the beautiful earth, and upon that decay is written—and in the above couplet we are reminded that the years, too, are mortal,—that they will die. What will the years be when the perishable present is among the years that were—when Time, pinioned with the wings of Death, shall swiftly make his transition flight from past to future, and, like the destroying angel, shall have claimed his own? We cannot tell what they will be. We only know that with the present shall pass the things of the present, and that, when we are gone, the world will continue to move and have its being—our presence will not be necessary.

But this is a sad retrospect and very unlike the poet's song. He is represented as going forth among the glories of nature at the sweet evening time, and singing a song so melodious and gay, that even the birds were charmed into silence.—The song of the future—it should be a melodious song! When perishable time shall be no more, and with it shall have passed away all that is mortal, then, our Creator hath said, "Behold I create a new heaven and a new earth, wherein dwelleth righteousness." This earth, renewed and beautified, shall blossom as the rose, everlasting and unchangeable. A habitation for redeemed spirits in robes of immortality. It will be a world of infinite purity and bliss, and "the Lamb will be the light thereof." A world where there will be no pain, no mourning or sighing for departed joys or blighted hopes. All our yearnings for something higher and beyond will then be satisfied. The mysteries of the other world, which we so often desire to look into, will be opened to our spirit's view. This is what the world will be when the years of time have ceased, for there are no years in eternity. And, like the wanderer from his youthful home, who will not rejoice in the thought of dwelling again and forever where he was wont to be in the childhood of his existence?

Changeable, fleeting and perishing years,
Counted by man in a valley of tears;
Bowing, thou Time, to the Angel of Death;
Staying thy flight at his sickening breath;
Thou hast not ever tyrannical power,
O'er as exorting it every hour,
Shortly, according to sacred decree,
Lost in eternity, ever thou'll be.
Mortals shall soar above perishing things;
Sharing the bliss immortality brings;
Passing where Christ and the martyrs have been;
Witnessing glories that eye hath seen.
Pittard, N. Y., 1890. JANE E. H.

FAITH IN GOD.—Have faith in God. Faith will be staggered even by loose stone in the way, if we look manward; if we look Godward, faith will not be staggered even by inaccessible mountains stretching across and obstructing apparently our onward progress. "Go forward," is the voice from heaven; and faith obeying, finds the mountains before it flat as plains. "God with us," is the watchword of our warfare, the secret of our strength, the security of our triumph. "If thou canst believe, all things are possible to him that believeth." How strong faith is when we are just fresh from the fountain of redeeming love! A good conscience, and then faith will do all things, for it is in its very nature such as to let God work all; we may say that it is most active when it is most passive, and that it wears least when it does most work.—*Hewitson.*

AFFLICTION.—We argue, "Cannot God bring us to heaven with ease and prosperity?" Who doubteth but he can? but his infinite wisdom ordereth the contrary; and though we cannot see the reason, yet he hath the most just reason. It is your part now to believe, and suffer, and hope, and wait on. Whether God comes to his children with a rod or with a crown, if he come himself with it, it is well. Welcome, welcome, Jesus, what way soever thou come, if we get a sight of thee! And sure I am it is better to be sick, providing Christ come to the bedside, and say, "Courage, I am thy salvation," than to enjoy health, and never be visited by God.—*Rutherford.*

THE TRAVELER.

LETTERS FROM A HUNGARIAN.

NUMBER THREE.

The Great Cathedral of Gran—What sort of people go to church—Dress of the Hungarian populace—The Catacombs—The bridge on pontoons.

Gran, Hungary, Sept. 1858.

DEAR FRIEND MOORE:—If you wish to become acquainted with the manners and customs of a nation, you need not absolutely visit great capitals and large cities. In these your attention will be almost uniformly attracted by splendid sights and exhibitions; and you will, in consequence, be apt to wholly neglect the domestic life of the people.—"We want a history of *fratres*," said the great statesman, DANIEL WENSTEN, and such a history can only be obtained by mingling with the people at their several homes. Now this, I may flatter myself, I had ample opportunity to do. Living, as I now do, in the midst of a large circle of relatives whom I left here ten years ago, when on my way to America, I must needs have the best *cicerone* to accompany me, not merely to all the public "sights," but also to the inner, private gatherings round the family hearth. Though I have now been near six weeks in Hungary, yet most of all this time I spent in such insignificant towns as Gran, Wesprim and vicinity, stopping but a few days in Pesth the capital of Hungary, and Fared, the most celebrated Hungarian water-cure. And now I am again in the neat little town of Gran; and from here, sitting at ease in my brother's home, I will write you what I observed and learned in my travels in Hungary.

And, first of all, let me commence where I left off in my last—the great *Basilica* of Gran. Though this city contains but about 15,000 inhabitants, (mostly Magyars,) yet from its having been the birth-place and residence of ST. STEPHEN, the patron saint and first Christian King of Hungary, (A. D. 1000,) it has ever been the residence of the Primate of Hungary, who is at the same time Archbishop of the Graner diocese. As late as 1543 there existed on the fort facing the Danube, a church dedicated to St. STEPHEN. But in that year the Turks took possession of the fort, and destroyed the entire city, with the exception of a single chapel which remains unto this day. After the Turks were dislodged, and Gran rebuilt, the primates of Hungary successively endeavored to rear a magnificent cathedral on the old fort; but it was not until 1821 that the corner-stone was laid, and after 35 years (Aug. 31st, 1856,) the Emperor of Austria, together with the entire royal family, all the bishops and archbishops, nobles and magistrates, assembled in Gran to witness the dedication of the "Basilica," which, with the exception of St. Peter's in Rome, is the most costly and magnificent church on the Continent.

The rock on which the church is built is 216 feet above the level of the Danube; the church itself is 288 feet high, 288 long, and 150 wide. From the centre of the roof rises an immense dome, supported by 38 pillars. The copper covering of this dome weighs 31,000 pounds, and is surmounted by a globe and cross 24 feet high. Above the main entrance, (two iron doors weighing 10,000 pounds,) fronting the Danube, stands the inscription, *Quae eunum aut querite*, ("seek what is above,") and on the flat roof above is a statue (32 feet high,) representing Religion, together with the statues of PAUL, PETER, ST. STEPHEN, and other saints. On each side of the church rises a massive tower 180 feet high, one of which is as yet unfinished.

I have thus described the church as it appears to the traveler sailing along the majestic Danube. But it was not until I entered that I fully realized the splendor and costliness of the primatial Basilica. It was on a beautiful Sunday morning when I attended the worship here observed. The seats being free to all, I selected a convenient position from which I could at once observe the congregation, choir, and officiating ministers. Among the former I noticed mostly people of the lower classes. A single glance at their dress and general appearance would at once betray this. The farmer, mechanic, and workmen, generally wear on holidays a round, broad-brimmed hat, a black jacket, tight cloth pantaloons, and long-legged boots covering the pantaloons up to the knee. Some, moreover, who belong to the more hardy and less favored sons of Fortune, have, instead of pantaloons, a loose *gatyá* made of coarse linen, and resembling our inexpressibles. The legs of these *gatyá*-pants are so wide, that they might, if spanned by hoops, form pretty respectable crinolines. If an American were to go out in this style at home, he would be taken up as indecently clothed; and yet here I observed more than a dozen of peasants with nothing but a short jacket and wide *gatyá*, kneeling on the marble floor of the most magnificent church of Hungary. Nor could I observe among the women any one deserving the title of "lady."—From their dress, also, I observed that none of the cultivated, refined, or fashionable ladies of the Magyar race were present. For these, like the more cultivated men, adopt the style of the great European capitals—particularly of Paris, the center from which most fashions radiate. But the women of the lower classes wear, instead of a bonnet, a snow-white cloth, so arranged as to cover the head, ears and part of the neck. Then comes a tight *corsette*, of some gaudy color, such as red or yellow. Then a short red or light blue petticoat, (no crinoline,) with an immense number of folds. And crowning (or rather footing all,) a pair of horse-skin boots—no shoes are worn by these hardy women. These, also, in pleasant weather, are made of red leather.

The service, which lasted two hours, was similar to that observed in Catholic churches generally. After the service, I inspected, in company with a friend of mine, the several parts of the edifice more particularly. The gigantic dome, (82 feet in di-

ameter,) viewed from within, resembles the blue sky decked with stars; and below extends, in majestic proportions, the nave of the church. The interior is decked, from top to bottom, with polished marble of various hues, and supported by fifty-four pillars. The most renowned artists of Italy and Germany were called to decorate the walls and ceiling with biblical scenes and characters, allegorical paintings and statues. Among these I must not fail to mention the painting above the main altar. This is one of the greatest in the world, it being 40 feet high (without the frame,) and 20 wide. The artist, GUICCIOTTI, of Venice, here represents the ascension of MARY, greeted by nine angelic choirs, the apostles looking up to her with joy and astonishment. The altar itself is made of costly marble weighing a thousand hundred weight, and is decorated with several bas-reliefs in alabaster. Beneath the dome there are no seats, the floor being formed into a gigantic mosaic rosette, formed of numerous many-colored marble stones. The rest of the floor is paved with white and red Hungarian Marble. Viewed from beneath the dome, the entire church is truly beautiful and sublime.

If you ever visit this church, do not fail to descend into the catacombs below. The entrance is guided by two gigantic figures representing *Peace* and *Immortality*; and a forest of imposing pillars leads to the marble altar. Here rest the remains of the Arch-Duke AUBRISTOS (uncle of the present Emperor of Austria,) Cardinal RUDNAR (the founder of this "Basilica,") and other Archbishops. Older tombstones, also, are here set, among them that of the last commander of the fortress of Gran—Baron SONNENFELD (died 1823.)

In front of the church, or still better from the dome, you have a fine view of the picturesque vicinity for several miles. At the foot of the fort flows the Danube, spanned by a bridge resting on 24 pontoons, and connecting Gran with a village on the opposite bank, called Parkany. Whenever a steamer comes along from Pesth or Vienna, signal is given from the fort; whereupon a portion of the bridge, resting on three pontoons, is drawn out in order to let the boat pass through. The "opening" and "closing" of the bridge is done by hand-machinery, and takes up about 15 minutes. In the winter, when the Danube freezes, the entire bridge is drawn into the "little Danube" (an arm of the river proper,) which, being fed by warm springs, remains tepid during the entire year. This little Danube begins and ends at the great river, thus forming a beautiful island with many fine promenades and pleasure-gardens.

Thus you see, Mr. Editor, that this little city offers material more than enough for a single letter, and I should think, interesting enough for the amateur traveler. You will find here also a College, a Theological Seminary, a Library with many Hungarian manuscripts and antiquities, and what I will describe more at length in my next—the real Magyar life. SIMON TUSKA.

EDUCATION IN BRAZIL.

Boys are carefully, though rather superficially educated. They never play. At a very early age the sons of the wealthy are sent to the *collegio*, or boarding-school, and by their twelfth year generally acquire the manners of "little old men," the stiff black hat, standing collar and cane. They walk the streets as though everybody was looking at them, and as rigid as if they were encased in corsets. They are well instructed in the languages. Of late, however, the "cramping system" has been falling into disrepute. The Superintendent of Public Instruction has extended his authority within college walls. The military, naval, and medical academies, generally complete the course. There are likewise common schools, supported by the government. The Brazilian despises mercantile labor, and prefers a starving salary to the vexation of the counting-room. Only members of the learned professions attain to civil office; never merchants or artisans.—Rev. J. C. Fletcher.

ETHEL'S LOVE LIFE: A NOVEL. By MARGARET J. M. SWART. New York: R. D. Carlton. For sale by DEWEY.

EPISODES OF FRENCH HISTORY During the Consulate and the First Empire. By MISS PARDOX. New York: Harper & Bros. [pp. 861.] Sold by DEWEY.

Nature has not conferred upon us a responsible existence without giving us, at the same time, the strength, rightly exerted, to perform its duties.

SCENES IN AND AROUND JERUSALEM.

GROUP OF JEWS AND JEWESSES.

An opportunity to continue our sketches of *Scenes in and around Jerusalem*, is furnished us by the publication of a small work, *Hadji in Syria*, written by SARAH BARCLAY JOHNSON. The description of the country, people and incidents are copied from a journal, kept during a residence of three years in Palestine, and the illustrations, for which we are indebted to the publishers, JAMES CHALLEN & SONS, Philadelphia, are selected from her own portfolio, and their correctness may be implicitly relied upon. We give a portion of one chapter on

THE JEWS.

There are no people more worthy of our attention and regard than the people of Israel, God's own chosen race. And those inhabiting Jerusalem claim not only our serious consideration, but most heart-felt pity. Their condition is a sad and wonderful verification of the sure word of prophecy, which long ago doomed them to their present state of degradation and woe. They are now beginning to come to Jerusalem in great numbers; and are supported while there mainly by contributions from abroad, amounting to the miserable pittance of a few paras a day for each person. Yet they are quite happy and contented, so long as they enjoy the privilege of treading the land of their forefathers, and living on the sacred soil of their beloved Mount Zion. The heart of the lover of Israel is often made to bleed when witnessing instances of the tyranny exercised over them by their despotic lords, the Turks; such as a poor old Jew being pelted with stones by the little Turkish boys in the street. The little scamps are greatly amused with the sport; and, instead of meeting with a severe rebuke, they are rewarded with encouragement from their seniors; at whose instigation, indeed, the sport is generally commenced.

THE TOMB OF RACHEL.

No Jew is allowed to enter the Church of the Holy Sepulchre; and, indeed, should one be seen even passing through the court, he is instantly attacked by an infuriated mob of Christians, who, if they allow him to escape with his life, he has great occasion to thank them, as they are fully empowered to kill him by express firman of the Sultan. He is set free only on condition of submission to the practice his soul abhors—of kissing a crucifix of the despised Nazarene, or an image of the Virgin Mary. One privilege, however, is granted the poor Jew of Jerusalem, upon which he places inestimable value; that of performing his devotions close by the remains of the magnificent walls that once surrounded the Temple. For this favor, they at one time paid an enormous price to the Turks, who own not only this spot, but nearly all of the Holy City. And there they resort at all times, but particularly on Friday, to weep and lament that their Temple is no more.

Here, too, assemble multitudes of the matrons and maids of Israel, to pour forth their bitter lamentations and scalding tears through the crevices of that portion of the wall nearest the site of their beloved but unapproachable Temple; "deeply weeping, deeply wailing that the daughter of Zion is left as a cottage in a vineyard, as a lodge in a garden of cucumbers; as a besieged city." But so down-trodden, impotent, and helpless are they, that it is no uncommon thing for "certain lewd fellows of the baser sort," of Turkish, Arab, and Christian pedigree, so to annoy them, that they are glad to ensconce themselves in their crowded and comfortless tenements on Mount Zion.

The Tomb of Rachel is another spot held by them in great veneration; and I envy neither the head nor the heart of the stranger who can pass

from Jerusalem to Bethlehem without deviating a few hundred yards from the stony path to muse awhile, and perhaps drop a tear at the tomb of the ill-fated but "beautiful and well-favored" Rachel. The pillar set upon her grave, thirty-five long centuries and a generation ago, has long since crumbled into dust, or, more probably, been chipped into fragmentary amulets; but the venerated spot is still marked, and no doubt correctly indicated by a picturesque mausoleum, seen in the engraving, containing two rooms, the innermost of which is the consecrated sanctuary where her idolized remains lie interred beneath a rude oblong tomb of plastered stones, four or five feet in height; Ephrath, or Ephrathah, being a mile or two distant; for "she was buried in the way to Ephrath, which is Bethlehem;" "and there was but a little way to go to Ephrath." Ramah, in the Hebrew, means an eminence, and it was doubtless on the top of the intervening hill in the coats of Bethlehem, and not at Ramley, near Joppa, as CHARLOTTE ELIZABETH imagines (in that admirable production of her pen, "Judah's Lion,") that a "voice was heard"—lamentations and bitter weeping—"Rachel weeping for her children, refusing to be comforted because they were not."

How touchingly is the traveler reminded of that soul-rending cry, in passing this cherished monument of the mother of millions of the noblest race on earth—where, beneath its dome and around its walls, he hears the plaintive wailings of the daughters of this revered "mother in Israel." But they weep not for the hecatombs of innocent infants, sacrificed in the vain attempt of Herod the Great (monster of cruelty) to destroy the infant Messiah; for that event they profess to disbelieve. They are weeping for their own state of hopeless degradation, and the misery that has come upon them.—

YOUNG RURALIST.

ARITHMETICAL FACTS, AGAIN.

Messrs Eds:—"JOURNAL" a short time ago, gave us some interesting facts in Arithmetic,—but which, without some explanation that we may understand the "why" as well as the "how," we do not consider very valuable, for a mathematician who works by rules rather than analyses goes on the machine principle.

We should like, therefore, to have him tell us why "14 is to 11, as the diameter multiplied by itself" is to the superficial contents of the circle, (I suppose.)

And with your permission, Mr. Editor, I will give my way to find the contents of a circle, the diameter of which is known. Find the circumference, which is 8.1416 times the diameter. Then "multiply one-half the diameter by one-half the circumference," and the product will be the exact (not "nearly,") number of square inches contained in the circle.

And now, for a practical illustration of this rule, Cut out a round piece of paper, (pasteboard is best,) and divide it according to the following illustration, (fig. 1,) cutting it entirely in two on the line a, b, but let a narrow strip hold at the end of each of the other lines.

FIG. 1.

Now take hold of the points a, b, and straighten each semi-circumference, and you will have fig. 2. These pieces now arrange in the form of fig. 3, and you will have a parallelogram; the length of which will be one-half the circumference of the circle, and the width one-half the diameter, and the superficial contents are the same as those of the circle from which it is formed; hence the reason of the rule.

FIG. 2.

This is on the supposition that the lines a, b, in fig. 2 and 3, are straight lines, and which would be straight if the circle was divided with sufficient accuracy.

FIG. 3.

If a tapering or irregular shaped vessel is to be measured, get the average diameter, and the results of the above rule, multiplied by the height, will give the solid contents.

As to measuring bins, &c., I believe 1.244 + cubic feet, or 2150 cubic inches make an *azart* bushel.

In measuring hay, about here, it is usually estimated that 400 feet, in a well settled mow, make a tun. I do not know, however, on what authority that number is used, and should like to know which is right.

And now, I should like to have some of the boys tell the reason of the following result:—Why the unit point is placed as it is, and why dividing a number makes it larger, &c.

.0041	.0096	and again	22.64
.252	1		.006
			.135-4

In one case, dividing makes a number larger, in the other, multiplying makes a number smaller. ONPUZUS.

"STEADY BOYS WANTED."

We often notice on taking up a newspaper the following advertisement, under the head of wants: "Wanted, a Steady Boy," &c. Boys what can be the meaning of this? Are there so few "steady boys" among so many that it is necessary to search among thousands; yes, among tens of thousands to find a "steady boy"? Are they, indeed, so scarce? By no means. Although far from being a supply, there are many "steady boys." The demand will always be in excess of the supply.

When the wild, reckless boy becomes a man of middle age, he will look back down the long vista of years with a sigh of regret, when he beholds the "steady boys" of bygone days the honored, the distinguished, and the world-renowned heroes and statesmen of the day. Yes, "steady boys" are wanted. Parents want them, teachers want them, and a progressive world must have them.

Little thinks the thoughtless, harem-scarem boy of to-day, that there must be "steady boys" to fill the place of the gray-haired veterans who are now the pillars of society, the body guard of even handed justice, and the moral police of a civilized people. When the icy hand of the king of terrors strikes down these veterans at their posts, the next generation must provide men who can and will make good the people's loss.

Make known to us boys who prefer a book to a game of ball; a newspaper to a new play; an evening at home with their books, to one at the tavern or stores; the records of history to the senseless pages of a novel; the companionship of the intelligent and refined, to that of the vulgar, and depraved; and we will show you "steady boys" that are wanted to make men of. G. C. BEZUCHER.

Livonia, N. Y., January, 1859.

Dew.—There is dew in one flower and not in another, because one opens its cup and takes it in, while the other closes itself, and the drop runs off. God rains his goodness and mercy as wide-spread as the dew, and if we lack them, it is because we will not open our hearts to receive them.

RAIN, SPRINGS, &c.—The questions of "H. T. A.," were answered in the RURAL of February 5th.

The News Condenser.

- In California six religious papers are published.
- Wheat is now being taken from Chicago to Iowa.
- They expect to grow raisins in California next year.
- The new Emperor of Japan is between 16 and 17 years old.
- The wharves of New Orleans rent annually for one million dollars.
- A man has been sentenced to be hung for burglary at Charleston, S. C.
- There are 311 miles of railroad, in the aggregate, completed in Iowa.
- Emigration from New Orleans to Cuba is going on quietly and briskly.
- It is now believed that Judge Roosevelt will succeed Mr. Dallas at London.
- The Michigan Legislature have voted 15,000 for the Gratiot Co. destitute.
- One of the Sing Sing prisoners choked to death at dinner, a few days since.
- Sunday schools have been commenced in Russia solely by voluntary efforts.
- A woman died in Cleveland last week from starvation, leaving four children.
- The jails of Rhode Island last year held nearly 600 persons committed for debt.
- The population of California, according to the best estimates, amounts to 600,000.
- During the past year, the Governor of Michigan pardoned no less than 69 convicts.
- Montgomery, one of the Kansas leaders, was formerly a regular licensed preacher.
- Three millions and a half of the new U. S. loan have been paid into the Treasury.
- Every important matter that is now brought up in Congress is settled by King Caucus.

DREADFUL AFFAIR.—On the night of the 1st inst., a frame house on the outskirts of Allegheny City, Penn., occupied by a carpenter named Rodgers and his family, took fire and was totally consumed. Rodgers, his wife and three of his children were burned to death. Only one of his family, a boy of eleven years, was saved.

Mr. Lawrence, an old Californian, has just returned to Leavenworth from Cherry Creek, bringing the most cheering accounts of the prospect at the mines. He estimates the amount of dust in the hands of miners at Denver City, at from \$15,000 to \$16,000, and states that no sales had been made at less than \$20 per ounce.

Nicaragua Ratifies the Treaty.—The N. Y. *Daily Times* has private intelligence announcing the ratification, by the Nicaraguan Government, of the Cass-Yrisari treaty, as originally arranged by the negotiators. The ratification was made at Managua on the 17th of January.

NEW GOLD DISCOVERIES. — St. Louis papers state that new gold discoveries have been made covered near the head of the Missouri river, about 100 miles distant from St. Louis. The gold is said to be very plentiful, but of an inferior quality. The mines can be easily reached by steamboat navigation.

— The Jews of New York propose to erect a temple that will rival in extent and magnificence the Catholic cathedral in the course of erection in that city.

Chapter I.

[illegible]

be found upon earth. (How many mothers wish the same opinion!) She was now thinking, however, that Miss RAYMOND came nearest to the ideal of what her son's wife should be, of any young lady she had ever seen. And if CHARLES loved her, why—she should make no objections to the match. As to the young lady's not fancying CHARLES, if her affections were disengaged, the idea was too absurd to be tolerated. Then her thoughts wandered off into the future, and in fancy beheld the fair girl taking her place in the household and she half-grieved, as she thought of the young lady, for she was not so young as she relapsed into the same reveries.

[Concluded next week]

her life, her garden enclosed. All the week is performed, as it were, with her Sunday. Prayer and praise are the proper elements of this day, but I am so common to her at all times, that I sometimes to be her special blessing—that to satisfy right myself this day after her own heart; and is thus to her day of gladness. * * * She is a little way on Sunday which are peculiar the day. As for instance—I am brushed the morning with a searching criticism, and however willingly I may have arranged my hair, it must receive one more touch from her gentle hand. She is herself complete and perfect for the day.

seldom get out in the afternoon. As seldom as my wife stay at home. Whether it rains or shine, or hail or snow, the performance must be spirited if it keeps her from the afternoon service. My father and myself take our usual naps; at not as long, if possible, on Sundays as on other days. About two o'clock we exchange papers. I receive from some church paper; for which, by the way, it is not that I have no taste but small regard, and receive from him the *New York Herald*. Its readable articles—and they are many—I find marked by him with red chalk, for my special portion in sport, and in part for the benefit of friends a long way off, to whom the paper is always sent, after it has been thoroughly exhausted at home.

MISCELLANEOUS ENIGMA.

My whole is a true maxim,
Genoa, N. Y., 1859. JASON G. CROUCH.

GEOGRAPHICAL ENIGMA.

I AM composed of 17 letters.
 My 17, 11, 11, 4 is an island in New Brunswick.
 My 15, 9, 10, 16 is a mountain in Sicily.
 My 18, 6, 7, 10, 10, 11, 3 is a county in Missouri.
 My 4, 13, 5, 3 is a lake in Scotland.
 My 18, 1, 16, 13, 13, 4 is an island east of New Jersey.
 My 5, 2, 4, 14, 2 is a river in North Carolina.
 My whole is one of the Ten Commandments.
 Oswego Co. N. Y. 1850. MARY.

ANSWER in two weeks.

For Moore's Rural N

ALGEBRAIC PROBLEM.

A MAN bought two sheep. The square of the number of dollars he paid for the first, added to twice the price of the first, multiplied by the second, plus the second squared, is equal to twenty-five. And the cube of the first added to the cube of the second is equal to thirty-five. What did each sheep cost him?

ANSWERS TO ENIGMAS, &c., IN No. 474.

Answer to Miscellaneous Enigma:—My wife's rolling
pin.
Answer to Grammatical Enigma:—Make hay while
the sun shines.
Answer to Riddle:—Steam.

MOORE'S RURAL NEW-YORKER,
AN ORIGINAL WEEKLY
RURAL, LITERARY AND FAMILY NEWSPAPER

CONDUCTED BY D. D. T. MOORE,
With an Able Corps of Assistants and Contributors.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, Usefulness and Variety of Contents, and unique and beautiful in Appearance. Its Conductor devotes his personal attention to the supervision of its various departments, and earnestly labors to render the RURAL an eminently Reliable Guide on all the important Practical, Scientific and other Subjects intimately connected with the business of those whose interests it zealously advocates. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate and beautiful Engravings, than any other Journal,—rendering it the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.
For Terms and other particulars, see last page.

INQUIRIES AND NOTES.

THE number of inquiries received of late, has been so great that we are unable to answer them in the usual way. Many, to be of any value, only require immediate answers, but those of some length, partaking more of the character of essays than simple answers and inquiries. We have determined, therefore, to devote a few extra columns to this purpose.

Culture of Tobacco.

CAN you give some information on the Culture of Tobacco—what soils are best adapted to it, and the time of planting—whether it must be started in hot-beds—if the frost ever injures it, and how to cure it? Whether it is to be cut up when green or ripe, and how far apart are plants to be in the rows? Also, where seed can be got, and whether the seed will ripen in this latitude?—A Subscriber, Naples, N. Y., 1859.

PLEASE oblige me by giving a little information in regard to the Tobacco Plant—the soil raised in Connecticut and Massachusetts? Can it be raised successfully in Ulster Co., and where can the seed be procured? Please inform me of the manner and time of planting. —C. B., Brooklyn, N. Y., 1859.

THE above are specimens of the inquiries we have received from nearly all parts of the country, on the subject of growing Tobacco, showing a great demand for information, and a disposition in very many to engage in its culture. The growing and curing of tobacco, like the raising of hops, flax, and sugar from the Chinese cane, is somewhat of a manufacturing operation, requiring some skill and experience, and the necessary fixtures and conveniences for curing and packing. Hence, many who engage in these operations will fail. Indeed, nearly all will be likely to fail in a great measure, in the first attempt, for however well the theory may be studied, much must be learned by experience. The extent of our experience in the business has been confined to a few plants in the garden, but we have watched very carefully the operations of the largest and best growers in this section of the country, and the facts we have learned are cheerfully given. If what we say shall in any way differ from the experience of practical growers, we hope they will give us the facts.

Tobacco will succeed in any climate where corn will ripen, and any good corn land is suitable for tobacco. The tobacco grown at the north is most valuable when fit for cigar wrappers, and for this purpose a large, broad leaf, thin, of a silky texture, tough, and with small veins is desirable. The Connecticut Seed Leaf is the variety most prized and generally sown. The tobacco when cured is assorted into two or three sorts, the best being composed of large fine leaves, without holes, and of good color. These are used entirely for cigar wrappers and sell for about \$10 per hundred pounds. The second quality is made up of smaller and broken leaves, and the best of these are used for wrappers, and the balance for filling. The third quality, made up of leaves very much broken and discolored, &c., are used for filling for commonest cigars, cutting for smoking, &c., and sells at a low price.

SEED BARS.—Seed can be obtained at most of our seed stores, at about \$4 per pound, but an ounce or so will produce plants enough for a couple of acres. About the first of April select some dry, warm, sheltered spot, make nicely prepared narrow beds for convenience in weeding and sow the seed. It is very fine, and may be mixed with sand, as in this way it can be more evenly sown. As soon as the plants make their appearance a vigorous war

must be kept up against the weeds, for if they get the start it will be almost impossible to eradicate them without destroying the plants. Some burn brush over their seed beds just before sowing, for the purpose of destroying the seeds of the weeds.

SOIL AND PLANTING.—To grow a good crop, coming near to a ton an acre, requires very rich land. Well rotted stable or hog manure should be used in abundance and the ground be well prepared by plowing and dragging. From the first to the fifteenth of June the plants will be ready to set in the field, and this work should be done on a damp day if possible. In taking up the plants, care should be exercised so as to injure the roots as little as possible. A few should be reserved in the seed bed to replace those plants that may not grow, or be killed by the grub. The best distance, perhaps, is two feet in the rows, and the rows three feet apart, so as to admit of the use of the cultivator once way.

CULTURE, TOPPING AND CUTTING.—The after culture is similar to that for corn—keeping the ground light, and the weeds destroyed. The hill, if any, around the plant must be low, or it will interfere with the lower leaves. The tobacco worm sometimes makes its appearance about the time of the second hoeing, eating holes in the leaves, and must be searched for on the under sides of the leaves and destroyed.

As soon as the flower buds appear, the tops must be broken off three leaves below the buds, which will increase the growth of the lower leaves. This topping causes shoots to start out at the base of each leaf, and these shoots must be broken off in about eight days after the topping, or they, too, injure the growth of the leaves, and still further injure them in curing.

The time for cutting the crop is from the 5th of September to the 15th, in about 12 or 15 days after topping. The plant should be cut with a hatchet between the lower leaves and the ground, and be allowed to lay on the ground long enough to wilt the leaves, so that they may be handled without breaking, but not exposed to the noon-day sun, or they will become scorched and worthless. It is necessary, therefore, to cut early in the morning or the evening, and in either case it should be housed before noon. In all the operations care must be taken not to tear or injure the leaves.

CURING.—This operation requires great care. As soon as gathered it must be hung on poles in a tobacco house or shed, the butts being fastened to the poles and the points hanging downwards. The plants are fastened to the poles with twine, about six inches apart, and the poles about one foot apart. It will be necessary to have a circulation of air through the building, but when the wind is high, unless the building is closed, the leaves will be injured. As soon as sufficiently cured, it may be taken down and the leaves stripped from the stalks. It will generally be in this state, about the first of December. If, on a dry day the leaf stalk will break from near the butt, it is sufficiently cured to take down and strip. The tobacco grower, while stripping assort into different grades, the largest, soundest and best colored leaves being put in the first class, and the narrow, torn and light colored leaves make the second class. Some growers make three grades. There is a good deal of difference in the value, the price ranging from five to twelve cents a pound. After the leaves are assorted, they are made into "hands," by taking a large handful, with the butts even, and binding a leaf around, so as to hold them together. These "hands" are then packed away in a stack, with the butts and the points of the leaves overlapping each other, and in this way the leaves will be kept soft and pliable, and the butts be more thoroughly cured. Tobacco should not be handled when it is dry and harsh, and all handling is better done on a damp day.

SWEATING.—The last and most important operation is sweating. This operation is thus performed. Boxes are made about two feet four inches by three feet six inches. Into these boxes the "hands" of tobacco are placed, lengthwise of the box, the butts at the end. In this way the box is filled. A heavy "follower" of two inch plank, just made to fit the inside of the box, is then pressed upon it with a lever or screw. The top or "follower" is then removed, and more tobacco put in and pressed, and so on until the case is full of pressed tobacco, and these cases will generally contain from three to four hundred pounds. After the box is full the "follower" is removed, and the cover nailed on, and the cases packed away in a dry close building, where they must remain during the next summer, until fall, when the tobacco is fit for market. When packed for sweating the tobacco should be soft and pliable without being wet or sticky. Any that appears too damp may be packed at the top or sides of the box, or dried.

The profits to be derived from the culture of tobacco depend entirely upon the management.—Farmers who grow an acre or so will, as a general

thing, find more trouble than profit from its culture, as it will interfere very much with other work, and in consequence be neglected at some critical point which will very much lessen its value; or the injury done by neglect of other crops will destroy more than the profits realized from the tobacco. Without a suitable building, one erected for the purpose, it is almost impossible to cure it properly. This is an expense that a small business will not warrant. Those who engage largely in tobacco raising, take pains to learn all that they can from the experience of other, and erect suitable buildings, if they are careful, enterprising men, and not discouraged, though at first they fail, will no doubt find it a very profitable business.

Moon Theories, Again.

PERHAPS this is not quite the right season to talk about "planting and sowing in the moon," but I would like to have some of those who call the influence of the moon on vegetation, all "humbug," or "moonshine," tell me which would be more likely to be affected by the gentle influence of LUNA, in her changing moods, the sturdy hemlock that has withstood the blasts and storms of ages, or the tender plant that shrinks from the chill winds, and falls before the first frost of autumn? It is a well known fact (at least to those who spend part of the summer peeling bark for tanneries,) that the new moon is the best time for their business, and that during the old moon in latter August, near the close of the peeling season, the bark begins to adhere firmly to the wood, but in the next new moon will peel easily. Now, if it is all "moonshine" that causes this, is it fair to call it all "humbug" to believe there may be a difference in the growth of some plants, according to the phase of the moon, when the seeds begin to germinate?—S. S. S., Windsor, N. Y., 1859.

OUR own views in relation to this subject, are well known to Rural readers, and to again pass over the whole ground, merely for the sake of argument, would be fruitless. We would be pleased, however, to ask "S. S. S." a few questions. If the influence of LUNA is so "gentle," why attribute so great an effect to so slight a cause? Why choose the "close of the season"—the last of the summer months, when hot and dry is the rule? Will the bark peel more readily during the new than the old moon in the preceding months of June and July? The moon does not require a full month to wax and wane—and in process of time the last of August has its new moon—does our correspondent consider himself most governed by the date of that particular month or the condition of the moon? Is not the fact that the hemlock peels readily in early September more attributable to the "midsummer flow of sap" than to any influence lunar rays can exert? Our nurserymen, in ordinary seasons, cannot bud at the very season when "S. S. S." finds so much difficulty in procuring tan-bark and for the same reason—the external covering of the fruit trees adheres so strongly; but in September, new moon or not, the renewed flow of sap enables them to operate. If the advocates of the theory in which our correspondent seems to be so firm a believer, will arrive at some tangible conclusions in reference to the action of the moon on vegetation—attribute it to heat, light, or some other of the known necessary agents of growth in the vegetable world—we will endeavor to meet the subject,—we have neither time nor space "to beat the bush" in the columns of the New-Yorker.

Feeding Grain to Colts.

HAVING several young colts keeping through the winter, I would like to know whether it is best to give them any grain. Experienced breeders say they should not have any, while all books on the subject say they should have from a pint to a quart of oats per day. Now, which is right?—AN OLD SUBSCRIBER, Ogden, N. Y.

IF the "books" are wrong, we must say we believe their error is on the side of right. At no after period in the life of the foal will liberal feeding become a principle of so great importance as during the period of growth—and for the first few months after weaning this is particularly the case. Starvation—or short-allowance, if the latter term is preferred—is the last made to make fine animals. Bad keep never made a good colt; good care, i. e., judicious treatment, we do not think is a sure road to ruin. When quite young the oats ought to be bruised, thus aiding the digestive organs in the full performance of the duties the economy of nature has assigned.

To Prevent Over-Reaching.

I wish to inquire of you, or the readers of the RURAL, if there is any way to prevent horses clicking their hind shoes against their fore shoes in traveling?—P. Putney, N. Y., 1859.

YOUR horses frequently over-reach so as to strike the toes of the hind-shoe against the fore ones, causing the clicking mentioned by our correspondent. The fact should be made known to the smith, and, if he is the right man in the right place, he will remedy it by shortening the toes of the hind-shoes and widening the web. "P." may try what tightening the check-rein will do—elevating the head of the horse will sometimes obviate the evil.

PORTABLE HOP AND HAY PRESS.

WE take pleasure in giving the accompanying illustration and description of a HOP AND HAY PRESS invented by one of our subscribers, whom we have long known as an active friend of Rural Improvement. The inventor claims for this Press many advantages, such as great simplicity, portability, &c. Among other things the patentee states that "when, as often happens in presses, the follower in its descent takes an inclined position, the press will not of course operate with entire freedom, but in the Hop and Hay Press this difficulty has received special attention, and been successfully overcome." We copy the following description from the *Scientific American*:

"The accompanying engraving is a perspective view of the Hop, Hay or Cotton Press, invented by LINCOLN L. CUMMINGS, of Munsville, Madison county, N. Y., and patented by him June 15, 1858. A, represents a case or box of rectangular form, in which is fitted a follower or plunger, capable of working freely up and down. C, is a bar that is placed on the top of the follower and longitudinally with it, the ends of the bar projecting beyond the ends of the follower, and having a T-shaped slot, a, made vertically in each end. On each end of the bar, C, a cap, D, is placed, having oblong slots made through them. These caps are provided at each end with a handle, e, and on each cap a plate, E, is placed, passing between guides, d, which form part of the cap, D. The plates are adjusted by crank handles, F, and screws, e, which pass through a central opening in E.

"To the bottom of the case or box, A, a bar, G, is attached. This bar projects beyond the box at each end, and to it a chain, H, is attached. To the upper end of the chain a screw, I, is secured, and these screws pass through the inner part of the slots, a, in the bar, c, through the slots in D, through E, and a nut is fitted on to each screw above the plate, E. Each nut is surrounded by teeth, g, into which a spring pawl, K, catches. These pawls are fitted in sockets, L, that can move freely upon the nuts. In these sockets, L, hand levers, M, are placed, to operate the press.

"Each side of the case or box, A, at its upper part is formed a series of slots, h, which are placed one over the other between proper guides, so that they may be withdrawn as the follower descends, and the substance within the box is compressed. The operation is as follows:—The follower is depressed upon the hops, hay or cotton, by turning the hand levers, M, and consequently the nuts, so that as they are made to descend on the screws, I, they carry C, and the follower with them. Should the follower become inclined, the screws, I, have room to move in the T-shaped slot, a, so that it will operate the follower when inclined, and gradually make it level. Many of these presses are in use for hop pressing, and give general satisfaction."

We may add that this Press has been awarded the First Premium at Fairs in three of the most noted hop-growing sections of this State—Otego, Madison and Oneida. For price, &c., see advertisement in this paper.

AGRICULTURE IN OHIO.

MESSRS. EDS.—Some of the statements and facts contained in the Ohio Agricultural Report for 1857, recently published, I have thought might very profitably have a wider circulation through the pages of the RURAL.

From this report it appears that Ohio has of land, actually cultivated, 11,583,731 acres, of which about 6,500,000 are plow land, and 3,500,000 meadow land, the remainder being in orchards, gardens, yards, &c.

The great crops of the State are Wheat and Corn. The wheat crop is first in importance, so far as the grain market is concerned, though for domestic consumption, in feeding cattle, swine, &c., the corn crop should, perhaps, take the precedence.

The average of wheat per acre is about thirteen bushels, and of corn thirty-four bushels; the number of acres devoted to the former is yearly becoming less, while the area of corn land is as constantly increasing,—showing that the corn crop is considered more reliable and profitable. The wheat crop for 1857 is estimated at twenty-eight million bushels—the corn crop for 1857 is estimated from sixty to ninety million bushels. Not only has the area of land devoted to wheat been gradually diminishing for several years past, but also the average yield per acre.

Underdraining has done wonders here, as it does everywhere, so far as it has been practiced, which is as yet to a very limited extent, although a very

large proportion of the arable soil of Ohio is of that kind to be especially benefited by the process, viz., a clayey loam, or stiff clay.

Stock-growing is a very important branch of our farming. In 1856 Ohio shipped to the New York market over forty-three thousand cattle for beef; in 1857 over thirty thousand.

Wool is another of our staple productions, but greatly diminished from what it has been, and still rapidly diminishing, from the want of suitable protection against dogs, which do far more injury to the flocks in this country than wolves ever did.

The expense of fencing is here, as everywhere, a great tax upon farmers, and annually increasing, as the timber suitable for the purpose is diminishing. It is estimated that over eighty million of dollars is actually invested in this State in fences on farms. Many experiments are making with hedges.

The culture of the grape is attracting considerable attention. The amount of land now devoted to the culture of the grape in the State is estimated at three thousand acres. As an instance of the remunerativeness of the grape culture it is stated that Mr. CHAS. CARPENTER, of Kelly's Island, sold in 1854, as the product of one acre of vines, 800 gallons of wine, at prices ranging from \$1.25 to \$1.50 per gallon,—grapes to the amount of one hundred dollars,—roots and cuttings to the amount of one hundred and thirty dollars. Thus did one acre return to its proprietor \$1,330 in one year.

The agricultural population of the State does not

increase in proportion to the general increase, large drafts being constantly made upon it for other employments. Farm laborers are scarce.—Machinery is very largely employed in almost all farm operations. These statements are almost entirely in the language of the report.

Hudson, Ohio, 1859.

A LARGE OX—FEEDING OUT GRAIN.

MR. MORAN TRACT, of Pulteney, Steuben Co., N. Y., has a single steer, of his own raising, 6 years old past, 6 feet 8 inches height of rump, 8 feet 9 inches girth, and which, though thin in flesh, he thinks will weigh 3,500 pounds. An experienced tanner estimates his hide alone at 300 pounds. As an outlandish specimen of the genus ox, and sample of coarse and elephantine character, I doubt if it is anywhere excelled! It is due to Mr. TRACT to say that not till quite recently has he given it other than ordinary fare, and that he now proposes to settle the question whether the animal can be fattened. If he succeeds, it will become, as it indeed is now, a monstrous monstrosity. The profits, it is presumed, he will enjoy when they are realized.

The gloomy reports during the last season of crops at the West, and the low price of beef and mutton in the New York and other markets, conspired to create a somewhat general impression that it would not pay so well to feed corn this winter as to sell the same in market. It is not mid-winter yet, and the evidence accumulates that more than one farmer has made a mistake. The present look is that corn fed into beef and mutton is going to pay better than it has any winter in some time. Thrifty steers in good condition were sold two months ago at 8 per hundred, but are now rapidly going up to \$5. Those whose motto in farming is to not go with the multitude, are in luck. Would it not be well for farmers more generally to feed their own grain? Many find feeding to be unprofitable because they feed too much. The animal "eats itself up" when it becomes necessary to hold on some time for an improved market. An intelligent and experienced farmer and feeder of this county, says he can fatten an ox faster with three quarters of Indian meal a day and good hay, than with eight. Such feeding is always safe, for you have increased weights and improved quality, and markets from which to realize pay for the grain fed, which will scarcely exceed ten dollars' worth in a whole winter.

Pittsburgh, N. Y., Jan. 19, 1859. W. P. B.

THE CULTURE OF ROOTS.

END. RURAL:—In your issue of the 22d ult., you gave the experience of DANIEL NEDHAM, of Vt., in root culture. His testimony coincides with that of ours in all points respecting this all important but long neglected branch of agriculture. We have pursued, with varied success, the raising of roots for the last ten or fifteen years. And although neighbors around have croaked and talked of small returns for the amount of labor expended, and made up wry faces at the "spine distorting" process, yet we can safely assert that no part of our farming, for the amount of ground cultivated, was paid so high a per centage.

We have mostly cultivated the ruta baga and Swede turnip, in connection with the mangold wurtzel and carrots. We have raised, of the turnips, in good seasons, from six to eight hundred bushels per acre, at a cost not to exceed sixpence a bushel, and for stock, feeding purposes we consider them well worth twenty-five cents per bushel. We have, of late years, practiced Mr. NEDHAM's plan of feeding roots in connection with straw, and think stock will do better on this feed than hay alone. For fattening purposes they are excellent—we have fattened our beef for years on roots alone.

The altitude of our Allegheny hills seems peculiarly adapted to the cultivation of this excellent, and it may be adopted with safety by all progressive farmers, not only in this latitude, but throughout the length and breadth of the arable land of the country. Although some years we may partially fail from drouth or depredations of insects, and can never expect to equal the humid climate of "Old England" in the production of roots, yet we may approximate somewhere near their standard, if we will direct ourselves of that prejudice which has thrown such a distaste and heaped so much obloquy on this branch of terra-culture.—Perhaps I may conclude, in some future communication, to write an article describing our system of management in the cultivation of this earthly vegetable.

NELSON BLANCHARD.

Centerville, Allegheny Co., N. Y., 1859.

THE SHEEP BUSINESS AND LEGISLATION.

MESSRS. EDITORS:—I was quite amused at the mention of the FISH bill, the length and bearings of which you so fully described in your issue of the 6th inst., and which seems to be designed to pick from the poor seedsmen their already hard-earned laurels. After several years experience and dealing with this class of men, I have concluded that there is as much honesty practiced in their business, as in that of the other professions, and that the obstacles they have to surmount are ten to one of that of the other trades. Mr. FISH must be quite ignorant of the difficulties of the seedsmen, or of the laws of Nature, on every page of which is written, in characters never to be defaced, change, change, ever change!

Let us suppose Mr. F.'s bill passed, and the law in force, and see how it will work. Mr. F. goes out one morning, and his wife (perhaps he has none) requests him to bring home some Aster seeds, as she saw some fine double ones in M.'s garden last fall. He calls on a seedsmen of good reputation, and procures a package marked *Pure Aster Seeds*, the seeds are planted, and behind the produce are single petaled flowers, about the size of a dime. F. waxes warm, and has the seedsmen arraigned to answer, wherein said seedsmen pleads that the seeds were true to name, that in consequence of the passage of the late law, he was compelled to be as careful and circumspect as possible. Prof. TRACT, the best botanist authority, is called to the stand, and testifies that the true type of the Asters were small and insignificant flowers, and that a double, both the petals and the fruit, are of a color, which are so much admired, are not from seeds, but

hybrids. Consequently F. has his trouble for his pains.

Again, a large quantity of rare and new seeds are just received from China, put up by the great Mr. FORTUNE; these are warranted pure, but the price is very high, as the seedsmen has been compelled to add fifty per cent. to his usual profits, to guard himself against the law, in the form of fees, costs, &c. Mr. F. bites at the bait, and as matters turn out, some of the things are not true to name. Seedsmen quietly forks over the fifty per cent. already procured of Mr. F., and hopes for better luck next time, while Mr. F. has again his pains for his trouble.

The price of seeds would be greatly enhanced by this law, and much of the business would be transferred to persons of no responsibility—persons who cared nothing for law or its consequences—while it would not in the least remedy the evil for which it was made. A seedsmen receives four kinds of corn, white, red, blue, yellow, and in his endeavor to furnish his customers pure seed, plants 100 hills in each corner of his eighty acre lot. The seed is sold and planted, and his customers complain that their corn contained grains of all colors, and Mr. SEEDSMAN is set down as a cheat, for not trammeling the winds of heaven, and that active co-operator in the field of nature, the "busy little bee," who carries the pollen from flower to flower.

There is positively no way to raise seed entirely pure but to plant a single seed under glass, and then exclude all insects. Even then it will take several years to effect this purpose, as all productions are at times disposed to make a retrograde movement towards their original type. This the breeder of stock well knows, for in spite of his vigilance, here comes a calf pure white, with black or red ears, the exact type of the original British stock several centuries ago.

W. P. B.

PATENT OFFICE AG'L OPERATIONS.

END. RURAL:—If the strictures of the public press are any criterion, I conclude that the Filling-busting, Patent-Lever, Agricultural Convention, lately assembled under the auspices of the Agricultural Bureau, at Washington, meets with no favor or mercy. In fact, the whole establishment is a parasite on the Patent Office and its acts—besides the distribution of such seeds and plants as come into the possession of the United States through the Navy and Army, in their visits to foreign parts, is a useless, expensive, and illegitimate branch of the government.

The Transactions of the Massachusetts Horticultural Society contain a very sensible and modest article on this subject, in which the author, Mr. JAMES LEWIS RUSSELL, Professor of Botany, shows up the acts of this branch of the Office in a very just and pertinent manner; censuring the indiscriminate course in which seeds are distributed—many totally useless, and others mere "worthless weeds."

That two or more hundred thousand dollars should be expended in importing from England and other countries, common—often worse than common—seeds, and sending them through the mail to every part of our extended country—with-out the remotest consideration of climate, habits of production, or wants of the people—is sending "coals to Newcastle," and "curling tongs to Guinea," and is most preposterous and absurd.—"Uncle Sam's" mail bags are sufficiently overburdened with Congressmen's shirts to wash and wives' dresses—while the finances of the concern are verging on bankruptcy—without carrying 100 bushels of "King Philip Corn," or "Cat Mountain Wheat,"—which are not worth the powder to shoot or the fire to burn them—not to mention the millions of bags and papers of all conceivable commodities, in the way of Garden, Flower and Field seeds, not one in fifty of which, after trial, has ever been adopted as a standard article, and never will be. There is hardly an exception to this fact. The Chinese Sugar Cane (Sorghum) and a variety of Cabbage, are the only instances where these seeds, in this region, have generally been esteemed as new and valuable, as far as my experience goes, and I have had the run of some bushels every year, for a long period. Nine-tenths of the whole catalogue are the merest humbug in the world.—Five or six varieties of Early Peas, for instance, cannot compare with those now in use, and in everybody's hand, and have been for twenty years, and in this category may be classed the "Improved" Onions, Carrots, Parsnips, Ruta Bogas, &c. In short, there is nothing in the whole routine better—often not half as good—as can be procured from any reputable seedsmen who understands his business.

W. P. B.

"WILL KEEPING SHEEP PAY?"

In a late number of the RURAL the above question is asked, then follows a statement of the avails of six sheep owned by Mr. H. A. WHITTEMORE, who says he has averaged \$4.62½ per head for the last year, and wishes to hear from others on the same subject. I have twenty-four ewes that have averaged six pounds and one ounce of wool per head for the past three years. The average price per pound for the same time is 43 cents, amounting to \$187.69, and I have sold two years' crop of lambs for \$216.50, making \$404.19, which, added to one crop of lambs now on hand, twenty-five in number, that I call worth to me \$100, the whole makes \$504.19—an average of seven dollars per head for my twenty-four sheep. If he thinks four dollars too high for my lambs, call them three, and I have an average of \$6.65. Said sheep have been kept on good hay and pasture only—no grain or roots of any kind. In winter I keep them in a good warm place.—S. D. TABER, Castile, N. Y., 1859.

MR. EDITOR:—Mr. WHITTEMORE gives us the proceeds of his sheep, and wishes to hear from others, to which, with your permission, I will reply. I wintered five ewes last winter, on hay alone, which sheared, on an average, 4½ pounds. The wool was used to make cloth for family use, and estimating it at forty cents per pound, we find a total of \$9.50. The ewes raised eight lambs, which I sold for \$2 per head, or \$16—making a total value, of wool and lambs, of \$25.50—averaging \$5.10 per head.—ANNE GRAY, Watford, N. Y.

MAPLE SUGAR—TIN SAP BUCKETS.

MESSRS. EDITORS:—As the season of the year is near at hand when many of the readers of the RURAL will be engaged in making maple sugar, they will thank you for permitting me to call their attention to the subject of sap buckets, as very much of their success in sugar-making, both as to quality and quantity, depends upon the provision made to receive the sap as it comes from the tree.

I suppose there is no question about the fact that, on every account, tin sap buckets are the best that have yet been found. They possess many advantages over any others, the most obvious of which are—1st. They can be hung on a nail close under the spile, preventing any of the sap being blown away while passing from the spile to the bucket. 2d. Being elevated from the ground, the sap is kept free from leaves, which always discolors it, and of course affects the sugar. 3d. They are light and pleasant to handle. 4th. They can be scaled as often as may be necessary to keep them perfectly sweet and clean, and that with very little trouble, enabling those using them to make as good sugar from the last run of the sap as from the first, which all accustomed to making sugar, know cannot be done with any other bucket. And last, but by no means least, when they are no longer needed they can be easily cleaned, and, as one fits inside of another, be put away in a very small space, with the certainty of being found in good order, and all ready for use when they are wanted for the next season's sugar-making, and with proper care, that is to say, if they are properly cleaned and put in a dry place, I see no reason why they will not last a lifetime, without one cent expense after the first investment.

The above reasons are given, and confirmed by the experience of one who has made maple sugar, and all of whose observations on the subject lead him to advocate, most persistently, the universal adoption of

TIN SAP BUCKETS.

Rural Spirit of the Press.

"Droptical Land."—Underdraining.

JOHN JOHNSON writes the *Boston Cultivator* that "the advocates of drainage expect farmers to be possessed of common sense enough to discriminate between land that will pay for draining and that which will not. If there are those that cannot so discriminate, the draining of a few acres will show plainly whether it will or not, so that even if one has very little judgment in the case, he need not essentially err. Every man may have observed that one part of a field will in general produce fine bright straw, (it may be wheat or other grain,) with plump heavy ears, giving a satisfactory return for seed and labor expended, while immediately adjoining such part of the field another portion produces dark colored straw, (even if not rusted,) and lean ears, with light, unremunerating grain. Now, did it ever occur to the farmer to ask himself the reason why one part of the field brought good grain and the other bad?—for surely he must see there was a local cause. I will tell how it is: the part giving good grain is sound, healthy land; the part giving bad grain, is *droptical* and diseased. Whatever manure may have been applied to it, did little or no good, and whatever vegetation it produced was unhealthy like itself. To prove what I say, let a ditch be dug in the sound land, and there will be no run of water, even in a wet time, unless there is a snow-bank melting near by, which runs into the ditch from the surface. Then let another ditch be dug through the *droptical* land, two and a half feet deep, and in ninety-nine cases out of a hundred there will be a free run of water, and that coming at or near the bottom of the ditch. And if the *droptical* portion is thoroughly tapped, it will bring for a number of years much better crops than the land that was healthy from the beginning. In many cases such land will pay the cost of draining by the excess of the first crop, where it can be drained for \$15 to \$22 per acre."

Management of Manures.

THIS Country Gentleman, in an article on this subject given in its issue of the 17th inst., remarks: "We have often had occasion to urge the importance of the thorough intermixture of manure with the soil. One of the chief reasons why fermented manure so often proves superior to unfermented, is the facility with which it may be pulverized while working in by plowing and harrowing. Repeated experiments with fresh manure, made by plowing it under in the usual way, in one instance, and by thoroughly grinding it into the soil by means of what is termed a *drag roller*, in another; have shown the beneficial effects of the latter treatment on the crop to be more than double the former. In corroboration of these views, we condense into a brief form the statement of an experiment reported by H. C. WHITS, of Barre, Vt., in the *Aerie England Farmer*. He cuts all kind of fodder, except hay, before feeding, which causes all his manure to be short, and easily spread and intermixed with the soil. He breaks up his green sward eight or ten inches deep, late in autumn; in the spring the sod is rolled, and the fresh short manure is drawn out and spread upon it at the rate of fifteen to eighteen cords per acre. It is thoroughly mixed with the soil by the harrow or cultivator, and just before planting it is plowed three to five inches deep and harrowed again. This treatment has given, for the last three years, 60 to 70 bushels of corn per acre. The success is attributed, no doubt justly, to the thorough mixture of manure and soil, the product of corn, oats, potatoes and hay being about double the amount that obtained 'under the old system.'"

The Horses of Norway.

LAIKO, in his travels in Norway, says that the horses in that country have a very sensible way of taking their food. Instead of swilling themselves with a painful of water as a draught, no doubt from the fear of not getting any again, and then overdoing themselves for the same reason, they have a bucket of water put down beside their allowance of hay. It is amusing to see with what relish they take a sip of the one and a mouthful of the other, alternately, sometimes only moistening their mouths, as a rational being would do, while eating a dinner of such dry food. A broken-winded horse is scarcely ever seen in Norway.

Agricultural Miscellany.

A FALSE CHARGE—"Strike, but Hear!"—Popular and successful journals, like prominent and influential individuals, are the constant targets of the envious, jealous and ambitious. Malice, like Death, loves a shining mark, and to him who has excelled in any department, for so long as poor human nature exists in its present state, his heels will be snugged at, and his good name traduced "without a why or a wherefore." These remarks are suggested by a very singular, and, so far as this journal is concerned, absurd and unjust article in a late number of the *Michigan Farmer*. Under the title of "Wool Circulars and Eastern Reports," that journal has a long, and apparently labored and studied leader, with the evident design of demolishing some special enemies, and, as a dessert, the Eastern Agricultural, Commercial and Literary papers—and as the RURAL NEW-YORKER comes under that head, and is prominently noticed, it would be unjust not to recognize the attack. After paying its respects to a firm in Cleveland, Ohio—Wool Dealers and publishers of a Wool Reporter—the *Farmer* proceeds in this trenchant wise, with the apparent intention of devouring several "eastern papers" at one fell swoop:

"The eastern papers were then [last spring] busy informing the wool growers that prices must settle low, that manufacturers would close their mills, and dismiss their operators, that the market was overclouded with foreign goods, and that the clip would be much larger than it was the year before, and therefore it was useless to look for higher rates; prices must be at least 10 cents per pound less than they were the year before. These opinions were prevalent at the east, and were spread over the west by the *Rural New-Yorker*, the *New York Tribune*, by the *Journal of Commerce*, and by nearly every paper that came from the east. Many farmers in this State who took no paper but one of these eastern journals, sold their wool under the impression that wool would not pay for years to come, and then sold out their sheep as soon as the grass fed put them in condition for the drover or the butcher."

Now, knowing as they do, that so far as this journal is concerned, the above statement is entirely unfounded—that no article can be quoted from the RURAL to sustain such an unjust and injurious charge—what can our readers think of the veracity and reliability of the paper which gives it utterance? In our long experience as a journalist, we remember nothing more flagrant and insidious—nothing so far from the truth, or so unbecoming the character of honorable and manly rivalry; for that jealousy of the RURAL's large circulation in Michigan is the cause of the attack, is as apparent as that the sun is above the horizon at noon-day. And this is even confessed in another part of the article, for, after lauding itself, and again pitching into its Cleveland neighbor, the Oracle—like the minister who preacheth to a few patient listeners about the sins of absentees—in language more emphatic than polite or truthful, thus reveals the secret of its ire: "Two-thirds of the Farmers at the west expend all the money they can afford for reading matter in sustaining eastern papers. Every post-master's clerk is a hired agent to thrust upon them at low rates the libelations of editors who know no more about western farming and care no more for western interests, than so many bullfrogs."

Part of this may be true, and it's a good thing that our Western friends have a monitor so courageous, faithful and wise—a veritable SOLOMON to teach and guide their erring footsteps. As the RURAL is mentioned first in the list of Eastern journals—thanks for according it the post of honor, and proper rank, for once!—of course, we must take a large share of the sweet compliment about Western farming, interests and bullfrogs. We feel bad, certainly—yet can't help remembering that some fifteen years ago, when this editor of marvellous Western knowledge and feelings was basking in Eastern sunshine, we started and successfully established the *Michigan Farmer*! And, if our memory serves us, we aided the cause of Western Agriculture in some other respects—had something to do with the inception of the first law ever passed by the Michigan Legislature to promote Rural Improvement by the organization of Agricultural Societies, and earnestly labored to have the People and the State benefited by its provisions. We then thought we knew something more about Western farming and Western interests than did the bullfrogs—yet it may have been a myth—and are confident we have not forgotten what little knowledge we possessed, nor have the numerous friends of our comparatively early days, and hard struggles, yet ignored our humble but earnest efforts. The aid they then rendered us—at a time when Agricultural Improvement was not as popular and easy as now, and when labor in behalf of the cause was real labor—and how they seconded our efforts until impaired health compelled us to retire from the field, will ever be held in grateful remembrance. And, though now located a little nearer sunrise, we trust the thousands of Western friends with whom we communicate weekly, do not consider us quite so great an ignominy concerning their position and interests as the new-fledged editor of our first agricultural journal would fain make them believe. On the contrary, we have the best assurance that they consider the RURAL NEW-YORKER independent, progressive and reliable (even in its Market Reports), with decidedly Western proclivities.

—In conclusion we challenge our cotemporary to prove his assertions. If what he charges is true, it can be sustained by quoting from our pages—and if false, as we pronounce it, where is the justification for the injurious attack? *Strike*, if you please, but let your readers and the public hear or see the testimony. Meantime we shall endeavor to find room, in a week or two, to repeat the substance of what we did say and quote last spring on the subject of Wool, its price, &c., in order to show the unfounded nature of the charge. The reputation of a journal like the *New-Yorker* stands upon its character for truth and statistical accuracy, and while we would hail with pleasure a competition which is fair and honorable, this stabbing in the dark, with a poisoned arrow, we despise. The Market Reports of the RURAL have been questioned, and upon this point (general accuracy and reliability,) we challenge not only the *Michigan Farmer*, but any weekly (not mainly devoted to commercial matters) in the country! Will our Michigan cotemporary "come to the center?" The *Farmer*, since it began to deck itself in clean clothes every seventh day, is evidently "bound to blaze," and while our remarks are more particularly intended for its special attention, any who feel aggrieved are requested to take up the glove, as we "bar neither age, weight, nor color." And here we rest.

N. Y. STATE AG. SOCIETY—Winter Premiums.—

The following premiums were awarded at the recent Annual Meeting of our State Ag. Society:

FARMS.
GRAZING FARM.—L. D. CLIF, Carmel, Put. County, \$500
GRAIN FARM.—Under 50 acres, S. Walrath, St. Lawrence Co., \$50; 2d, over 50 acres, L. Sherrill, Greene Co., \$50.

CHEESE DAIRIES.
James S. Jackson, Leyden, \$50; 2d, Norman Gowdy, Lowville, \$30. L. S. Standing, Denmark, special prem., Silver Medal; Clemence Whitaker, Marlburg, special commendation.

BUTTER DAIRIES.
J. C. Collins, Lewis Co., \$50.
BUTTER.—Best 30 lbs. Win. H. Pew, Lewis Co., \$15; 2d, Hiram Mills, Lowville, \$10; 3d, L. I. French, Richfield Springs, Otsego Co., \$5.

BUTTER MADE IN JUNE, AUG., AND NOV.—Best 30 lbs. B. S. Carpenter, Elmira, Chemung Co., \$15. One tub, Miss Jane E. Mills, Lowville, 14 years old, very superior, special prem.

WINTER MADE BUTTER.—Best, Elia Merriam, Leyden, Lewis Co., \$3; 2d, Norman Gowdy, \$3; 3d, Miss Walrath, Canton, St. Lawrence Co., Trans.; 4th, Miss Van Auker, Phelps, Ont. Co., Trans.

CHEESE.—Best, Norman Gowdy, \$15; 2d, Theron Van Auker, \$10.

EGGAT
Robert L. Pell, New York, on the edible flesh of New York, plate, \$100.

DRAINING.
William Johnson, Geneva, \$20; 2d, Jonathan Talcott, Rome, \$10.50. Walrath, Canton, special prem., Sil. Med.

PREPARED GRASSES.
Mrs. J. T. Van Namee, Pittstown, \$15.

COLLECTION OF GRAINS IN STRAW
Mrs. J. T. Van Namee, \$10.

WINTER FRUIT

APPLES.—Best 30 varieties, J. W. Bailey, Mattaburg, Dip. and \$4; best 10 do, W. P. Otley, Phelps, Ont. Co., Dip. and \$3; 2d, W. Ives, Watertown, Barry and \$1; 3d, J. M. Mattison, Tompkins Co., Trans. Best plate (caldwin) W. P. Otley, Sil. Med.; 2d, J. M. Mattison, (King) Thomas.

GRAPE.—Best sample (Isabella) R. P. Wilce, Albany, Sil. Med.

FIELD CROPS.

SPRING WHEAT.—Solomon Walrath, the quantity land not sufficient—crop at rate of 40 bu. per acre; barley, Norman Gowdy, 50 bu., \$15; rye, C. L. Keated, 44 bu., \$15; oats, same, 115 bu., \$15; corn, same, 97½ bu., \$15; 2d, H. S. Carpenter, 50 bu., \$10; peas, 180 bushels, \$45; beans, 50 bushels, \$15; Walrath, Modest; potatoes, Lovi Harford & Hiram Olmstead, Walton, Delaware Co., 1-1600 acre, 233 bu., \$4; ruta baga, Lovi Harford & Hiram Olmstead, Vol. Trans.; mangold wurtzel, Thos. Messenger, East Kent, \$5.

FOR SAMPLES OF GRAIN AND SEEDS.

WINTER WHEAT.—White, Wm. P. Otley, \$3; 2d, red, O. Howland, Auburn, Cayuga Co., \$2; 3d, Wm. P. Otley, \$1.

SPRING WHEAT.—Tee wheat, H. Blodget, Denmark, Lewis Co., \$3; 2d, Wm. P. Conradt, Brunswick, Italia Co., \$2; 3d, O. Howland, \$1.

RYE.—Wm. P. Conradt, \$3; 2d, B. S. Carpenter, \$2; 3d, C. L. Keated, \$1.

BARLEY.—Two Rowed.—Norman Gowdy, \$3; 2d, O. Howland, \$2; 3d, Wm. P. Otley, \$1.

BARLEY.—Foot Rowed.—B. S. Carpenter, \$3.

CORN.—Yellow, C. W. Ellis, Westmoreland, Oneida Co., \$3; 2d, Sol. Walrath, \$2; 3d, H. Blodget, \$1.

WHITE CORN.—Henry Wier, Pittstown, Rens. Co., \$3; 2d, B. S. Carpenter, \$2; 3d, N. Y. S. Ag. College, \$1.

SWEET CORN.—Wm. P. Conradt, Vol. Trans.; Wm. Newcomb, Johnsville, Rens. Co., Vol. Trans.

BROCKWATER.—B. S. Carpenter, \$3; 2d, L. L. French, \$2; 3d, Wm. P. Conradt, \$1.

BEANS.—White.—Wm. P. Conradt \$3; 2d, S. Walrath, \$2; 3d, Wm. Newcomb, \$1.

ONIONS.—D. A. Mackay, Rensselaerville, Albany Co., \$3; 2d, Henry Wier, \$3; 3d, Wm. P. Conradt, \$1. Sample of oats, "Potato Oats," E. Merriam, seed from Bay Chautauque, Canada East, a fine sample, Vol. Trans.

PEAS.—Norman Gowdy, \$3; 2d, O. Howland, \$2.

TIMOTHY SEED.—S. Carey, Albany, \$3; 2d, O. Howland, \$2; 3d, H. Blodget, \$1.

CLOVER SEED.—W. P. Otley, \$3; 2d, S. Carey, \$2.

FLAX SEED.—Henry Wier, two samples, one red and one white, Vol. Trans.

MILLET.—Henry Wier, Vol. Trans.

DISCRETIONARY PREMIUMS.

Sugar Cane Syrup, W. P. Otley, \$2. Maple Sugar, H. Blodget, \$2. Turkeys, W. P. Otley, \$2; 2d, Wm. Richardson, Albany, \$1. Pense & Eggleston, Portville, Hoagland, Dip. same, Cultivator, Dip. same, Harrow, Dip. S. E. & M. P. Jackson, Boonville, Mower and Reaper, Dip. E. E. Service, Hubbard's Combined Reaper and Mower, Dip. Mrs. W. Ives, Watertown, Current Wine, Trans. F. Bauer & Co., Buffalo, 8 samples Faring, Trans. M. Hallenbeck, Model Mowing Machine, Trans. E. C. Rowland, Phelps, Self-Opening Gate, Dip. Emory Brothers, Albany, Churn, with Dog Power attached; Emory Bros. Horse Power speed and safety attachment, Circular Saw for sawing wood, Over-shot Separator and Thresher, Dip. Emory Bros. banford's Improved Farm Mill, Sil. Med. Volney Burgess, Isabella Grape Vine, 6 years old, very fine, Dip. Hon. A. B. Dickinson, Horby, exhibited a new Draining Plug which attracted much attention, and was fully explained as to its operations by Mr. Dickinson. It promises, in stiff clay soil, to reduce very materially the cost of drainage, and is within the means of every farmer.

OFFICERS OF STATE AG. SOCIETY.—The following is a complete list of Officers for 1859:

President—A. B. CONNOR, of Rockland.
Vice-Presidents—E. G. Falle, of New York; O. S. Wainwright, of Dutchess; Herman Wendell, of Albany; H. W. Beckwith, of Washington; B. N. Huntington, of Oneida; B. A. Law, of Delaware; James O. Sheldon, of Ontario; T. C. Peters, of Genesee.

Corresponding Secretary—D. P. Johnson, of Albany.

Recording Secretary—E. Corning, Jr., of Albany.

Treasurer—L. H. Tucker, of Albany.

Executive Committee—Thomas B. Carroll, H. W. Dwight, E. A. Lawrence, C. Boughton, Alrick Hubbell.

MAINE RURAL.—Drew's Rural Intelligencer of the 12th inst., contains the valedictory of Rev. Wm. A. Drew, its originator, and announces its transfer to Messrs. BROCK & CHANET. The paper of the 10th comes to us under the title of *Maine Rural*, and in neat quarto form. We trust this "Rural" will do good service in the cause, and wish it success—yet don't think its prosperity will be enhanced by publishing (even in a supplement) the opening chapters of a love-and-murder-story, for the benefit of a Metropolitan hebdomadal.

CONNECTION.—The first prize plan of Farm House, given in No. 1, of this volume, was designed by Geo. D. RAND, instead of Geo. B. as erroneously printed in the report of awards. Mr. R. is now a resident of Worcester, Mass., and one of the editors of the *Transcript*, we believe.

—The plan of Circular Barn, noticed favorably in the report of Committee (in RURAL of Feb. 5th) as from C. J. RATHBUN, Springfield, Mass., was designed by C. T. RATHBUN, of Pittsfield, Mass.

THE LEXOX (Mad. Co.) Farmers' and Mechanics' Association, organized last autumn, had a fine Fair in September, and is in a prosperous condition. The officers are:—President—R. H. AYER; Vice-Presidents—F. M. Whitman, John W. Allen; Secretary—I. N. Messenger; Treasurer—Theo. F. Hand; Executive Committee—D. P. Lamb, E. F. Lewis, E. C. Saunders, C. P. Tobey, Nelson Cobb and A. P. Lampham.

HONOLULU SQUASH.—We are requested by Mr. BRIGGS, of Maceodo, to say that he has no seeds of this squash to sell at any price—not half as much as he would like to plant. We ought, perhaps, to have stated this fact in our former notice.

FRUITS ADAPTED TO THE WEST.

Our Western correspondents are constantly inquiring the varieties of fruits best adapted to culture in the West. Trees have suffered so much in that section the past few years, that it is not strange there should be a great anxiety to know which, if any, will succeed. The proceedings of the American Pomological Society, just received, contain reports from different State Committees, in answer to questions asked in the Society's circular, as to the best fruits in their several localities, and from these we select three, the only reports received from Western States:

OHIO.

The Cincinnati Horticultural Society furnishes the following lists of fruits for the vicinity of Cincinnati:

APPLES.

For an orchard of one hundred trees, best also varieties.

Red Astrachan	10	White Pippin	25
Bramley	10	Wine Sap	25
Marion's Bush	10	Rawley's Janet	25

Best twelve for an orchard of one hundred trees.

Red Astrachan	6	Fallenwalder	10
Early Harvest	4	Wine Sap	10
Bramley	4	Rome Beauty	10
Rambo	6	Smith's Cider	10
Full Pippin	6	White Pippin	10
Maiden's Bush	6	Rawley's Janet	10

PEARS.

Best twelve for an orchard of one hundred trees.

Red Astrachan	8	Newtown Spitzenberg	5
Early Harvest	2	White Pippin	5
Bramley	2	Wine Sap	5
Summer Queen	3	Smith's Cider	5
Maiden's Bush	6	Prior's Red	5
Porter	2	Rome Beauty	10
Full Pippin	3	Yellow Belleflower	5
Wine Sap	3	Bellflower	5
Rambo	4	Rawley's Janet	5

PEACHES.

Best twelve for an orchard of one hundred trees.

Large Early York	20	Old Mixon, free	20
Crawford's Early	10	White Heath, free	15
George the Fourth	10	Old Mixon, cling	15

Best twelve for an orchard of one hundred trees.

Large Early York	15	Coolidge's Favorite	5
Crawford's Early	10	White Heath, free	5
George the Fourth	10	Heath Cling	5
Ward's Late, free	3	Old Mixon, cling	5
Maria White	3	Druid Hill	5
Old Mixon, free	10	Columbia, free	5

PEACHES.

Best twelve for an orchard of one hundred trees.

Large Early York	20	Old Mixon, free	20
Crawford's Early	10	White Heath, free	15
George the Fourth	10	Old Mixon, cling	15

Best twelve for an orchard of one hundred trees.

Large Early York	15	Coolidge's Favorite	5
Crawford's Early	10	White Heath, free	5
George the Fourth	10	Heath Cling	5
Ward's Late, free	3	Old Mixon, cling	5
Maria White	3	Druid Hill	5
Old Mixon, free	10	Columbia, free	5

MICHIGAN.

D. K. UNDERWOOD, of Adrian, Chairman of the Society's Fruit Committee in Michigan, reports as follows for that State:

APPLES.

Best twelve for an orchard of one hundred trees, for family use.

Early Harvest	10	Bellmont	15

KING APPLE OF TOMPKINS COUNTY.

No apple we are acquainted with is gaining more in public favor than the *King of Tompkins County*, which we figure above. In quality it is very good, the flesh, although coarse, is tender and juicy, with an exceedingly agreeable, rich, vinous flavor. The fruit is large and showy, bears transportation well, while the tree is a vigorous grower and an abundant bearer, giving good crops almost every season. These qualities, our readers will perceive, make it extremely valuable as a market fruit. At the last meeting of the *Fruit Growers of Western New York*, on the vote being taken for the best varieties for an orchard of 1,000 trees, it stood the fourth on the list of twenty-seven varieties—the first three being *Baldwin*, *R. I. Greening* and *Roxbury Russet*. Had growers been better acquainted with it, it might have received a still more flattering vote. The origin of the *King*, we believe, is not known, but it has been grown for a good many

years in Tompkins, and the neighboring counties. It was only introduced to the notice of Pomologists generally a few years since, and at the session of the *American Pomological Society* in 1856, was placed on the list of the new varieties which promise well. Mr. Downing gives the following description:—"Tree very vigorous, spreading, an abundant bearer annually. Fruit large, globular, inclining to conic, sometimes oblate, angular. Skin yellowish, mostly shaded with red, striped and splashed with crimson. Stalk rather stout and short, inserted in a large, somewhat irregular cavity. Calyx small and closed, set in a medium slightly corrugated basin. Flesh yellowish, coarse, juicy, tender, with an exceedingly agreeable, rich, vinous flavor, delightfully aromatic. December to March."

It is said to be good for eating almost as soon as picked in the fall, and retains its flavor well until the latter part of March, and much later if well kept.

HORTICULTURE IN CANADA.

We notice with great pleasure an awakening interest on the subject of Horticulture in Canada. The first steps for organizing a *Fruit Growers' Association for Upper Canada* were taken during the last Provincial Exhibition at Toronto, and a Committee was appointed, consisting of a number of leading fruit growers, to draft a Constitution and By-Laws, to be submitted to a meeting to be held on the third Wednesday in January. This was accordingly done, and an Association organized, bearing the name of "The Fruit Growers' Association of Upper Canada," whose objects are "the advancement of the science and art of fruit culture, by holding meetings for the exhibition of Fruits and the discussion of all questions relative to Fruit culture, by collecting, arranging and disseminating useful information, and such other means as may from time to time seem advisable."

The Hamilton *Spectator* says:—"The means for collecting information in relation to the subject appear to us very simple, and likely to be efficient. They are the establishment in each county of separate sub-committees, to consist of the Presidents of the Horticultural Societies it contains, and of two other gentlemen who may or may not be members of such Societies; which Committees are to transmit semi-annual reports to the Central Committee. Thus the experience of individual fruit growers all over Canada may be collected and disseminated for the good of the whole community. Need we say that we wish success to an Association with such objects?"

The officers elected for the first year, are as follows: President—Judge CAMPBELL, Niagara. Vice-Presidents—J. HURBURN, LL. D., Hamilton, and Geo. LESLIE, Esq., Toronto. Recording Secretary—ARTHUR HARVEY, Esq., Hamilton. Corresponding Secretary—J. D. HUMPHREYS, Esq., Toronto. Treasurer—Ed. KELLY, Esq.

The local committees throughout the country are not yet fully organized. The representative members for York and Peel are Messrs. GRAY and FLEMING; those for Wentworth—Messrs. FRED and MESTON; those for Brant—Messrs. ARNOLD and WILSON.

The Sub-Committee on Management consists of Messrs. FLEMING, HURBURN, and LESLIE; that on Orchard Fruits, of Messrs. ARNOLD, LESLIE and KELLY; that on other Fruits, of Messrs. GRAY, MESTON and FRED; that on Publication, of the Secretaries and Dr. HURBURN.

A HORTICULTURAL SOCIETY, to be called the *Cobourg Horticultural Society*, was organized on the 3d inst. The following were the officers elected: President—THOMAS SCOTT, Esq. Vice-President—G. M. GOODEVEY, Esq. Secretary—F. G. COVENTRY, Esq. Treasurer—DAVID BURN, Esq. Committee—Messrs. B. LOKE, F. G. CALLENDER, A. J. BURHAM, JOHN TAME, JOHN ROBERTS, W. H. KITTSO, G. BENNETT, A. M'DONALD, GEO. E. JOSE.

OLD QUINCE TREES PRODUCING BLIGHT.

Eds. RURAL:—In a former communication, I stated that all the blight we had on our grounds was on some pear trees in the immediate neighborhood of some old affected quince trees, while the remainder of our trees have never shown any signs of blight. With your permission, I will give you some additional facts that came under my observation while visiting an amateur a few days since, in this vicinity. I found some old quince trees badly affected with the blight, and two pear trees standing near them, also affected; and about one half of the tops cut away in consequence. In another part of his grounds, about fifteen rods distant, I found a row of quince trees, very much blighted—some pear trees standing in the same row were also affected, while the remainder of his trees, thirty or forty in number, were, to all appearance, perfectly healthy. He told me that all the blight he ever had, was confined to the above named trees. We have also the testimony of J. E. BARNHART, of New Jersey, to the same effect, in the *Patent Office Report* of 1856, page 352. He says, "It is a strange fact that some pear trees growing in the immediate vicinity of some affected quince trees, have all been more or less injured; while in other parts of my grounds I have not seen a single blight, and chiefly no blight of the extremities, showing that the same disease did work in the same manner upon some pear trees as if by contagion."

The above corresponds with my experience, and observation, and if we find that pear trees standing near old quince trees blight worse than those at a distance, the sooner we learn this fact the better, that we may be prepared to apply a remedy. Mine is to eradicate the quince, root and branch. If pear growers would communicate such facts as come under their observation, perhaps we may learn something more of this mysterious disease, for very little is known of the cause, and, perhaps, still less of the remedy.

J. S. C.

Greece, N. Y., Jan., 1859.

FRUIT GROWERS' SOCIETY OF NIAGARA COUNTY.—It is with no small pleasure we record the organization of a Fruit Growers' Society in Niagara Co. We notice among the officers, and those present at the meeting called for the formation of the Society, some of our best friends, who are among the most intelligent and successful Pomologists in Western New York. It is proposed to hold monthly meetings for discussion, &c. The following officers were elected for the present year:

President—N. B. ROGERS.

Vice-Presidents—JACOB GAUNT, E. MOODY, E. S. HOBBS.

Secretary—C. L. HOAG.

Treasurer—N. S. RINGBERG.

Executive Committee—W. P. TOWNSEND, D. MONSE, L. H. NICHOLS, M. L. BURRELL, JAMES CULVER.

Committee on Nomenclature—W. P. TOWNSEND, E. MOODY, C. L. HOAG.

Committee on Fruits—JACOB GAUNT, A. B. PENFIELD, JOHN CRANE, SOLOMON RICHARDSON, EDWIN HAMMOND and CHARLES AYER.

The next meeting is to be held on Saturday, the 12th of March, at Lockport.

Horticultural Advertisements.—We call the particular attention of nurserymen, and all who intend to plant trees, shrubs, or vines, the coming spring, to the advertisements in this number. We are so crowded with advertising the present week that for convenience in reference we give all on horticultural matters a place in this page.

Horticultural Advertisements.

NATIVE EVERGREENS.—The subscriber is prepared to furnish Nurserymen with Native Evergreens of the following varieties: viz. *White Pine*, *White Spruce*, *Hemlock*, *Balsam Fir*, and *Arbor Vitae*; from 6 to 12 inches high for \$1 per 100, or 97 per 1000.

GEORGE S. ROOT, Skaneateles, N. Y.

GRAPE VINES.—Hartford, Prolific, Diana, Concord, Rebecca, Northern Muscadine, To Killon, Early Hudson, and 50 other varieties, at \$1 each, charged paid by Mail or Express. Delaware, Anna, and Perkins' also in fine stock of well rooted plants of the *Lawson Blackberry*, and *Orange Raspberry*. Address HOAG & CHAIN, Lockport, N. Y.

THE UNDERSIGNED, whose genuine *CHERRY CRANBERRY* has lately attracted so much attention, will send to all who will apply for it. A circular, giving much information about the cultivation of this excellent fruit, and how to make *Current Wine*. Also prices of plants and seeds. CHARLES F. EDWARD, Ravenswood, Long Island.

477-11

WHALE OIL SOAP. The most effective protection for the skin, and for the hair, and for the face. One or two applications will remove all impurities. It also makes the skin soft and supple, and gives it a healthy and beautiful appearance. Put up in boxes and sold by Express. Price 10 cts. per box. For sale by all druggists.

477-12

GREAT VALLEY NURSERY ON N. Y. and **GRACE R. R.**—The subscribers offer a fine lot of *Arbor Vitae*, *Hemlock*, *White Pine*, and *Balsam Fir*, under 1 foot, very low for cash. The same from the forest, under 1 foot, 87 per 1,000—\$2 per 1,000. Maple Seedlings, Sugar and Sour, from forest, 1 to 2 years old, in quantities, at \$2 to \$3 per 1,000. Good plants and fair dealing guaranteed. Orders also received by F. K. PIERCE of the *Bloomington Nursery*, Ill. See Catalogue. S. T. LEELEY & CO., Great Valley, N. Y.

477-13

TREES FROM 1 TO 4 YEARS OF THE "KING OF TOMPKINS CO." Apple, which originated near and was first introduced by us—has been awarded the first premium by the N. Y. State Agricultural Society as the best variety in competition with a rare specimen of *Northland Spr*, from Rochester, and fine *Baldwin*—has sold in New York the last few years at \$6 to \$8 per barrel, and is more thrifty and productive than the *Greening*. Also Standard and Dwarf Fruit Trees of all kinds—Ornamental Trees and Shrubs, Vines, Green-House and Bedding Plants. Also, Apple, Plum and Quince Stocks, at the *Seneca Lake Highland Nurseries*, established in 1845, by E. C. FROST, Havana, N. Y.

477-14

SHEPARD'S FORWARDING and Commission HORTICULTURAL NURSERY & SEED AGENCY. NO. 159 FRONT STREET, NEW YORK.

The only establishment in the United States giving special attention to the Foreign and Domestic interests of Horticulturists, Seedsmen, Florists, &c., affording facilities for the importation and exportation of seeds, plants, and all articles pertaining to these departments, not to be secured elsewhere.

477-15

FOR SALE. Apple Seed, Orange Seed, Gunny Cloth for packing. Pear Stocks, &c.

TO ARRIVE EARLY IN THE SEASON FROM EUROPE. Dwarf and Standard Pears and Dwarf Apples. Pear, Plum, Quince, Mahaleb and Paradise Stocks, Roses, &c. Anything and everything required for Garden, Nursery or Seed purposes, promptly procured, at the lowest Market Price. Letters of inquiry must include postage stamps. Address WM. P. SHEPARD, Box 272, P. O. 477-16

APPLE ROOTS and GRAFTS for sale by S. WEAVER, Albion, N. Y.

DIANA and REBECCA VINES. By the dozen, hundred, or thousand. Address P. BISSELL & SALTER, Rochester, N. Y.

CHOICE SEEDS. Hungarian Grass, Egyptian Millet, Chinese Sugar Cane, Rhode Island Premium Corn, Siberian Potatoes, by R. L. HARRIS, 401 Broadway, New York. Also, a fine stock of well rooted plants of the *Lawson Blackberry*, and *Orange Raspberry*. Address D. D. TOOKER, Seed Grower, Napoleon, Jackson Co., Mich.

477-17

FRUIT AND ORNAMENTAL TREES.

For Spring of 1859.

ELLWANGER & BARRY have to inform Planters, Nurserymen and Dealers in Trees, that they have all on hand to offer for **PLANTING**, a large stock of the following named articles of superior quality in all respects:

FRUIT DEPARTMENT.

STANDARD PEAR, on Pear stock, 2 and 3 yrs from bud. **DWARF AND PYRAMID PEARS** on Quince, 3 & 5 yrs from bud. **DWARF AND PYRAMID APPLES** on Paradise and Doucin, 1, 2 and 3 years from bud. **STANDARD CHERRIES** on Mazzard stocks, 2 yrs from bud. **DWARF AND PYRAMID CHERRIES** on Mahaleb stocks, 1 and 2 years from bud. **APPLE QUINCES** grafted, 2 and 3 yrs from graft. **EVOLVING VARIETIES.** *Baltimore*, *Spanish*, *Chastel*, *Fil-let*, &c. **HARDY GRAPES**, including *Isabella*, *Catawba*, *Clinton*, *Concord*, *Diana*, *Rebecca*, *Monticola*, and other new varieties. **FOREIGN GRAPES**, for Vines, all the most esteemed varieties, well ripened plants, in pots, 1, 2 and 3 years old from the vine. **BLACKBERRIES**, *New Rochelle*, or *Lawson*, and *Dorchester*. **GOSWORTHIES**, the American Seedling and large English varieties. **SPRINGBERRIES**, upwards of 20 varieties, including all the best American and Foreign varieties. **CURRENTS**, *Red Dutch*, *Victoria*, *White Grape*, *Black Naples*, *Black English*, &c. &c. **RUBIANS**, *Myrtle*, *Linnaeus*, *Victoria*, *Prince Albert*, &c. **ASPAUGUS**, strong roots.

Stocks.

MAZZARD Cherry Seedlings. **MAHALEB do.**

ORNAMENTAL DEPARTMENT.

DECIDUOUS STANDARD LAWN TREES. **EVERGREEN TREES.** embracing an immense stock of *Norway Spruce*, from 8 inches to 6 feet. Also, rare *California Picea*, &c. See special advertisement. **PLANTING STOCKS**, all the most desirable, a very large stock. **CLIMBERS**, of all sorts. **ROSES**—the largest stock in the country of all the best sorts, both on the *Manett* stock and on their own roots. See Catalogue. **HEBES**, a *Paeonia*, a superb assortment of more than 75 varieties. **DANIELS**—Over 100 of the most beautiful varieties, including the latest novelties. **PHLOXES**, an unrivaled assortment, embracing all the classes. **DIEHLEIA SPECTABILIS**, the most charming hardy border plant in cultivation—over 10,000 plants on hand. **CR. ANTHURUS**, both large and postage varieties, the newest and best. **CARNATIONS** and **PICTURES**, a fine collection. **FLORIBUNDA HANDBERRY**—Magnificent and other beautiful plants. Besides all the most desirable hardy border plants grown. See Descriptive Catalogue.

Green-House and Bedding Plants.

All the most useful and popular plants such as *Fuchsia*, *Geranium*, *Heliotropes*, *Verbena*, *Pelargonium*, *Lantana*, *Geranium*, *Hydrangea*, *Begonia*, *Plumbago*, &c. &c. grown extensively and supplied in quantities, or by the dozen, assorted, at low rates. See Catalogue No. 3.

Summer and Autumn Blooming Plants.

A superb collection of the new *Glaucifolia*, and *Japan Lilies*, besides *Tulip*, *Tigridia*, &c. We can say without boasting, that our present stock has never been surpassed in vigor, health, and beauty of growth, and we invite all parties interested to examine it and satisfy themselves.

Packing for distant parts executed in the most careful and skillful manner, and customers treated in all respects with fairness and liberality.

THE HAPPIEST TIME.

BY IDA FAIRFIELD

Oh! when is the happiest time?
Is it Childhood's rosy morn,
When the air is rent with the merry shouts
From the careless heart upborne,
When the new-found ball and gilded toy
Could fullest pleasure bring?
Too brief the joy, for the broken toy,
As bitter tears would wring.

Then, when is the happiest time?
Comes it with love's young dream
In the hour of Youth, when the flowery path
Is bright with its golden gleam?
Scarcely the foot on a flower had pressed
Ere the thorns grew thick around,
And the withered flowers and blood-stained path,
Gave answer without sound.

Or comes it with Manhood's pride,
And the consciousness of power,
With the arm of strength, and the giant will,
And Ambition's well-earned dower?
There is little of joy or peace,
There is fever and unrest,
And a ceaseless struggling with the world,
And a weary heart oppressed.

Then fingers that happiest time,
Till the hand is furrowed o'er,
And the aching brow is deeply marked
With the furrows of "three score,"
Till the heart has grown too old
To love, or hate, or fear?
Not then, for life grows cold and dark
In the shadow of the bier.

But it comes in life's bright morn,
Or its dim, declining day,
Or its fervid noon, of summer heat,
To gladden the Christian's way,
Whene'er we find that Peace,
The world hath never known,
And humbly trust our all to Him
Who reigns on Heaven's bright Throne.
Independence, N. Y., 1859.

FEMININE APPAREL.

For two or three years past the grave question of "hoops" has agitated the public mind. Nearly every newspaper we take up has something to offer—either ridicule, or commendation, or serious disapprobation. Everybody thinks and talks about hoops, and women, who wear them, must think of them, for the strange accidents that "will happen in the best families," and the troublesome expansion so inconvenient almost everywhere, recall her thoughts from their sublimer flights, her emotions from their holiest flow, to the care of her hoops.

A woman who wears hooped skirts is subjected to daily and hourly annoyances, yet what could she do without her hoops? No one who has given them a fair trial, however dissatisfied with, and ashamed of, them she may be, is willing again to try walking dressed as women used to dress only three or four years ago. Then, skirts clinging closely to the form were thought very graceful and becoming; now, they are quite shocking to behold, (so much does custom control our ideas of the beautiful!) and the women of to-day look like the poppy dolls little girls construct; or appear, when promouncing the streets, like the pine-tassel-ladies' children blow across a smooth surface with their breath. Many a woman, like Mrs. JANE CHORNDASHEN, is weary and disgusted with all this.

But there is a "way that we females can be clothed, without our burdening skirts," and most gladly will I make it known to those who have not yet tried this decidedly "better way." If you would dress comfortably, conveniently, healthfully, modestly, why not adopt the style of dress known as the "reform dress," or "American costume?" You surely know what this is. Have you never seen a woman wearing her light skirts reaching only a trifle below the knee, and her limbs well protected by neatly-fitting pants made of the same material as her dress? How freely and easily she could exercise! How much unnecessary fatigue and ill-health did she thereby avoid! How much time, and money, and thought, did she save from the care of her wardrobe, to devote to nobler objects! Did not your judgment tell you that, however odd and awkward the dress might appear to your unaccustomed eyes, it was a very much more rational way for a human being to dress than woman's usual style? And did you not secretly wish that everybody dressed so?—that you might also be bodily free?

"How it looks!" people say. Well, how does it look? If you, from your infancy, had never seen a woman clad in long robes, you would be disgusted to see one attempting to do any kind of work dressed as women usually are. I know that the flowing folds and sweep of drapery are pleasing to the beauty-loving eye, but drapery can never give true pleasure when out of its legitimate sphere—when it interferes with Nature's laws for growth and development.

My sisters, think of these things, and *dear* to be true to your convictions. A large band of good and intelligent women have already entered the field of Dress Reform, and all sensible people approve.

Cazenovia, N. Y., 1859.

DRESS YOUR CHILDREN WARM.—This is of the most dangerous seasons for children. Colds and coughs are now easily fastened upon them, often resulting in consumption and premature death. Therefore, dress them warm. Let their necks and throats be well protected. Let your boy's pantaloons reach to the instep. Don't dress them in monkey trousers, reaching only to the knees, and the chilling air. Don't sacrifice your children's health to the gratification of a mother's taste, but dress them with the paramount view of comfort and safety. *Selected*

"FASHIONABLE CHILDREN."

I poor little creatures! I pity them from my heart and that is more than I can say of fashionable grown people, though I pity them, too, in a way. But the children, little victims! condemned in winter to shiver in short skirts, thin stockings, and paper shoes, made colder by little *hairs* of rubbers; and in summer, roasted with long sleeves and great poking bonnets, lest the sun should dash a streak of bronze upon their delicate skins. It vexes me beyond all patience to see them, and I will tell of it.

What are fashionable children good for, I would like to know? Can they roll with Rover on the grass, and chase kitty to her nursery under the garret eaves? Can they bound into mamma's lap, and give her a good hug with all those frills, flounces and embroideries? Can they creep under papa's arm chair, and astonish him with a "boo!" when he sits down? Can they climb the cherry tree, or swing on the wild grape vines? O, no—they are "dressed in the fashion," and must be kept out of the dirt, and at arms-length from everything that is enjoyable and delightful. Otherwise they are sure to tear something, or soil something, or else muss everything up generally. I always feel like putting such a child in a glass case, where they can be looked at and admired without injury.

Not very long since I was visiting, in company with a little girl five or six years old very daintily and sparingly dressed, I observed that she only sat on the music stool, or some little crickets which were in the room; and once, when these were in use, and she remained standing, an old gentleman offered her a seat upon his knee, which she refused. Afterward, when the party had dispersed, she came to me, and with much preliminary adjusting of her dress, seated herself upon my lap.

"Now, Lottie," said I, "why did you not do so, when Mr. D. called you?"

"Oh dear, I wouldn't dare," she answered, looking as distressed as a fashionable little girl could look, "because you see sometimes, when I go to sit down, my hoop acts awful!"

Who will say that child's mother hasn't much to answer for? and the little innocent cannot always so easily rectify all the consequences of her misjudging vanity.

Fashionable children! Why the very term implies a contradiction. Children are fresh from the hands of God; fashions from—who knows where? Suppose the little birds should simultaneously make an attempt to be fashionable. Should we love them any better, do you think, because they put on airs, and only hopped in straight lines, and wore all the same colors, and sang all the same tune, and nodded their heads in the same way, and puffed out their feathers to make themselves look large? Children should be like the birds, as artless, spontaneous and happy; as free from envy, vanity and ostentation. Dear, fashionable mothers, deprive yourselves of comfort, or put yourselves to death in any manner you please—by damp feet, or tight waists, or bare shoulders, or night air, or in any other fashionable way—but, for the sake of what little unadulterated natural feeling there is left in you, do let the children grow up as God and nature intended.—*Ohio Farmer.*

FINDING FAULT WITH YOUR CHILDREN.

It is at times necessary to censure and punish. But very much more may be done by encouraging children when they do well. Be, therefore, more careful to express your approbation of good conduct, than your disapprobation of bad. Nothing can more discourage a child than a spirit of incessant fault-finding on the part of its parent. And hardly anything can exert a more injurious influence upon the disposition both of the parent and the child. There are two great motives influencing human actions; hope and fear. Both of these are at times necessary. But who would not prefer to have her child influenced to good conduct by a desire of pleasing rather than by the fear of offending. If a mother never expresses her gratification when her children do well, and is always censuring them when she sees anything amiss, they are discouraged and unhappy. They feel that it is useless to try to please. Their dispositions become hardened and soured by this ceaseless fretting; and at last, finding that whether they do well or ill, they are equally found fault with, they relinquish all efforts to please, and become heedless of reproaches.

But let a mother approve of her child's conduct whenever she can. Let her show that his good behavior makes her sincerely happy. Let her reward him for his efforts to please by smiles and affection. In this way she will cherish in her child's heart some of the noblest and most desirable feelings of our nature. She will cultivate in him an amiable disposition and a cheerful spirit.—Your child has been, during the day, very pleasant and obedient. Just before putting him to sleep for the night, you take his hand and say, "My son, you have been a very good boy to-day. It makes me very happy to see you so kind and obedient.—God loves children who are dutiful to their parents, and he promises to make them happy." This approbation from his mother is to him, a great reward. And when, with a more than ordinarily affectionate tone, you say, "Good-night, my dear son," he leaves the room with his little heart full of feeling. And when he closes his eyes for sleep, he is happy, and resolves that he will always try to do his duty.—*The Mother at Home.*

HEALTH PROMOTED BY FAMILY MUSIC.—Music, like paintings and statuary, refines, and elevates, and sanctifies. Song is the language of gladness, and it is the utterance of devotion. But coming lower down, it is physically beneficial; it rouses the circulation, wakes up bodily energies, and diffuses life and animation around. Does a lazy man ever sing? Does a milk-and-water character ever strike a stirring note? Never. Song is the outlet of mental and physical activity, and increases both by its exercises. No child has completed a religious education who has not been taught to sing the songs of Zion. No part of our religious worship is sweeter than this. In David's day it was a practice and a study.

REIGN OF THE FROST KING.

BY GEO. A. HAMILTON.

O'er lakes and over mountains
Comes the Frost-king to-day,
Riding on the piercing north wind,
"Rushing onward, bearing away—
Scaling forests, hills, and valleys,
Trampling brist across each plain,
Printing, sketching, palating, carving
Curious figures on each pane.

There is seen a forest spreading:
Curious shapes of quaint old trees,
All is beauty in that wild-wood,
Glowing in the winter breeze—
Beauty glittering and sparkling,
Daring from each magic form—
Beauty in the very wilderness—
Beauty painted by the storm.

Forms of footmen, forms of horsemen,
Vast battalions marching there,
Strangely silent in their tramping—
Banners waving in the air;
Curious figures, gorgeous trappings,
Dancing in the rays of light,
Everything is hung with brilliants,
Everything is strangely bright.

Here is reared some vast cathedral,
Doric columns lofty stand,
There a dome and spire are towering—
Painting, carving, all is grand;
Altars, statues—strangely brilliant—
Fresco-paintings on the walls,
Everything is bright and sparkling,
In those glittering, magic halls.

There the Monarch chains the river,
And the brooklet, and the rill,
While some lake, quite bridged with crystals,
Sleeps a prisoner, calm and still:
All the landscape smiles in beauty,
Sculptured figures, bright and bold,
Every tree is hung with jewels
Carved and burnished by the cold.

Now a mansion bright appearing
Through the vista of the trees,
Gothic forms and towers uprearing,
Carved from basement to the frieze:
All is brightness, all is beauty,
Flashing from each mythic form,
Beauty in the very wilderness—
Beauty painted by the storm.

THE EDITOR'S FRIENDS.

MY DEAR MR. "RURAL" EDITOR:—A great many times I have thought what a favored mortal an editor must be—especially a popular editor. Now, pray don't, before you read any further, give vent to one of those ejaculations in which editors are wont to indulge, when their profession is spoken of as an avocation that is easy, nice, agreeable, and so on, to the end of the paragraph. I know that editor's have tribulations, trials, and terrible times generally; and you must have had cares and crosses in raising your Rural child, and making him the sensible youth that he is—and then making that "many-headed animal, the public," appreciate him. But then, how they can help appreciating him when he comes to their firesides with his new dress on, is more than one can tell; for, in this part of this "mundane sphere," to slightly revise somebody's poetry,

None know him but to love him,
None see him but to praise.

But what I was going to say when I commenced, and what I am going to say now, is, that an editor is to be envied because he has such hosts of friends scattered all over the world. Now, you don't know all of your friends. You have lots of them here, in Oneida county, whom you have never seen, and who would not know you if they should meet you. We hear from you every week, but you don't hear from us so often. Our letters to you are like "angels visits, few and far between." You never have heard from "Grove Hill,"—perhaps you don't know where that particular elevation is situated. I should like to tell you something about it, and its vicinity,—about its crops and cattle,—its farmers and their families, including the fair daughters, of course,—speaking about the vicinity remember, oh! there's lots of things that I should like to say, but just now I am only going to say, before I forget it, that it's nice to be an editor. It must be gratifying to you to think when you are traveling, how many ardent admirers you meet who pass you by without noticing you any more than they would any other intelligent-looking,—(well, I am not going to say anything) simply because they don't know you by sight.

Now, let me sit on your shoulder like the good genius in the old fairy tale, and point out to you some of your unknown acquaintances, whom you have benefited and made happy. Over there is an old farmer—the one with the genial look, and a brown cheek, through which there shows a "struggling red," like the sunny side of a good Roxbury Russet. Well, he is one of your friends, and he is a friend to be prized, if you only know him. And he is a man to be envied, if any body is in this fast age. He owns a farm, back in the country, and he's rich. Yes, sir, he is rich—because he owns a farm. He has worked and paid for it, and now he is out of debt and independent. His money is invested in a bank that will not break, one that yields good yearly dividends. His farm belongs "to him and to his heirs forever," and it reaches half way down to China! And he has no doubt but he might work it up to within four inches of the surface of the opposite farm of "HOOBS WAXO" in that Celestial Country, and he never would know the difference, because he never read anything in that barbarian Rural Journal about sub-soiling. If that old farmer is not worth having in these days when, too often,

"Friendship, in truth, is but a name,"
then the "subscriber" is laboring under an delusion. He has a whole family of friends, too,—from the

son who has married and moved away, clear down to the "little mischief" who prefers to adorn the walls of his picture gallery with the engravings in the Rural,—that is, he wants to tear out the birds to paste on the wood box.

And how happened they to be friends of yours? Simply because every Friday afternoon the Rural comes home in father's pocket. I am not going to particularize any parts that they like, I am only saying that, through its columns, you have become endeared to them. They are friends of yours—the whole family—the father and mother—the sturdy, honest sons—the fair, rosy, (trite, but true,) daughters—the Rebus and story-loving little ones,—and when I say that these multiplied by several unknown thousands, constitute your army of friends, don't you feel a satisfactory thrill tingle through your veins? Do you ever have time to indulge in such a reverie? If not, I have done so for you this long winter evening, have penned it down, and send it to you with my best respects.

I intended to have said something about our hill, &c., and have just awakened out of my reverie to find that I have not said anything yet.—But you may hear from me again, and the next time I promise you something worth reading.—"Nous verrons," as the Frenchman says—"we shall see, what we shall see." Till then I subscribe myself,
A—Y—G—T.

Grove Hill, Feb., 1859.

USEFUL EFFECTS OF LIGHT

SIR JAMES WYLIE, late physician to the emperor of Russia, attentively studied the effects of light as a curative agent, in the hospitals at St. Petersburg, and he discovered that the number of patients who were cured in rooms properly lighted, was four times greater than that of those confined in dark rooms. This led to a complete reform in lighting the hospitals of Russia, and with the most beneficial results. In all cities visited by the cholera, it was universally found that the greatest number of deaths took place in narrow streets, and on the sides of those having a northern exposure, where the salutary beams of the sun were excluded. The inhabitants of the southern slopes of mountains are better developed and more healthy than those who live on the northern sides; while those who dwell in secluded valleys are generally subject to peculiar diseases and deformities of person. These different results are due to the agency of light, without a full supply of which plants and animals maintain but a feeble and sickly existence. Eminent physicians have observed that partially deformed children have been restored by exposure to the sun and the open air. As scrofula is most prevalent among the children of the poor, this is attributed by many persons to their living in dark and confined houses, such diseases being most common among those residing chiefly in underground tenements. The health statistics of all civilized countries have improved greatly during the past century. This may be justly regarded as due to the superior construction of houses, by admitting more light into them.

SNATCHING AT STRAWS.

STANDING in a shop-door with a friend, the other morning, he wished to wager us that the next three men that passed, would bear straws in their hands. "Is there a bale of straw lying upon the sidewalk up the street?" we asked. Laughing, he answered, "There is." True enough, of the six persons who came along, five had straws in their hands, which they were toying with or nibbling between their teeth. The sixth, occupied with his own thoughts, pushed gravely on, paying no heed to trifles, as wisps or spears of straw. Here then was a decided display of character. The first straw bearers were either men at ease in mind and body, or they are easily directed from their course by any chance allurements that crosses their path. Number six is more sure to look after number one, and more likely to succeed in business and affairs of the world than either of the others, but he may not be so happy at heart. He is intent on some enduring pursuit. He has no thought of pleasure or the by-play of life, and is looking strictly and straight-forward after the main chance. Straws, it is said, show which way the wind blows, and the same little indexes may point as clearly the bias and course of human character. This is one morality by the shop-door.—*Selected.*

HAPPINESS OF LIFE.—It has been well remarked, that no man can judge of the happiness of another. As the moon plays upon the waves, and seems to our eyes to favor, with a peculiar beam, one long track amid the waters, leaving the rest in comparative obscurity—yet all the while she is no niggard in her lustre; for though the rays that meet not our eyes are to us as though they were not, yet she, with an equal and favorable loveliness, mirrors herself on every wave—even so, perhaps, happiness falls with the same brightness and power over the whole expanse of life, though to our limited eyes she seems only to rest on those billows from which the ray is reflected back to our eyes.—*Selected.*

HOW TO PROSPER IN BUSINESS.—In the first place, make up your mind to accomplish whatever you undertake; decide upon some particular employment, and persevere in it. All difficulties are overcome by diligence and assiduity. Be not afraid to work with your own hands, and diligently, too.—Attend to your own business, and never trust it to another. Treat every one with respect and civility. Everything is gained, and nothing lost by civility.

There is one warning lesson in life which few of us have not received, and no book that I can call to memory has noted down with an adequate emphasis. It is this, "Beware of parting." The true sadness is not in the pain of the parting, it is in the When and the How you are to meet again with the face about to vanish from your view.

"When a stranger treats me with a want of respect," said a philosophic poor man, "I comfort myself with the reflection that it is not myself that he slight, but my old shabby coat and hat, which to say the truth have no particular claim to admiration. So if my hat and boots choose to fret about it, let them, but that it is nothing to me."

LOOKING OUT.

BY CLARA AUGUSTA

Tax day is fading softly out
Along the western sky,
And silently the stars assume
Their vigils up on high;
And looking forth with hopeful eye
I gather sweet content,
For with my heart the quiet calm
In Glend balm is blent—
With God to care for us should we
Sit idly and lament?

The wind sails down the purple steep
Of Heaven's leaning arch—
The moon sets forth in royal state
On her untiring march—
And, waiting on the distant hills,
The rosy-sanded Light,
Still tarries till the Pale-Browed comes—
Her weeping sister, Night—
Waiting to kiss the pallid lips,
Then to her onward flight.

Heart! gather up thy wasted wealth
From all this thankless earth;
Baptize thyself in new resolve,
Rouse to a second birth!
Take Faith, the meek-eyed gentle child,
To be thy guide and stay,
And trust to her unerring hand
Through every doubting day!
For never can her sacred feet
Stray from the chosen way!

The mountains lift their hoar brows up,
Bleached by the wind and rains—
Torn by the sweep of centuries,
Racked by volcanic pains;
And though the valley-pass be dark,
These giant warriors lave
In the out-pouring of the light,
From Day's receding wave!
And so shall bathe the faithful soul
That looks beyond the grave.

Farmington, N. H., 1859.

CHILDHOOD.

Who does not look back to his childhood with an eye of interest, but views the joys and sorrows which were there passed? We all had many griefs, and we felt keenly the scornful look and bitter word. Children have many griefs, both of body and mind, and they quickly feel neglect and want of kindness. Then who would speak harsh to a child? Who would not rather cheer him with the voice of tenderness and affection. Their sport and gambols are so joyous, so innocent, so abandoned to delight, so full of the grace of motion, and so necessary for their health, that it is a wonder how some parents confine them so close to the house and place so many restraints upon them in this respect. Then let them laugh and play as much as they will. It is their season of gladness. Childhood is the golden age. Let it be full of gladness. Let them enjoy the fresh air and breeze of heaven before the world with all its cares comes to fill their hearts with sadness and sorrow. If a child is grieved, a little act of kindness will cause smiles to break through his tears. How beautifully is the returning sunshine on the face of the child expressed by Scott:

"The tear down childhood's cheek that flows,
Is like the dew drop on the rose;
When next the summer's breeze came by
And waved the bush, the flower was dry."

POINTLESS SERMONS.—In one of his discourses, JOHN NEWTON has this pithy remark:—"Many sermons, ingenious of their kind, may be compared to a letter put in the post-office without a direction. It is addressed to nobody, it is owned by nobody, and if a hundred people were to read it, not one of them would think himself concerned in the contents. Such a sermon, whatever excellence it may have, lacks the chief requisite of a sermon. It is like a sword which has a polished blade, a jewelled hilt, and a gorgeous scabbard, but yet will not cut, and, therefore, to all real use, is no sword. The truth, properly presented, has an edge; it pierces to the dividing asunder of soul and spirit; it is a discernor of the thoughts and intents of the heart."

DIFFICULTIES.—Wait not for your difficulties to cease; there is no soldier's glory to be won on peaceful fields, no sailor's daring to be shown on sunny seas, no trust or friendship to be proved when all goes well. Faith, patience, heroic love, devout courage, gentleness, are not to be formed when there are no doubts, no pains, no irritations, no difficulties. The highly-favored are they who amid rebuffs are meek, amid chastisements are resigned, amid pains are courageous, amid provocations are gentle, amid enemies are full of love, amid doubts hold fast the faith, amid sorrows find joy in God.

RELIGION IN DAILY LIFE.—Religion is not a perpetual moping over good books. Religion is not even prayer, praise, holy ordinances. These are necessary to religion—no man can be religious without them. But religion is mainly and chiefly the glorifying God among the duties and trials of the world; the guiding of our course amid adverse winds and currents of temptation, by the starlight of duty and the compass of divine truth; the bearing us manfully, wisely, courageously, for the honor of Christ, our great Leader, in the conflict of life.—*Cairy.*

The want of a genuine religious faith is a great misfortune, but it should never be punished as a great crime; and it never is, or will be, by those who truly possess it. It is only religious prejudice, mistakenly called religious faith, that is intolerant.

In order to live justly and be respected, we must refrain from doing what we blame in others.

EDUCATIONAL

Written for Moore's Rural New-Yorker.
ABOUT READING.

HEAVEN has made the human intellect capable of improvement, and the ways are various in which this work may be promoted. There are few things better calculated to improve the mind than the perusal of the productions of genius, but if we would receive any great degree of profit from reading, there are several rules which we must observe.

It is injurious to read a poorly written book.—COWPER tells us that,

"To dally much with subjects mean or low,
Proves the mind weak, or makes it so,"

and experience confirms this statement of the fact. We are apt to partake of the character of those with whom we converse; and how close is the communion that the mind of the reader holds with that of the author. Will he not be apt to become assimilated to him, in his mental character? Have not JAMES, INGRAM, and LIPPARD, by their writings, prevented many a youth from ever acquiring the strength of intellect that he would otherwise have possessed? The mind must become familiar with nobler thoughts than those that are to be found in the works of such writers, before it can be fitted for the conflicts of life.

Do not confine your reading within too narrow bounds. This has a tendency to render the mind one-sided in the development of its powers.—Many persons, who read much, confine their inquiries almost entirely to one class of subjects. Some are deeply versed in theology, but have little knowledge of any other science. Others have paid much attention to history, but have restricted themselves almost entirely to this kind of reading. And what is the result of such a course? Are all the powers of the mind harmoniously developed? Such persons are not likely to be remarkable for the correctness of their views, even upon those subjects with which they are most conversant. The different sciences often cast light upon each other. Many questions in Theology can be understood, only, by an appeal to History and Natural Philosophy.

Never read a book carelessly. Many persons carelessly read hundreds of volumes. But are they much the wiser for so doing? Inquire of them in regard to the contents of a volume that they have just perused, and you will soon discover that they have but a very confused recollection of what the author says. Of what use can it be to waste time in this manner? They would be more useful if they were employed in digging ditches.—But there is another evil to be avoided here, namely, that of taking on trust all that an author writes. There are some readers who never think of differing from their author, and the mere fact that they find a statement in a book, is, to them, sufficient evidence of its truth. They find no difficulty in receiving any theory that the author may choose to advocate—they receive the chaff with the wheat, and consider it all of equal value.

Never read a book that is immoral in its tendency however great may be its literary merits. Unhappily, genius is not always the hand-maid of virtue, but is often found engaged in the service of vice. How dangerous is the author who devotes the energies of a powerful mind to the propagation of error. No improvement of the intellect can make amends for the corruption of the heart, and your familiarity with as corrupt writer may embitter your life. There is no excuse for the perusal of such books. He must be very industrious who finds time to read the tenth part of the well written books, of an unexceptionable moral character, that are in circulation—vice cannot boast that she has enlisted all the genius and talent under her banners.

S. L. LEONARD.

Butler, Wis., 1859.

CHIROGRAPHY.

Good penmanship does not consist in spreading flourishes and five-story capitals! True, there should be a freeness of movement in the hand and arm, evinced by the pen-tracings, but never any extravagances. We like a plain, round hand-writing. That is the best phase of chirography which is most easily read. Affected penmanship, like mock polish of any sort, is devoid of grace and beauty.

We hear of some great men who are not good penmen, but their faulty penmanship does not make them great. We know of some half-hatched lawyers, and aspiring young men of other vocations, who claim to be great and distinguished in proportion to the awkwardness and unintelligibility of their scribbling-ship. And if such were the gauge of guessing at greatness, how incomprehensibly great some men would be!

A good story is told of the wretched writing of a certain very celebrated Railroad manager in Michigan. He had written a letter to a man on the Central route, notifying him that he must remove a barn that in some way incommoded the road, under the penalty of prosecution. The threatened man was unable to read any part of the letter but the signature; but he took it to be a free pass over the road, and used it for a couple of years as such, none of the conductors being able to dispute his interpretation of the document!—School Visitor.

EDUCATION.—An educated man stands, as it were, in the midst of a boundless arsenal and magazine, filled with all the weapons man's skill has been able to devise from the earliest time; and he works, accordingly, with a strength borrowed from all past ages. How different is his state who stands on the outside of that storehouse, and feels that its gates must be stormed, or remain forever shut against him! His means are the commonest and rudest; the mere work done is no measure of his strength. A dwarf will hew them down with the pickaxe; and he must be a Titan that hurls them abroad with his arms.—Carlyle.

The Reviewer.

LA PLATA, THE ARGENTINE CONFEDERATION, AND PARAGUAY. Being a Narrative of the Explorations of the Tributaries of the River La Plata and adjacent Countries during the years 1853, 54, 55, and 56, under the Orders of the United States Government. By THOMAS J. PAGE, U. S. N., Commander of the Expedition. With Map and Numerous Engravings. New York: Harper & Brothers. [3 vo. pp. 682.]

This is a valuable contribution to the scientific literature of the country. The author was commissioned by the U. S. Government, during Mr. Fillmore's administration, to explore the La Plata and bordering countries. The expedition was projected for scientific and commercial purposes, and prosecuted with assiduity and very satisfactory results. The commander's report not only received the approbation of Government, but earned for him honorable distinction. The large and beautiful volume now issued is a more detailed and interesting history of the expedition, including the geographical observations and scientific discoveries made during the explorations. The work is so richly interspersed with incidents, descriptions of scenery, places and characters, as to render it quite valuable to other than purely scientific readers. The society of the regions visited, the characteristics and habits of the people—their employments and sports—the nature of the climate, capacity of the soil and its products, are pleasantly discussed, rendering the contents of the volume diversified and entertaining as well as instructive. The numerous illustrations are finely executed and add to the attractions of the work. Sold by DEXTER.

THE FARM: A Pocket Manual of Practical Agriculture; or How to Cultivate all the Field Crops, &c., with a most valuable essay on Farm Management. By the author of "How to do Business," "How to Behave," &c. New York: Fowler & Wells.

THE GARDEN: A Pocket Manual of Practical Horticulture; or How to Cultivate Vegetables, Fruits, and Flowers, &c., with a Chapter on Ornamental Trees and Shrubs. By the author of "How to Write," "How to Behave," &c. New York: Fowler & Wells.

A HAND-BOOK OF FRUIT CULTURE: Being a Guide to the Cultivation and Management of Fruit Trees, &c., By THOMAS GREGG. New York: Fowler & Wells.

HERE we have a series of small books, neatly printed, and the getting up, so far as the publication is concerned, is almost faultless. But they are the representatives of a class of books got up to sell, compiled from various sources by men who know little or nothing of the subjects of which they treat. The praiseworthy desire of the people to obtain knowledge is abused, and their ignorance taken advantage of to take from them their money. They seek bread, and are willing to pay for it, but often find that what they purchase is as worthless and barren of information as a stone. The author of the first two must be a bookmaker by trade, perhaps engaged by the month at this work, for it seems he has made books on "How to Write," "How to Behave," and "How to do Business," and perhaps on a dozen other subjects, and now manufactures a "Manual of Practical Agriculture," telling practical farmers, and those seeking information "how to cultivate all the field crops!" He must be a man of wonderful information—a miracle of knowledge, and should not hide himself under a bushel, by concealing his name. 'Tis truly strange that one small head can carry all he knows. But this is not all. He is not only prepared to tell people how to write, do business, behave, and cultivate all the field crops, but from the titles above, it will be seen he has also made a book to instruct people in the cultivation of vegetables, fruits and flowers, as well as ornamental trees and shrubs! Is it not time there was an end to this fraud or farce? Will not the people learn publishers that, if they wish their books to sell, they must publish works of merit? Will not the agricultural press come to the rescue, and tell the truth of the books they notice, and quit this indiscriminate puffing, which has long enough cheated the public, and filled the country with worthless books? Others may do as they please, but we shall fearlessly do our duty.

The "Hand-Book of Fruit Culture" is by another author, THOMAS GREGG. The prolific author of the previous books, we suppose, had his hands full of other work. Time, doubtless, was wanting. We will not for a moment suppose that he lacked the knowledge to make a book on this or any other subject. As to book-making, Mr. G. modestly says in his preface that he lays "no claims to originality, but has made use of the thoughts and experience of others; that scientific pomologists (and he might have said practical men) will find little in it to interest them, but many imperfections." Then we ask what business had he to put his second-hand thoughts and imperfections in a book, and ask a confiding and too easily-cheated public to buy them?—Have we not men that can write books without these imperfections—without depending entirely upon the knowledge of others—men of sufficient knowledge, at least, to discern between the true and the false—the wheat and the chaff—when selecting material for a book? We have several other equally valuable books awaiting notice.

THE NEW ENGLAND THEOCRACY. A History of the Congregationalists of New England to the Revival of 1740. By H. F. UNDER. With a Preface by the late Dr. NEANDER. Translated from the Second German Edition by H. C. CONANT. Boston: Gould & Lincoln.

This notice of this work by the press have been highly commendatory. No such history of the New England Congregationalists has been written in our country, important as such history would seem to be to New Englanders and to the world. This work was composed by a German, W. F. UNDER, amply qualified by a great amount of documents, and undertaken at the suggestion of the celebrated NEANDER. The qualifications of Mrs. Professor CONANT, who has only recently removed from our city, no one can doubt. The style is clear, and copious, and appropriate. The translation is from the second edition of the German author, the first having been scarcely known on this side of the Atlantic. There must be, of course, in a veritable history of Congregationalism, though brought down only to 1740, a great amount and variety of matter, full of interest to the Christian of any country as well as to the patriot of our own, and the lover of liberty in all lands, on account of its moulding influence on the civil relations of the people of the United States. The reader will find a rich treasure of knowledge in the work, and even Americans will see many things clearly, of which there have been only very dim conceptions. The work is worthy of general circulation. The prefix to the author's title, viz., "The New England Theocracy," by the translator, is unfortunate and surprising. 'Tis it is the "term constantly applied by the author himself to the peculiar politico-religious institutions of which he treats," he did not adopt it as part of the title. The reason is obvious; it is a misnomer. It was not a Theocracy more than is the Episcopacy of England, or the Papacy of Rome, or the Greek Church of Russia; and yet no one calls either of them a Theocracy. To a New Englander, New England Theocracy must sound like a myth. On this account, however, let not this work be neglected or forgotten. Sold by COLE & ADAMS.—O. D.

The Westminster Review for January—with eight able articles, upon as many subjects—has been received. As the volume begins with the year, those who desire standard literature, will find the present a very appropriate time to subscribe. LEONARD SCOTT & CO., New York, Publishers.—DEXTER, Agent.

WILLIAM HICKLING PRESCOTT, LL. D.

THE intelligence of the sudden death of the subject of this sketch, which occasioned a feeling of melancholy surprise and profound regret, has also created an intense desire among those who knew him only by his reputation in the field of literature, to learn something more of the "Blind Historian." Everything relating to him or his works possesses a peculiar interest at the present, and though we devote considerable portion of our space to a review of his life and labors, we think the lesson these convey will amply reward the thoughtful reader.

WILLIAM H. PRESCOTT was born in Salem, Mass., in 1796. His father was an able lawyer and judge, and the son of that Prescott whose name is forever associated with "Bunker Hill," as the fearless leader of that brave band who opened the drama of the Revolution so gallantly on that bloody height. His father removed to Boston when he was but 12 years of age. Here the opportunities for education, for which the metropolis of New England is noted, were faithfully improved by the embryo historian. In 1811, he entered Harvard College, at Cambridge. Although it was while in College that the great affliction of his life befell him, yet he was graduated with a high standard of excellence in 1814, and entered at once upon a preparation for the profession of his choice, and the same in which his father had already distinguished himself. But finding that his sight was entirely failing him, and that he received no benefit from American physicians, he resolved to try the advantages of travel and European medical skill. For two years he traveled over Europe, visiting England, France, Germany and Italy, consulting the best oculists in London and Paris. Alas! all was useless, and he returned once more to Boston in almost total darkness.

But his was no desponding spirit, and with a cheerful heart he resolved that the inner perception of his mind should suffer no injury from the darkening of the windows of his body. He determined to become a historian in the best sense of the term, and devoted himself, for ten years, to traveling, studying models, cultivating his taste and style, until he felt competent to the task. Then more in musing among the rusty records of the past for the materials of the first great work of his life.

The method of preparation and composition which Mr. Prescott adopted, and by which he was enabled to overcome his impaired vision, and to place his name in the very first rank of historical writers, is thus described in the Boston Evening Transcript: "He was exceedingly systematic in his mode of life, and devoted five hours out of the twenty-four to his historical labors. After breakfast he listened for an hour to some light reading, a novel, poem, or other entertaining book. He then walked for an hour. At half-past ten o'clock his secretary came to his study and remained till twelve o'clock. Another walk of an hour was then taken, after which he went to his study and remained another hour and a half with his secretary. After dinner light reading was again resorted to, and at six o'clock the secretary returned and remained until eight. This routine of work and leisure was very rigidly observed during the years devoted to the preparation of his elaborate volumes.

Mr. Prescott's mode of writing history was this:—We will take, for example, his last work, 'Philip the Second.' He arranged in his study all the books and manuscripts relating to that monarch. They numbered three or four hundred printed volumes of all sizes. There were also some twenty thick folios of manuscripts—the libraries and book-stores of all Western Europe, from Cadiz to Amsterdam, having been ransacked by agents in search of everything that could throw light on the history of Philip the Second. Except dictionaries and other works of reference, books not specially relating to the subject in hand were excluded from the study.

With his materials thus gathered about him, the historian commenced his work. The secretary first read the only English history of the King and his reign. Notes and observations were dictated as they were suggested by the book. Having freshened his recollections by hearing this volume read, Mr. Prescott proceeded to examine the treasures he had collected. Each book was taken from the shelf in turns by the secretary, who read aloud its title, its table of contents, and a few pages by way of specimen of its style and character. Notes were taken while this examination was going on, which

were preserved for future reference. Of the three or four hundred volumes, a great majority of course proved worthless, being either merely repetitions, or compilations, or translations of preceding authors, or else, if original, without authority. The number of books of real value would be thus reduced down, perhaps, to a hundred.

The huge folios of MSS. were next attacked. These had been examined by a competent person, who prepared a careful digest and table of contents. The secretary read this, and notes were dictated as he proceeded. Having thus, as it were, taken an account of stock, and ascertained the general character of his materials, they were next inspected in detail in the following manner:—The first chapter of Philip the Second contains an account of the abdication and last days of his father and predecessor, Charles the Fifth. The secretary gathered round him every volume, printed or MSS., which contained anything about the last named monarch. The books are in the English, French, Spanish, Italian and Latin languages. One by one they were read aloud, and copious notes were dictated. When everything that related to Charles the Fifth had thus been perused and noted, the historian began to compose his work, or, more properly speaking, to write it—for the process of composition had of course been going on in his mind during these preparatory labors.

The apparatus used by Mr. Prescott consisted of a frame the size of a common sheet of letter paper, with brass wires inserted to correspond with the number of lines marked. Thin carbonated paper was used, and instead of a pen the writer employed a stylus with an agate point. The great difficulty in the way of a person's writing in the ordinary manner, whose vision is impaired, arises from not knowing when the ink is exhausted, and moreover the lines will be run into one another. Both difficulties are obviated by the simple arrangement just described. The pages thus written by Mr. Prescott were copied by the secretary, and read, that such interlinations, alterations and amendments might be made, as were needed. The materials for the second chapter, on the early life of Philip, were next taken up, and the same process repeated, until the volume was ready for the printer. About six years were devoted to the first two volumes of Philip the Second, including the preparatory studies.

Referring to his home-life and sociability of feeling, a distinguished cotemporary, Mr. Bancroft, states that while his history proved him to have felt that he owed his time to the service of mankind, everything about him marked him out to be the most beloved of companions, and the life, joy and pride of society. His personal appearance was pleasing, and won for him everywhere in advance a welcome and favor. While he was high-spirited, he was tender, gentle and humane. His voice was like music, and one could never hear enough of it. His cheerfulness reached and animated all about him. He could indulge in playfulness, and could also speak earnestly and profoundly; but he knew not how to be ungracious or pedantic. In truth, the charms of his conversation were unequalled, he so united the rich stores of memory with the ease of one who is familiar with the world.

But he has gone. "If it had pleased Almighty God," writes one who knew him, "to have permitted us one word of farewell, we should doubtless have heard him call to us, as we can now only hail his departed spirit,

"Say not good night—
But in another clime bid me good morning."

The works of Mr. Prescott comprise thirteen volumes, and are noble monuments to his life of labor and study. With a knowledge of the facts concerning their preparation, who will not say all honor to the memory of the man whose patient toil, careful training, rare scholarship, and heroic devotion, produced the Histories of Ferdinand and Isabella, the Conquests of Mexico and Peru, and the Reign of Philip the Second!

In most quarrels there is a fault on both sides. A quarrel may be compared to a spark, which cannot be produced without a flint as well as a steel; either of them may hammer on wood forever, and no fire will follow.

GIVE a man brains and riches, and he is a king; give him brains without riches and he is a slave; give him riches without brains and he is a fool.

YOUNG RURALIST.

MECHANICS AND CLERKS.—THE WEST.

As a subscriber to your valuable paper, I take the liberty of asking you a question or two, as I deem you a proper person to appeal to for the information I want. Is the State of Ohio a suitable State for mechanics, such as carpenters and masons, and would Cincinnati be a place where a clerk would be likely to meet with success? Either you, or any of your intelligent correspondents, answering me through your next issue, would greatly oblige

J. H.

Peterboro, C. W., 1859.

These questions, we fear, we cannot answer to the satisfaction of our young correspondent. Ohio is a flourishing State, but, like all others, and Canada, suffered more or less from the late commercial embarrassment, which resulted in the stagnation of business of all kinds. Good mechanics, who are industrious and sober, as a general thing, succeed in earning a living in almost any enterprising, go-ahead place, and with economy, may accumulate a little money. Cincinnati is one of the most flourishing cities in the Union, but we have noticed in our travels through the West, that most of the Western cities are flooded by the young men from the East seeking employment as clerks. Once, in Chicago, when mechanics of all kinds were eagerly sought by employers at very high wages, we became acquainted with many young men from this and the Eastern States, who had been seeking employment in banks and stores for many weeks. We would not advise our young friend, therefore, to go West with the expectation of obtaining a profitable clerkship immediately. But, if he is determined to work his way up in the world by honest industry, intelligence and perseverance, and will take the first thing that offers, he will not, in the end, we think, regret the change. Our young men are too impatient. They want to commence where their fathers left off—assume at once positions which they attained only after years of faithful toil. This impatience is discouraging, and in fact destroying, many of our young men. Our advice is, commence at the bottom of the ladder, and work yourself up. Every step will prepare you for the next, and when you reach a high position, you will be able to stand there—you will have the satisfaction of knowing that you have earned it, and all will say you are worthy of it.

A PLEA FOR DOGS.—NO. I.

"Be a friend to dogs,
For they are honest creatures,
And bear about them noble qualities,
To shame their masters—men!"

In all ages and in all climes, the dog has occupied a conspicuous place among domestic animals. He has sustained useful relations to man, in every quarter of the globe. In the sunny tropics, as a watchman and faithful sentinel at night—on the stormy and tempestuous Alps, as a merciful deliverer from peril and death—in the frigid zones of the north, as a companion to transport his master in sledges over the frozen seas, and frost-bound hills and glens. It is true, the term "dog" has been (and now is to some extent) used as a term of reproach, but it should be remembered, that this custom had its origin among a rude people, proverbial for their selfishness and hatred.

Since, then, the Great Father has eminently shown his love and regard for these "gentle dogs" in all parts of his wide jurisdiction, they ought to imitate that mercy in a kind and gentle treatment of the noble animal for which we plead.

The three letters that compose the term, when differently arranged, might serve as a gentle hint never to maltreat or annoy the most faithful of all domestic animals.

CHARACTERISTICS.—The dog has noble qualities. He is amiable and affectionate. Said a gentleman once, on being urged to part with his dog—"I can make up my mind to dispose of every inch of him, except that kind wag of his tail—money can never buy that, sir." He is very sensitive to kind or severe treatment. No animal is more appreciative of a smile and kind word from his master, as his antic and playful gestures so often indicate. When petted and caressed, his noble face kindles with joy, and he opens his mouth in laughter and gladness.

SENSITIVENESS TO ABUSE.—On the other hand, how sensitive to harsh words and cold treatment—his countenance changes to sadness—his pert ears hang down, as if to shut off the cruel sounds, his head droops in sorrow, and his eloquent tail is silent and seeks to hide itself out of sight. Loaded with reproach he moves slowly away from his persecutor, his spirit thrust through as with a rapier, his heart wronged with anguish, and what renders his case more pitiful, he is, perhaps, utterly unconscious of committing any offense.

S. B. N.

Spring Side, Vt., Feb., 1859.

THE FAST "SOLO."—

One thing which I do not like to see is the spirit of the letter of "Solo." I think it is very evident that he is a fast young man, but I see no propriety in bragging of it. I should think he would blush with shame, when he writes such things as are in his letter. I think he has done one thing which will astonish the country people, although I don't think it is very nice, i. e.—bragging about his own folly.

It takes just such fast young men to make laborers in the service of the State. And "Solo" will be very likely to terminate his career in Auburn or Sing Sing. I hope "Uncle Jed" will keep him straight, and give him a thrashing once in a while.

PERADOLESCENS.

Would you throughout life be up to the height of your century—always in the prime of man's reason—without crudeness, and without decline—live habitually, while young, with persons older, and when old, with persons younger than yourself.

— A letter from Crescent City, Iowa, expresses the

THE LAST "GOOD-NIGHT!"

"Good-night—good-night!" a silver voice
rang through my midnight dream!
And a fair young face with bowing curls
Flashed in the fancied dream
Of the moonlight on my rapturous couch
With a "wonderful tender beam."

"Good-night!" broke from my answering tongue,
And the beautiful shape was gone;
I woke as the distant clock tolled out
The hour of another dawn;
And the holy moon was smiling down
On the cottage porch and lawn.

"She is dead!" a voice sobbed faintly forth;
I knew she had gone before!
To her sweet "Good-night," my waking ear
Would never listen more!
The beautiful angel, dead, had come,
And opened the pearly door.

And down in her bed-room's mellowed light
Lay Florence, white and fair;
With the piling moonbeams on her brow
And the curls of golden hair;
But I thought of the spirit above the stars,
And only the casket there.

Story Teller

NELLIE RAYMOND'S CHOICE; OR, LOVE VERSUS PRIDE.

BY AGNES HARRERT.

Chapter II.

(Concluded from page 68, last number.)

It was the hour of twilight. CHARLES had been reading aloud to NELLIE, as they sat together in Mrs. ALLAN's little parlor, but the light had grown dim, and he had closed the book. He was silent, and NELLIE, chancing to look up, met his eyes resting upon her face. A certain undefinable something in their expression caused NELLIE's cheek to crimson, and involuntarily her glance sought the carpet at her feet. A happy, triumphant smile lighted up the young man's face, and in another moment he stood at her side.

"NELLIE," said he, in a low voice, "need I tell you how truly I love you—will you be mine?—will you be?"—what impulse urged him to use the word?—"a farmer's wife?"

NELLIE's lids flew up, and her blue eyes shone with astonishment; then a scornful smile curled her lip, and in a calm, cold, distinct tone, she answered, "Never!"

CHARLES stood for a moment as though paralyzed. Recovering himself, with perfect self-possession he bade her good evening, and left the room.

Very quietly he closed the door, passed through the hall, and down the walk. NELLIE listened intently to the retreating footsteps, growing fainter and fainter, until they ceased—then the creaking of the gate, as it swung to on its rusty iron hinges, fell upon ear, and all was still. A few moments she sat motionless, with drooping head and relaxed form; then starting up with an impatient ejaculation of "Nonsense!" she began pacing the room with rapid steps. But the motion availed not to quiet her restless mind, and with a despairing gesture of vexation, NELLIE threw herself upon the sofa and seemed to relapse into deep thought.

"A farmer's wife!" The words had struck a chord which gave only a discordant sound. Involuntarily, in place of the well-dressed gentleman before her, NELLIE recalled the picture he presented at their first meeting. His wife? No wonder her proud lip curled and she answered "Never!"

But now—No! we will not tell you of what NELLIE was thinking. We can keep a secret, and though you may think you can guess, most inquisitive reader, we shall not tell you whether you be right or wrong. At least, not at present.

"NELLIE," exclaimed Mrs. ALLAN one morning as she entered the parlor and threw herself down in a semi-tragic manner, "I am in despair!"

"Why, what has happened?" inquired NELLIE.

"Bridget is going to leave this morning, and how I am to do the work and make preparations for the company we expect next week, is more than I can at present imagine."

"Surely you cannot. You must have another girl to take BRIDGET's place," suggested NELLIE.

"Yes, but we don't happen to have an intelligence office about here, NELLIE. I don't think there is a girl to be found within ten miles—and, besides, John is so crowded with work, he could not think of leaving on such a wild goose chase as looking up a girl. Well, I suppose I am only making a bad matter worse, by expending my time here. You will have to entertain yourself, NELLIE, until brother GEORGE comes," said Mrs. ALLAN, as she hurried out to the kitchen.

NELLIE threw down the magazine she had been examining, and after a moment's thought a mischievous smile dimpled her cheek. Going to her own little room, she proceeded to dampen and straighten her curls—then brushing her hair plaitly back from her face, she arranged it in a simple knot at the back of her head. Entering Mrs. ALLAN's room, which opened into hers, she selected from her cousin's wardrobe a plain calico dress, and an immense blue checked apron, which attire soon took the place of her embroidered morning-robe.

Mrs. ALLAN held up both hands in amazement as NELLIE made her appearance, with a profound courtesy, at the kitchen door.

"Place me'am, and are ye after wanting a girl to do housework?" said NELLIE, with an inimitable Irish expression.

Remonstrance was useless, and NELLIE's dainty hands were soon deeply immersed in that most unspectacular of repositories—the dish-pan.

Now, NELLIE did not at first fill BRIDGET's place very satisfactorily, but she possessed the strongest disposition in the world to learn, and though her mistakes and blunders were at first about as

numerous and comical as those of any newly imported daughter of Erin, she never committed the same error twice.

Besides a willingness to assist her cousin, NELLIE had another unacknowledged impulse to inspire her present undertaking. She was making an experiment, and it resulted in her coming to the conclusion that it would not be such a dreadful thing, after all, to become a farmer's wife.

NELLIE had not seen CHARLES HOWARD since her summary rejection of his suit, save once when she chanced (?) to pass his residence, and beheld the young man spading in the garden. Strange to say, NELLIE's glance scarcely observed the coarse attire—she noted only the graceful, manly form—the intellectual, soul-stamped features. With a deep sigh NELLIE pursued her walk, meditating, meanwhile, upon the dignity and nobility of Labor. We are afraid, however, that she looked at the subject in a restricted light. She took a particular, rather than a general view, and CHARLES HOWARD stood in foreground.

The expected guests did not arrive until a fortnight after the designated time, and upon the morning preceding the day of their arrival, NELLIE resigned her office, as maid-of-all-work, in favor of a neat German girl who had applied for the vacant place.

GEORGE ARNOLD, NELLIE's cousin, and Mrs. ALLAN's brother, and his friend, FRED ARLINGTON, had left the city, ostensibly for the sake of a few days' enjoyment of country air and repose. Of the former, this was true—of the latter, it was far from being the chief object.

FRED ARLINGTON was one of NELLIE's most devoted admirers, and was, withal, the one whom the gossiping world set down as standing highest in her favor. He was handsome, intelligent, and wealthy—qualities surely desirable, and in most cases all-sufficient. He really loved NELLIE RAYMOND, and had skillfully maneuvered to obtain an invitation to accompany his friend, for the sole purpose of placing his hand, heart, and fortune at her disposal.

"I say, cousin, this is perfectly abominable!" exclaimed GEORGE ARNOLD, as he burst into the parlor, where NELLIE was engaged in completing a pencil sketch.

"Why, GEORGE, what do you mean?" queried NELLIE, arresting her hand and looking up with a surprised expression. It was evident, however, that her surprise was only assumed, for a conscious smile hovered about her lips.

"You know well enough what I mean, NELLIE—your rejection of FRED. 'Oh—these women!' and GEORGE seated himself, with an air of desperation, in the rocking-chair.

NELLIE quietly sharpened her pencil, and commenced re-touching the foliage of her picture. A few moments of silence ensued which was broken by GEORGE, who, in a very energetic tone, said: "NELLIE, lay down that work. I wish to talk with you."

"My work won't interfere with our conversation," said NELLIE, with a half smile.

"Well, then, I wish to know what possible fault you can find with FRED ARLINGTON? Isn't he good-looking?"

"Yes."

"Well educated and agreeable?"

"Very."

"Wealthy?"

"I believe so."

"Then what more can you ask?" interrogated GEORGE, in a triumphant tone. "He surely mistook your meaning—oh, NELLIE!"

"No, GEORGE, I respect Mr. ARLINGTON—I like him as a friend—nothing more. Were I capable of the act, I esteem him too highly to present him with so worthless a gift as would be my hand without my heart."

"That's what puzzles me, NELLIE, I'm almost certain that when you left B. you were heart free, or if you had preferences they centered upon FRED. MARY," said he, as Mrs. ALLAN entered the room, "has NELLIE lost her heart out here?"

Mrs. ALLAN glanced at NELLIE as she replied, carelessly,

"Not to my knowledge." Her cheek was flushed, and her fingers were making strokes which seemed too nervous to be accurate. Looking over her shoulder Mrs. ALLAN exclaimed,

"Mercy! what are you about NELLIE?"

With a start of dismay, NELLIE surveyed her drawing. Within the last moment, her erring pencil had mingled light and shade in inextricable confusion, and brought the hill-top, which a short time before had seemed to melt away in the distance, into the foreground, in laughable proximity with a bit of stone wall.

"Perspective decidedly bad, I should say Miss NELLIE," remarked GEORGE, with a quizzical glance from the drawing to her face.

Chapter III.

As a matter of course, important business (?) recalled Mr. ARLINGTON to the city, immediately GEORGE remained another week, at the expiration of which time, NELLIE signified her intention of accompanying him back to B. The morning of the day upon which they were to leave, NELLIE arose early for the purpose of taking one more country walk. She scarcely heeded the path she took, until, with a start, she found herself in the spot where she first met CHARLES HOWARD.

A rustic seat, which NELLIE had never before observed, was placed 'neath the shade of the maple, and with a sigh NELLIE sat down.

There—but a few steps distant—the foaming, sparkling little creek went dancing on its way, in the early sunlight, awakening in NELLIE's mind, however, naught but regretful, sorrowful emotions. She bowed her face upon her hands, and for a few moments sobbed convulsively. She had just mastered her grief, and with an impatient gesture said to herself, "This is very, very foolish," when a shadow fell upon the green turf at her feet, and looking up she beheld CHARLES HOWARD.

Dashing the tears indignantly away, confused and ashamed that her emotion should be discovered, she started to her feet, and with a slight salutation would have hastened away, had he not, by a gesture indicative of a desire to speak, prevented her.

"Pardon my intrusion, Miss RAYMOND," he said, "but having learned that you were to leave to-day,

you will excuse me for simply wishing to bid you farewell."

He extended his hand as he said this, and NELLIE placed within his labor-hardened palm her own little white hand in a parting clasp.

"Perhaps, Miss RAYMOND," CHARLES continued, still holding her hand, "you will allow me to offer a friend's congratulations upon your approaching marriage. You have my best wishes for your happiness."

"I—I do not understand you, Mr. HOWARD," said NELLIE. "You have probably been misinformed."

"Are you not engaged to Mr. ARLINGTON?—and is not the marriage to take place in a few weeks?" questioned CHARLES.

"No, Mr. HOWARD, and I am at a loss to comprehend why you should have supposed so."

A bright smile lighted up CHARLES' face as he replied, "Such is the report throughout the neighborhood, though where it originated I cannot say." At this moment some old recollection, fraught with pain, seemed to flit across his mind, and the smile faded from his lips. "Good-bye, Miss RAYMOND," he said, as he released her hand.

"Good-bye"—her lips formed—but there was no audible sound. Her cheeks were pale as marble, and the next instant dyed with crimson. "Mr. HOWARD," she said, but though he stood expectantly waiting, she did not proceed.

Was ever man so obtuse! There had been a fearful struggle in NELLIE's heart, between Love and Pride—and the former had conquered. Perhaps CHARLES HOWARD partially comprehended this—perhaps he read the secret in her burning blushes, her trembling lip, and downcast eyes—but the echo of that word "Never!" still lingered in his memory. He stood silently regarding NELLIE's confusion, which, as she raised her eyes to his and met their calm inquiring gaze, gradually subsided. She must speak now—what would he think of her—but she must speak—and with an effort which drove the blood from lip, cheek and brow, back to her heart, she said, "Mr. HOWARD, I wish to say that I very much regret my abrupt, my rude reply to you at our last interview." She paused a moment, and then added timidly, "We part friends, do we not?"

CHARLES smiled a sad smile, as he said, "Yes, we part friends. I have only myself to blame for my folly, in daring to hope that a city belle and heiress could love a farmer."

The last words were spoken in a sarcastic tone, for CHARLES really loved and honored his vocation too much to deem it a disgrace for even NELLIE RAYMOND to wed with a farmer. And NELLIE, who well understood the significant tone, loved him the more for his manly pride.

"I knew not my own heart then,"—she faltered. "NELLIE! did I hear aright?" exclaimed CHARLES, starting forward. One glance at her face, downcast and crimson with shame, was answer sufficient.

A glorious opportunity this, for repaying Miss NELLIE's disdain, with interest. But CHARLES—foolish fellow—did not improve it. He only drew NELLIE to his heart, and whispered, "NELLIE—my own NELLIE!"

One year from that time, NELLIE RAYMOND—to the astonishment of all her aristocratic friends and acquaintances—became a Farmer's Wife.

AN UP-COUNTRY SUNDAY NIGHT.

Another Sunday—the glad day of the week—has come to us—made its bright path in the sky, and passed over to other lands. It is almost midnight; the breath of the week-days, like the chill of the early dawn, is not yet felt. I shall sleep over into the bustling to-morrow with wet eyes, and a throbbing but joyful pulse.

Years ago it was our custom on this night to gather here, or at Rambleton House, and sing our old Connecticut hymns. My father always took the lead, walking the room back and forth, and gesticulating, sometimes in rather an extraordinary manner. The occasion was one of solemnity, but mainly it was a time of praise and thanksgiving.

We formed, at this time, a large circle; and it required a strong and powerful leader, like my father, to keep us in control. Sometimes that office was assigned to me; but in such case, we always failed in reaching that grand movement which my father commanded.

After such failure, my father would rise from his seat, look round upon us with a smile, and dash into the same tune with great force and emphasis; after which he would seat himself, and remark, in a modest way, that he had sung that tune "more than forty years ago;" had learned it, perhaps, on Litchfield Hill; and the first time it was ever sung was at such an ordination,—and was composed by such an one, expressly for that purpose. As to myself, I had been thoroughly trained by my father, years ago, for hours at a time, on rainy mornings, in the most difficult tunes he could select,—each taking a different part, and my father dashing through his with great spirit and precision.

Pausing occasionally, he would explain to me how Mr. W.—th, or Mr. —, or the celebrated Mr. D.—bible, sang the same. At these times, we sang, also, old anthems, now long since laid away (except now and then that we raise them, as it were, from the dead)—such as "I beheld, and lo!" (from Haydn's Creation), "The Heavens are telling," &c.

On the Sunday night meetings of which I was speaking, we usually sang "Denmark" towards the close; and for the last, a piece composed, or rather collected, by my father, from the closing passages of four different anthems—one by Dr. Madan, from the "Lock Hospital," and the others by eminent composers. The words were:

To our Almighty King
Wonder and praise—wonder and praise belong.
Praise him above, ye heavenly hosts,
Praise Father, Son, and Holy Ghost.
Thine all the glory, man's the boundless bliss.
Shining in immortal bloom!

These passages being very fine, we were all familiar with them, and sang them with great power. They formed, altogether, a very grand Doxology; after singing which, it was my father's custom, with some abruptness, to say, "Good night," and immediately retire.

This was years ago. We meet now—those of us

who are left—but more rarely. We sing the same songs; but we are not all here. Some have faded away, and others are scattered about the land. Shall we ever meet again to sing those old tunes? Not here. We can have but an echo of those days now. But we may meet—all meet—in a better home. (May our Father in Heaven grant that this be so.) We may all meet there and sing them again, with the hosts of Heaven—with the "thousands and thousands, and ten times thousands," who surround the throne of the Lamb, and cease not day nor night, saying, "Holy, holy, holy, Lord God Almighty, which was, and is, and is to come." All gathered at one hearth—father, and mother, and sisters, and brothers—to walk in white robes—to sing there the song of the Redeemed in Glory! Oh, my Father and my God, will this be so? All—

I have been, to-night, in one of my sad but joyous moods; silent and bewildered; the images of old friends and old times about me. It is not long since my voice was strong and firm. It is so now; but in this strange humor—this indomitable willfulness of the heart—I have no power over it. I can but sit, speechless, and look up with a trembling hope to the kind Heaven which is over all.

I was sitting, to-night, leaned back in my chair, while T. sat by the hearth, gazing silently upon the dying embers, when my father came in, and without speaking to us, began walking slowly across the room. Presently, he began an old anthem, in a low tone, his voice—a very unusual thing—trembling, and at times almost failing him, while he walked slowly back and forth. The words, as well as I remember them, were "Farewell, farewell, my friends, and God grant that we may meet again, where trouble shall cease and harmony abound." As he finished singing, he turned to me and asked what old piece it was. "Strange," he said, "that I should think of it now. I do not remember of singing it in more than forty years. It was to be one of the old pieces we used to sing on Litchfield Hill," and again he repeated it, slowly, and as if searching carefully for the old tones so long buried—"Farewell, farewell, my friends!"

He retired soon after, but presently returned, with a black leather-covered book (*Songs of the Temple*, 1819), took a seat by the table, by the side of my wife, and opening the book carefully, turned to an old tune not at all familiar to me, but of a soft and plaintive strain. It was very simple in tone, but exceedingly difficult in its construction. My father sang it through once by himself, and then asked us to sing it with him. I was in that foolish condition I have mentioned—my eyes troubled with tears—and could make no reply. I was, in fact, pretending to sleep. My father looked at me a moment, over his glasses, but said no more, and began singing again—my wife joining with him. These are the words:

'Tis finished, said the Savior cried,
And meekly bowed his head and died;
'Tis finished—yes, the race is run,
The battle's fought—the victory won

They sang it again and again, with the same words. My wife has a sweet voice, and they both sang in low and subdued tones; my father using but little of his usual gesticulation, only raising and lowering his hands slowly, as in prayer. Once, at the close of the verse, he looked at T. with a smile, and remarked, gently, that she did not quite touch a certain note. "But," said he, in the same low tone, "it is very intricate." Again and again, they repeated it, and the words still throb at my heart:

The battle's fought—the victory won!

At length my father rose, bowed, without speaking, and retired. T. came and sat by my me, silently, for a few moments, and went up to her rest.

And now the midnight has come, my friend, and Sunday night is over. I must go now. But I shall still see that picture of youth and age bending over the old book—the calm and prayerful face of T. and the grave but rapt look of my father—I shall still hear, in the morning watch, those sweet, sad tones, and those glorious words:

'Tis finished—yes, the race is run,
The battle's fought—the victory won.

Up-Country Letters.

Wit and Humor.

MOTHER—"Here, Tommy, is some nice castor oil, with orange juice in it."

DOCTOR—"Now don't give it all to Tommy; leave some for me."

TOMMY (who has tasted it before)—"Doctor's a nice man, ma; give it all to the doctor!"

A LEARNED young lady the other evening astonished the company by asking for the "loan of a diminutive, argentiferous, truncated cone, convex on its summit, and semi-perforated with symmetrical indentations." She wanted a thimble.

A DRUGGIST sent his Irish porter into a darkened cellar; soon after, hearing a noise he went to the opening and called out—"Patrick, keep your eyes skinned!" "Och! duce an eye," roared Pat, "but it's my nose that's skint entirely."

JORUM was told of a supper at which goblets of ice, formed by evaporation, were used, from which to drink champagne. Jorum heard the story through, and then exclaimed—"Well, ice is rare!"

SENTENTIOUS.—The saying that "there is more pleasure in giving than receiving," is supposed to apply chiefly to kicks, medicine and advice.

"Mr dear wife, I wish you would try to keep your temper." "My dear husband, I wish you would try and get rid of yours."

THE world should have its docket called, and sluggards all defaulted, and those should be the "upper ten" whom labor has exalted.

THE man who undertook to blast his neighbor's prospects, used too short a fuse, and got blown up himself.

WHAT is a screech-owl like a fiddler? Because he makes a *vila lingo* (violin go.)

ALGEBRAICAL PROBLEM.

A MAN had some barley, oats, peas, and buckwheat, and made a mixture for feed; he found that if he took 1-5 of his oats, 1/2 of his peas, 1/3 of his barley, and 1/4 of his buckwheat, his mixture is worth 13 13-18 cents a bushel. If he takes 1/2 of each, his mixture is worth 63 4-5 cents a bushel. If he takes all his grain, his mixture is worth 70 3/4 cents a bushel. If he takes all of his oats and peas, his mixture is worth 71 3/4 cents a bushel. How many bushels of each, also the price of each kind of grain?

Allen Cent, N. Y., 1889.

Moore's Rural New-Yorker,
THE LARGEST CIRCULATED
Agricultural, Literary and Family Weekly,
IS PUBLISHED EVERY SATURDAY BY
D. D. T. MOORE, ROCHESTER, N. Y.
Office, Union Buildings, Opposite the Court House, Buffalo St.

Agents in New York and Boston.
Subscription—C. M. SEXTON, Agricultural Book Publisher, 25 Park Row, (opposite Astor House), New York.
Wholesale, (to supply Periodical Dealers, &c.)—DEXTER & BRO., 14 Ann St.,—ROSS & TOWSE, 103 Nassau St.
Advertisers—S. M. PATTENGILL & CO., No. 119 Nassau St., New York, and No. 10 State St., Boston.

TERMS, IN ADVANCE:
Two Dollars a Year—\$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for \$5; six, and one free to club agent, for \$10; ten, and one free, for \$15; sixteen, and one free, for \$22; twenty, and one free, for \$28; thirty-two, and two free, for \$40; (for Thirty for \$37.50,) and any greater number at same rate—only \$1.25 per copy—with an extra copy for every Ten Subscribers over Thirty. Club papers sent to different Post-offices, if desired. As we pre-pay American postage on papers sent to the British Provinces, our Canadian agents and friends must add 12 1/2 cents per copy to the club rates of the RURAL. The lowest price of copies sent to Europe, &c., is \$2.50—including postage.

THE POSTAGE ON THE RURAL is only 3 1/2 cents per quarter to any part of this State, and 6 1/2 cts. to any other State, if paid quarterly in advance at the post-office where received.
ADVERTISEMENTS—Twenty-Five Cents a Line, each insertion, payable in advance. Our rule is to give no advertisement, unless very brief, more than six to eight consecutive insertions. Patent Medicines, &c., are not advertised in the RURAL on any conditions.

PUBLISHER'S SPECIAL NOTICES.

THE MONEY WE RECEIVE.—Bills on all solvent Banks in the U. S. and Canada taken at par on subscriptions to the RURAL, but our agents and other friends will please remit New York, New England or Canada money when convenient. For all amounts over \$15 we prefer Drafts on either New York, Philadelphia, Boston, Albany, Rochester or Buffalo (less exchange,) payable to our order—and all such drafts may be mailed at our risk.

IS ordering the RURAL, please send us the best money conveniently obtainable, and do not forget to give your full address—the name of Post-Office, and also State, &c.

MOORE'S RURAL NEW-YORKER,
AN ORIGINAL WEEKLY
RURAL, LITERARY AND FAMILY NEWSPAPER
CONDUCTED BY D. D. T. MOORE,
With an Able Corps of Assistants and Contributors.

The Rural New Yorker is designed to be unsurpassed in Value, Purity, Usefulness and Variety of Contents, and unique and beautiful in Appearance. Its Conductor devotes his personal attention to the supervision of its various departments, and earnestly labors to render the Rural an eminently Reliable Guide on all the important Practical, Scientific and other Subjects intimately connected with the business of those who are interested in its contents. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate and useful Engravings, than any other Journal published in the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER IN AMERICA.

All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.
TERMS and other particulars, see last page.

DIVISION OF LABOR.

Those who have not given attention to the subject can form no adequate idea of how much is gained by a judicious division of labor. By its adoption in manufacturing, scores of articles in daily and general use are so cheapened as to come within the means of all, adding much to the comfort of the people, which, without this system, would be classed among the luxuries to be enjoyed only by the opulent. Such small and simple articles as the pin and needle, pass through half a dozen different operations, each one being a trade to which a class of operatives devote their entire time and skill. In the making of the steel pen there are about twenty operations, and most of these are distinct trades. By confining themselves to one work the operatives acquire a skill and expertness truly surprising, and which could never be gained was the whole work of making a pen committed to one set of workers. In all our manufactures the same system is practiced, to the mutual advantage of those who make and those who use.

The farmer, in common with others, enjoys the benefits of this system, but we have thought that from it he might derive some useful hints as to the best way of conducting his own business; and while we make this remark we freely admit that his circumstances are unfavorable to its general adoption. He trades his corn, and wheat, and butter, and cheese, with the mechanic for plows and wagons, boots and clothes; with the store-keeper for tea, coffee and cotton cloth; or, what is the same thing, sells his produce in the market to procure money to pay for them. That this kind of division of labor is of mutual advantage no one will doubt, for the farmer can raise the wheat and butter to pay the shoemaker and blacksmith much easier than he could make his boots or shoe his horses, while the shoemaker and blacksmith can earn what wheat and corn they need much easier and cheaper by trades at which they are skillful, than in a bungling attempt to grow it for themselves, for at this they would work to great disadvantage.

Of the advantages of a division of labor thus far, or rather an exchange of labor, there can be no question. But a division of the legitimate business of the farm, between those engaged in it, assigning to each his peculiar work, is difficult from the nature of the work itself. It is so diversified in its character, differing at each season—each week during vegetation bringing its own peculiar business, that an advantageous division of labor seems almost impossible. Then, at particular seasons, such as planting, haying, harvesting, &c., all the available strength of the farm must be directed to the special and all-absorbing work on hand. Still, we have seen on large and well managed farms in another land, a very judicious system of division of labor almost as perfect as in a well regulated factory, where every man had a particular work assigned him—where one class did little but ditch and drain—to another was given especial charge of the horses, and they were held responsible for their care—another had the cattle to manage—another the sheep, &c. The most intelligent and trusty man in each of these classes was designated a foreman, under whose direction the others acted, and he received a higher salary than the others as a compensation for greater responsibility and usefulness, and as an incentive to the faithful performance of duty. How far this plan might be adopted to advantage in this country, we leave to our readers to say.

Our circumstances are different. Here farms are small, and but little labor is generally employed beyond the farmer and his sons, with, in some cases, a hired man. We have no doubt, however, that something might be done in this way, for we think we have seen sad neglect as well as waste of labor for want of some system of the kind. It is an old saying, and true, that "what is every body's business is nobody's," and we have all observed with what pleasure and pride even a little boy will care for a colt or a calf, or do any other work, when he understands that it is committed to him as his special department of labor. He feels a pride in being trusted, a pleasure in responsibility. From this principle in our nature—so fraught with good, if properly directed, and so early developed—may we not learn the great advantage of dividing labor, and responsibility, as a means of educating young farmers and securing the diligent performance of the work, and in the best possible manner? By this means not only the labor of the hands is secured, but the head is engaged.

But, in these rather rambling, though we hope not altogether unprofitable thoughts, we have strayed from the subject on which we proposed to merely make a few remarks. The question has been asked a score of times the past month or so, whether the experience of the past season was such as to warrant farmers in planting Chinese Sugar Cane the present spring. We have watched this matter pretty closely, and what facts we have learned we will freely state, with such inferences as we think fairly drawn from the facts presented. The Chinese Cane will ripen sufficiently for making syrup wherever corn is a sure crop. An acre of good cane will produce from two to three hundred gallons of good syrup, worth at least fifty cents a gallon. It is no more trouble to raise a good crop of the Chinese Sugar Cane than a crop of corn.

From these facts, which we consider established, our readers may infer that this is the best and most profitable crop that a farmer can raise. But, before admitting this conclusion, we will state some other facts which have come under our observation. We have known persons raise very good crops of cane, waste a good deal of time and patience in a vain attempt to extract the juice and make syrup, with imperfect machinery, little knowledge and less skill, and at last give up in despair, pronouncing the whole thing a humbug. We have known others to stack their canes, waiting until other work was out of the way for a convenient time to commence manufacturing syrup, when the canes became mouldy and the juice soured and spoiled. Others have raised the cane in abundance, but the work of making syrup seemed so formidable that it was never attempted. Others we have known who determined to engage in the manufacture of syrup on a pretty large scale, and constructed expensive machinery, which proved faulty in some respects, requiring repeated alterations until the season was about over—proving an unprofitable investment for the one season, at last. One farmer, in this vicinity, not laying claim to much mechanical skill, but of good sound sense and an investigating mind, had a mill and boiling pans made, which cost about three hundred dollars. He made syrup from his own canes, and then manufactured for his neighbors on shares. The expense was, of course, more the past year than it would be after a season's experience, but we believe he cleared enough to pay all expenses, with a first-rate mill for grinding the canes and other apparatus on hand for another season. One gentleman raised about a quarter of an acre of cane, had it made into syrup "on shares," and obtained over thirty gallons of good syrup to pay him for the trouble of cultivating a quarter of an acre, which he considered a fine investment.

The great difficulty is in making the syrup. Any farmer can grow the canes. It is a manufacturing operation in which farmers cannot, as a general thing, profitably engage. Would the sugar cane of the South succeed as well here as it does in the most favorable Southern climate, we do not think our farmers could grow it in small quantities, as they do the Chinese cane, and make sugar, at a profit. In this, we must have a division of labor. Could some enterprising man in each town be induced to study the subject, and erect the proper works, then farmers could grow the cane with confidence, and farmers and manufacturers might realize a large profit; or the farmers in each district might unite in a Joint Stock Company, and by paying a few dollars each, mills and apparatus of the best kind could be procured and a competent person employed to superintend the operation. Until this, or something like this is done, which no doubt will be before long, we cannot urge farmers to grow the Chinese cane, with the expectation of procuring either sugar or syrup. Care, skill and experience are essential to success; the two former few possess, and of the latter all are alike destitute. We would discourage none yet we would have all understand the difficulties they will have to encounter.

ANOTHER PREMIUM FARM HOUSE.

The accompanying engraving is a very good representation of the farm house to which the Committee awarded the Second Premium, as announced in our issue of January 1st. It was built, and is still occupied by H. B. HART, Esq., of this County. Mr. H. furnishes a fine description of his house and its conveniences, and we commend his interesting remarks to all our readers:

FRIEND MOORE. In compliance with your request, I herewith present a plan, elevation, &c., of my dwelling house, which stands upon the north-west of four corners, fronting east and south, which was designed for a farm house. It was built of wood, in the years 1855 and '56, on walls two feet thick.

THE CELLAR is eight feet in the clear, its size 32x36—16x26, with outside stairs 8 feet high, 4 feet 8 inches wide, leading into the wood-house, and consequently accessible at all seasons of the year. Cement bottom, three inches thick, composed of one barrel water-lime to four of fine gravel. There has been no frost or water in the cellar since we have occupied it. Ten windows with frieze grates outside. Never have banked the walls outside, the depth of cellar and thickness of walls (as I believe) being a sufficient guard against frost.

THE UPRIGHT OR MAIN BUILDING is 32x36, 18 feet posts. Lower story 9 feet high in the clear; the upper, 7 feet 8 inches. Wings, 26x32, 12 feet posts. Lower story 9 feet in the clear. Wood House, 20 feet square, with floor above and below.

The outside is sheathed upon studs 2x5, 12 inches apart, with matched pine boards, then clapboarded. 1 1/2 inch lap, and 3/4 inches to the weather. Lower floors yellow, or pitch pine, upper white pine. A cistern, containing when full, 100 barrels of water.

I do not claim that the exterior appearance of our house is superior, or even equal, to hundreds of others, excepting, perhaps, that in the limited space occupied by the front stoop, (saving much room inside,) yet still presenting a very neat and imposing appearance. The interior arrangement, after an occupancy of two years, meets our most sanguine expectations, and I am of the opinion that the interior plans for, or arrangements of, most of our farm houses are too hastily matured, or in many instances left to architects or builders, without consulting the FARMER'S WIFE, who, of all others, should know, and does know, more about the real comforts and conveniences of a good farm house, than a score of those who make high pretensions to these matters. It is a well settled fact, that in the rural districts the ever faithful companion of the farmer, (of ordinary material means,) does, in every well regulated farm house, perform much, very much, of the labor with her own hands. How important and necessary then, that every convenience and comfort that can possibly be attained, be secured in the construction of the farm house. If only one step can be saved in going to and returning from the kitchen to the cellar, the pantry, the dining-room, the cistern, &c., how many will it save in a day, a month, a year? We will appeal to that patient class, farmers' wives, daughters, and servants, who are compelled to pass through the whole length of a dining-room to the pantry, or through the pantry and a sleeping-room to get to the cellar stairs; or, are compelled to run through dining-room and parlor to get up stairs; or, have the shins of half a dozen stalwart men (especially in the morning) to step over, or pass around to get to the cook-store, and as many eyes scanning the movements of the already half-faint cook, while she is preparing the meal, to answer!

By referring to the plan, it will be seen that this important and desirable end—convenience for performing the work of the house—has been, as far as possible, secured. One desirable advantage we have attained, is in the location of the dish and wash sinks, both discharging into the same sewer, into which all the water from one entire side of the house is conducted, cleansing and purifying the same at every shower. Another advantage we claim over many good farm houses is, that the kitchen is in a pleasant part of the house—unlike too many cook-rooms, that have more of the aspect of a prison than a place for lovely woman to dwell in. The attention of the reader is also called to the pantry, (usually another of those little dark places,) which is lighted by two large windows, (but which may be darkened if desired,) and containing a large dish cupboard and six smaller ones, for various other uses; also, numerous drawers, a cooling shelf, and four flour chests, capacious enough to hold the flour from twenty bushels of grain.

We also think it a great convenience to have one bed-room contiguous to the nursery, in case of protracted sickness in the family. Many costly farm houses have but one sleeping-room on the first floor, which we have known from experience to be exceedingly inconvenient. Another convenience we find in having ward-robes, or clothes

PREMIUM FARM HOUSE—No. II.

presses, near each sleeping-room and nursery. One more decidedly comfortable arrangement is that the floors, both upper and lower, are each upon a level. No steps to rise in the whole house save the main stairs.

It may be a question with some farmers whether a house without a fire-place is complete. I will answer by saying that, we have a building (and the like may be had by any farmer at a trifling expense) within sixty feet of the house, in which we have a cauldron kettle, a good fire-place, &c., in which we can do all of what is usually called dirty work, without even the scent of grease about the dwelling.

My mechanics were all employed by the day, and the whole work is done in a good, neat, and substantial manner. It would undoubtedly have cost less money had it been done by the job, but I think would not be as cheap in the end. The cost of this house might be an objection with some, but I preferred (on the score of economy even,) putting the whole under one roof, rather than be under the necessity of adding a part of a house every two or three years, at the cost of half the price of a whole one—and, in addition to that, the mortification of not having a house that pleases at last. The cost of my house, in round numbers, was \$3,000, exclusive of my own team work, and the board of hands.

I fear I have already embodied too much in this description, but it seemed (to me, at least,) necessary to get a correct idea of the thing, that thus much should be stated.
H. B. HART.
Rush, N. Y., 1859

THE SOUTHERN TIER—THE DAIRY REGION.

In the opinion of my friends, I owe an apology to "Steuben and Cattaraugus" for making them symbolize the icebergs and the barrens—not quite so bad as that—I accused them of "hard pan" and "grass." Now, the first is a questionable compliment, but the last is no crime. A recent visit in that quarter brought to mind an able essay in the New York Tribune on the "dairy region," written by a regular contributor of the Rural New Yorker, in which it was demonstrated that the dairy region proper in the United States, was mainly confined to Northern Pennsylvania, Southern New York, and the region bordering on Lake Erie. New England is included, and Eastern New York, but from proximity to great markets, the soil must be devoted to the varied wants of a city population.

Grass will grow, and cows will live in most sections of the United States, but it is manifest that localities differ in their fitness for particular products. In general, grass is not the forte of our western prairies. The deep, rich, dry soil of our Southern and Western States is peculiarly adapted to corn—a crop of great excellence and worth, while wheat, oats, barley, &c., are extensively and profitably raised. Grass, fresh and sweet, suitable for the best quality of dairy products, with soft,

pure, enduring water, belongs to the high lands, and the showery region of Southern New York, and the contiguous country. This is emphatically the dairy region! Dairying does not suit the habits of the Western people; it requires attention to details, method and exactness. These are not, and for a long time will not be the distinguishing characteristics of the Western people—they live in a "great country"—they must do things by wholesale.

Good fresh dairy butter readily commands twenty cents a pound, and cheese, though somewhat depressed the present season, brings remunerating prices. If SYLVESTER GRAHAM was "Autocrat of the breakfast table," butter might have a thinner spread, and enter more sparingly into the condiments that grace or disgrace the board—as it is, our palates govern with very little deference to constitutional provisions, and butter, the great antidote to leanness and insipidity, seems likely to pervade all the cracks and crevices of our cookery, playing a wide, and still wider part in domestic affairs.

The "dairy region" must rise in the world, it will never become obsolete, its "shadow will never be less." As the world progresses we have nicer discriminations—a slight degree of taint, a moderately bad odor, signifies nothing with the barbarian,—at the "Astor," or the "St. Nicholas" such

irrelevant manifestations would excite a popular commotion that would throw a modern French Revolution into the shade. This growing accuracy of estimate, this delicacy of appreciation will render it necessary to study adaptation and capabilities. When people will no longer content themselves with the second and third rate, producers will find it convenient to put themselves into a shape to supply the "extra." If people will have fruit of delicate and exquisite flavor, the soil and climate which can supply that demand will be diligently sought out and consecrated to fruit growing. If dark bread will not do, the white, plump, clear kernel will claim its proper place—the judge permitting—melons will take the rich, sandy soils, and potatoes run the gauntlet—"electricity" on one side, and the "bugs," with their conditors, on the other.

Dairying, too, has its domain. A difference of, say from three to ten cents per pound in the market value of butter, is a financial consideration that men may disregard, while society and business are in a chrysalis state; but in process of time, facilities for making the best article will be sought out and improved. Then the real dairy region will be known. Southern New York is elevated land, as any one may see by observing the course of the streams; these high lands arrest the floating vapor, and bring down the showers—vegetation is fresh and sweet. White clover, the delight of dairy-maids, is indigenous. "Limestone and hard-water"—abominations in butter-making, according to A. B. Dickinson, Esq.—have prudently kept themselves away. The bovine herd is not forced to elaborate sweet cream from tad-poles and wigglers found in rain water cisterns and stagnant pools—the pure spring water has a perpetual flow—vegetation has not a rank overgrowth in the spring, as in some of the more Southern latitudes, which remains dry and dead for the remainder of the year—in short, everything conspires to make it a dairy region. As such it will distinguish itself.

Doubtless much remains to be done, but first of all its inhabitants should appreciate their eminent opportunities—knowing what their *forte* is, they should act accordingly. How to get a good crop of good grass is the first great consideration.—This will be treated in a subsequent article.

A judicious selection of dairy stock will next claim attention. I know, from actual observation and experience, that it is possible to get a large supply of good milk from compact, symmetrical, easy to keep, and good-to-look-at cows. We should give unremitting and assiduous attention to our dairy stock. A cow's antecedents, like a President's, should be all right. *Sire* and *dam* should be from good milking, healthy and thrifty stock, and nothing else. Avoid, as you would pestilence, all crosses with individuals and families that don't "run to milk," or are otherwise defective.

Barns, stables, and all requisite appendages should be provided after the best plans. High keeping is the height of economy. Good pastures, good hay, (cut in season and carefully mown,) wheat bran, corn and buckwheat meal, apples, roots, &c., should not be withheld especially in the spring.—Providence will bless in this as in other things, a diligent use of the means.—H. T. D.

THE APIARY.—MANAGEMENT OF BEES.

EDM. RURAL:—Heartily do I endorse the suggestions of Mr. BENJ. SUMMERS in regard to wintering bees,—they are excellent so far as they go, and to neglect such precautions would certainly prove fatal to the bees,—but there is something more needed to winter bees successfully in this locality. I have never lost bees to any extent from the causes he wishes bee-keepers to guard against—have never used thin boards for hives, (never less than 1 inch to 1½ thick,) but can see no difference in favor of thick boards—neither can I see the philosophy of thick stuff to prevent the changes in atmospheric temperature affecting the bees. According to this reasoning, the thicker the stuff used for hives, the better—and, also, if so thick that atmospheric changes would not be felt at all, would be perfectly useless to the bees, and they would perish from confinement.

Something else is wanting to the successful wintering bees here. If some plan could be devised to keep bees in their hives in a cool and dry temperature—say from November 1st to May 1st—would be the thing. I have tried various plans, but with unsatisfactory results—such as burying them like potatoes, but the combs will mold, being too damp—putting them in the cellar—and by constructing a building, the walls of which were filled in with spent tan-bark. All these have failed.

The mere having abundance of honey to winter the bees through is not sufficient, for swarms that have a great surplus of honey in the spring, do not do any better, or swarm earlier, than those that have barely enough honey to carry them through. They want protection from our raw, cold, backward spring months, which deplete their numbers seriously, thereby retarding swarming until so late that the young swarms cannot possibly make comb and gather honey enough to winter upon. Now, under this state of things, how can bees be kept successfully and profitably? Can any one suggest a remedy through the *RURAL*?—If so, they will oblige others, as well as

T. L.
Apiary Cottage, Cal. Co., N. Y., 1880.

COST OF DRAINING IN ONTARIO COUNTY.—At the winter meeting of the Ontario Co. Ag. Society, the competitors for premiums on Draining were to report. Two premiums were offered "for the greatest number of rods of tile or stone drains put down in the year 1878, said drains to be not less than two and one-half feet deep." The successful persons were Wm. Johnson of Seneca, and THOMAS TERRY of Gorham. Mr. J. laid 604 rods of drains, two inch tile, at a cost of 31½ cents per rod; and 144 rods of drains, of six inch tile, costing 70 cents per rod. These drains were put on nine and a half acres of land. Mr. T. put down 300 rods—3,000 tile were one and one-half inch; the balance of the tile were 2 inch. There were some few rods of stone drains. The tile drains cost 28 cents per rod, and the stone drains cost 37½ cents per rod.

A small farm, well tilled and manured, will give more profit than a large one with the same labor and amount of fertilizing material.

TO KILL TICKS ON SHEEP.

EDM. RURAL:—In your issue of the 19th ult., J. W. SALSBERY wishes to know a cure for Ticks on Sheep. Bountiful feeding and comfortable shelter is a great preventive, but it will not eradicate them after they have made a permanent settlement, and it is an injury to the sheep to wash them in tobacco water in cold weather, and at this season of the year, the wool is too long for that operation; but Scotch snuff applied to the skin, where the ticks are located, will make them decamp immediately. Separate the wool carefully, lengthwise of the sheep, take the snuff with the thumb and fingers and apply it on the skin, closing the wool after it. If the Ticks are all over the body, apply two or three rows on each side, (avoiding the back,) from head to tail; but if they are only located on particular parts, apply it freely there, and they will soon decamp. If the Ticks are very plenty, take time and do the work thoroughly. When sheep are much infested with Ticks in the Spring, about two weeks after shearing they will leave the old sheep and go upon the lambs, then dip the lambs in tobacco water, and you get clear of the nuisances for a time.—W. G., Wheatland, N. Y.

MESSRS. EDS.:—In answer to Mr. SALSBERY'S inquiry in the *RURAL* of Feb. 19th, I would say that if his flock really demands some antidote at his hands before warm weather comes, that the following may be relied on as sure to kill every time.—For one hundred sheep, take six pounds good tobacco, or its equivalent in poorer, say ten pounds, steep it, (not boil,) in a number of waters until the strength is all out, strain it through a flannel-mill sieve, and add to it half a pail full of good strong ley, and two quarts of salt. If your tobacco is good, and sheep not very bad, it may do without the last two articles. Now for the operation. Provide yourself with two hands to hold your sheep, by laying them down first on the side, now take an old tin tea-pot, and commence pouring the whole length of the sheep, by parting the wool, taking care to so hold up the wool, and rub it in, as to have it find its way nearly all over the skin, without losing your liquid in the wool. It is better to give a little time for it to run in than to hasten the operation. Serve both sides as above, then stand the sheep up, and serve the back in the same way, taking particular care not to miss the shoulder, using about one to two quarts on each, according to condition of Ticks, and size of sheep. One quart for lambs, if strong liquid and properly applied, will cure, or rather, kill, the first time. As dipping in winter, with all the wool on, is rather laborious, and takes too much tobacco, Scotch snuff will prove good, but will not penetrate every part like liquid tobacco. My flock of long wool lambs I found were fast going, and on examination found them perfectly black with Ticks—very poor, and three already dead. I prepared myself as above, three days ago, and doctored them, and now I find, where the tobacco was applied, not one live Tick to be seen, but all dead, not having had time even to escape. Three men will doctor, if they work lively, about ten per hour, and do it right. But I consider one ounce of prevention better than a pound of cure. Dip your lambs within one or two weeks after shearing, in tobacco water, when the Ticks will all be on them, and you will not have cause to doctor again, if properly cared for—that is, shelter, bedding, racks, water, and food sufficient. I close my Sheep Tick article, by expressing my gratification in the perusal of such articles as Mr. M. ADAMS' on Gravel Roads—a much needed reform; also Mr. G. W. THOMAS' expose of the Jack Lantern, or, as he calls them, Standard bearers in Agriculture.—D. R. PRINDLE, East Bathing, N. Y., 1879.

MESSRS. EDS.:—J. W. SALSBERY wishes to know through the *RURAL*, how to get rid of Ticks on Sheep. I will state what I believe to be an easy and sure remedy to dispose of Ticks on Sheep, and effectually destroy Lice on Cattle. I have for many years, been in the habit of keeping on hand through the fall and winter, a full supply of salt and sulphur where my stock could have free access to it at all times. I take three parts salt to one of sulphur. Now, if J. W. SALSBERY will let his lambs have a full supply at all times, my word for it, the Ticks will very soon take up their line of march, and will not return as long as the stock is cared for in this way. The sulphur works in the blood of the animal, and is a great preventive of many fatal diseases to which our domestic animals are heir. The above preparation is also good for horses. I have been a farmer for the last twenty years, and have been possessor of all the above named animals, and to the best of my recollection, have had no Ticks, or diseased animals.—AVERY WILLIAMS, New Berlin Centre, N. Y., 1880.

FEEDING ROOTS IN WINTER.

FARMERS very generally declaim against feeding roots in winter to their farm stock. What few they raise are generally buried off to market in the fall, or fed out without stint or measure until all are out of the way. In our long, severe winters stock need the best of care in order to hold their own, to say nothing of keeping them growing, or from losing flesh. So long kept confined without green food, their digestion becomes impaired, and costiveness, or an unhealthy looseness, is liable to attack them in turn. Horses, sheep, and cattle, suffer from these causes, and it is no uncommon thing in winter to find it evidenced by the thin and soft, or hard and waxy character of the droppings of different animals.

In all such cases the stock are suffering for some food, offering a closer substitute to their natural one—fresh grass. Roots should at this time be fed "as a medicine," if for nothing more. The change in the appearance of a herd with a good supply of roots, even once or twice each week in mid-winter, from that presented when without them, furnishes to all who try the experiment sufficient evidence of their value.

We are quite confident that all stock can be wintered more cheaply when supplied with roots than when they are not. The winter is the best time to secure the necessary roots, and when the weather is so cold, the green food in this form far more than when it is in the hay or other forage.

Nagara Co., N. Y., 1880.

OAK SHINGLES. THEIR DURABILITY.

EDM. RURAL:—In answer to Mr. MARTIN SMITH, of Wheatland, N. Y., I will give a little of my experience on this subject. I have been in Michigan most of the time since 1853, and for the greater portion of the time in Livingston county. I do not know where Mr. SMITH's friend could have lived in Michigan, for, as far as my knowledge extends, there is no place in this State where people are using oak shingles to any extent. In this section of the country oak shingles are worth \$1.25, and pine \$2.00 per thousand; still, pine are used almost invariably for any thing of a decent building. I have one shed covered with pine, and another one which are oak, white wood, and black ash, and the latter is much the best of any except the pine. Mr. SMITH's friend says oak looks well. I wish he was here to take a look at the different kinds, as I think he never would go to New York State and make another such statement. I have a barn which has been built twenty years, and, during that period, it has been covered twice with oak. I covered one side with pine last summer, and intend to cover the other side with the same material next spring.—L. HANTSBERG, Unadilla, Mich., 1859.

MESSRS. EDS.:—Having noticed an inquiry relative to oak shingles in a January number of your *RURAL*, I would say that they are not made like pine shingles. In the first place the timber is sawed off the required length—say eighteen inches long—then it is split into what is called bolts. These latter are put into a large vat which is filled with steam and kept so until the wood is thoroughly steamed through. The bolts are then taken out and cut into shingles by a machine for that purpose. The knife being concave-shaped, it, of course, cracks the shingles more or less in cutting, so that when exposed to the rays of the sun, (unless care be taken to lay the cylindrical side up,) your roof has the appearance of a tile roof. At the best they don't make a handsome roof; it is a very good one, however, but not equal to pine. The price of the oak is \$1.50 per thousand, and for pine, \$3.50. The pine is used by many here at these figures.—D. INGRAM, Hillsdale Co., Mich., 1859.

MESSRS. EDS.:—Concerning oak shingles, I would say, in this part of Michigan we think but very little of them, although quite extensively used on account of the cost. Pine is much better, and preferred by good judges of both, at about twice the cost of oak. Roofs that were put on 20 or 25 years ago, have had to be newly roofed once or twice since, and pine that was put on at the same time stands good yet, and bids fair to stand the storms for ten or fifteen years to come.—R. W. N., Jackson Co., Mich., 1859.

MESSRS. EDS.:—I noticed, in a January number of the *RURAL*, an article from MARTIN SMITH, of Wheatland, N. Y., stating he had been informed, by a resident of Michigan, that the people here were covering their best houses with oak shingles. This may be so, but the instances are rare. I have resided here twelve years, and oak shingles are used to some extent in this locality, but I have never known an instance where they were used on a building worthy a good roof. They are manufactured, in some cases, similar to pine, but there are different modes of laying them. I do not consider them worthy of further notice.—A. F. FIELD, Cohodah, Mich., 1859.

Inquiries and Answers.

Filtering Cistern.

Will a large pine cistern tub, sunk in ground, and fitted for filtering by packing one side of the partition, with charcoal and sand, (as directed in the *RURAL*), preserve the water fit for table use? Will said filtering materials harden the water in any degree so as to unfit it for washing?—A CANADIAN READER.

The filtering material will not harden the water the least. For a while the water will be much softer than unfiltered water, in consequence of the small quantity of wood ashes that will be in the charcoal. This might be prevented by washing the coal. If the filter was well made the water would be fit for use, but for furnishing water for table use we would prefer a small filter that, in addition to the packing, would hold two or three buckets of water. Anything out of order would be noticed immediately, and cleaning or re-packing would be but very little trouble. It might be placed in a good clean cellar, or any other convenient position.

Blue and Red Ink.

Will you, or some of the numerous readers of the *RURAL*, please give me a good recipe for making Red Ink, and also Blue?—C., New York, 1859.

For Blue Ink, dissolve indigo in oil of vitriol and add water until you have the shade of color required. Then add as much potash, or soda, as the liquid will bear without injury to its color.—Another method is to mix in a glass bottle one ounce of powdered Prussian blue with two ounces of muriatic acid. Let it stand 24 hours, then dilute with water, and it is ready for use. There are a dozen methods of making Red Ink, differing but little. In fact, ink of any color may be made from strong decoctions of the ingredients used in dyeing, mixed with a little alum and gum arabic.—The following makes a very good red ink. Stale beer, or vinegar, 1 pint; cochineal, bruised, 1 dram; gum arabic 1 ounce; ground Brazil 2 ounces; alum 2 ounces; boil moderately for three or four hours and strain.

HUNGARIAN GRASS SEED.—(W. L. L., Sharon Spa, N. Y.)—The nature of Hungarian Grass is not understood by many who ask questions.—Though called a grass, it is more of the nature of Millet in its growth and appearance. It cannot, therefore, be sown on winter wheat or barley, or spring grain. It needs a good soil, and clean, to insure a crop. It is generally sown broadcast, but we think would do full as well drilled in. A bushel will sow about three acres. Seed can be obtained of the seed-dealers in this city at \$5 per bushel.

Tobacco.—(A. B., Williamsville, N. Y.)—The information needed about this crop, you will find in the *RURAL* of February 26th. The *Orange Orange*, all things considered, is the best plant for a hedge fence, we know of.

Rural Spirit of the Press.

Effects of Temperature on Wool.

From an article on this subject in the *American Sheep Journal*, we make the following extract:—"Of all our domestic animals, perhaps none more speedily adapts itself to a change of climate than the sheep. As a wool-bearing animal, its natural habitat seems to be a temperate climate, and it is a noticeable fact that the culture of fine wool has been pursued with little success in latitudes where the temperature is either extremely hot or cold.—Extreme cold tends to check the secretion of the oily substance which furnishes the principal nourishment to the fibres of wool, and also keeps it in a soft and pliant condition. Extreme heat also injures the quality of the wool, by tending to promote excessive evaporation, and thus rendering the fibre harsh and brittle. Every breeder of fine-wooled sheep, must have noticed that immediately after shearing, the wool remaining upon the sheep becomes harsh, dry and stiff. This is owing to the exposure of the skin to the sun and wind, which renders it hard and dry, thus nearly closing the glands which secrete the yolk or oily matter, that is so necessary to the healthy growth and condition of the wool.

All successful breeders of fine-wooled sheep very well understand the importance of protecting them from the sudden changes of temperature so common in our variable climate; but a large majority of farmers seem to have only a faint idea of the importance of this; and very many appear to imagine that an abundance of hay fed at the stack in the open meadow with a little grain, is all that is required. It is true that sheep, by liberal feeding, may be kept in fair condition without shelter, but although the condition of the carcass be maintained, and the animal appear thrifty, the quality of the fleece will most certainly deteriorate. This will in many cases account for the want of success which has followed the attempts of some farmers to grow fine wool. They have, perhaps, procured breeding animals of superior quality, and kept them in high condition, confidently expecting that they will be able to show a better clip of wool than their neighbors. But their sheep miss the dry yards and warm shelter provided for them by him who bred them, and within two years, yes, within a twelve-month, the purchaser finds that the peculiar fineness and softness of the fleece has gone, and he perhaps fancies there was some trickery on the part of the seller, by which he was deceived, and that the wool was never, in fact, as good as he thought it. Farmers who have any reason to believe that they have been imposed upon in this way, or who think that the quality of their wool is deteriorating, will do well to visit the flock of some more successful breeder, and if they find the care and management of the latter differs in any material respect from their own, it is but reasonable to suspect that their own is wrong."

Good vs. Bad Breeds of Hogs.

The editor of the *Valley Farmer* knows what a good porker is "at sight"—never waiting for his demise and visit to the pork-barrel—and converses as powerfully on porcine matters as some men "talk horse." Hear him:—"Reader, did you ever see a short while rooting, kick up every time he bored his nose into the ground, as if trying to stand on his head? If so, don't buy him; he will not prove a profitable feeder. We might call this a sub-soil variety. Did you ever see a hog that would grab an ear of corn and run a quarter of a mile before he would stop to eat? If so, beware. We will place such in the same category, and for the sake of distinction we will call them Elm peelers. Did you ever see a tall, slab-sided, long-legged, razor-backed breed that were always hungry, and when opportunity required, would climb up to where the rails in the fence were some distance apart, and then either slip through a crack or throw off a few rails and jump over? If so, don't purchase unless you are a small farmer and can't possibly build corn-cribs. We might, perhaps, call these free-soilers, also barn-burners. Did you ever see a slim, dead-alive kind of thing, that would get so poor as to be obliged to trot before and canter behind when required to get up motion, and still not die; its eyes both coming out at the same hole, or at least so near it that the hog appeared cross-eyed? If so, let us pass the dismal picture and simply call them old-liners. All these breeds may be described as follows:—Long ears, large, heavy heads, long and thick legs, a streak of lean underneath a thick grizzle, and that covered with a thick, tough hide, with abundance of bristles, and in fine a great amount of offal of every description.

Such animals have no thriftiness, no capacity to fatten, and very little about them that is digestible after they are killed. Pick for a hog with a small, clean head, rather small bone, body low to the ground, long and square; hams full and round, disposition quiet and pleasant. Such a hog will always ensure a good return. If you can come across such hogs, whether called Berksbire, Woburn, Suffolk, Grazier, or what not, get some and try them. They will not disappoint you. A word to the wise is sufficient.

Oats—How Much Seed to the Acre?

The Massachusetts Board of Agriculture tried the following experiment at the State Farm at Westborough. Five acres were marked out, treated alike, and sowed to oats broadcast. Four received 100 pounds of plaster to the acre; the fifth none. They were sown with various quantities of seed, April 27th and 28th, harvested July 25th, and threshed Sept. 3d, with the following results:

No. 1 sowed with 5 bushels,	yielded 42 bushels.
No. 2 " " 4 " "	" 35½ "
No. 3 " " 3 " "	" 30 "
No. 4 " " 2 " "	" 26½ "

The acre not plastered yielded 20½ bushels. The grain on all the lots weighed about twenty-eight pounds to the bushel, except lot No. 1, on which both grain and straw were lightest. This shows greatly in favor of three bushels on land of good quality.

The advent of March should be met with notes of preparation for the Summer Campaign. "Always ready" is the motto for up-to-time Farmers.

Agricultural Miscellany.

AN AGRICULTURAL BUREAU has been established in Mass. pp. by the Legislature.

STATE FAIRS FOR 1880.—New York, at Albany, Oct. 4th to 15th inclusive. Ohio, at Zanesville, Sept. 20th—23d. Vermont, at Burlington, Sept. 13th—15th.

THE JEFFERSON CO. FAIR for 1880, will be held on the Society's Grounds, in Watertown, on the 21st and 22d of September.

THE HONEYDEW FARM, advertised by Mr. Geo. SUMMERS, of Wheatland, is one of the most valuable in the Genesee Valley.

THE LOCUSTS COMING.—Dr. O. B. SMITH, of Baltimore, predicts the appearance of locusts, the present spring, in Virginia, Maryland, North Carolina, Tennessee, Georgia and Mississippi. They belong to the tribe of thirteen and seventeen years locusts.

THE SOUTH COUNTRYMAN is the title of a new Agricultural monthly published at Marietta, Oen.—\$1 per annum. C. W. HOWARD, Editor; W. H. HOW, publisher. No. 1 indicates zeal and energy in behalf of the cause of improvement at the South.

AMERICAN STOCK JOURNAL.—We have unintentionally neglected to state that what was the "Vt. Stock Journal" is now issued in New York, under the above title, considerably enlarged and decidedly improved in appearance. D. O. LINSLEY continues as both editor and proprietor. Monthly—\$2 per annum—\$1 per annum.

ROSELVILLE UNION AG. SOCIETY.—Officers for 1880:—President—A. B. THOMAS, Potter. Vice-Presidents—W. B. Sabin, Gorham; A. Foster, Potter; W. N. Perry, Middlesex. Rec. Sec'y—John Sayre, Potter. Cor. Sec'y—Geo. W. Searns, Gorham. Treas.—Charles D. Castle, Potter.

NEW DRAINING FLOW.—The Journal of the N. Y. State Ag. Society states that Hon. A. B. Dickinson, of Hornby, Swanton Co., exhibited a new Draining Flow at the recent Annual Meeting, which attracted much attention, and was fully explained, as to its operation, by Mr. D. It promises, in all clay soil, to reduce, very materially, the cost of drainage, and is within the means of every farmer.

THE LANCE OF BEE.—We learn that M. QUINN, of St. Johnsville, N. Y., has sold to one dealer in New York city over 48,000 pounds of surplus or box honey during the past three years, all produced by his own and neighbors' bees. In 1856 he sold 22,000, in 1857, 8,000, and in 1858, 15,000 pounds. The area occupied by the bees was probably some ten or twelve miles square. This indicates what may be done in other places by giving bee cultivation proper attention.

SPRING-LIKE.—Around Charleston, S. C., the orange trees are in blossom and the pea vines growing vigorously. In Niagara Co., N. Y., there are swarms of grasshoppers—in the town of Cambria. A friend writes from Adrian, Mich., that the blue-birds appeared on the 20th ult., and thinks "those near bogs will soon hear bullfrogs." Hereabouts everything indicates an early spring, there being little frost in the earth and no ice in the Genesee River.

SALES OF SHORT-HORNS.—We learn that Mr. C. K. WARD, of Lo Hoy, has recently sold to R. F. NORTON, of Sedus, a bull calf, "Independence," got by Mr. W.'s stock bull "Kirklington, Jr.," dam "Fanny." Also "Fanny Kirk," a heifer calf, got by "Perfection," out of "Kitty Kirk." These are said to be very promising animals, both received prices at the Genesee Co. Fair, and sold at good prices. Mr. WARD has also sold to ANTHONY STROUD, of York, a young bull, "Governor," (got by imported "Governor," dam "Victoria," and two young cows, "Kitty Kirk" and "Topsy."

CANADA CROPS FOR 1858.—The Secretary of the Bureau of Agriculture and Statistics, WM. HUTTON, Esq., derives the following inferences from the Abstracts of Returns of the Crops of Lower and Upper Canada for 1858:—1. Wheat crop of Canada about 25 per cent. below the yearly average. 2. Rye, barley and oats are a fair average. 3. Pea crop 10 per cent. above the average. 4. Potato crop about 25 per cent. deficient—quality excellent. 5. Indian corn much less cultivated than usual—but a small supply, about what will be required for domestic purposes. Upon the whole there is an improvement in the wheat crop from the previous year—the deficiency then being 81 per cent. from the general average. Potato crop also better than in 1857.

WINTER, &c., IN CENTRAL MICHIGAN.—A recent letter from a subscriber in Calhoun Co., Mich., says:—"So far our Winter has been extremely mild, with little snow; at present the ground is entirely bare, and the weather more like April than February. Farmers are busy making and repairing fences, hauling out manure, and otherwise preparing for an extensive and vigorous Spring campaign. The present high prices of all kinds of produce are a stimulus which will cause a great breadth (greater breadth than depth, I fear,) of land to be sown and planted this year. A raw well-to-do, but over-anxious-to-get-rich farmer, are leaving their friends and homes for the new El Dorado, Pike's Peak, to 'drain' (what does H. T. B. think of such draining?) its rocky slopes."

HARTLAND AG. SOCIETY.—At the recent annual meeting of this excellent Town Society the following officers were elected for 1880:—President—ANNEA KIRKENDALL. Vice-President—Henry Hoag. Secretary—J. C. Deuel. Treasurer—Peter Cooper. Directors—Geo. L. Angeline, Linnus Paulding, Jr. An eloquent Address was delivered by Hon. T. C. FLAGLER, of Lockport.

Premiums Awarded.—We are requested to publish the awards of premiums at above meeting, as follows: A premium of \$5 "to the farmer cultivating not less than fifty acres, who has in use the greatest number of Farm Gates (in proportion to the number of acres he cultivates) as the close of 1858," was awarded to CURTIS ROOT, who had seventeen gates on 75 acres cultivated.

The 1st premium, of \$3, "for the most satisfactory experiment in producing Sugar or Sirup from either the Sorghum or Imphee plant," was awarded to MRS. ATWATER. We have received a sample of the sirup, which is superior; also Mr. A.'s statement for publication.

The 1st premium, of \$5, "to the lady cultivating the greatest number and variety of flowers (naming the varieties) during the year 1858," was awarded to Mrs. S. C. ROOT, whose list comprised 343 varieties. Mrs. J. A. LUTHER HALL cultivated over 200 varieties, Mrs. J. A. GLADSTONE about 120, and several other ladies from 50 to 100 varieties each. Very creditable competition.

[The above, and other prizes, (including \$10 "to the farmer cultivating not less than 50 acres, who shall plant the greatest number of Fruit Trees—in proportion to the area cultivated—during the year 1859,") were offered under the title of *Moore's Premium List*—the Editor of the *RURAL* having delivered an Address at the Annual Meeting of the Society in 1858, the charges for which were donated on condition of being awarded in such premiums as he should designate.]

HORTICULTURAL

SPRING WORK.

After a winter of unusual mildness,—with very many bright and sunny days,—of sudden changes and occasional severity, we may safely conclude that the frosts and storms of another winter are almost at an end, and spring, with its life, activity and beauty, will soon be upon us. The little time remaining before active work commences, should be improved in making selections of trees, plants and seeds that may be needed, and in making roads, fences, and draining, and in doing any other rough work, that if not done now will be sadly in the way of the regular gardening when the fine weather comes on.

THE HOT BED.

Making a hot-bed in the first work in the garden, and with our cold, uncertain springs, a hot-bed is almost a necessity. We have given directions for their construction so often, that we would omit it this season, were we not warned by a dozen inquiries on the subject, that there are many who yet lack the necessary information.

With some care and a very little expense a good supply of radishes, lettuce, &c., can be had for the table by the latter end of April or early in May. Cucumbers cannot be had until the summer is half over without hot-bed culture, but with a well managed hot-bed they may be abundant in June. The best time to start the hot-bed is from the first to the twentieth of March, depending somewhat on the weather—if severe it is well to delay until a change. For its location a dry and sheltered place must be selected, and if there is the least danger that water will lay, a good drain should be dug, that will carry off all surplus moisture. If there are no buildings to serve as a protection from the north and west winds, a temporary fence must be made. The bed should face the south or south-east. A very good idea of the form of the frame is given in the engraving, and it may be made of any size to suit the wants or fancy of the builder. Twelve feet long, by five wide, is a very good size for family use. It should be made of 1½ or 2 inch plank, which may be nailed to posts in the corners. The back should be about two feet high, and the front 14 inches. A frame of the size mentioned will require four sashes, three feet wide. These are somewhat like window sash, but have no cross-bars, the upper panes of glass overlapping the lower, so as to shed the rain.

The best material for producing heat is fresh manure from the horse stable. This should be thrown into a pile and allowed to heat, under cover if possible, about a week, when it is ready for use. Now dig a pit about eighteen inches deep, and a foot larger than the frame each way. Fill this pit with the manure you have prepared, and continue to put on the manure evenly until you have it raised up about two feet above the natural surface of the ground, which will give three and a half feet of manure. Care should be taken to put the manure on evenly, and have it well packed down, by beating it with the back of the fork. Rake down the edges carefully, so that they will present a nice, even appearance. The frame and glass should now be put on, and be kept close for a day or two. After this it will be necessary to open the sash a little during the middle of the day for a couple of days, to allow the steam to escape. About six inches of good, mellow, warm soil, must now be put inside the frame, and all closed up for a day or two, until the earth becomes warm. Examine occasionally, and if the heat appears too great, open the sash a little on the back side. It is now ready for the seed. Those who wish to raise cucumbers, radishes, tomato plants, &c., should have two frames, of half the size described, or a division in the frame, as the cucumbers will require so much heat as to injure the other plants. We will resume this subject in the next number.

HORTICULTURAL CONTROVERSY.

Although we occasionally engage in controversy, we do so not for the purpose of injuring the reputation or calling in question the honor of any man or set of men, but for the purpose of detecting and exposing error and defending the truth. If in this work we have to show inconsistencies, contradictory statements, double-dealing, or sophistry, we do so, not because we love to expose the frailties or faults of men, but because we love the truth, and have at heart the public good. As guardians of the public interest, with tens of thousands looking to us for instruction, with full faith in our watch-care, duty and honor require that we should detect and expose error with searching clearness, denounce falsehood in no hesitated words, and defend the truth with all the ability with which we are possessed. With the doings of individuals, other than as they claim to be guides for others, we have nothing to do or say. It is no business of ours whether persons cultivate trees well or ill, on good land or poor; but when they present their successful failure as an argument for or against the general culture of these fruits, then it is our business to ascertain the cause which produced the results they offer as an argument—to sift the whole matter to the bottom and ascertain the truth. This is a duty that we shall fearlessly perform, regardless of friends or foes, or threatened libel suits!

In an article in the February number of the *Horticulturalist*, in which he says a good many foolish

things, Lewis F. Allen, calls the *Horticulturalist* Editor of this journal a "nurseryman and editor," and accuses us of writing under "the promptings of the largest dwarf pear nursery in America." Now, we beg to say, once for all, that no one connected with the editorial department of the *Rural* has an interest in the nursery business to the amount of a single dime, and no editorial article has ever been written for our columns, or even prompted by a nurseryman. The editors of the *Rural* devote themselves exclusively to this work, and need neither aid nor prompting from any source. We have no interest in the questions discussed but to promote truth and the general good of our readers.

In the present number we give an article from Mr. Allen, on the *Allen Raspberry*, in reply to one from W. R. Corrocks in our issue of February 12th. The statements made by these parties are directly at variance, and a good deal of falsehood rests somewhere. Not a particle of proof has been presented on either side. We await the proof. If people are buying an old and poor variety, under a new name, and paying high prices for it we shall, if possible, expose the cheat. If, on the contrary, the *Allen Raspberry* is really valuable, and not an old, discarded sort, its propagator should not rest under unfounded charges and suspicions. The last paragraph of Mr. A.'s article we would gladly have omitted, but preferred, under all the circumstances, to give it just as received.

THE NATIVE BLACK RASPBERRY.

The American Black Raspberry is a great favorite with most people, and though far inferior to the *Antwerp* and other improved sorts for the table, possesses a richness of flavor highly prized by many, who prefer it to the best improved sorts; and it is really invaluable for cooking and preserving. In our market it sells as high, and even higher, than other sorts. The plants are hardy and productive. For several years dealers in fruit in this city, and also in some neighboring villages, have been supplied with this Raspberry by H. H. Doolittle, of Oak Corners, in Ontario Co. Mr. D. cultivates this fruit on an extensive scale, and claims to have discovered a method of propagating the plants, by which their fruitfulness is much increased, and made permanent. We will explain his theory as clearly as possible, in the brief space we can devote to the subject:

Mr. D. states that the American Black Raspberry in its wild state, or as usually propagated, produces but two or three crops, and often but one, before it becomes barren, and that no extra cultivation or manure will prevent this. Many plants are almost entirely barren, producing but a few scattering, seedy, deformed berries the first year, and afterwards nothing. The barren hills or plants,

BARREN PLANTS.

he is enabled readily to detect from their appearance. The barren form of hill is indicated by the vast number of small canes, and from the fact that they are thornless, while the leaves are small and generally covered with yellow rust. The healthy, or fruitful, form of hill is shown in the engraving below, by a few large berry canes. The barren form is indicated on only a portion of the right hand canes—but extends over the whole growth—and the number and size or bulky form of the thorns furnish to an experienced eye a sure index of the yield and quality of fruit to be expected.

FRUITFUL CANES.

An examination of any plot of Black Raspberries will show the barren form prevailing more or less, in hills two or three years old. Some hills will have a part barren canes and part partially barren—that is, the canes may be quite large, but are almost or quite destitute of thorns. This Raspberry is different in its growth from others. The new canes which grow every year, are not connected with its own root, nor do they spring from the head of the main root as others, but spring from the old cane, and so high up as to have no union with the old root, except through the old cane. Only a few small fibers spring from the base of those growing

lowest down on the old stock, and these take but feeble hold of the soil the first year, but the second year they extend and assist in the growth of fruit. Thus, each year there is a growth of branches and fibers higher up the base of the old cane, until the accumulated mass of fibres and decayed wood from the stumps of the removed canes, elevate the hill above the surface soil.

From the nature of the growth it will be seen that young plants cannot be obtained as off-shoots from the old roots, as other varieties, as the newly formed canes are destitute of roots. They are obtained only by the formation of roots at the points of the young canes. At the tips of the canes a soft substance will be found, which if permitted to lay near the ground, throws out roots, and often in moist, shady situations, roots will form several inches in length before reaching the soil. After taking root, if these points are severed from the parent stem before frost stops the circulation, or before fully developed, they die, showing that they derive their nourishment, for some time after roots are formed, from the parent plant. From this fact, sustained by extensive experience, Mr. D. argues that a new plant is a portion of its parent cane—is of the same bearing habits, and of the same age. So, that if a young plant is formed from a cane growing on a root five or ten years old, it will partake of the age, barrenness and other infirmities of the parent stock. As this is the main point in Mr. D.'s theory, we give his own words:—"If the roots of a hill are so old—or have become so exhausted from any cause, as to be unable to produce healthy fruit-bearing canes, the plants put take of the same nature. Or if the juices, taken up by the root, in passing through the unhealthy and decaying medium of the stumps of the previous years' growth, have imbibed in any degree the elements of decay and barrenness, and have deposited them in the formation of the cane, they will also, in the formation of the plant at its tip. Or, finally, as 'like produces like,' if the young plant inherited barrenness in its propagation, it may make quite a luxuriant growth, but it will be of the barren form."

The only way to prevent these evils is to propagate from the first growth of canes from young, healthy plants. The cut below represents the growth which a young plant attains by the 15th of August or 1st of September.

YOUNG PLANT FIT FOR LAYERING.

When the tips of the trailing canes become naked or free from leaves, and of a red color, they are ready for layering. Plants formed from this growth, receive their nourishment directly from the soil, through new formed roots and canes, without passing any unhealthy and decaying medium, as is unavoidable in propagating from older hills. This mode makes it necessary to set out a new plot of plants every spring, from which to propagate.

PROPER MODE OF LAYERING.

The point of the cane is soft and sappy, designed particularly for the formation of roots, and if not permitted to do so by coming in contact with the soil, this point dries up and dies. If the "tip" of the cane is placed in the soil two inches, one healthy, fruitful plant will be formed, and its

YOUNG PLANT.

appearance, soon after the roots commence forming, will be as shown in the engraving. If the cane is laid on the surface of the soil, and a foot or so of its length covered with earth, as is the common method, a young plant will form from each bud. The plants formed in this manner, Mr. D. contends, are neither healthy nor productive. When grown from the points or tips of the canes, all the roots center under the germ, thus forming a broad head or crown for the support of the future plant. When grown from the fruit buds there is no crown or head as the center of the roots and the germ, but a few roots spring from the cane on the opposite side from the germ, and while a few may connect directly with the base of the unnatural germ, most of them can convey nourishment to it only through the intervening portion of cane, and hence when this portion of the cane perishes the next year, (according to a law of its being,) the plant is left without proper support, and hence, speedily becomes exhausted and barren.

CULTIVATION.

Any good corn land is suitable for this Raspberry. A position sheltered from heavy wind is desirable. A partial shade is no injury. Plant 3½ feet apart in the rows, and the rows 7 feet. Keep the ground mellow and free from weeds, but do not plow nearer than two feet of the hills. During an open winter's day, or in the spring, cut off the main branches to within three feet of the roots, and all the side branches to within one foot of the body. About the last of June stop cultivation, and straw freely between the rows, and partially under the edges of the bushes.

PLANT OF ONE YEAR'S GROWTH.

As soon as the young canes obtain a growth above the top of the fruit branches, tie them to-

gether, as shown by the horizontal line in the engraving, and when the first ripe berries appear, clip the ends, at the dotted circle. As soon as the fruit is gathered, cut away all the old wood, and bend over the tops of the young canes to the ground, and place a stone and straw, or earth, upon them to keep them down. Bend over all one way. The object of causing a growth in a horizontal position is that, when elevated in the spring on wires, as in engraving, they press down the wires, and need no tying.

PLANT TRAINED FOR FRUITING.

This method of training is a great convenience in picking the fruit. In all cultivation care must be had not to hill up around the roots. The roots must be near the surface. The second year after the plants are set, when the canes are six or eight inches high, select four or five of the largest and most thorny for future growth, and separate the rest from the base of the fruit-bearing canes.

We have thus, as briefly as possible, given the substance of Mr. Doolittle's theory of propagation and mode of cultivation, about which there has been a good deal said, and but very little known.

THE "ALLEN RASPBERRY."

Messrs. Editors:—I would not notice the apertful and malignant article under the above title, in your paper of the 12th inst., signed W. R. Corrocks, had it been published only in the community where its author is known, as it would there do me no harm. The motives which conceived it I shall not discuss—they having no interest with your readers. The statement therein made contains as many falsehoods as assertions, and as they implicate my character for fair dealing, with your leave, I have a word to say.

The "*Allen Raspberry*" is not "an old, and well-established variety," so far as I have yet ascertained, in the experience and examination of those who have had it from me. It somewhat resembles one or two other varieties, as all raspberries more or less resemble one another, but is not yet proved to be identical with them in growth, or bearing. I never claimed it to be the "*Hudson River Antwerp*," as the "*Allen*" is hardy, and the other is not. The wood is not "red," but russet-colored; nor is it "branching"—never branched, to my knowledge, until headed down "for fruiting," as usual, the second year. It did not "come from Ohio," Corrocks never had it in his "ground," unless he had a plant or two from me; nor is it all like the *driers* which lately infested the sides of the fences round his garden. He never saw my plants in bearing, and knows nothing at all of their productiveness, or the flavor of their fruit. I never had a raspberry plant of W. H. Sotham, having got mine years before Sotham lived about here. I know nothing about his raspberries, more than that he told me he had some from Ohio growing in his garden, which I saw, and they were not like mine. Col. Hodges denies that he ever stated that my raspberry came from Ohio, nor does he know that he ever cultivated it.

I did get the original plants of the "*Allen*" raspberry in the garden of a deceased gentleman—the late Hiram Pratt, in Buffalo—when it was broken up, and used for a florist's garden, as I have always stated. Where the proprietor obtained them, I never could ascertain, nor did the gardener then occupying the premises, of whom I had them—the late Mr. Webb, an Englishman, between whom and Corrocks, countrymen alike, an intense hatred existed—know what variety they were. But he told me they were somewhat like the English *Antwerp*, though, in his opinion, a much better fruit.

This is all I have to say, relative to the malicious article on the "*Allen Raspberry*," and the holy horror against "giving new names to old fruit" of this "professor"—whether of the arts of dancing, fiddling, piano teaching, or "pomology," he can make his own selections. And, if he wants to work himself into notoriety with the public by personally abusing me in his petty spite, from "Long-sight (better Long-bow) place," ("Flint Hill," is the old, popular and descriptive name,) he can do so, so long as he can find a publication willing to devote its types, ink, and paper to that object.

Black Rock, Feb. 10, 1859. LEWIS F. ALLEN.

FRUIT IN OREGON.—Permit me to say to the friends of the *Rural*, that it has given me many valuable hints in bringing about the following substantial results in the cultivation of a fruit garden. I have less than half an acre of ground set out with apple and plum trees. Some thirty apple and four plum trees bore last summer, yielding me in the aggregate \$147 87 cash returns, besides thirteen bushels of apples, and nearly half the plums which were used in my own family. My apples brought me from \$1 50 to \$3 87 per bushel. The trees which bore, were set out in 1854 and 1855,—one and two years old, root-grafted, when planted.—O. DICKINSON, Salem, Oregon, Dec., 1858.

LARGE RADISH.—I will describe a radish grown in our garden the past season, and you can judge how it compares with different garden vegetables as noticed in the *Rural*. It is the common table turnip radish, of second planting of the season, and with no uncommon culture, and when harvested, on account of frost, but still growing, weighed by the Washington City scales, twelve pounds. Also, several others from that down to the size of a quart bowl.—Mrs. J. P. D., *Hermitage, Mont. Co., Maryland*, 1859.

OUR CORRESPONDENTS must have patience for a week or two. We have half-a-dozen articles now in type—enough to fill another number.

SOMETHING ABOUT KNITTING.

EDS. *RURAL*:—We have settled the political questions of the day in our own mind,—we have left Cuba to the tender mercy of the Administration,—we have read through the President's Message. So we conclude to write a long-contemplated letter to our *Albion* friend of the *Rural New-Yorker*. We happen to be confined in the house by a wounded foot, and our attention has been drawn to the fact that our wife is extremely, passionately, fond of knitting. Now, we are in a quandary. We don't like to see our wife knit—indeed we hate it—but we dislike to say anything to her about it—it might hurt her feelings, you know. The necessity for such kind of work, we confess we never could see, and, more especially, in the case of our wife. We do not wear any of her knitting work on the inside of our boots, and, to our certain knowledge, she has scores of stockings wherewith to clothe her own dainty feet. Now, we do not wish to be understood as complaining of our wife. We are happy to assert that no man was ever blessed with a better wife than ourself. She makes our home a home in the true sense of that word. In the evening after tea she invariably seats herself at the piano and sings and plays for our especial amusement for a few minutes, then she knits—after breakfast she "washes up the dishes," and sweeps; and performs sundry duties belonging to the housekeepers' routine—then she knits—while she is preparing her long-to-be remembered meals—even then she finds time to knit. The other day we attempted to remonstrate with her. "My dear," does knitting constitute your sole recreation?"—meaning to be sarcastic. But she silenced us by saying, "No, you naughty man, you—you are my recreation," which sentence she instantly proved to be untrue, by seizing her knitting work—which is "an abomination in our eyes." Our wife is intelligent in an eminent degree, and she is constantly adding to her stock by reading the papers and standard works.

Perhaps you ask if she leaves her knitting to read. Not by any means. She has practically proved the old adage, "You can't do two things at the same time," to be false; for she repeatedly shows herself capable of reading and wielding her odious knitting-needles at one and the same time. Do not suppose that our wife neglects her duties.—No, sir! She always has everything done in season—our meals are, without fail, made ready at the appointed time—and they are not to be badly sneezed at, those meals,—our garments are never out of repair. Our little wife, herself, is the pattern of neatness. She is surrounded by all the comforts and even luxuries which a goopily portion of this world's goods can procure for her,—nevertheless she appears to enjoy knitting better than all the rest put together,—great satisfaction appears on her gentle face while she rattles her needles, as though it were to her the most pleasant music.—She knits herself out of every dilemma—she knits herself into every body's affections—she knits the blessings of the poor down upon her head—she knits peace between discordants—she knits when she is watching by the sick—she knits when she rejoices with those that rejoice,—and when she mourns with those that mourn—she knits while the bread is baking—she knits while the tea is "dripping"—in short, knitting appears to be her sole vocation. And she knits "as for dear life."—Now, our *Rural Oracle*, what shall we do? We read about ways and means to abate nearly all evils except this evil of knitting.

We will frankly admit that we don't like to say anything to KIRRY (that's our wife) about it, for having been married only a year we dislike to "raise a breeze." Won't you just use your influence as a public journalist to abate this nuisance—and if you can only convince our wife that knitting is not essential to human happiness you will secure our lasting gratitude. SQUIM.

Noxocottage, Feb., 1859.

FRIEND SQUIM, we feel for you—an amount of sympathy, and that of the *intensest kind*, we are ready to offer, so desperate is your condition.—We would like to know what right a woman has to while away her hours in any occupation that may be characterized useful? The Constitution of the United States grants no such immunities—Female Reform Conventions never dared to insert such a plank in their platform. Had SQUIM not taken "KIRRY" to wife, we would guarantee a perfect cure as the result of a single course of instruction (?) at one of our fashionable Seminars, but having uttered the vow—having said for "better or worse"—there is no resource but *submission*! When the "household divinity" arms herself with those minute weapons of industry, and begins

"knit, knit, knitting,"

all the while talking eloquently of "drop stitches," "heeling," "narrowing in," etc., SQUIM must make the best of it by compounding the Balm of Resignation, (one part nice clean wool, one part the "rattle of the needles," one part the harmony of "a home that is a home") and applying the same to his weary, "wounded" (old's)

GALVANIZED WIRE CLOTHES' LINES.—Many of the *Rural*'s readers are perhaps not aware that galvanized wire, of the size used for telegraphing, can be used to good advantage for clothes' lines. It is only a little more expensive than common wire—lasts forever—never sags, and is in all respects perfect and entirely satisfactory. It is a luxury to have a line up that is always ready, never in the way, and can be left out for a lifetime. I have known it to be used ten years. You are, of course, aware, (though some may not be,) that the wire is coated with zinc.—B., Pittsford, N. Y., 1859.

NATURE makes us poor only when we want necessities, but custom gives the name of poverty to the want of superfluities.

LIGHT.

Life is a flame which brightens with our years
And grows more brilliant with the good we do,
And though exposed to winds of sorrow's tears,
It pales not, but like summer's sparkling dew
Beams brighter when the night is passed away,
And sun shall kiss it with his warming ray.

Alike is love a flame! nor do we doubt
Who with God's angels have been bound in life—
Angels that now are jewels round about
God's throne!—and bear the sacred name of wife,
Each love is ever beaming brightly now
As when on earth we worshipped their fair brow.

And what is hope if it is not a flame
Fed by the hand of faith?—It kindly burns—
Guiding aright the spirit meekly tame
Along the path of life, with all its turns,
And when this flame expires there will remain
Nothing but ashes! never roll again.

May God prolong our lives that we may love,
And loving may we hope to win his grace,
Inspired by revelation from above;
But not indeed will be this earthly race—
God speed the end when we are prepared to go,
With Christ shall live—can it be else than so?
Dedham, Mass., 1850. E. W. K.

Plain Talks to American Women.—No. 5.

BY MRS. M. P. A. CROZIER.

There are some objections we think relative to sending young children to the public schools, when they can be equally well instructed at home. One of these is the unnatural and injurious confinement to which they are subjected, and often, in ill-ventilated rooms, breathing for hours every day an atmosphere rendered unwholesome by the exhalations of scores of lungs, thus acquiring mental discipline at the expense of physical health. A large majority of those who undertake the instruction of children are shamefully ignorant of the requirements of physical law, and of the relations between body and mind. Many there are who know no better than to confine children for hours in close, hot school rooms—compelling, under severe penalties, an intense application to books which they are almost wholly incompetent to render interesting. It is no wonder that so many children hate to go to school, and frame multitudes of excuses for remaining at home!—no marvel that so many, after spending a dozen or fifteen of the best years of their lives in the school-room, should enter upon the active business of life with but a jot of that knowledge which they might have acquired under more rational management.

To aid those parents, then, who think best to devote the necessary time and attention to direct the education of their children for the first few years, themselves, we will endeavor to throw out some hints which may be useful. We will premise that it will require much care and labor, if faithfully performed; but what more pleasant task for a mother than to assist in the unfolding and development of her child's mind,—to watch its growth in knowledge, and become herself a child again, in being the daily witness of the eagerness with which it drinks at the fount of wisdom? By mingling with them in all their pursuits, how intimate and delightful will become the relation between them,—how thoroughly will her precepts and example become impressed upon their minds—how little likely will they be to stray from them when in after years it becomes necessary for them to leave the parental roof! In a pleasant home, under the faithful instructions of a noble mother, how could it be possible that a child should not grow up beautiful, intelligent, and good?

Every child possesses certain faculties, is born with certain natural capacities, moral and mental; no two, perhaps, have these exactly alike, so that no one system of culture will be exactly adapted to two individuals. Every mother should understand her own child, else she will be illy prepared to direct its education. The science of Phrenology has shed much light upon the mysteries of the human mind, and offers a very available means of understanding a child's natural mental endowments, and it would be well if every mother would accept the aid thus proffered her; aside from this, she must learn and profit by experience and observation.

The intellectual, social, moral and religious branches of education are so blended in practice, that perhaps we shall be pardoned for treating them somewhat in combination, though more prominence will soon be given, for a short time, to moral, as the foundation upon which all others must be built.

It is a trite, though none the less just observation, that education commences in infancy; perhaps it should be said in embryo. Be this as it may, the infant of days is being educated when nursing at its mother's breast—being educated when annoyed by those pains that are so apt to disturb its rest. It would be curious to draw aside the curtain that so nearly hides from us the workings of its mind during all those months in which it is unable to express in words its half-formed thoughts, and observe how each new development to its understanding is received and appropriated to its mental sustenance,—how each new and curious object is thought upon and wondered about,—what strange theories of explanation are woven in the little brain. But we may not, at this early period, lift high the veil of the soul, and freely gaze into the mysteries of its busy life.

March has been written on the subject of self-government on the part of the mother. Her position does this become what it is as desired in

relation to its influence upon the moral character of the child! How can the child, trusting in its mother's example for a model of what is right, be led to believe that a course of action is wrong which he sees her habitually pursue?—or, if he is persuaded that it is so, how must his confidence in her be diminished, and how much of salutary influence over him does she lose?

Would you then have your children completely under your influence—would you have them amiable and loving—be amiable and loving yourself.—If you tell them it is wrong to be passionate, let your own calm and equable manner add force to your preceptive teaching. And upon no other basis than the government of the passions can a truly symmetrical character be built. If a child's natural passions be allowed free scope for exercise, there is an end of all true exaltation; they will almost surely prove its destruction. To expect the flowers of truth to unfold in such a character, is like looking for lilies to blossom in a whirlwind.

The principle of obedience is one of the most important to which the attention of a mother can be directed. When our first parents were placed in the Garden of Eden, this was the condition upon which they were to be allowed to remain there; and when they failed to endure the test, a flaming sword denied them access to the tree of life; so when in the paradise of home this principle is not observed, the child, self-exiled, is barred from the tree of happiness, wanders away from the fold of parental love, and becomes, too often, as did the unhappy Cain, a "fugitive and vagabond in the earth."

Does some mother, impressed with a sense of maternal responsibility, inquire, "How shall I secure from my child a cheerful and ready obedience?" Ah, mother, go to your closet and ask your God! Unclasp the Volume of Inspiration and read His promise:—"If any man lack wisdom let him ask of God, who giveth to all men liberally and upbraideth not, and it shall be given him." Go draw from the fount whence the wisest have obtained their most profound wisdom! Go there and so thoroughly imbue your own soul with the love of God, that it shall become a divine halo around you, in whose brightness your children shall love to bask!—so shall you have reason to hope that it shall not long be a difficult thing for your little ones to submit their will to that of one in whose love and favor they only are happy, and whom they must recognize as worthy of their young hearts' affections.

But even the best religious example on the part of the mother, if unsupported by judgment and prudence—if such a thing be possible—may fail of securing the object desired. The parent must, from the beginning, hold the reins of government steady. There must be united with the gentleness of love, the firmness of authority. The mother's will must be law, and that law must be supported by penalty. In some cases, where a child's affection is very strong, and its sympathies active, it may be a sufficient penalty that the mother appear displeased and grieved; but in other cases it still remains true as of old, that the "rod will give wisdom." It is a hard thing for a tender-hearted mother to be obliged to resort to corporeal punishment, but it would seem that there are but few cases at most where it can be entirely dispensed with; and when it becomes necessary, "chasten thy son while there is hope, and let not thy soul spare for his crying;" "correct him and he shall give thee rest—yea, he shall give delight unto thy soul;" but remember, that "a child left to himself bringeth his mother to shame." But let the child be made to feel that even in the correction, you are manifesting your parental love—mingle the tears of tenderness with the strokes of the rod, and they will have their effect. The child's heart is not of adamant, that it should not melt in the focus of the intense and united rays of a mother's love and displeasure.

The principle of obedience once established, filial respect will naturally follow, if the parents maintain that dignity of moral and intellectual nature which every parent should strive to acquire and maintain.

A HOPE "RESTORATIVE."

"HAIR RESTORATIVE!"—What a great puff you make over your dyes, and nostrums, for faded hair! Why don't you advertise a panacea, an invigorator, a restorative for the dead, and faded, and dying hopes that lie thickly clustered in hopeless, rayless despair, buried in the unseen grave of the broken heart? Are there no chemical combinations—no art—no discovery whereby the joyless heart can be restored to hope and happiness?—Why are we all turning gray—even before the noon of life? Is sickness the cause? No. What then? Among men it may often be too much hard work—too close application to business; but why are the women gray-headed, before half their years are numbered? In nine cases out of ten, the cause is deeper than you think—it is beyond the reach of external dyes and restoratives. You men who are whowing, and hurrying, and driving through this world—who have homes, and wives, and children, but know it not—the next time you go home, see—look at your wife long enough to see whether her hair is black, or blue, or white, and look at her face—you can tell whether some secret sorrow is sapping the life-blood from her veins, and the color from her hair, and stop and think five minutes, whether there is or is not a cause for it? Study her temperament. Possibly a little consideration on your part may do wonders in the line of restoratives. If you would have her retain the bloom and freshness of youth, make her happy, and you will be repaid ten-fold in your brighter home, and the consciousness of doing good, and then you can throw all the hair nostrums to the winds.

It is perfectly well understood, or if not, it should be, that almost any husband would leap into the sea or rush into a burning edifice to rescue a perishing wife. But to anticipate the convenience or happiness of a wife in some small matter, the neglect of which would be unobserved, is a more closed and selfish tenderness. This shows a mind full of selfishness which wants occasions in which to express itself. And the smaller the occasion seized upon, the more intensely affectionate is the attention.

CIVILIZATION.

BY E. M. FARGO.

An Indian being asked how he was pleased with civilized life, replied:—"Your country is very fair, but my language and my people are passing away. The forests we loved are cut down, and, like the deer and the buffalo, there will soon be no place left for us this side of the happy hunting-grounds."

Very fair is our land with its forest-crowned hills—
With its grand chains of mountains, its rivers and rills—
With its prairies, and valleys, and lakes, broad and blue,
The loved home of the freeman, the brave, and the true;
From the East, where the curtains of morning unfold,
To the West, with its portals and chambers of gold,
With its spreading shores leaved by the billowy tide,
Like an Eden it lies in its beauty and pride.

Very fair is our land with its wealth and its power,
Where Prosperity blossoms each halcyon hour—
Where the rivers of Knowledge inviolably flow,
And the beacons of Science perpetual glow—
Where Improvement and Progress their honors maintain,
And the myriad lovers of Industry reign—
Where Religion, and Learning, and Liberty dwell,
And the bright rays of truth misty falsehoods dispel.

Very fair is our land, but its clear gushing streams
That have rippled and sung in the sun's joyous beams,
Have been dwindled by art into watery chains,
Linking valleys remote to the glorious main;
And where once the tall pine nodded proudly its head,
Fills the "Lightning Express," by the iron steel led,
And where lowering forests once covered the plain,
Smiling Cereus exhibits her rich golden grain.

Very fair is our land, but the birchen canoe
Dashes swiftly no longer the bright waters through,
And the wild swan has flown from her favorite lakes,
At the echoes the sound of the rifle awakes,
And the timid deer bounds o'er the green hills no more,
Or lies down, undisturbed, in sweet days of yore,
And the buffalo ranges no longer at will
O'er the flowery prairies so fragrant and still.

Very fair is our land, but the Indian of song,
Who has reigned here in might and supremacy long,
Who has roamed in his freedom by lake-side and river,
Can return to the land of his forefathers never!
With his light bow and quiver the warrior no more
Can the limitless depths of the wildwood explore,
Or assemble his chiefs round the camp fires at night,
As in times ere the pale faces first saw their light.

Very fair is our land, but how and is the thought
That this civilization has tyranny wrought—
That the primitive charms of the beautiful West
Must be rendered extinct by the white man's behest!
And that when the dim future years cheerfully glide
O'er our country reposing in grandeur and pride,
The expelled forest sons will have quite passed away,
With no heart left to mourn o'er their nation's decay!
Oramel, N. Y., 1850.

SAVED! SAVED!

There is a world of joy shut up in that little word, saved! How many a dawn of rich and golden beauty for the soul has it ushered in, after gloomy nights of deferred hope and anxious watching! It is always a sweet word to hear—a sweeter word to speak. So full of happy music when the lips utter it—so full of happier meaning when the heart feels it. The voice never breathes it, but the face becomes radiant with joy, and the eye sparkles with delight. Every chord of the heart vibrates with inexpressible pleasure, as its music falls upon the ear long waiting in anxious expectation.

It has a history of its own, written in the mingled experience of sorrow and joy of many a soul. Few there are who have not uttered it in more or less of fullness of its meaning; few, through whose soul it has not sent a thrill of delight, filling it too full for utterance. Sound it out in the stillness of night, and some aching heart will take it up, and send it joyfully back again through the gloom and darkness. Whisper it ever so softly, and there will be some soul that cannot contain itself for very joy. It is the avenue through which the soul breathes out its overflowing gratitude. Its whole expression is that of thankfulness.

Saved! and from what? Ah! from a life of misery, of crime, of degradation, of shame, of infamy, and from death. If you have known, kind reader, what it is to have had the dear object of your heart's best affections, snatched from any of these calamities, you have found no word that could so fitly express the out-gushing thankfulness of your heart, as that little word, saved.

It is a glorious evening in mid-ocean. The stars, peeping quietly out from their blue homes, fill the whole heavens with glory, and glimmer and dance on the blue waves around. There is splendor above, around, and beneath. An ocean steamer, freighted with human souls, is moving gracefully and steadily toward home. The passengers are all on deck, admiring the beauty and loveliness of the evening. The air is vocal with happy tones of the speakers, and loud peals of joyous laughter ring out above the music of the waves. Suddenly a loud scream is heard, and the cry so terrible at sea, "there is a child overboard," startles every passenger. All is confusion, while every mother is looking for her darling child. But there is one mother who cannot find her's. Her child is overboard. She calls wildly on all to save her child. Will no one save her? Swift as thought some object strikes the waves, and soon the strong arm of a brave seaman is clasped around the struggling, and both are drawn upon deck, amid the thanks and praises of all. But who can describe the joy of that mother's heart, when the face of her darling is close to her own, and she hears the breath come and go? Saved! she cries, saved from a watery grave! God be thanked!

The news arrives that a steamer has been wrecked, and all on board perished. There was one on board whom we called Father, Mother, Brother, Sister, Child, or Friend. None but those who have felt the same can offer us any sympathy in our mournful bereavement. To see our loved ones die

at home, where we can minister to their wants, and soothe the pain and anguish of their departure, is a melancholy privilege, and painful almost beyond endurance; but to know that their life went out amid the shrieks of the drowning, amid the cries of helpless women and children, is crushing to our hearts. We have not ceased to mourn for our dead—we never can this side eternity. Some quiet evening, while we are gathered about our firesides, talking tearfully of the loved and lost, the door is opened, and we are clasped in the arms of our lost one. We have learned the meaning of that word, saved.

A telegram has just reached us, announcing a terrible railroad disaster. It was only this morning we bade good-bye to the idol of our heart, and he was on that train. O God! is he numbered among the victims? Who shall know the anguish of our heart as we hurry to the scene of disaster, and look among the dead, to see if he is there.—Every crushed and bleeding face we imagine to be his. Our looking is in vain. At length, in our weary search, we find him torn and bleeding, but living, breathing, still; and the physician says he is not much injured, and will soon be able to rise again. Our joy then is too full for utterance, and we can only say, saved! saved!

The court room is crowded, while the only son of his poor mother is on trial for murder. She knows he is innocent—innocent as when a babe he drew his life from her own bosom. But they who try him do not know it. With what intense anxiety she watches every countenance of those twelve men into whose hands are committed the fate of her only son. The pleaders have ended, the judge has summed up, and the jury are alone. The hours lengthen into days as the mother awaits the decision. The jury return. The verdict is given—not guilty! He is saved, cries the mother in the overflowing joy of her heart. Saved, my only, my beloved son!

However much of significance these scenes have given to this word, we shall never know all its meaning this side eternity. We may have felt its power when our brother was saved from a life of shame, or from death; but we shall never know how much it means, until on the green slopes of the River of Life, watching and waiting for the loved ones we left behind, we are permitted to welcome them amid the songs of Angels, and the joyous shouts of the redeemed, to the ceaseless joys of heaven. Saved, we shall shout it throughout all eternity. Saved, it will echo through the high arches of heaven, louder and louder still, as the years roll on. Saved from sin, from misery, from death, and from all that can mar our peace; safe in heaven, where God will wipe away all tears from our eyes. Saved, we shall be, with an everlasting salvation. Then shall we know the glorious import of those words that first brought joy to our souls—He that believeth on the Lord Jesus Christ shall be saved.

Rochester, N. Y., 1850. S. A. E.

A BEAUTIFUL PEBRATION.

In a recent lecture on Astronomy, by Prof. MITCHELL, that gentleman closed with the following thrilling passage:

"Light traverses space at the rate of twelve million miles a minute, yet the light from the nearest star requires ten years to reach the earth, and Herschel's telescope revealed stars two thousand three hundred times further distant. The great telescope of Lord Rosse pursued these creations of God still deeper into space, and having resolved the nebulae of the Milky Way into stars, discovered other systems of stars—beautiful diamond points, glittering through the black darkness beyond.—When he beheld this amazing abyss—when he saw these systems scattered profusely throughout space—when he reflected upon their immense distances, their enormous magnitude, and the countless millions of worlds that belonged to them, it seemed to him as though the wild dream of the German poet was more than realized.

"God called man in dreams into the vestibule of heaven, saying, 'come up hither and I will show thee the glory of my house.' And to his angels who stood about his throne, he said, 'take him, strip him of his robes of flesh; cleanse his affections; put a new breath into his nostrils; but touch not his human heart—the heart that fears, and hopes, and trembles.' A moment, and it was done, and the man stood ready for his unknown voyage. Under the guidance of a mighty angel, with sound of flying pinions, they sped away from the battlements of heaven. Some time on the mighty angel's wings they fled through Sabaras of darkness, wilderness of death. At length from a distance not counted save in the arithmetic of heaven—light beamed upon them—a sleepy flame as seen through a hazy cloud. They sped on in their terrible speed to meet the light; the light with lesser speed came to meet them. In a moment the blazing of suns around them—a moment the wheeling of planets; then came long eternities of twilight; then again on the right hand and the left appeared other constellations. At last the man sank down crying—'Angel, I can go no further; let me lie down in the grave and hide myself from the infinitude of the universe, for end there is none.' 'End is there none?' demanded the angel. And from the glittering stars that shone around, there came a choral shout—'End there is none!' 'End there is none?' demanded the angel again; 'and is it this that awes thy soul? I answer, end there is none to the universe of God! Lo, also, there is no beginning!'

HARDNESS OF CHARACTER.—Hardness is a want of minute attention to the feelings of others; it does not proceed from malignity or a carelessness of inflicting pain, but from a want of delicate perception of those little things by which pleasure is conferred or pain excited. A hard person thinks he has done enough if he does not speak ill of your relations, your children, or your country; and then, with the greatest good humor and volubility, and with a total inattention to your individual state and position, gallops over a thousand fine feelings, and leaves in every step the mark of his hoof upon your heart.—Sidney Smith.

ECONOMY, joined to industry and sobriety, is a better outfit for business than a dowry.

MY MOTHER'S BIBLE.

BY GEO. F. MORRIS.

This book is all that's left me now;
Tears will unbidden start—
With faltering lip and throbbing brow
I press it to my heart.
For many generations past,
Here is our family tree;
My mother's hands this Bible clasped;
She, dying, gave it me.

Ah! well do I remember those
Whose names these records bear;
Who round the heart-stone used to close
After the evening prayer,
And speak of what these pages said,
In tones my heart would thrill!
Thou art they are with the silent dead,
Here they are living still!

My father read this holy book
To sisters, brothers dear,
How calm was my poor mother's look
Who leaned God's word to hear!
Her angel face—I see it yet!
What thrilling memories come!
Again that little group is met
Within the halls of home!

Thou trust friend man ever knew,
Thy constancy I've tried;
Where all were false I found thee true,
My counsellor and guide,
The mines of earth no treasures give
That could this volume buy;
In teaching me the way to live,
It taught me how to die.

Written for Moore's Rural New-Yorker.
AFFLICTIONS.

In their light we can see what we are! Professing to believe that God orders all things wisely and well, and praying "Thy will be done," yet, whose heart does not, for the moment at least, secretly rise in opposition to Him, when he sees death invading his dwelling to remove his most cherished friend and support? Do we ever think what that emotion of opposition signifies?—Nothing less than we would not have His will to be done! It is bringing Jehovah to the bar of our hearts, and pronouncing judgment against His decrees! It is that lurking enmity of Satan that would actually dethrone God if it had the power! It speaks in unmistakable language what the human heart is! It proves that we are fallen, depraved—aliens to God by nature and practice!—Does any one doubt this opposition of his heart, and think that on the instant, he would cheerfully acquiesce? "Let him that thinketh he standeth, take heed lest he fall." A single, sudden, stunning blow would undeceive him, if he was not utterly oblivious to his own emotional exercises.—Has another grace that enables him, after the moment, to be reconciled? Know that that is not your nature, but God's gift, and be grateful and humble in view of it.

But what is it to be truly reconciled to an affliction? A great deal that passes under that name is spurious. It is of a kind which leads us to feel, and even to say, "well, it can't be helped, I suppose it is all right, let us return again to our business, or to our pleasure"—precisely the submission of the culprit on the scaffold. And this is just as high as the unaided heart can get. It cannot ascend above this platform one inch. It is not its nature to have any higher, nor any more comforting philosophy in sorrow than is involved in the expression—"it can't be helped." Only the spirit of God can lift it up to a higher level. That will teach us that "afflictions come not forth of the dust, neither doth trouble spring out of the ground,"—that "He doth not afflict willingly, nor grieve the children of men, but for their profit, that they may be partakers of his holiness,"—that his dealings and dispensations, how dark soever they may appear to the natural eye, are not vindictive judgments, but the affectionate chastening of a Father's hand to wean us from those baser objects, towards which our natures inevitably tend, and draw us upward to Him! Such a faith or apprehension of truth, will not only sustain us under any trial that we may be appointed to pass, however severe, but will go so far beyond this, as to enable us even to rejoice in times of greatest darkness and trouble, and to kiss the hand that smites us. Any thing short of this, is of little worth, and might as well be thrown to the winds. And any view of truth that does not incline the soul in this direction, is not of the Spirit's interpretation, but is of the same nature with that which leads a now lionized public speaker, under the guise of a lecturer on foreign travel, to poison the public mind with his own infidel sentiments, by declaring, against the testimony of Scripture, and Calvary itself, that no man is created "totally bad."

OUR FATHER!—The gospel brings man into a most intimate and endearing relation with the Creator. It teaches us to worship Him, not as the Absolute Being, independent and regardless of His creatures, or as the Unchangeable, withdrawn from all connection with a transitory world, but as a Father who feels a tender interest in his human children, and hears their prayers and ministers to their wants. LARINGTON says very beautifully:

Oh! the unspeakable privilege to have Him for our Father, who is the Father of all mercies, and the God of all comfort. Do not think he can shut out a bleeding soul that comes to Him, and refuse to take, and to bind up, and heal, a broken heart that offers itself to Him, puts itself into His hand, and entrusts His help. Doth He require pity of us, and doth He give it to us, and is not infinitely more in Himself? All that is in angels and men is but an insensate drop to that ocean.—Selected.

It costs more to revenge wrongs than to bear them.

THE TRAVELER.

LETTERS FROM A HUNGARIAN.

NUMBER FOUR.

Scenery along the Danube—Pesth—Catenary Suspension Bridge—Hungarian Opera—Casino—Cheap Breakfast—Compliments.

GRAN, Hungary, Sept. 1893.

DEAR FRIEND MOORE:—A few weeks ago I visited the capital of Hungary, Buda-Pesth. There are two passenger trains which daily leave Vienna for Pesth, but the passage by steamer on the Danube is far the most pleasant, and the scenery more picturesque. Being, then, in this city (which I briefly described in my last,) I accordingly preferred the steamer to the locomotive, and in three hours we traversed fifty English miles, the distance between here and Pesth. The scenery on both sides of the Danube, throughout this trip, is ever varying and charming. About midway we saw a mass of ruined walls and towers on the top of a high, steep rock, now called *Wissegrad*, formerly (by the Romans) *Arx Alta*. These ruins are all that remain of the once favorite residence (built in the eleventh century) of the Kings of Hungary. Under *Matthew Corvinus*, (died 1490,) the most warlike and mighty chief of the Magyars, this residence was enlarged and embellished in the highest degree. But, like many other forts and castles, this strongly fortified residence, also, was destroyed in the 16th century by the Turks. The Turks, as well as the Romans of a much earlier period, have left many a trace of their campaigns in the land of the Magyars.

On drawing nearer the haven of Pesth, the beauty of the scenery grows more and more intense, till at last, the stately edifices of Pesth, lining the left bank of the Danube, the palace and forts of Buda on the lofty hills opposite, and the vast Suspension Bridge connecting Buda with Pesth, combine with all their beauty and magnificence in producing a most powerful impression on the stranger. The steamer passes under the bridge, and whenever the water is very high, the pipe and mast are inclined, by means of a single rope, at an angle of 45 degrees. Formerly a bridge resting on pontoons, like the one I described in my last, connected the two banks a short distance above the present bridge; but as this had to be "opened" for allowing boats to pass through, and altogether taken out as soon as ice began to form in the river, the mercantile population of Pesth, desiring to have an easy passage across to Buda at all times, and at all seasons, determined upon building a catenary suspension bridge, sufficiently high above the level of the river to allow boats to pass under it. It was accordingly built, between 1842 and '49, by the English Engineer, CLARK, at a cost of near three millions of dollars. The entire roadway of the bridge is 1,200 feet in length, resting upon four towers, two on the bank and two on the bed of the river. The chains alone weigh thirty thousand cwt.—There is a double aisle for foot passengers, the one for those coming from Pesth, the other for those from Buda. The fare across is only one *Kreuzer* (one cent). During the late revolution the Austrian artillery began to cannonade one of the towers from the fort of Buda, but so solid and massive is the structure, that the bridge received no injury from the bombardment.

Scarcely a century ago Pesth was as yet an insignificant place, (*Prenburg* being formerly the capital of Hungary,) but now it is the most beautiful, wealthy, and frequented Hungarian city—counting 100,000 inhabitants. The great inundation of 1839, which destroyed 3,000 houses, and the bombardment (on the part of the Austrians) in 1849, was the cause of many new and splendid mansions, most of which may be seen along the river.

The population is of a mixed character, and the German is here spoken as much as the Hungarian. Among the three theatres of Pesth, there is only one where Hungarian dramas are played, and Hungarian operas sung. By the way, if you would most appreciate the full, rotund melody of the Magyar tongue, you must attend the opera at the *National Theatre*. On the day I arrived, the bills announced the celebrated opera of *WILLIAM TELL*. In the evening, accordingly, it being very late, I rode with a friend of mine, in a "comfortable," to the theatre. (A "comfortable," in Austria, is applied to a kind of hack with a seat for two persons only.) When we arrived the seats in the parterre, dress-circle, and three galleries were already all occupied—such a theatre-going people are the Hungarians—and we were glad to obtain a convenient place for standing—there were more than a hundred in the same posture. The scenes, with all their decorations, were prepared on a grand scale; the orchestra was full and excellent; and the Asiatic language of the original Huns, sung by modern artists, was most pleasing to the ear. At the close of every act the audience, amidst loud applause, called out the principal actor, at whose appearance the clapping of hands ceased, the audience shouting *Eljen*, which corresponds to our "three cheers," and literally signifies "long may he, or she, live!" The whole play lasted from 7½ to 9½. Thus I spent a pleasant evening; not a little surprised that a play in which the *Republican Text* speaks so much of *Sabotage* (liberty) in the presence of the tyrant *Gesza*, should be represented in song on the stage of a despotic land. But there is no danger now to be feared from the *disarmed* Magyars.

The next morning, instead of breakfasting at the hotel, I went into one of the numerous *casinos*, or coffee-saloons. There is not only economy in this, but several advantages are thereby gained. A *casino*, besides furnishing you with tea, coffee, ice-cream, etc., contains more or less numerous newspapers, which you may read at your leisure. My breakfast, like that of almost everybody in this country, consisted of a glass of coffee and a penny-roll, which is crumbled into the former. It is in these *casinos*, moreover, where you can best learn the character of the people. Journals being very dear in Hungary, most people visit the *casino*, where they have opportunity not only to read the

news and discuss the various topics of the day, but also (if they choose) to play a game at billiards, chess, or cards. In regard to chess, almost every third person you meet plays it.

Unterthanigster Diener, ("most humble servant,") said the host to me, as I left with an "*ich empfehle mich*," (I commend myself.) These two phrases, strange though they sound to an English ear, are the most common salutations here in coming and going. These phrases are, indeed, German, but in the Hungarian the literal translation of them is used just as much. In addressing ladies of wealth or distinction, men often use, instead of the above, the phrase "I kiss your hand," though they do no such thing. So, too, if such a lady offers you anything, and you decline it, the same phrase is used, instead of our, "No, thank you." Compliments, in general, exist here in great abundance. Even the customer, on entering or leaving a store, is expected to "commend himself," for which the merchant or clerk is your "most humble servant." This system of compliments is also carried out in traveling. Thus when a person leaves the car or steamboat at any intermediate station, he wishes the company around him a "*glueckliche weiterreise*"—"a happy continuance of the journey"—how odd and awkward this sounds in our language. Well, this abundance of compliments arises from the more social character of the Hungarians and Germans generally. But enough of these; I have a great many more curiosities yet to relate of Hungary—of which more in my next.

SIMON TOSKA.

THE ROTASCOPE.—No. I.

BY THOMAS WITMEN.

THE little child, with intense interest and delight, begins to study philosophy as soon as it is able to handle a ball or a hammer, and thousands of experiments have to be made before the law is fully established in its mind that all things tend to go one way, when *let go*. And it is just as much a matter of surprise to the little innocent on its mother's knee, that the apple, which has been picked up for the twentieth time and again put into its little hands, should *always* go towards the floor, as it is to its older brother, who has "learned a thing or two," to see the great balloon rise to the clouds.

When once our notions are fixed with regard to the laws which govern the material universe, either by our own experience and observation, or by availing ourselves of the observations and experience of others, through books, or otherwise, and the operations of those laws have become a kind of second nature to us, it is extremely difficult for us to give up our opinions, and adopt different views. The commendable decisiveness and stability of the human character requires that this should be so. Sometimes, however, we see in the operation of Nature's Laws, our experience put at default; and we are all astonished with some "new thing under the sun."

The Rotascope, though it is generally considered by practical men as a "mere plaything" of no practical utility, has engaged the attention of the Scientific World for a number of years, and it never fails to amuse and excite the wonder of every one who has not before witnessed the phenomena it presents. Though Scientific Lectures have been delivered, and learned articles published, describing the little machine and its wonderful phenomena, we have never seen a practical demonstration given of its wonderful performances, which are so contrary to our experience.

We propose, through the columns of the *RURAL*, in a series of articles, to give the result of our own observations and experiments with this little "plaything," in a manner that will be instructive to the young beginner in the study of the laws of Nature—and perhaps give a hint at some of the practical uses to which the principle might be applied—hoping, thereby to add, our humble mite to the treasury of knowledge, which the good men of our age are storing up for the benefit of our race. As many readers of the *RURAL* may not have seen the Rotascope, a brief description of it may be necessary. It consists of a simple balance wheel, A, made of brass or other metal, moving on very nicely adjusted bearings, e, e, in a brass frame or ring, B, with as little friction as possible; and a stand, made by fastening a pointed wire, W, upright into a block of wood, S, for the purpose of supporting the machine when put in operation. Opposite each end of the axle are fastened little plates, or "ears," D, D, on the upper side of the ring, B, with a small indentation on the under side of each, to prevent its falling off when set in motion upon the stand. To set it in operation, a very rapid motion is given to the wheel by means of a strong cord wound carefully around the axle, X, and pulled violently with the right hand, as in spinning a top, while the frame or ring, B, is held

in the left hand, without obstructing the motion of the wheel. Now place one of the ears, D, upon the sharp point of the stand, W, holding the other ear firmly with the thumb and finger of the right hand, placing the axle of the wheel in a horizontal position, as seen in the diagram. Withdraw the hand horizontally in a line with the axle, letting the machine go, and it will retain its axis in the horizontal position, and begin slowly to rotate around the point on which it rests. This rotary motion around the stand will be accelerated until the motion of the wheel is spent and it falls off, which will require some four or five minutes, if the machine is in good order. The grand inquiries now arise:

First.—Why does motion given to the wheel A, tend to keep the axis in a horizontal position?

Second.—Why does the machine rotate around the point on which one end of its axis rests?

Third.—Why is its rotary motion around the stand accelerated?

It is impossible for matter to put itself in motion—so it is also impossible for it to stop when once put in motion, or to go slower or faster, or to take another direction from that given it by the force which set it in motion. Thus, matter, when put in motion, always moves in a straight line in the direction of the force given to it, with a uniform velocity, unless some opposing force intervenes and retards it, or turns it out of its course. Now, suppose the wheel is put in motion with a velocity equal to that of a ball discharged from a rifle, and all the particles move in the vertical plane, A, B; their united force, continued in that direction, which is necessarily rotary motion, will not only overcome the power of gravitation upon those particles themselves, but will enable them to carry the frame or ring, and, perhaps, considerable additional weight if applied, with them around "their stated course," until the motion of the wheel is spent, and gravitation again resumes her sway. Thus, a revolving body tends always to keep its axis parallel to itself, and hence a ball discharged from a "twist-cut" rifle, which gives it a rapid rotary motion, keeps its axis parallel with the rifle barrel, until it meets some opposing force; and it is more apt to go straight to a great distance, than a ball fired from a "smooth-bore" rifle, by which no rotary motion is communicated to the ball.

It is not pretended that this principle is a new one, but we have thus elementarily treated of it, as an introduction to the more intricate question which follows, and which will be treated of in our next article.

Williamsville, N. Y., Feb., 1893.

ANIMAL HEAT—CARBON AND OXYGEN.

In an able lecture, delivered by the Rev. Dr. Storrs, of Brooklyn, in the Cooper Institute, recently, on the "Influence of Climate on Civilization," he seemed to attribute much of the vigor of races to the food required by their climate. The idea conveyed seemed to be an endorsement of the popular theory of animal heat, which is inculcated in all the common books on physiology. These compare the lungs to a furnace, in which air and carbon are brought into chemical union in producing heat. This theory is simple and somewhat beautiful, but not correct. The combustion of our food-fuel does not take place in the lungs, in the same manner that the fire is produced in the furnace; the food of man is not fed into his lungs, neither does the oxygen of the air combine with the food or carbon in the lungs, but passes into the blood through their membrane tissue; carbonic acid and moisture being given out in exchange. All our food undergoes a chemical change before it reaches the lungs in the form of blood, and the warmth of the body comes from the organic processes which make and unmake the animal tissues. These facts, which would be familiar to all, lay the axe at the root of the common furnace theory of animal heat.

Man requires the same elements for his food in all climates. The northern races eat much fat which is almost pure hydro-carbon; the inhabitants of tropical climates eat gums and sugars, which are just as rich in carbon. Some castes of Hindoos, in India, live exclusively on vegetables; the Caffres of hot South Africa are the greatest beef gormandizers in the world.

The temperature of man is 98° in all seasons in the hottest and coldest climates. A change of this uniform temperature of the human body is the sign of disease. Man preserves his standard temperature in the tropical and arctic regions in virtue of this peculiar organism which adjusts itself to varying circumstances, but the means by which it does this is still involved in much obscurity.—*Scientific American*.

DEATH FROM WANT OF SLEEP.

THE question how long can a person exist without sleep is one often asked than answered, and the difficulties and inhumanity of answering the questions by experiment would seem to leave it ever unsolved. A recent communication to a British Society whose fields of operation are in Asia, would seem to answer the inquiry. It is a description of a cruel mode of punishment peculiar to, and webelieve, original with the Chinese. It appears that a Chinese merchant had been convicted of murdering his wife and was sentenced to die by being totally deprived of the privilege of going to sleep. This painful and singular mode of quitting an earthly existence was carried into execution at Amoy under the following circumstances:—"The condemned was placed in prison under the care of three of the police guard, who relieved each other every alternate hour, and who prevented the prisoner from falling asleep, night or day. He thus lived for nineteen days without enjoying any sleep. At the commencement of the eighth day, his sufferings were so intense that he implored the authorities to grant him the blessed opportunity of being strangled, garroted, guillotined, burned to death, drowned, shot, quartered, blown up with gunpowder, or put to death in any conceivable way which their humanity or ferocity could invent. This will give a slight idea of the horrors of death from want of sleep.

A drop of water has the properties of the sea, but cannot exhibit a storm.

PROTECT YOUR EYE-SIGHT.

MILTON's blindness was the result of over work and dyspepsia. One of the most eminent American divines having, for some time, been compelled to forego the pleasure of reading, has spent thousands of dollars in value, and lost years of time in consequence of getting up several hours before day, and studying by artificial light. His eyes never got well.

Multitudes of men and women have made their eyes weak for life by the too free use of the eye-sight, reading small print and doing fine sewing. In view of these things, it is well to observe the following rules in the use of the eyes:

Avoid all sudden changes between light and darkness.

Never begin to read, or write, or sew, for several minutes after coming from darkness to a bright light.

Never read by twilight, or moonlight, or of a very cloudy day.

Never read or sew directly in front of the light, or window, or door.

It is best to have the light fall from above, obliquely over the left shoulder.

Never sleep so that, on the first waking, the eyes shall open on the light of a window.

Do not use the eye-sight by light so scant that it requires an effort to discriminate.

Too much light creates a glare, and pains and confuses the sight. The moment you are sensible of an effort to distinguish, that moment cease, and take a walk or ride.

As the sky is blue and the earth green, it would seem that the ceiling should be a bluish tinge, and the carpet green, and the walls of some mellow tint.

The moment you are instinctively prompted to rub the eyes, that moment cease using them.

If the eyelids are glued together on waking up, do not forcibly open them, but apply the saliva with the finger—it is the speediest diluent in the world—then wash your eyes and face in warm water.—*Hall's Journal of Health*.

THE PHYSICAL SYSTEM.—No keenness or culture of intellect (says a recent writer) that does not embrace the culture of health—no wealth, no morality, and not even a religion, that does not embrace the preservation of the physical system from all deterioration, and its cultivation to the highest perfection, will ever last long. No nation or people will ever preserve the weight of influence to which they are naturally entitled among others, without manliness of development as the only reliable foundation of manliness and reliability of character. All that tends to produce these is so far a vital good.

A PLEA FOR DOGS.—No. II.

A WOUNDED SPIRIT, WHO (WHAT DOGS) CAN BEAR? The dog is proud of his relation to man, and scorns a mean act. He has a high sense of the trust and honor conferred to him. The following incident (for the veracity of which we do not vouch,) is proof in point. A gentleman near Boston, owned a large New Foundland dog,—on a certain occasion he brought home a fine cut of fresh beef, and hung it away in an adjoining apartment ready for use. Carlo, by some strange misconception of facts in the case, entertained the opinion that his master intended this choice morsel, to be served out from time to time to his faithful dog. With this idea in his brain, (for his excellent character forbids any other supposition,) he argued, that he would not put any one to the trouble to serve it out to him, but would act as steward in the case,—would turn commissary to the camp, and serve himself to rations. So he reasoned, and who can say it was not good logic?

MAKES A BLUNDER IN HIS PREMISES.—He accordingly (after placing himself in a suitable and commanding position,) carefully lifted the meat from its place, and duly and ceremoniously appropriated the choice bit to his noble dogship's use. What was not wanted for immediate purposes he carefully stored away for future emergencies. Time, the revealer of secrets, and the exponent of errors, soon brought down a storm of indignation upon poor Carlo's head, and made him to see and feel that he had fallen into a grave dietetic error, and that his opinions were unsound, and not quite safe as a rule of action.

HIS MASTER GETS EXCITED.—His master, in a fit of passion, called him all manner of hard names, scolded him unmercifully, and bid him leave his house and never enter it again. Poor Carlo! He had never experienced anything like it before. He could not bear it. He could have endured a beating, but to be called hard names, and actually expelled from home—driven out upon the false charities of a cold and selfish world—disinherited and banished from the place he had guarded and protected both night and day for long, long years—this was too much. It broke his spirits completely—he felt himself dishonored—disgraced. The noble animal could not brook the offence committed against his previous good name, and standing in this false position was too much to bear. What could he do? He revolved the matter very carefully over and over, and at last came to the *manly* conclusion to take his own life.

CARLO COMMITS SUICIDE.—He preferred the sleep of death and the rest of the grave, to a life dishonored and disgraced, by charges so cruel and bitter. He became gloomy and sad, and indulged in habitual melancholy, and his countenance was the very embodiment of woe! About sunset, as the Western train of cars came dashing along, he deliberately placed his neck on the rail, and in a moment more, life was extinct—his troubles over!

The dog has some traits of character, man would do well to emulate. He seldom or never harbors

revenge. He readily forgets an injury, or wrong done to him. In most cases, the dog that is abused to-day, will affectionally lick the hand of his master to-morrow. He will not harbor ill will in his breast. He scorns such depravity.

In all we have said, we wish not to be understood to advocate the claims of every cur and cross-breed and whelp of which the world is already too full. Thousands of such exist, whose bones ought to be whiten and fertilize the corn fields of their silly owners. Our plea is for the thorough-bred dog of his kind—the cultivated—the educated, and none other. For all such we ask at the hands of their owners generous treatment.

IN WHAT THEY SUFFER.—Good dogs are too much abused. They often suffer for want of food. Often too, they suffer from great irregularity in their meals, and in winter, they are greatly outraged by exposure to pinching cold and frost.—Dogs are very sensitive to cold. How much cruelty is practiced upon them in the severest wintry months. Not long since, I knew an unmerciful man, turn his young dog at night into his barn to sleep, when the thermometer at 5 o'clock, P. M., stood 34° below zero, (at 9 o'clock, same day, it stood 33° below.) The poor dog complained bitterly, and howled occasionally all night, from the biting effects of extreme cold. The penitentiary, would afford suitable and adequate punishment for such a brutish master.

TURN THE KITCHEN INTO A KENNEL.—The kitchen at night, is none too good a place for a good, faithful dog, in the coldest months. His acute ear will detect the tread of any reckless villain, who may be prowling around the premises, and the sharp ring of his voice, will put them to flight. Some men take delight in acts of cruelty—their fiendish natures seem to be in their appropriate element when inflicting cruelty on dumb animals. The poor dog is too often the victim of their passionate rage, or their cool and calculating cruelty. We do verily believe, that if the eternal salvation of such men were suspended upon their humane treatment to their dogs, they would be forever excluded from Heaven, and wall in eternal misery. Boys, as you desire mercy, show mercy to the faithful dog.—Girls, as you esteem friendship and kindness, shun as you would the Sirocco's breath, the companionship of those young men who treat domestic animals with tyranny. It is a moral certainty, that they will make unkind, tyrannical husbands.

Spring Side, Vt., Feb., 1893.

S. B. R.

BOB-O-LINK OR RICE BIRD.

THIS beautiful little bird, the favorite of all the young folks on account of its cheerful music, pretty plumage, and lively and curious manners, makes its appearance in this part of the country with the mild weather of spring. He is not then fully clad in his summer dress, but improves in appearance as the season advances.

The male, like the good pioneer, precedes his mate in his migration northward, arriving at his furthest boreal residence about the beginning of June. It is said that the Bob-o-link is found as far west as the base of the Rocky Mountains, but not in Oregon. The West India Islands furnish a favorable winter abode for this bird.

The meadows and orchards here are usually made vocal by their lively song about the first of May. They destroy many insects, which would otherwise trouble the farmer. The rearing of the young being their chief business, this does not take place until they have crossed the 40th degree of north latitude.

The mating season is one of great interest, calling forth the most incessant strains of music from the various competitors perched upon the fences and tree-tops, and sometimes like the lark, hovering on the wing. The males continue their song during the lonely days of incubation and rearing of the young, after which, they begin to lay aside their pied dress and appear in a more humble garb. In undergoing this change they lose their musical powers. About the middle of August they collect in flocks and begin their migration to their Southern home.

A CHEAP AND GOOD BAROMETER.—A truthful and cheap *Barometer*, interesting and instructive to youth, may be made by taking a clean glass bottle, and putting in it a small quantity of finely pulverized alum. Then fill up the bottle with spirits of wine. The alum will be perfectly dissolved by the alcohol, and in clear weather the liquid will be as transparent as the purest water. On the approach of rain, or cloudy weather, the alum will be visible in a dusky spiral cloud in the centre of the fluid, reaching from the bottom to the surface. This is a cheap, simple, and beautiful barometer.—*ROBERT SHAW, Shaverilla, N. Y., 1859*.

SUCCESS IN LIFE.—A man's best help is in himself—his own heart, his own soul, his own resolute purpose. The battle cannot be fought by proxy. A man's may be aroused by another—his desire to improve and advance himself be excited by another; but he must mould his own stuff, quarry his own nature, make his own character.—What if a man fail in one effort? Let him try again! Let him try again—try often, and he cannot fail ultimately to succeed. No man can tell what he can do until he tries, and tries with resolution.

Review of the Week.

THIRTY-THREE STARS. T. W. Higginson says of the Stars, "I agree with thirty stars. There was no other way of settling the question of the number of stars. It may be true, nevertheless, that the thirty stars are the symbol of America, the thirty States of the Nation. I am glad that on the occasion of every new State into the Union, one star be added to the flag, and that such addition shall take effect on the fourth day of July, then next succeeding such admission."

MOORE'S RURAL NEW-YORKER

AGRICULTURE RURAL LIFE EXCELSIOR LITERATURE SCIENCE ARTS NEWS

TWO DOLLARS A YEAR.

"PROGRESS AND IMPROVEMENT."

[SINGLE NO. FOUR CENTS.]

VOL. X. NO. 11.

ROCHESTER, N. Y.,—FOR THE WEEK ENDING SATURDAY, MARCH 12, 1859.

[WHOLE NO. 479.]

MOORE'S RURAL NEW-YORKER,
AN ORIGINAL WEEKLY
RURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE,
With an Able Corps of Assistants and Contributors.

TERMS, IN ADVANCE:

Two Dollars a Year—\$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for \$5; Six, and one free to club agent, for \$10; Ten, and one free, for \$15; Sixteen, and one free, for \$22; Twenty, and one free, for \$28; Thirty-two, and two free, for \$44. (or Thirty for \$37.50.) and any greater number at same rate—only \$1.25 per copy—with an extra copy for every Ten Subscribers over Thirty. Club papers sent to different Post-offices, if desired. As we pre-pay American postage on papers sent to the British Provinces, our Canadian agents and friends must add 12½ cents per copy to the club rates of the Rural. The lowest price of copies sent to Europe, &c., is \$2.50—Including postage.

THE POSTAGE ON THE RURAL is only 8½ cents per quarter to any part of this State, and 6½ cts. to any other State, if paid quarterly in advance at the post-office where received.

All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

POTATOES:

PRICES, MARKETS AND VARIETIES.

Many farmers in Western New York, and particularly those who have light farms near Railroad stations, grow potatoes in large quantities, principally for the Eastern market. Some seasons, however, a portion of our surplus crop is sent to the West, and this is the case the present spring. The potato crop last season was large in the Northern Atlantic States, and, in consequence, the price is now so low in the New York market as to prevent shipment in that direction. On the contrary, the crop through the West was generally light, and prices are now so high in Western cities, that our surplus is moving Westward for a market, with great rapidity. Could growers here know in what direction the demand would be the greatest, it would be of advantage, for buyers for the Eastern market generally refuse to purchase anything but the choicest kinds, such as the *Mercer*; while for the Western market they are not very particular, though, of course, making distinction as to price.

As many of our readers are asking the question, whether they could profitably engage in growing potatoes for market, as a staple crop; and if so, what kinds it would be best to plant, we give the prices paid here for the last five years, and such other facts in regard to sorts and quality as we hope will be of general interest to our readers.

PRICE IN ROCHESTER THE LAST FIVE YEARS.

The *Mercer*, it must be understood, is the best and highest priced potato, and the most eagerly sought by buyers, and it is the price of this sort we give; common sorts range from five to twenty-five cents a bushel lower. The price the present season is not high, though perhaps sufficiently so barely to remunerate growers. *Mercers* now sell for 50 cents a bushel. On the first of November last, or just at the close of the digging season, 40 cents was the price paid. Last year at this time, (1858,) they brought 63 cents, and two weeks afterwards went up to 75 cents, and continued at this price during the greater part of April. This crop when dug (Nov., 1857,) could have been sold from the field at 63 cents. In 1857, through March and until the middle of April, 63 cents was paid. At this time they advanced to 75 cents, April 25th to \$1 12½, and May 1st to \$1 25. This high price was maintained until the season was over. At the time of digging this crop (Nov., 1856,) they would have brought in market only 50 cents, showing a great profit from keeping until spring. In 1856, *Mercers* sold for 32 cents during the entire spring, with the exception of a week or two, when they were down to 25 cents. The fall prices of this crop might have been sold from the field at 25 cents, showing a less than keeping until the spring. In 1855, during March and until the middle of April, 55 cents a bushel was the market rate. They then typically advanced to \$1 25, and continued at this price two weeks, when there was a decline to \$1, which price was maintained during the entire season. This crop, when dug in the fall of 1854, would have sold at 63 cents, showing in this case a profit from keeping.

From these figures our readers, we think, may be able to judge somewhat of the prices to expect in the future, and also of the profit to be derived from this crop, and whether any advantage can be derived from keeping potatoes until the spring.

The loss by shrinkage, rot, &c., is great, and whether the advance, as a general thing, will pay for the loss, we leave our readers to decide with the other questions, after having given the facts above.

NEW VARIETIES—PEACH BLOW AND BUCKEYE.

The best varieties for cultivation, is an important question, and we would like growers of large experience to give us their views. From the higher price paid for *Mercers*, as well as from the fact that they are eagerly sought by buyers for the Eastern market, they are much grown by our farmers, and they are an excellent potato, (though, were we disposed to be critical, we might name some faults,) but unproductive, and quite subject to the rot. Occasionally we have seen a good crop, when the season and soil happened to be just right, but in nine cases out of ten the yield is quite light, and if the market was as good for poorer, but more productive sorts, we incline to the opinion that farmers would do better to grow them at one-third less price per bushel. The great object which our potato growers have been looking for, is a potato as good as the *Mercer*—one as highly prized in the New York market, and a good yielder. Many have been attempting to raise a sort from seed with these desirable qualities, and high hopes are entertained in regard to some sorts, which we and others have been very anxiously watching. It seems that this work has, in part at least, been accomplished, and a potato has been found that suits the taste of the New Yorkers as well as the *Mercer*, for which they are willing to pay even a higher price, and one that bears an abundant crop. This is the *Peach Blow*. Several years since a friend traveling in Saratoga and Washington counties, told us of an excellent potato raised in that section, and called by this name. Supposing that it was the old *Peach Blow* grown under favorable circumstances, we paid no attention to the matter. Of late, however, it has risen into especial favor, having been grown largely in New Jersey for the New York market.

Messrs. DAW & FRANK, produce dealers, furnish the following statement in regard to this variety, for the New York Tribune:—"Among the new sorts the *Peach Blow* at present takes the first rank; not the old-fashioned, yellow-meated, red-skinned, rank-flavored *Peach Blow* of our boyhood, but the modern seedling of the Western *Rod*. It is round, with deep eyes, has a parti-colored skin, and whitish-yellow meat, being whiter and finer flavored when grown in this latitude than at the north, where it originated. It is generally sound-hearted, cooks very evenly, dry, and light. This market has this season been well supplied with it, and it has steadily commanded the highest rates—selling on a par with that old favorite and standard variety, the *Mercer*. It has a tall, upright, and luxuriant vine, rambles from the hill, and is very late, requiring the whole season to mature. It attains large size, is a large yielder—turning out from 50 to 100 per cent. more than the *Mercer*—and has been far the most profitable late potato of the past season. The chances of rot are very much increased by the length of time it takes to mature; and this, together with the uncertainty, from recent introduction, of continuing to thrive as well as heretofore, render the more prudent cultivators cautious of risking too much upon this promising variety." We have eaten this potato within a few days, and have no hesitation in pronouncing it of good quality. A portion of the specimens we had, however, were hollow at heart.

From the same source we have the opinions entertained of another variety, which has been grown here for about five years, having been brought from Ohio, hence its name, *Buckeye*. It is an excellent early potato, we think, from a brief experience, but we cannot speak of its value for a general crop. "The *Buckeye* is the most promising early potato. It was introduced from Ohio to the vicinity of Rochester, N. Y., three years ago, from which locality it has spread to different sections, but has been most largely cultivated in Monmouth county, N. J. It is a handsome round potato, white throughout, except a little bright pink at the bottom of the eye. It cooks very dry and bright, and is fine flavored, particularly when first matured. It is very early, ripening before the *Mercer*, and attains good marketable size as early as the *Dykman*. It is remarkable for cooking well, as soon as it attains fair size. It throws up a very thick, vigorous and luxuriant vine; grows compactly in the hill, and to a large size, yielding abundantly. The yield upon good ground in Monmouth county the last season has varied from 150 to 300 bushels per acre. Bushel baskets full of them were exhibited at the late Monmouth County Fair, containing only sixty-six potatoes. It has been very free from rot, and in one instance, where some of these were accidentally mixed with *Peach Blows* on a piece of ground very wet, and calculated to induce the disease, the *Buckeyes* remained sound, while the *Peach Blows* rotted very badly. It is most valuable for an early

potato. If planted for a late or medium crop, upon strong, rich, ground, it grows so rapidly and to so great a size, that many of them will be hollow-hearted, which, of course, impairs their quality for the table. The early crop of last summer sold in this market at the highest rates; but when the later crops of *Mercers* and *Peach Blows* became abundant, the late planted *Buckeyes* were not considered their equal in quality—but as an early market potato they gave promise of far exceeding all other known varieties."

BEST VARIETIES FOR NEW YORK MARKET.

B. STEPHENS, another produce dealer in New York, furnishes the following article for the *American Agriculturist*, in which, it will be seen, he condemns the *Buckeye* most unceremoniously, giving it, we believe, a great deal worse name than it deserves, for as an early potato there are few better. For a winter variety we would not recommend it. The *Peach Blow*, we have no doubt, like many new things, is somewhat over-praised.

"As it is time for the farmers to decide what kinds of potatoes to plant the coming season, I send you these few remarks made up from my experience of marketing potatoes the past year, and also from minute inquiries made of farmers from different sections of the country. In the first place for New York Market we require a white fleshed, white skinned, round or oval shaped, and smooth potato, that will boil perfectly dry and mealy, in addition to which the farmer wants a good yielder, and one that will as a general thing withstand the rot.

From the past year's experience, of all the kinds which have come under my notice, I unhesitatingly pronounce the *Peach Blow* to come nearest to these requirements for a standard potato. It has been, and now is the most plentiful in market, and when raised on sandy soil, sells for more than any other table variety. It will yield from two to three bushels to one of *Mercers*, on the same soil, and so far, has grown free from rot on any ground that would grow sound potatoes of any kind.

The next variety I would recommend is the *Long Pink Eye* or *Pink Eye Kidney*. It is a good yielder, commands a high price in market, and is one of our very best Spring potatoes, cooking dry, white, and mealy.

The *Blue Mercers* I would also recommend where they will grow of large size, smooth and sound.

The *Carter* is a first class potato, but being subject to rot, and a poor yielder, it is not profitable to raise for market.

The *Porter*, a good cooker, but small in size and yield, therefore, not profitable.

The *Rough and Ready*, from the past two years' experience, I class as a potato of first quality, which only requires to be known, to be appreciated, as it comes nearer to the old fashioned *Carter*, both in looks and quality than any other kind. It is a good yielder, very hardy, and ripens before the *Mercers*, but later than the *Dykman* or *Junes*.

The *Round Red* and *Yellow Pink Eyes* are hardy, good yielders, but are mostly for shipping and ship stores.

The *Dykman* is the earliest good variety we have, yields well, and will cook dry when half grown, but is a poor Winter potato; the *Mountain June*, is also a good potato to yield, but is apt to have black spots under the skin.

Prince Alberts are pronounced, after the past years' experience, a failure, for they will not take as market potatoes, when offered for sale, and will not cook dry, unless under very favorable circumstances, until quite late in the Spring. The only redeeming quality they have, is that they will not rot. I would advise farmers not to plant them, as the call for seed at high prices, is about run out.

The *Buck-Eye* is another humbug. It has been tried in the scale and found wanting. They would not bring as much in market the past season as the *Junes* and *Yellow Pink Eyes*.

There are a great number of varieties constantly before the public, but they are generally brought out by persons for the purpose of selling seed at enormous prices. Farmers should choose such kinds as yield well and command good prices as market potatoes."

Small Farms Well Tilled.

A WASHINGTON CO., Min., subscriber of *Emery's Journal of Agriculture* says that, "all the largest farmers in his county are badly in debt, and a good many of them will lose their farms before times get good again. The crops were light this last season; wheat averaged ten bushels per acre; oats thirty; corn good—more than an average. I worked fifty acres last year; got my crops in in good season, and tended them well, and my wheat averaged 21 bushels; oats, 45; corn, 50; barley, 80; potatoes, 200, &c. I recommend small farms well tilled; they are more profit to the owner than large ones. Large farmers are in debt."

A CHAPTER ON FARM GATES.

A GOOD GATE is an "institution" upon the farm the merits of which have never been sufficiently recognized by a title of those who make daily use thereof. While new, and in prime working order, the possessor has rubbed his hands good-naturedly, congratulating himself upon the advance he has taken towards farm neatness and economy—with pride has thought how completely he has distanced such "old fogies as Farmer A.," on the one side, "and Farmer B.," on the other. But age came on—gates as well as men feel the "tooth of time"—or a fierce, bleak wind has racked its joints, and the freedom and elasticity of movement have departed—just as the rheumatism serves the *genus homo*—and he commences patching up, a little here, a little there, until tired and wearied in spirit, (the disease having become chronic,) he votes the whole thing a nuisance, and leaves it to its fate. That the majority of gates rapidly fail to answer the ends for which they were erected, is true—that such failure to their operation is a law of necessity, is not the fact. Many who build seem to think that when the gate "swings freely" the great difficulty is surmounted, and the chief object sought in its construction attained. The first principle is overlooked—a gate should be, to a very great degree, self-sustaining, it should—every timber assisting—support itself.

The common form of gates in use among our farmers is the rectangular frame. This frame, constantly suspended by one of its sides, will not maintain its form—the opposite sides falling by their own weight. To counteract this effect, the angle-brace, or angle-tie, are called into service, and the adoption of the tie or brace should be determined by the material of which the gate is composed. That our readers may have a perfect understanding of the subject we copy the two diagrams given below from the *Cyclopedia of Agriculture*.

Let the first diagram represent—a the hanging-post, b the top rail, and c the angle-strut of a gate.

This is evidently a simple truss, like the jib of a crane; and if a weight, w, be hung on the end of the rail b, this rail will be in a state of tension, and c in a state of compression; and if the rail b be firmly held at d, and have an unyielding abutment at e, the point of the rail to which the weight is hung cannot drop down.

Again, let a, as before, be the hanging-style, b the lowest rail, and c the angle-tie; it is evident, that, under the same conditions as before, b will now be compressed; that is to say, the lower rail will act as a strut, while c, the diagonal, will act as

a tie. It will be obvious, that on these elementary parts the stability of the gate is entirely dependent; the addition of the other style and rails to complete the rectangular frame, and the filling-in rails or styles, serving only to make the fence.

From the consideration of these figures, and keeping in view the constructive maxim that iron should be used as a tie, and wood as a strut, we should learn not only what materials to use, but how to use them. Thus, if the construction be that of the first diagram, b should be of iron, and c of wood; and in the following figure, c should be iron, and b wood. Many of those who have had "exceeding trouble" with gates will be able to perceive in what was the difficulty—and obviate it hereafter. In this connection we give plans of two gates furnished by Rural correspondents.

A CHEAP FARM GATE.

EDS. RURAL:—Observing a communication on Farm Gates in your paper of the 8th of January, I send a plan for a cheap one, which I will try to ex-

plain. First take a round post and set it firmly in the ground, then make your gate with a scantling, 8 by 8 at one end, and 2 by 8 at the other, for the top rail—make your heel piece of 3 by 4 scantling. Let the top rail of the gate run over the top of the post—put a ½ round iron pin through the top rail and into the centre of the post, thus forming the top hinge. For the bottom hinge match upon the heel piece, about 6 inches from the bottom, a piece of three-inch plank, 15 inches wide, edgewise, hollowing it out so as to fit the round post which forms the lower hinge. You can make a perfect gate in this manner without expense, and with good hinges—make double, single, or otherwise, according to fancy, in the usual way with bevels or slats. This gate will swing clear open both ways.

Steuben County, N. Y., 1859. PRATTSBURGH.

BATHY'S RAILWAY FARM GATE.

EDS. RURAL:—Inclosed I send you a drawing of what we will call BATHY'S RAILWAY FARM GATE. The minor sketch exhibits one of the upright pieces. This is one of the most convenient gates I have seen. Two of the main features are, one can drive close on either side, then, with one hand, the gate is pushed open, rolling on a case prepared for it. The wheels rest on the bed-piece when closed, and move on it when opened. The wind does not affect it, opened or closed. The wheels are nine inches in diameter, made of white oak plank, two inches thick,—the three standards are made of 2 by 4 oak scantling, and the boards of inch pine, let into the standards as shown in the small engraving.

GEORGE BATHY, Columbus, St. Clair Co., Mich., 1859.

OBSTRUCTING THE HIGHWAY.

"BENOLD! what wondrous piles now strew the ground, Of rubbish, carts and wagons, scattered round; Old sleds and what not burst upon our sight, And logs and brush and burdock! Illustrious plight, Indeed, for ways like this!"—EDWARDS.

The highway belongs to the traveling public—they have a legal right to a free and unobstructed passage—and every good citizen will show some respect to the rights which belong to the world at large by using his influence to keep all obstructions and nuisances, not only from the beaten track of the highway, but from the sides thereof, and he will be exceedingly cautious how he leaves anything in the public way that will discommode, or hinder the passage of any one. Any thing, no matter what it may be, that is left on the ground which is a portion of the highway, is denominated, in the civil law, a nuisance, and treated as a nuisance; because it is on forbidden ground. It is no mitigation of the offence that a nuisance is left on the side of the highway. A highway must be kept clear—and he who, heedlessly, or wilfully, places obstructions in the way of a peaceable traveler, to his disadvantage or detriment, is not only liable to a fine equal to the damage or injury, but it is culpable of great ingratitude and disregard for the rights of good citizens.

Many people try to flatter themselves that they have a right, which no one may deny them, of putting any thing which they please on the sides of the highway, providing they leave barely room enough for travelers to pass without being capsized. Consequently, the sides of the highway are often made the receptacle of every old sled, old wagon, and piles of old rails and logs, and old implements that have been thrown aside, so that a passer-by often is very forcibly reminded of the ruins of Jerusalem, after the Babylonish captivity of the Jews. It is most stupendously surprising to see how many farmers will persist in such a practice of dropping every old hay-rigging, or worn out implement, on one side of the highway, as if such old nuisances were valuable pieces of property to be kept for what service they had rendered in days gone by. If there must be a place—a "catch-all"—about the farm—pray let it never be along the highway. A man may collect as much trash, and as many old nuisances as he pleases, in his backyard, and it is nobody's business; but when the highway is obstructed with wood piles, timber, piles of rails, and a hundred other things which we will not mention, we will tell what we think of such management. And if we happen to probe a few "old sores" on some unknown friends, not a score of miles from Rochester, who, in addition to encumbering the highway about their residences

with everything that has been already mentioned, will allow all the burdock and other noxious weeds to go to seed unmolested, we hope it will cause them to flourish so furiously, that some of the rubbish will get hoisted over the fence, and some of the huge burdocks trampled down.

When we are traveling and snarling car bounds out at us, or looks mildly and peaceably at us as we pass, we always can read the character of his master, with most indubitable certainty; because a man may be known by the dog he owns. So, when we see the highway obstructed, practically, habitually, and forever, we will read to you traits of character—without applying the principles of physiognomy, or phrenology—which we might have failed to learn in an acquaintance of a half score of years under other circumstances.

It is not only a violation of the civil law—which you, gentle reader, and I do not wish to have repeated—to obstruct the highway with trash and rubbish, and noxious weeds, but it is a species of down-right dishonesty. It shows a disposition to invade the harmless and necessary rights of another; and it discloses a feeling very antagonistic to the principles which dwell in the breasts of estimable citizens, and which strengthen the ties of attachment between neighbors and friends. It shows a disposition to over-reach, in little things, even to the disadvantage and detriment of those whose good will and esteem we greatly desire.

In a pecuniary point of view, it is bad policy for farmers to allow the highway, which runs through their farms, to be blockaded with rubbish and overgrown with noxious weeds. Highways of a good width, with the sides covered with grass instead of pestiferous weeds, and free from obstructions, always enhance the value of any farm; and he, who is always making little encroachments on the borders of the highway, by setting his fences a little further into the road every few years, in order to get a few rods more of land—when he has already more than he cultivates in a farmer-like manner—is prompted by a very short-sighted policy. It is right to keep the highways clear and clean, and no one, however parsimonious and disposed to encroach, has the audacity to deny that people have no business to drop all the trash and old rubbish of the farm on the borders of the highway. Much more might be penned on this subject; but it is devoutly to be wished that these few remarks to the wise and prudent will induce them, if they have any regard at all for the good will and approbation of their neighbors, to deposit their rubbish in any corner except on the borders of the highway.

Lake Ridge, Tompkins Co., N. Y., 1859.

"WHAT KIND OF SHEEP TO CHOOSE."

EDM. RURAL:—In your issue of February 19th, is an extract from an article in the New York Chronicle, under the above title, in which the writer draws a comparison between Leicester and Merino sheep, and in which the Merino is made to yield a profit of nearly a dollar more than the Leicester, at the age of three years. To do this he takes it for granted (though he is careful not to say so,) that the Merino is worth as much to sell for mutton as the Leicester. And, by the way, this is a very common way of reasoning among dealers in fine wool sheep, and by which some of them, at least, have made nice little fortunes. The fallacy of this kind of reasoning lies in the assumption that the Leicester sheep will be no heavier at the age of three years than the Merino—that it will not be worth any more per pound for mutton—at the same time asserting, as does the writer in the Chronicle, that it costs one-third more to keep a coarse-wool sheep than it does a fine-wool sheep. Would it not be nearer the truth to suppose that an addition of 33 per cent. to the amount of feed would give an addition of 50 per cent. to the coarse-wool sheep—that is, if the Merino weighed 100 pounds live weight, the Leicester would weigh 150 pounds, and that when the Merino would sell for 5 cents per pound live weight, the Leicester would sell for 6 cents or more, so that, to carry out the comparison of the writer in the Chronicle, the Merino, including wool and lambs, would be worth \$10.00 and the Leicester \$12.40?

On looking over the reports of the sheep markets for the last two years I am led to believe that there is more than 50 per cent. difference between fine and coarse-wool sheep—that, in fact, the difference is nearly or quite 100 per cent. Coarse-wool sheep often sell from two to four cents per pound, live weight, higher than Merinos, so that to call the latter \$15, and the former \$25 would be at least as near the truth as the conclusion arrived at by the writer in the Chronicle.

As this kind of reasoning may be thought extravagant, I will introduce an account of the sale of two or three lots of coarse-wool sheep. In the Albany Cultivator, for March, 1858, we will find the following:

"COTSWOLD SHEEP.—R. O. COFFIN, of Dutchess Co., gives his preference to the Cotswold over any other breed when looked upon as a wool producing and mutton sheep. He sold in December last five wethers, 21 months old, at \$14 each. The expense of rearing them to that age including pasture, hay, turnips, and grain, was \$42.13. They produced 40 pounds of wool at 31½ cents, amounting to \$12.60, making the whole income from them \$29.60, and leaving a clear profit of a fraction over \$8 each."

The above account, though very satisfactory, is wanting in one important point—the live weight of the sheep. If we suppose they weighed 200 lbs., then they sold for 7 cents per pound. Or if we suppose their live weight was 175 pounds, which may be nearer the truth for sheep of that age, then they sold for 8 cents per pound. There is also a profit of \$40 in feeding \$42.13 worth of feed. Can fine wool sheep do any better than that?

In the Market report of the New York Tribune, Feb. 6th, 1858, is an account of the sale at Albany of 45 Cotswold sheep at \$16 a head, the live weight of which was 188 pounds each. Forty of them were from the farm of Wm. HALLOCK, Monroe Co., N. Y. These sheep sold for nearly 8½ cents a pound, live weight. The age is not given, but the live weight would seem to indicate that they were young sheep.

In the RURAL of Jan. 23, 1859, is the following: "Good Sheep and Good Prices.—In the Market re-

port of the Albany Journal we read, J. B. COOKE, brought in eight head, fed by Wm. HALLOCK, of Rush, Monroe Co., N. Y., which averaged 240 lbs. each—one weighed 288 pounds. They were full blooded Cotswolds, 2 years and 8 months old; purchased by McGraw at \$25 per head." It was further stated in the Journal "that McGraw said, that any one having any more such sheep could draw on him for \$25 a head for them."

It will be seen that these sheep sold for the extraordinary price of nearly 10½ cents per pound, live weight. If we may suppose they sheared 8 pounds of wool a head, which sold for 30 cents per pound, then the income of each sheep was \$29.80. The two last accounts are defective, in not giving the cost of rearing and fattening the sheep; also, in not giving the yield of wool per head, and the price it sold for. Perhaps Mr. HALLOCK will furnish the information, together with such other matters in relation to the Cotswold Sheep as he may deem interesting to farmers, or the readers of the RURAL.

An examination of the New York and Albany Market Reports, will show that sales like those above noticed, are by no means rare—that the demand for such sheep is greater than the supply—that they often sell for prices equal to from 7 to 10 cents per pound, live, while ordinary and common sheep, (which we may suppose includes the principal part of fine-wool sheep sold for mutton) do not sell for more than half that price.

It will be seen that whether sold by live or dressed weight, or by the carcass, mutton generally sells higher than beef or pork. Now, when we take into consideration that mutton can be made much cheaper than beef or pork—it is said by some that two pounds of mutton can be made as cheap as one of pork—that sheep can be raised much cheaper than cattle—that they come to maturity much sooner—that the same feed that will keep cattle and hogs in good order will fatten sheep, and that the latter yields a yearly fleece of considerable value, it certainly seems that raising good mutton sheep must be profitable. It also appears to me that if the subject of keeping sheep was better understood in all of its bearings, that farmers would keep more coarse-wool sheep, and that the price of pork, beef, and mutton, would be more in proportion to the cost of production.

Orleans County, N. Y., 1859.

ABOUT MAPLE SYRUP.

JOHN LOOMIS, of Bennington, takes the premium in the Tonawanda Valley on Maple Molasses. He does not make Sugar, because he says Molasses pays better. His buckets are made of tin—square, and just enough larger at the top than at the bottom to allow them to nest when he packs them away. Two sheets make the upright part, a half sheet the bottom. A wire is rolled in at top, and a hole made just under the wire on one side, large enough to slip over the head of a horse-nail. His spouts are sheet-iron, three inches long, one inch wide at one end, and half an inch at the other—sharpened at the wide end by grinding or filing, and then slightly hollowed by placing them between a pair of hardwood dies and giving a blow. Refuse oven linings at stove shops suit him. He taps with an ax, giving a blow first at an angle of about 80 degrees, across the grain, and then taking out a small chip by a downward blow. He then brushes the rough bark from beneath, and, with a hammer, drives the spout into, but not through, the remaining bark, and drives a nail just below the spout, to bang the bucket on. This gash, he thinks, heals better and sooner than a wound made by boring. For nails, he goes to a blacksmith shop, gets old horse-shoe nails, straightens and sharpens the point by hammering flat, and draws the head to one side. These nails drive without causing leakage of sap, and may be drawn and put away, and not left broken off in the tree to dull axes. His boiler is a large, shallow, sheet-iron pan, set on an arch, extended over at one end, with faucet to draw off the syrup. In boiling he feeds from a vat, with faucet, by which the delivery stream may be regulated. When gathered, his sap is strained into the vat.

By observing strict cleanliness in all the operations, and using the ordinary process for clarifying, he makes a molasses, or syrup, clear as honey, which commands a high price in market.

Attica, N. Y., 1859.

PROFITABLE, OR SYSTEMATIC FARMING.

Messrs. EDS.:—"A Young Farmer," Niagara Co., makes some comments upon my communication in the RURAL of Jan. 8th. Possibly I failed to make myself understood, for the qualifications he makes reduces the case to the same conditions that I assumed existed. After stating the qualifications he seems not to differ with me in extent of tillage.

I was treating of high-priced tillable land—land that would warrant an outlay for thorough cultivation, and from which could be expected a remunerative crop, even without manure, for from such land a crop would be due (so to speak) upon condition of such outlay. I expect land worth \$50 the acre to already contain the elements of fertility—(and also of a character that will allow the escape of surplus water without an expense of \$30 or more the acre for drainage) sufficient to warrant the application of such a system as I recommended—a system which he seems to approve, providing it will furnish enough manure.

A crop fed to animals will furnish more manure than will restore the exhaustion of the soil consequent upon its production. The increase of manure beyond supplying the exhaustion, will increase a succeeding crop, and consequently there will be a continual increase of crop, co-existing with the increase of manure—each dependent upon the other, and from which a basis for production can be formed as large as is desired. For this reason, I would at the outset adopt a system that will require all the land to yield up.

Weak land—poor in the elements of production—I think we would agree, mainly, in the treatment of. The manure that could be made from the crops that would voluntarily grow, added to that made from the more abundant yield from the few acres in tillage, would form a basis, slowly increasing, but constantly, from which, in time, the whole farm could derive increasing strength, and final support.

Where materials for fencing cost as much as they do in most parts of our country, I consider the differences between fencing a farm into six lots and twelve—large fields, or small—of great importance, and can't conceive it proper, for any kind of farming to make the divisions so numerous—principally on account of the expense of the fence. But there are other reasons against it. Considerable more labor can be, and is, performed by teams, and by men, in the larger than in the smaller field.—The comparatively waste land occupied by the fences, and the tendency of noxious weeds to accumulate thereon, each in itself an item worthy of consideration, and, when combined, urge the propriety of determining how many are needed, and having no more.

A course of farming needing so large an outlay as the one I proposed, would indeed seem too much for a farmer of too small means, and as what would appear to one easy of accomplishment would seem horrid to another, it seems right and proper for each to judge for himself how far it is proper for him to go; nevertheless, it appears to me not proper to withhold the recommendation of a system we approve, for fear of discouraging the weak, for there are numerous ones who are not limited in their means for cultivating their land. And some others—enterprising in their disposition—if they approved the course, could provide the means. All that is wanting in them is to feel satisfied of a profitable return.

Land already possessing a maximum value, and owned by a man positively without the means of tilling it, is like a team owned and kept idle—on expense because positively nobody can be hired to drive it. Either would be best sold and the money put to useful purposes.

J. W. CHADDOCK.

Pavilion, N. Y., 1859.

ABOUT SETTING HENS.

EOS. RURAL:—Now that you are giving cuts of poultry houses, to be followed by valuable information pertaining to the subject, (and ask for any information relative to poultry raising,) I will give your readers a valuable hint on SETTING HENS.

To insure a full return for the eggs you place under a hen, adopt the following course, and you will be satisfied.—Select as many flour barrels as you wish to set hens, (and it is well to have several clutches come off at the same time,) place the barrels in a carriage loft, around the sides, prepare the nests with straw or hay, place a board in front of each barrel, and having made the lot entirely dark, leave the hen to her duties for two or three days. On visiting the premises to feed and give water, you open the shutters for light, and commence by uncovering one barrel only at a time, and so soon as that hen has returned to the barrel, pursue the same course with the others. In this way you have only one hen off at a time. The darkness facilitates very much the process of incubation, and the hen can take her nest without disturbance. Adopting this course, I have known a person to be able to bring off hundreds of chickens, where others, (with the same number of eggs,) following the haphazard course, could count only by tens.

Dedham, Mass., 1859.

A DAIRY BARN IN CATTARAUGUS.

MR. MOORE:—As much is said in the RURAL about barns, permit me to give your readers a description of the dairy barn of JAMES WELLS, Esq., of Leon, Cattaraugus Co., N. Y. Its size is 100 feet by 40, main floor the entire length, 18 feet 6 inches wide. The floor on which the cows stand is 4 feet 4 inches, then a trench 17 inches wide by 4 inches deep; then a path 6 feet wide. Height between upper and lower floor 6 feet 4 inches, height of posts 14 feet, (Mr. WELLS, says they should be 17 feet,) vertical siding, boards all one foot wide, then battened. Six sky-light windows on each side. Joists over main floor, moveable, so that they can be slid back over the cows. They commence at one end to fill the barn. There are three doors in each, and one by which to drive upon the main floor; two others, wide enough to admit of team and sleigh, or large stone-boat passing along the walk behind the cows, to remove the manure, which is done every day. The trench receives all the excrement, solid and liquid. There are no mangers,—cows are fastened to stanchions, and fed on the floor. One man can feed sixty cows in a few minutes.

Forestville, Chas. Co., N. Y., 1859.

TO CURE SCRATCHES.—Having noticed in the RURAL inquiries as to a cure for Scratches and being possessed of a simple preventive and cure, I pen it, as this is one of the worst seasons of the year for horses to be troubled with them. When the horse comes in at night, his legs should be washed clean and rubbed as dry as may be, then apply good vinegar rubbing it well to the skin.—Two applications a day are sufficient. I have always found it a sure preventive and a certain cure. If the legs have become cracked and sore apply the vinegar freely and add a piece of copperas the size of a common hickory nut to a quart of vinegar.—This is worth to any farmer more than the RURAL costs a year.—H. PAYNE, Lockport, N. Y., 1859.

MAD ITCH—CHRONIC COUGH IN HORSES. In one of your papers I saw an inquiry from one of the subscribers in reference to a disease called the Mad Itch. The cattle near this place had it some time since, and numbers died. At last the owners tried physicking them thoroughly, and all that were treated thus recovered.

Here is a recipe for chronic cough in horses, that I have tried in many cases, and never knew it to fail.—Powdered squills, 1 oz.; ginger, 2 ozs.; cream tartar, 1 oz. Mix well and give a tablespoonful in wet bran night and morning. Keep the horse well clothed.—J. EMORY BROWN, Cedar Falls, Iowa.

UNBURNED BRICK HOUSES.—(A. J. M., Lafayette, Ind.)—A correspondent wishes to know how houses made of unburned brick, stand the climate. We have no experience. Who has? We suppose with a good foundation above ground, and a projecting roof to protect the walls from drippings, &c., they would endure a long time, but still would be far inferior to good burned brick, stone, or even wood.

Rural Spirit of the Press.

Experiment with Potatoes.

We clip the following detailed account of an experiment with potatoes from the N. Y. Spectator, and send it accordingly, though inclined to the belief that it belongs to some member of the Agricultural Press.

"The following experiment with the potato crop, while on a limited scale, is on the right principle. The different varieties of manure are employed with various potatoes, small and large, as well as cut in various forms, while the same forms are tried without manure, except what is common to the whole planting. The experiment is one of many made with different crops, during the last season, by O. S. COMINGS, Esq., the proprietor of Springdale Farm, near Trenton Falls, N. Y. He has been the presiding officer of an enterprising Ag. association of that place. This experiment was tried on twelve rows only of seven hills each, planted on the 5th of June, 1858, with the Rough Purple Chili variety, on gravel loam, which had received a light dressing of rotten manure before plowing.

Row No.	Planted with	Product when Dug, Oct. 24th.
No. 1.	Planted with small potatoes, one hill, no manure.	No. 1. 97 potatoes, chiefly small size, weight 4 lbs. 3 oz., and free from rot.
No. 2.	Planted with large potatoes, one hill, no manure.	No. 2. 38 potatoes, chiefly large weight 13 lbs. 13 oz., all sound.
No. 3.	Planted with small potatoes, cut once in two, two pieces in hill, no manure.	No. 3. 44 potatoes, medium size, weight 7 lbs. 8 oz., sound.
No. 4.	Large potatoes cut in two, two pieces in hill, no manure.	No. 4. 111 potatoes, average lot of large ones, and many small; weight 15 lbs. 8 oz., and rotten.
No. 5.	Large potatoes, cut to single eyes, three eyes in hill, no manure.	No. 5. 33 potatoes, average fair size, weight 8 lbs. 12 oz., sound.
No. 6.	Large potatoes, cut as above, one eye in hill.	No. 6. 36 potatoes, medium size, weight 7 lbs. 8 oz., one rotten.
No. 7.	One large whole potato in hill, one tablespoonful of bone dust on potatoes.	No. 7. 70 potatoes, mostly large size, weight 16 lbs. sound.
No. 8.	One large whole potato in hill, two tablespoonfuls of sulphate of ammonia on potatoes.	No. 8. 68 potatoes, medium size, weight 13 lbs., sound.
No. 9.	One large whole potato in hill, one tablespoonful of sulphate of ammonia on potatoes.	No. 9. 55 potatoes, very large mostly, weight 15 lbs., two rotten ones.
No. 10.	One large whole potato in hill, salt and lime mixture, with ashes, large handful on potatoes.	No. 10. 39 potatoes, under medium size, weight 8 lbs. 4 oz., sound.
No. 11.	One large whole potato in hill, superphosphate of lime, two tablespoonfuls on potatoes.	No. 11. 83 potatoes, medium size or under, weight 13 lbs., three rotten.
No. 12.	One large whole potato in hill, bean manure and muck; one part of manure to two of muck; one handful on potatoes.	No. 12. 70 potatoes, medium size, weight 13 lbs. 8 oz., sound.

Experiments and improved cultivation have not been confined to Springdale Farm in that neighborhood. They are the fruits of an Agricultural Club formed about one year since at that place. A fair was held at Trenton Falls in Oct. last, and on so short notice as to be almost extemporaneous in its arrangements, which called out its thousands of spectators and exhibitors from a region which had previously been dormant on such subjects. The display of stock, implements, vegetables, fruits, flowers, &c., astonished every body. Let such clubs be organized and active wherever they do not exist, and good will follow."

About Spreading Manure.

In an article on this subject, the editor of the American Farmer's Magazine remarks:—"As the time for top-dressing mow lands is at hand, we have a word to say on the subject. As to the question of fall or spring, we do not believe any body can answer it for all cases. If the manure is old and well composted with muck or other decayed vegetable matter; if the ground is such, that there is no danger of hard washing from it; and further, if you will work the manure down finely and evenly to the surface, we have no objection to fall top-dressing. It has its advantages. The effect on the first year's crop will probably be greater, and the permanent effect may not be less.

"For spring top-dressing we prefer the following mode, having often practiced it, and found the little extra labor implied, well paid, as we believe. It is, to carry out the manure (stable or barn-yard) early, to lay it in somewhat larger heaps than would be most easily spread, say six or seven to the large load; then to carry and throw over each heap a few shovels full of well cured muck, or, in want of this, of any rich soil; and to let it lie in this condition till a good time for spreading it. That time is, when a long, cold, north-easter is brewing.—When the indications of such a storm are strong, we would spread the manure, but not before. Let it be spread evenly, and worked in among the grass roots. A bush harrow may in some cases be used to advantage, and we would commend its use, providing you will go after it with a man-tined fork, or a rake, and regulate the inequalities which the harrow may have left, drawing the manure from places that have received too much to others that have received none.

"The muck or soil with which the heaps are covered, will render the manure more crumbly, will enable you to spread it more evenly, and will help to retain the ammonia, if your pre-calculations of the weather should fail, and you should have sunny instead of rainy weather after spreading."

That "Flock of Geese."

Our readers will remember that in a recent RURAL we made note of the purchase of several thousand geese in Ohio for the New York market. The editor of the Tribune records their safe arrival thus:—"We encountered, as we suppose, this grand army of Ohio geese, marching with slow and solemn pace through Fourth street, eastward, in charge of numerous captains of thousands, captains of hundreds, captains of fifties, and several 'little corporals' in command of tens and twenties; each armed with a long whip, which was intimidatingly used to keep the stragglers in the ranks. Interspersed throughout the multitude of grey geese and white, were some hundreds of tall black turkeys, which gave the army a sort of military appearance. Altogether it was a novel sight in New York to see such a drove marched through the streets, and it attracted a large degree of attention from a class of bipeds generally supposed to have more brains than the bipeds that were driven."

CORN AND PORK.—A. G. PERRY, of Newark, N. Y., weighed a thrifty pig, five months old, 150 lbs., then fed it 56 lbs. corn meal, mixed with hot water thin enough to answer for victuals and drink. This was eaten in 6½ days, and the gain was 18 lbs.

Agricultural Miscellany.

THE MICHIGAN FARMER—A Funny Martyr.—In the RURAL of 26th ult., we took occasion to notice, in just terms, an attack upon our reports of the Wool Market by the Mich. Farmer. After quoting what we characterized as an absurd and unjust charge—pronouncing it entirely unfounded, and averring that "no article could be quoted from the RURAL to sustain it"—we added that, "in our long experience as a journalist we remembered nothing more flagrant and insolent—nothing so far from truth, or so unbecoming the character of honorable and manly rivalry." &c. We also quoted some elegant remarks in which the Farmer affirmed that eastern editors "knew no more about western farming, and cared no more for western interests, than so many bull frogs"—and proceeded to ventilate the subject, referring to some cogent facts (among others, that we established the Mich. Farmer,) for the special edification of our accuser. In conclusion we challenged our contemporary to prove his assertions, saying—"If what he charges is true, it can be sustained by quoting from our pages, and if false, as we pronounce it, where is the justification for the injurious attack?" In answer to this reply—in which we fairly quoted or stated the charge, and responded in emphatic but courteous terms—the Farmer favors his readers with a leading article of nearly four columns. Commencing with a sentimental stanza, the burden of which is "Never Mind," it follows its text of not minding us by piling on the long-winded agony as aforesaid! Quoted context, truly. But, richer still, our contemporary talks about our "malicious and uncalled for attack"—just as though we were the aggressor, and he, innocent mortal, had not "cast the first stone!"—and then proceeds to make such a veritable martyr of himself that we are sure his readers must shut their eyes on reading the account of his wrongs, and how he has been immolated by that terrible savage of the RURAL New-Yorker! Ugh!—It's worse than the old nursery tales and Indian stories! We didn't know we were such an excruciating executioner before, but begin to think the Prairie Farmer was right in pronouncing our reply "some." But, persecuted as our contemporary is, he is game still—for, without fairly stating our reply, and in the absence of a word of argument to sustain his original attack, he begs the question by resorting to quibbles and new issues. He contradicts the fact of our establishing the Mich. Farmer (though it was stated, in complimentary terms, in No. 1 of his present volume), talks about our "squinting" in Mich. a few months, (instead of some five years, as was the fact,) and then tells a lachrymose tale about our trying to destroy his Journal—talking meantime of a "whining appeal to the sympathies of Mich. readers" (pray quote it)—and calling us all sorts of naughty names, as who school-children are apt to do, not forgetting such argumentative and pretty phrases as "egotist," "boaster," "cocker," &c. Then, after a long flutter concerning our challenge, the Farmer, instead of sustaining his assertion about our Wool Reports, dodges the question, and (taking advantage of the fact that our large edition compels us to put the RURAL to press several days ahead of its date,) talks about our Cattle Markets not being up to time! That's wool-gathering, and "coming to the centre," with a vengeance! And finally, after another broadside at eastern papers—it's strange Michigan people will send abroad for such trash, and allow so much genius and talent to "waste its sweetness," &c.,—he kindly remarks to the Editor of the RURAL that "as much thank himself for this appeal?" and in the next sentence avers that our jealousy, greediness, inordinate egotism and impudent assumption (hear, hear!) hurried us into an unprovoked attack upon him! Mercy!—what a complaisant martyr after all! Why, until we read that, we verily believed the "unprovoked attack" was made upon, and not by, the RURAL. But we give it up—can't hold a controversy with such a logician—and have only given the points of his article (as accurately as their absurdity and our abilities would permit) to show that even an intellectual Hercules could not cope successfully with such a Sampson-like Ajax. Of course we must keep our little boat near shore in future, and don't know as it will even be safe to infringe the Farmer's patent by receiving any more subscriptions from Michigan! Will take the matter into serious consideration—after craving the indulgence of our readers for wasting so much ammunition upon game so entirely beyond our reach and comprehension!

P. S.—In return for the long free advertisement of the RURAL above acknowledged, and for the benefit of any of our readers interested, we would state that the MICHIGAN FARMER is a handsome quarto weekly "Journal of Affairs relating to the Farm, the Garden, and the Household," published by E. F. JOHNSTONE, Detroit, at \$2 per annum in advance,—less to clubs.

A FARMERS' AND MECHANICS' ASSOCIATION has been organized in Chautauque Co. From proceedings, given in a Fredonia paper we infer that the Association is designed to comprise several towns; and it is stated that "ninety-nine \$10 shares (representing \$990) for the purchase of the old Fair Grounds, were reported as subscribed—80 from Pomfret and 19 from Sheridan." The organization was completed at a meeting held in Fredonia on the 22d ult., by the election of the following Officers:—President—J. B. PARKER, of Fredonia. Vice-President—J. E. GRIFFIN, of Sheridan. Secretary—John C. Mullett, of Fredonia. Treasurer—Eugene Baker, of Fredonia. Directors—A. S. MOSE, of Fredonia; J. O. BATES, of Sheridan; R. GREENE, of Fredonia; Levi Baldwin, of Arkwright; Seymour P. Ewing, of Sheridan; B. H. Dickinson, of Pomfret.

MICHIGAN LAND AGENCY.—We take pleasure in referring those of our readers wishing the services of a Land Agent in Michigan, to the card of J. M. TREADWELL, Esq., of Jackson—a gentleman of integrity, who possesses rare qualifications for the business announced. In addition to considerable experience as an agent, Mr. T. has had charge of the State Land Office for four years, which has afforded him superior knowledge and facilities for the transaction of any business connected with real estate.

THOSE MITTENS.—A lady of industry and taste—Mrs. D. G. BAILEY of Farms—has not only given us "the mitten," but a very fine pair of them, and we reckon they received the premium at our last County Fair. Be that as it may—and whether presented us as Editor or Ex-President—they are very comfortable. Though highly colored, they do not make us feel as "streaked" as the kind of mittens which some of our friends were wont to get years ago!

READ THE ADVERTISEMENTS in this and every number of the RURAL. Most of them are of interest to farmers and horticulturalists, and a careful perusal will save trouble and expense on the part of those desirous of procuring the implements, trees, seeds, &c., advertised. Always consult our advertising department before writing us to ascertain where certain articles can be obtained.

STURGEON CO. AG. SOCIETY.—Officers for 1859:—President—DANIEL GRAY, of Wheeler. Vice-Presidents—T. M. Younglove, Dr. Terry, Z. Elliot, Chas. H. Erwin, Geo. Farnum, John W. Whiting, William Bush. Treasurer—Reuben Noble, of Bath. Secretary—Robert M. Lyon, of Bath.

HORTICULTURAL

THE VEGETABLE GARDEN.

PLANTING AND MANAGEMENT OF THE HOT-BED.

In our last we gave the necessary directions for making a hot-bed. We now continue this subject, with instruction for planting and management.

Those who grow vegetables largely will do well to start a small frame early this month, as a seed-bed, and sow lettuce, tomatoes, celery, &c., to be transplanted into other beds early in April, when the seed-bed can be sown with radishes. If the weather is very severe, cover nights, and in the days when very cold and cloudy, with straw, mats, old carpet, or anything that may be convenient. Give air during sunshine in the early part of the day. Those who raise vegetables for family use, in a small way, can do without this early bed.

The hot-bed should be ready for planting cucumbers by about the 20th of March, though it may be done until the 1st of April. Plant a hill under the centre of each sash, raising the earth two or three inches higher than the rest of the bed, and putting eight or ten seeds in each hill. Plant the front with lettuce plants, or sow the seed; and sow celery and tomato seed at the back of the bed. The lettuce in this bed will grow finely, and in a very short time they will be fit for use, especially if young plants were used, and in almost all gardens where lettuce is grown, plenty of young plants can be found. We always sow a little seed in the fall, in some sheltered place in the garden, for this purpose. Before winter sets in, throw a few bushes and a little straw over them, and you will have excellent plants for the hot-bed. Cucumbers require so much more heat than tomatoes or celery, that it is best to transplant these, when about four inches high, to another and cooler frame, where they should be set thin, and allowed to harden, preparatory to being put out in the open ground. It will be best to make a new bed for them, with only about 18 inches of manure. Give plenty of air every fine day, or they will grow weak, and transplant into the open ground about the 10th of May. Many of the tomato plants will be in blossom at that time, and some protection should be in readiness for frosty nights. A light box with a pane of glass at the top is first-rate, and it should remain over them for a few days after transplanting, and on all unusually cold or windy days.

When the cucumbers are up, give air, in the early part of the day, when the sun is shining, and as the plants grow, draw the earth to the stems, and when the second leaf has fairly started, any surplus plants can be transplanted to another bed, or thrown away, leaving only three of the strongest plants in the hill. By the time the vines begin to run, the lettuce will be fit to pull, and the tomatoes must be removed, as before recommended. Then throw in three inches of good garden mold, and level off the bed. The frame will soon be filled with vines, and when this is so, throw earth over the old manure that formed the hot-bed, and rake it nicely, leaving the whole in the form of a graceful mound. Then raise the frame about six inches from the inner surface, by putting blocks under the corners, and let the vines run out under the frame. In about two weeks after this the frame may be taken away entirely, and you will not only have a beautiful green mound, but a fruitful one. The only care required now, is to water, and reap the reward of your labor, by picking the fruit. As soon as fruit begins to set, plenty of water must be supplied. The ground must be kept well moistened, and have an occasional thorough soaking.

ONIONS are very successfully raised by sowing the seed quite thick in the hot-bed, giving them plenty of air, until about the 10th of April, when the frame can be taken away, and used for some other purpose. They should be transplanted into the open ground about the 10th of May. In this way the trouble of thinning and weeding is avoided, they mature early, are large, and in every way as easily raised as the potato onion.

RADISHES require about the same treatment as onions, except transplanting. Too much heat will draw them, so that they will grow all to tops. The best kind for forcing is the *Early Oval*, a French variety; where this seed cannot be obtained, the *Early Scarlet* will answer.

Where two frames are started at the same time, as suggested in our last number, which is probably the best plan for new beginners, (they should be ready for the seed about the 25th of March,) we would advise that nothing be planted in the frame with cucumbers but a little lettuce in front. In this situation it receives the drippings from the sash, which is of so great benefit to lettuce, but would be injurious to most other things. In the other frame we would plant lettuce in the front, tomatoes and celery at the back, and radishes in the centre of the bed. Pepper, egg-plant seed, &c., can be sown, as desired. This frame will require plenty of air, especially as the time draws near for transplanting to the open ground. The plants will also require thinning out, and as the radishes and lettuce are drawn for the table, a few of these plants may be set out in the places thus left unoccupied, or seeds of Balsams and other annual flowers sown, so as to secure early flowers. We urge all our readers who can do so, to make a small hot-bed. They will be astonished to find how little it costs, and how essential to a good vegetable garden.

NOT A BAD IDEA.—In a report of the transactions of the Knox Co. (Ill.) Horticultural Society, as published in the *Prairie Farmer*, we observe the "weaker sex" share the honors with the "lords of creation"—the "Vice-Presidents number twelve, six of whom are females."

PROCEEDINGS OF AM. POMOLOGICAL SOCIETY.—The Report of the doings of this Society is received. It makes a volume of 264 pages, and is valuable either for present reading or future reference.

CULTURE OF THE GRAPE.—No. III.

Messrs. EDS.:—Two years ago the question came up in my mind.—Can Grape Vines be so pruned and managed that the sap and nutriment that the roots gather from the soil will be exhausted in bringing fruit to maturity instead of growing a large quantity of young wood, much more than is wanted for the next year's crop? So satisfactory was the result of my experiment that every reader of the *Rural* should understand it, if they cultivate no more than a single vine. To make the subject plain, I simply give a statement of the treatment my two old vines received. My practice is, in autumn pruning where vines are spread on a trellis, as they are, to spread the old wood as thin as possible, not closer than from two to four feet. As soon as the vines reach the flat or trellis, begin to leave spurs—the Saviour calls them branches—not closer than from two to four feet. This keeps the fruit in bunches to let the sunshine on it early and late in the day, and keep the skin of the fruit dry, that it may escape mildew. With a view to load the vines heavy with fruit where I could, I left two branches with four buds each. When the blossoms began to appear on the clusters, I commenced summer pruning and did a faithful day's work on the two vines, shortening in at two to four leaves above the fruit, taking off all the laterals only at the last leaf, leaving that to push forward so that the next year's fruit-bud, that stands by the side of it, be not started. A week later I pruned them again and spent half a day in shortening in what branches was over-looked in the first pruning, and taking off the laterals from the less thrifty branches that began to push forward by the first pruning, always leaving one or two branches on all the old wood to give all the extension to the vines they need, many of them being more than 50 feet in length. A week later I pruned them again, and spent nearly half a day observing the same rules as at the last pruning, and where the lateral at the last leaf of the branches had formed a leaf and began to push beyond it, pinched it off above the leaf. Vines that are thrifty will require this to be done frequently through the season, if they are not heavily loaded with fruit, as they will make numerous laterals on each branch, with each a single leaf.

When this was done the branches and clusters were so numerous and the fruit set so thick on the clusters that one-half of the branches never formed a new leaf until the fruit was fully grown; then, in September, the branches began to push forward a growth of young wood again. Now, for the result of lading vines thus heavy with fruit. I gathered and weighed from the two vines, 700 lbs. of fruit, at the same time there was picked up and weighed 80 lbs., and enough more that fell by heavy winds to make 40 lbs., making 800 lbs. gathered from the vines. All in this section know that two years ago no Isabella Grapes were well ripened. These remained on the vines till the middle of November, in hopes they would improve in quality, but an early frost froze the stems of the clusters which causes the fruit to part from them easy, in single berries. Much fruit was wasted by this cause and the hundreds of visiting friends that called to see the heavy crop of fruit and learn the treatment.—Such visitors think they are not treated with courtesy unless they can partake freely of a man's choice fruit. I concluded, taking the loss from these causes into consideration, there was not much less than 1,000 lbs. of fruit grown on the two vines. This established in my mind, beyond a doubt, the idea that the sap and nutriment that the roots gather from the soil can just as well be exhausted in bringing fruit to maturity as to grow young wood that is not wanted.

Reader, do you ask if this is correct summer pruning? My answer is, where vines are spread on a flat, the manner of pruning is correct, as near as I have learned it, but loading vines thus heavy with fruit, is the extreme of no pruning. No summer pruning grows mostly young wood that is not wanted; loading vines thus heavy with fruit, grows fruit of an inferior quality. Why is the fruit of an inferior quality? Because there was so much on the vines that much of it was small in size, and when the fruit was gathered nearly all the clusters had green fruit on them, in all stages of its growth, from the size of a grain of wheat to full grown grapes. There was not sap or nutriment enough to bring it forward notwithstanding the growth of young wood was nearly stopped by the fruit.

Another reason against loading vines thus heavy with fruit when autumn pruning is done, is there is a deficiency of young wood that is well hardened for the next year's crop. I studied to arrive at some correct rule to work by, in loading vines with fruit, by measuring off lengths of old wood and then counting the clusters, to ascertain how close they were on much of the old wood. They averaged a cluster in two to four inches and I concluded if they averaged a cluster in eight to twelve inches, the crop would be worth as much in market, and the vines left in better condition for the next year's crop. This is where vines have all the extension of old wood they need. Where they are shortened in to a given space, they would bear loading heavier, say from four to six inches.

West Bloomfield, N. Y., 1859. ALVIN WILCOX.

CAST-IRON POSTS FOR GRAPE TRELLIS.

Messrs. EDS.:—In a late *Rural* I noticed an article from ALVIN WILCOX, calling for information relative to *Grape Trellises*. His views of trellises correspond with my own, except in the material for the posts or stakes; and it gives me pleasure to state that a little thought and a few experiments have enabled me to construct a stake of cast-iron that surpasses any other in neatness, durability, utility, and even cheapness, when the durability is taken into consideration. The manner of fastening in the ground is entirely new, and it is very firmly set in the ground in five minutes' time, and when set it is ready for the wire, either by passing it through holes made in the casting, or around knobs on the side of the post, so that each post supports its own section of wire, and the strain on the end post is not much more than on the inner ones. There is a neck at the top of the post that the top wire is passed around, leaving space for wires across the rows, if necessary at any time to have them. I will, as soon as possible, send you a drawing.—H. L. DAWES, Sandusky City, Ohio.

FREMONTIA CALIFORNICA.

This shrub was first described by Dr. TORREY in *Smithsonian Contributions to Knowledge*, from dried specimens gathered by the Rev. A. FITCH, at the sources of the Sacramento, in the northern part of the Sierra Nevada, of California. Also, on hill sides in Mariposa county; flowering in May. We take the drawing below of a branch with blossoms, from the *London Gardeners' Chronicle*.

We do not know that it has been flowered or propagated in this country. The authority above quoted, says:—"Of this most remarkable plant a solitary individual was raised in 1851 in the garden of the Horticultural Society from a seed received from Mr. Robert Wrench. In April, 1854, it produced flowers for the first time, as large as those of *Trollius Asiaticus*, brilliant yellow inside, apricot-colored outside, with the addition of some cinnamon-colored down; and their substance was so thick that each flower remained in perfection for weeks."

Since that time it has proved to be a beautiful, hardy shrub, with a habit wholly unlike that of every hardy plant in cultivation, most resembling, indeed, some of the Hibiscuses of Western Australia. The plant has hitherto resisted all attempts at propagation, and still remains at Chiswick unique in Europe.

WILL THE NATIVE GRAPE PRODUCE WINE?

EDS. *RURAL*:—There is, at this time, more attention paid to the propagation of the grape, by a great per cent. than at any former period since the settlement of the country, both as a market fruit and for wine making. New and valuable varieties are being constantly introduced, and will continue to be until, probably, something very superior is produced.

The grape is of such easy propagation and early maturity, that there is a strong probability of the markets becoming glutted under the increased production, in which case the only resort to dispose of the surplus will be their conversion into wine, which involves a much mooted question, whether any grape as yet known, that will perfect itself in our Northern and Western climate, will produce that peculiar substance known as wine, and familiar to all nations since the time of the Hebrews, as "Wine that gladdeneth the heart of man"—that tonic stimulating beverage, that "stimulates but not inebriates."

The great deficiencies in our Native grapes, for the purpose of wine-making, are the want of sugar—grape sugar, a peculiar substance not crystallizable, and the Tartaric acid, the two prime constituents of wine—true wine.

It seems to be necessary, with all our grapes, to add to the expressed juice about three pounds of *Cane sugar* to the gallon, to give it a consistency that will not put on the Acetic fermentation in keeping, and become sour.

It will not be contended, that common sugar and water fermented will produce wine, or anything analogous to it, as it only becomes the simple mash of the brewer before the addition of hops, or of the distiller's tub, without a single concomitant of wine, except what Alcohol in its incipient stages it may contain. The addition of sugar confers no single advantage to wine, but the contrary, as the native grape does not contain any more Albumen, than required to convert its own sugar.—One of the faults of using so much sugar, fully 33½ per cent., is the fact that it makes so strong and dense a must, that the first fermentation is imperfect, and does not convert the whole saccharine and albuminous matter, and it remains a simple sweet cordial, and will slowly ferment for months at a cellar temperature, and contains hardly one quality of imported wines, and never can be a substitute for those varieties, and therefore will defeat the object of producing our article, and stopping importations.

It was asserted at the *Fruit-Growers' Convention* that none of our grapes possessed the Tartaric acid, and only the Malic or Apple acid, though a Mr. Farnsworth, an experienced wine-maker stated that he had found distinct crystals of Cream of Tartar, (*tartrate of Potash*), on the sides of the tub from one variety of grape, (*the Clinton*), which, if so, would be a strong recommendation for that kind. It is also claimed, that the Scuppernon and Poland grape possess that qualification.

It has been suggested, and with a great deal of plausibility, that no grape would make real wine, that would not in drying become a raisin, and it is evident that such grapes would produce a must that would require no sugar. It is quite certain that no native grape grown on this continent, as far as has been observed, will show that result,—

thereupon, the question recurs, can we make wine—real wine?

What does a portion of the world drink wine for?—not to quench thirst, for water is better—not for its sweetness, a lump of sugar or stick of candy would be more in keeping with such a taste; for what then?—is it not for its stimulus, its tonic, and its invigorating principles? If so, does our fermented grape juice and sugar, contain those requisites as a beverage, or as a medicinal agent?

On temperance considerations, perhaps our voice should be in favor of our factitious wines, as all the imported varieties, except the cheap Claret and Rhenish, contain a notable quantity of added Alcohol, either brandy or pure spirits—the highest prized sorts as much as 12 per cent., at least.

Our domestic wines might be improved, by forcing the fermentation by extra heat, or by passing a summer under the hot roof of a building, whereby there would be a more perfect elaboration of the vinous process, and dispersion of the carbonic acid, which produces that cider pungeny on the tongue in a great majority of our wines.

By partially drying the grapes, either by the sun or artificial heat, and evaporating some of the watery portion, less sugar would be required to bring the juice to the proper hydromatic proof, and the cracking of the stems and seeds, and fermenting before straining; would add some of the stringency peculiar to Port and some other wines.

The juice of our native grapes is about 60 per cent. water, (without referring to a chemical analysis,) the balance, grape sugar, albumen, and gummy mucilage; then by adding 30 or more per cent. of *Cane sugar*, it would puzzle an analytical chemist, to find where the elements reside in such a compound to constitute true wine.

The Southern Ohio wines approach, and only approach, the imported varieties. They are a fine, palatable cordial, and some of them are adulterated with more or less Alcoholic mixtures, and to many tastes are unexceptionable, but will they even supercede the imported article is the great question, if we as a people, are to enter extensively into its production?

Time, that hoary-headed truth teller must settle the question.

L. B. MANLY.

Mourne Co., Feb., 1859.

REMARKS.—In a previous article from the above correspondent, on the degree of frost which killed peach buds, an error occurred, as he was made to say, that the experience of 40 years in this region "without an exception," sanctioned the rule, that 15° below zero would prove fatal. It should have been "with but one exception." In a few remarks we made in answering an inquiry, why Elderberry wine turned sour, we intended to state that "the wine required more sugar" in making. By mistake it was printed "requires," and from this error, some have supposed, that they could remedy their sour wine by adding sugar. After the wine becomes acidified, or turned to vinegar, no art that we know of will make it wine. On this subject we have the following from a correspondent:

Messrs. EDS.:—In reading the *Rural* of Feb. 14th, I noticed an article headed, *Sour Wine*, and as your inquirer wants experimental facts, I will give one. In the fall of 1857, I made about thirty gallons of Grape wine, I thought it pretty good, but in the Spring it began to ferment. I tried various remedies to stop fermentation, but to no purpose, so I took one pound coffee sugar to the gallon, and dissolved it in the wine as it was heating. I let it boil about fifteen minutes, skimmed off all I could get off, set it off the fire and let it partly cool, then put it in the cask, and when it was perfectly cold, bunged it up tight. I think it is much better now than it was last spring before it began to work. E. can try a small quantity at a time until he gets it sweetened to his taste.

J. WOODRUFF.

Ripon, Feb., 1859.

FAILURE OF FRUIT.

EDS. *RURAL*:—I have been anxiously hoping that some good result would come of the discussion on Pear Culture. I am an ardent admirer of fruit, and delight in fruit culture, and I have, for one of my sex, done much and learned something in that line of business. By recent articles, I see the leaf-blight and cracking is charged to *fungus*. Am I understand it to be the cause, or the effect of a cause? If the latter, I agree. Will physicians say that *fungus* is the effect of a healthy state or condition of its locality? Some professors have got yet to learn the difference between cause and effect. I have the dwarfs in garden, well-tilled, in potato ground, and in the nursery. The former are the most affected. In spring, as soon as I gave heed to the affection, I had the trees scrubbed with a brush, or old broom, with a very strong solution of old soap-suds, thoroughly scrubbing the bark, and drenching the leaves and limbs. They had put forth all their strength, but it was evident, there was a lack of vital principle. The worst did not die, but made another attempt to put out.

My attention has been drawn to the condition of the peach tree leaves. They not only curled up, but dried before the new ones came on, as is common. I rather thought this must have been caused by an insect. I had some growing in my garden, I poured half a large teakettle of boiling water around the body, low down, for the benefit of the grub-worm. It did some good.

I was formerly an inhabitant of Long Island. I viewed the gradual failure of fruit there for many years. First, the peach, as I never have beheld here, though I have lived in this part of the State for twenty-four past years. *Virgalieu* pears next. A pear tree, now standing on my native born farm, one-hundred years old, dried down, sprouted out afresh, and bore well. The bees then failed to give honey, and the wheat followed, just as it has here. There is an exhaustion of some element, in the soil, I think. That is my simple conclusion, perhaps others will arrive at something better.

E. H. PAISON.

Poplar Ridge, Cayuga Co., 1859.

ONTARIO GRAPE.—Among the scores of new varieties of grapes that are being puffed into notoriety we notice the *Ontario Grape*. It is described by a correspondent of the *Horticulturalist* as being "the largest probably of any grape in the world," berries black, thin skinned and *buttery*. We fear the writer is more *buttery* than the grape.

WASHING-DAY DINNERS.

DEAR *RURAL*:—In a late issue of yours I saw a request that some lady would furnish a remedy for the improvement of wash-day dinners. In looking over Mrs. M. L. Scott's *Practical Housekeeper*, I find a few extracts from her chapter on every-day's employment through the week, &c., would not be inappropriate as an answer, as it shows up the evils of that day to such an extent, that it ought at least to make every housewife blush at such domestic immoralities.

"It is wash-day! and the consequence is that nothing must be expected to be right side up. The baby must cry; the older children must not have their faces washed, or hair combed; the lady of the house must look sour, fret and scold. The husband must not expect his dinner; the breakfast dishes must stand unwashed until the last garment is hung out."

Now, be sensible for once, and put your house in order as much for washing and ironing—with one exception; clean your oil-cloths, or floors after washing, and before ironing. You may dress just as neatly for washing as for any other work—you are just as liable to see company. Every one does not wash on Monday—although every one should, if practicable. Your husband will be there, and has a right to expect a value set upon his own opinion and taste, and no man, be he ever so regardless of his toilette, admires a slatternly woman. It is their nature to love order, modesty, and neatness in our sex, and thousands have remained single forever because they did not find all the qualifications they deemed requisite, in one they might choose as a companion. But too many have been driven from the domestic fireside for the want of that system which never mars the quiet of home, and which every man has an undoubted right to expect. It is a lamentable fact that the washing of a few garments should furnish ground for so much error.

"Because the clothing that we wear
Must go through tubs of water,
And then be hung out in the air;
Should this crazy wife and daughter?

Fahaw! cool down ye ladies fair,
Let system rule your houses,
And never suffer uncombed hair,
To disfavor you as spouses.

On Saturday, then, always bake,
And bake enough to last—
Of bread, and pies, and kinds of cake
To serve till washing's past."

EMILY K.

Toledo, Ohio, 1859.

COCOA-NUT DROPS, WINE SAUCE, &c.

EDS. *RURAL*:—Herewith please find some excellent recipes:

COCOA-NUT DROPS.—Take the white meat of a cocoa-nut and grate it; the whites of 4 eggs; half a pound white sugar; a teaspoonful essence lemon—make a batter, drop on buttered paper, and bake.

VICTORIA CAKE.—One and a half pounds sugar; 1½ butter; 1 doz. eggs, to one pound flour; 1 cup cream; 1 teaspoon saleratus—flavor with rose-water or nutmeg.

POUND CAKE.—One pound butter; 1 of flour; 1 of sugar; 8 eggs—season with cloves, nutmeg and cinnamon—1 glass of wine and some caraway seeds.

ROSE DROPS.—One pound flour; ¼ pound white sugar; ¼ lb. butter; 6 eggs; a wine glass of rose-water; 1 cup cream and 1 teaspoonful saleratus.—Drop on tins and sift sugar on before baking.

WINE SAUCE FOR PUDDINGS.—One cup butter; 1 cup white sugar, and a wine glass of wine; half a nutmeg—mix all well together and beat it till light.

PLUM CAKE.—Four pounds flour; 1 lb. sugar; 3 lbs. currants; ¼ lb. raisins; ¼ oz. mace; cloves, and one nutmeg; the peel of a lemon, and half a pound almonds; 2 lbs. butter; pint cream; pint wine; 1 glass brandy; 12 eggs; half pint yeast; 1 pound citron—lemon and orange.

MOLASSES PIM.—Make a good paste and line a dish with it, fill up the dish with molasses, in which stir a spoonful ginger and vinegar, slice a large lemon or orange in it; 1 teaspoonful cinnamon; cover with paste and bake.

A GOOD CHICKEN PIE.

EDS. *RURAL*:—In reading the *Domestic Economy* portion of the *Rural*, I find "A Farmer's Wife" who wishes a recipe for a good chicken pie. My rule, which I have always found good, is this:—Boil the chicken until tender, season with butter, salt, pepper, and two or three slices of pork. Prepare a crust by mixing one cup of cream and two of buttermilk; two and a half teaspoonfuls saleratus, and two teaspoonfuls salt into flour until it is stiff enough to roll. Cover the sides and bottom of the pan in which you wish to bake it, put in the chicken with a part of the broth; cover with the rest of your dough and bake three-quarters of an hour. Thicken the rest of the broth, add a little more butter and you have a good gravy, and if you have the luck that I have always had, a good plain pie.

To MARK I would say that we do not have a "picked up dinner," on washing-day—find the difficulty very easily obviated by having no dinner at all. If this plan suits him any better than the "picked up dinner" system, we can accommodate a boarder.

JENNY.

Dewittville, N. Y., 1859.

Do everything in its proper time. Keep everything in its place. Always mend clothes before washing.

ALUM or vinegar is good to set colors of red, green or yellow.

Written for Moore's Rural New-Yorker. MY LITTLE BOY.

BY M. A. GUTHRIE MORRISON.

On, where are the feet that ran in the hall—
And where the soft voice that answered my call—
Say, where the sweet lips that kissed me at day
Of my dear little BENNY, now far, far away?
My room it is silent, I hear not a sound
Of his lone little playthings rattling around,
His own little chair seems sadly to say,
Our dear little BENNY is far, far away.

Oh, who but a mother can feel the heart swell,
And who, with such sadness, her sorrows can tell,
When tears steal on her, where her loved one did play
Who has fled from her arms and is far, far away.
With love she will kiss the torn little shoe,
And each thing he hath left as it comes to her view,
Each stick he has whittled with a language to say—
The fingers that made them are far, far away.

How quick would she steal from her feverish bed,
To twine the gold locks of the dear little head,
Or hear the sweet voice that in parting did say,
"I'm going, dear mama, from you far away."
But words are too feeble—too and in the part—
No language portrays the fullness of heart
The mother oft feels when each pulse is in play,
And she thinks her loved one is far, far away.
New York City, 1850.

Written for Moore's Rural New-Yorker. LITTLE ALLIE.

DRAW aside the curtain of yon silent room, and
gaze upon that pale, young sleeper—little ALLIE.
Her hands are thrown carelessly by her side, while
ever and anon she starts from her sleep calling
"mama, mama!"

"What, my darling, exclaims the anxious mother,
who, as she bends over the little patient sufferer,
feels that ere long the idol of her bosom will be
laid far from her within the cold and silent tomb.
"Mama," murmured the darling child, "I am
going home—going to the good home you have so
often told me about. Sing me that pretty hymn
you taught me at your knee, for I want to hear it
once more before I join the angel band." With
trembling voice the mother sang,

"I want to be an angel,
And with the angels stand—
A crown upon my forehead,
A harp within my hand."

As she ceased a calm smile rested upon ALLIE'S
face, and the little hands were clasped as if in
prayer.

"Don't you see the angels, mama? They bid
me come home. Don't weep for little ALLIE—
there are no tears in Heaven where Jesus reigns.
Good-by, mama, ALLIE'S—going—home."

A calm, sacred stillness rested in that room as
the death-angel bore her pure spirit to the world
on high. They laid her to rest beneath the wide-
spreading branches of the weeping willow, and
a plain marble stone, with the inscription, "Little
Allie," often reminds us of

One of earth's fairest flowers
That blooms anew in Eden bowers.

Howlett Hill, Onond. Co., N. Y. ROSA BAKER.

Written for Moore's Rural New-Yorker. LONG SKIRTS, AGAIN.

THE suggestions of "FANNIE," in a late number,
in regard to "Feminine Apparel," impressed me
favorably. There is no doubt that some change
must soon take place, as hoops have undoubtedly
reached their "culminating point," or, rather, size.
I expressed the opinion that the dress recommended
by "FANNIE," would succeed them, but my wife
says it "won't do." There are too many women
with large feet, thick ankles, and an awkward,
clumsy gait, to give up hoops. She thinks the
fashion originated with such, and instances one of
the Miss BLANKS, of this village, saying "don't
you remember how badly she walked, and how
conspicuous the ungraceful and unsymmetrical
form of her locomotive arrangements before hoops
came in fashion? Do you think she would ever
lead the way in a reform that would exhibit her
imperfections, or follow, unless compelled by des-
potic fashion to do so?"

My sister replied, that the difference between the
graceful and the ungraceful was really as easily to
be perceived now as ever, and could not be dis-
guised, however much some "ladies" might flatter
themselves to the contrary. I was obliged to ad-
mit that it was so, and recollected that the manner
in which Miss ANASTASIA BLANK carried the crino-
line would hardly be admired in Broadway. But
her satisfaction, when she gets underway on the
side-walk, is perfect, and she is more fortunate
than the peacock, for it is said that his pride comes
down when he sees his feet, and Miss BLANK is
blissfully ignorant that she would not pass in any
assembly for the genuine article.

It would seem that the naturally graceful and
elegant are obliged to submit to a dress that, to
some extent, diminishes the grace of their move-
ments, but to the benevolent it is some consolation
that it enables their less fortunate sisters to believe
that they conceal their defects. Fashion aims at
reducing, or elevating, all to a level. Some are
happy that this cannot be done—others in the be-
lief that it succeeds.

How I CAME TO LEARN MUSIC.—A lady in similar
circumstances to the one who told, through the
RURAL, how she came to learn music, wishes to
have more communication with her. She says,—
"on the impulse of the moment she unflinchingly
thumped through the Instruction Book." Tell me
if this was done without a master—how long was
it before you could unhesitatingly play a simple
waltz, or common march—how much time did
you devote to practice each day? How I shall know
your composition, if any in circulation.—M. B. H.
Buff. N. Y., 1850.

THE SCOTCHMAN AND HIS DAUGHTER.

A SCOTCHMAN once gave the following advice to
his daughter on entering a boarding school:

Now, daughter, ye hae just four things to learn
in Edinburgh. Ye hae to learn to manage your
head, your hands, your feet, and your heart.
Your head will require a little rubbing up, baith
outside and inside. It's no the bobs and the curls,
the ribbon and the rose knots, the gildet kames,
and the topings o' weel-sleek-it up hair, that are
to stand the test of life, and yet these are a' be-
coming in their places. But there is something
else required. Ye moun learn to think for your-
sel, for your canna always have your mother and
me to think and act for you. Ye moun learn to
calculate and weigh not only your own actions, but
your motives of action as well as the actions and
apparent motives of those with whom you have to
deal, and stick aye by that, my child, of which you
are sure never to be ashamed, either in this world
or in that to come.

If ever you are spared to be a wife, there will
mair depend upon your head than your hands;
and you are nae the waur o' being able to cook
your family a neat dinner, and make yourself a
new gown at any time, or a frock to a bit wee ane.

But, now, for the heart, daughter; that is what
requires the mair care, and the mair watching
o'er of all, and there's naught else that I am aye
unqualified in giving advice. Keep it aye free o'
malice, rancor, and deceit; and as to the forming
of any improper acquaintances, or youthful partial-
ity, it is sae dangerous at your time of life,
that no advice or guardianship can counterail.
I moun therefore leave it entirely to your own
discretion and good sense.

I might have mentioned the management of the
tongue, as another and separate point of attention;
but it is a mere machine, and acts only in subor-
dination to the head and to the heart, and, if these
are kept in proper order, the other wianna ris far
waur. But dinna be ower the matter punctual
about catching the English pronunciation. It
looks rather affected in a country girl to be always
snapping at the English, and at the time popping
in an auld Scot's phrase which she learnt in the
nursery, for it is impossible to get quit o' them.
But mind this, my child, that good sense is well
favored and becoming, in whatever dialect it be
spoken, and ane's mother's tongue always suits
either the lips of a bonny lass or an auld earl the
best.—*Edrick Shepherd.*

WHAT WE LIVE FOR.

"We live for those who love us—
For those who are kind and true;
For the Heaven that smiles above us,
And which we are hastening to."

So sang the Hutchinsons in one of their touching
heart-songs. The thought may for a moment arrest
the attention of a few who listen to its utterance in
melody, but the mass hear and heed it not. They
seem to live as though life has no great purpose—
no higher aim than the gratification of self. Those
in the crowd are jostling each other; fiercely almost
are treading down each other; to reach their par-
ticular goal. The pale face of sorrow, or the wail
of distress are unheeded. Gain—gain—is the
maddened cry. Gold and lands for to-day, for to-
morrow we die. Let the dog lick the sores of the
poor, and despised Samaritans turn aside to bind
up the bruised and wounded unfortunates. Stock
in Heaven brings no direct dividend in money.
Lending to the Lord will not add two per cent. per
month to the yearly accumulations. Such seems
to be the common understanding. Men act as if
life were an eternity.

But the night cometh—there are graves to fill
and worms to fatten. Wealth finds no exclusive
privileges under the sod, or "over the river."—
Rents, mortgages and stocks are not current in the
"hereafter." No "sharp practice," no "shrewd
business transactions" there. No extraordinary
per cents, for those who have entered into an in-
heritance which fadeth not away. No poor faces to
grind, for all are rich. They are joint heirs with
Jesus Christ to an eternity of bliss. Sorrow and
pain; the crutch and tattered garments; the
bruised and injured heart, have been left in the
grave, and the paupers on earth become the owners
of Heaven! Oh! how often we have thought of
what may be the feelings of the rich, the pompous,
and the proud, when they see those they scorned,
robed in the un fading and dazzling fabrics of
eternal angel life.—*Wisconsin Chief.*

ASPECTS OF THE BRITISH QUEEN.—Frank B. Fay,
Esq., of Chelsea, Mass., who visited Europe last
summer, delivered an interesting narrative of his
travels in a lecture to the Chelsea Library Asso-
ciation last week. In the course of his lecture he
related the following anecdote of Queen Victoria:
"It is reported that her Majesty has a sweet little
temper of her own, and that her cara sposa, like a
prudent man, generally retires before the storm,
and locks himself in his private cabinet, until the
sky is clear, and sunshine again illumines the
classic shades of St. James or Windsor. After
one of these little ebullitions, the Queen gave a
'thundering knock' at the door of the room where
Prince Albert had taken refuge, and upon being
asked, 'Who's there?' responded, 'The Queen.'
'The Queen cannot enter here,' responded the ben-
pocked. After the lapse of half an hour, a gentle
tap was heard upon the door. 'Who's there?'
asked Prince Albert. 'Your wife,' responded Victo-
ria. 'My wife is always welcome,' was the gallant
reply."

HOW AMERICAN CHILDREN ARE FED.—A corres-
pondent of the Poughkeepsie Daily Democrat
states that while visiting a school in Montreal,
he asked the teacher if there were any American
children there. She said there were, and she could
tell them by their pale faces, bright eyes, and ner-
vousness. They learned quicker, but lost so many
days during the term from sickness, that they did
not get along so fast as those who were able to be
present constantly. He also took occasion to ex-
amine their luncheon baskets, and found the Ameri-
can fare to be a piece of mince pie, the same of
pound cake, two doughnuts, a pickle, and a cold
sausage, while the English, Irish, and Scotch
children had either two days old bread and meat,
bread and butter, or bread and apple, with nothing
more.

Written for Moore's Rural New-Yorker. THE SCIENCE OF GULLOLOGY.

BY A. H. GULLOCK.

All sorts of—ology we have
In this "enlightened age"—
Gullology—a hollow branch,
Just now is all the rage:
A printing press in every town,
An overplus of schools—
Yet, wheedled by Gullology,
This is the age of fools!

O'er prints that gull with stale romance,
The midnight oil we burn—
On our good REAS, feeble glance
To useful teachings learn.
We laugh and shake our knowing heads,
At superstition's whims—
We think New England's "witchery"
Her fame forever dims;

We send our men and money where
False gods receive the prayers,
In hopes that knees will cease to bend
To such absurd affairs—
While we, ourselves, are running mad
About the "Spirits" play,
And "Messages" which wondrous "rape"
And "Mediums" convey.

"Gift enterprises," everywhere,
A host of patrons find,
Each one expecting for a dime
A million of its kind.
In politics, gulleterers vile
As leaders form array,
Each is a "WASHINGTON" proclaimed
By nineties who obey.

We sigh when told of people who
Were worshippers of wind—
But, O! how dearly we adore
The airs of JIMMY LIND.
Those heathen follies we abhor,
Of gladiators rough,
Yet rush en masse to see performed
A Christian *stilt-walk*!

View "magic arts" with proud disdain,
By which, as myths relate,
The sick and old at once regained
Their young and healthful state;
But swallow nostrums from the quacks,
And swallow all they say,
Concerning charms by which "those pills"
Keep Death so long at bay:

Whereby all charlatans have found
If tales of "cure" but state
What never was nor will be true,
They have realists weight!
And one, "they say," will soon announce
A "plaster" that will glue
Your head, cut off, right on again—
"Be just as good as new."

P. S. Since the above was written "they say" that
plaster has spread itself, and has a great run—out-
strips Barnum, Bradstreet's pills, or the cholera—the
"proprietor" has made his fortune.

Written for Moore's Rural New-Yorker. BYGONES.—No. I.

My Childhood.—Visions.

A CHILD of many visions, I sauntered through
the long summer afternoon of my early life, with a
thousand vague yearnings and beautiful beliefs
that I never dare utter, and never heard from
others. With that sense of power, which strong
physical existence ever gives, I left no forest-co-
vert unexplored, and no dangerous foot-ledge of
high rock untrod; from my universal success and
safety, imbuing the belief that there was no height
of human goodness or elevation to which I might
not aspire, and feel competent to attain. The lofty
mountain scenery—the deep gorges and blue lakes
fed my kindling imagination, and peopled the fu-
ture with extravagant fancies and glorious hopes.
I could behold in the far distance an honored
home, surrounded by all of nature and art which
could beautify it, and thronged with troops of
friends who appreciated my goodness and dignity.

How sweetly and dreamingly I believed in truth
and purity without alloy! How despairingly is
the young heart cast back upon itself, as the falsity
and deception, which it must meet gradually, be-
comes felt! I dreamed of hours of delighted study
in genial companionship—I felt the half-under-
stood power of the artist's inspiration—I could not
check the gushing tears, when, yielding to the
moving pathos or glad delirium of that music
which, by earnest application, might be incorpo-
rated within my very soul, I revelled in the thought of
comprehending the mysteries of science—I felt a
great joy in the consciousness of power to master
and encompass all that could be permitted to
human capacity. How proudly, almost scorn-
fully, I achieved the daily lesson assigned me, and
accomplished with a tinge of madness, in my expen-
ditious haste, whatever was required of me in the
ordinary arrangements of the household. I had
some uncertain faith that we were mortal, although
my visions had no palpable range beyond the
things of time, yet far back beyond the changes of
later years, I can clearly discern aching fears of
oblivion, and death revolting at the thought of
being entombed in the earth, and passing from the
memory of all the living. That the endless suc-
cession of days, months, and years, should calmly
progress, and my presence and influence be forever
unfelt, was more than I could willingly believe.—
I studied, and dreamed, and resolved, and finally
turned despairingly to my books for solace, deter-
mining to excel, seeking to grasp within myself
that majesty of command which was so much ad-
mired in others. What a torture my inner life
became, when forced from the one channel of per-
severing, absorbing, mad study! My highest as-
pirations were world-wide, comprehending all hu-
man knowledge, and strangely panting for more.—
I sometimes paused a moment to glance forward
to the laurel-crowns and myrtle-chaplets, which
should adorn my honored brow, little suspecting

that I was wandering in a wilderness, my feet even
then entangled in its rank undergrowth.

Who can know the heart of a child, how from
rude sport it turns to the saddest realities of life;
and they dawned upon me daily, tempering the
wild extravagance of my visions, and turning me
down to the ordinary level of common mortals.—
But I could never conquer all my moods, and in
their erratic wanderings, since my gusty and fitful
childhood, I have found myself strangely misun-
derstood and misrepresented. My childhood-vi-
sions are "by-gones," coming back at times in
spasmodic returns, and tinged sober, every-day
life with a gleam of rosy light and vivifying bright-
ness.

Written for Moore's Rural New-Yorker. INCENTIVES.

EVERYTHING that acts is moved by some power,
either within, or without itself. Thus we see that the
ship, and the iron car, are propelled by the power of
steam. We also know that it is owing to the law of
gravitation that the planets are held in their proper
course, and that it is this law which binds the uni-
verse together.

When we turn our thoughts from the world of
mere matter to animated existence, we find the
same thing true. The bee constructs his cell, the
bird builds her nest, the rabbit prepares his bur-
row, and the beaver forms his dam, by some blind
power and impulse. If we leave the region of in-
stinct, and enter upon a higher and grander sphere,
we find the same principle holds good. Man
acts, and we call the power that moves him, incen-
tives, or motives, and they are absolutely neces-
sary to human action. You might as well think of
propelling the iron steed without steam, as to
move man without this agency, and for the simple
reason, that he is naturally indolent, and needs
something to overcome this native aversion to toil.
Those are to man, what power is to a machine, and
as fuel feeds the engine, so desires furnish nutri-
ment for the incentives. The desire of knowledge,
causes the weary student to toil on, using the
hours of sleep to plow the classic fields—the love
of country moves the patriot to meet his foes on
the field of strife and carnage—the man of avarice
will ransack the whole earth, to dig out his store of
gold—the aspirant for fame will leave nothing
undone to secure the wreath of honor, and with
pagan devotion he will immolate his principles and
his all on the altar of ambition.

At the call of duty the evangelist severs the ties
of country and kindred, and trusts himself to an
augry sea, to reach a land shrouded in the dark-
ness of heathenism, where he may proclaim the
principles of eternal truth to an erring race—where
he may be instrumental in redeeming those who
bow in mad adoration before the altar of supersti-
tion, and help to irradiate and evangelize a world.
We see from these few examples, that our actions
are as various as our incentives. Hence, in order
to have good motives and right actions, we must
have pure desires, which are the foundations of a
good character.

Wyoming, N. Y., 1850.

EXHAUSTION OF TALK.

How long the lamp of conversation holds out to
burn, between two persons only, is curiously set
down in the following passage, from Count Gon-
falonier's account of his imprisonment:

"Fifteen years I existed in a dungeon ten feet
square! During six years I had a companion;
during nine I was alone! I never could rightly
distinguish the face of him who shared my cap-
tivity in the eternal twilight of our cell. The first
year we talked incessantly together; we related
our past lives, our joys forever gone, over and over
again. The next year we communicated to each
other our thoughts and ideas on all subjects. The
third year we had no ideas to communicate; we
were beginning to lose the power of reflection.
The fourth, at the interval of a month or so, we
would open our lips to ask each other if it were
possible that the world went on as gay and bustling
as when we formed a portion of mankind. The
fifth we were silent. The sixth he was taken away.—
I never knew where, to execution or liberty.
But I was glad when he was gone; even solitude
was better than the pale, vacant face. One day (it
must have been a year or two after my companion
left me,) the dungeon door was opened, whence
proceeding I knew not, the following words were
uttered:—'By order of his Imperial Majesty, I in-
timate to you that your wife died a year ago.' Then
the door was shut, and I heard no more; they
had but sung this great agony upon me and left
me alone with it."

BE GENTLEMEN AT HOME.

THERE are few families, we imagine, anywhere,
in which love is not abused as furnishing the
license for impoliteness. A husband, father, or
brother, who speak harsh words to those he loves
best, and those who love him best, simply because
the security of love and family pride, keeps him
from getting his head broken. It is shameful that
a man will speak more impolite, at times, to his
wife or sister, than he would to any other female
except a low and vicious one. It is thus that the
honest affections of a man's nature prove to be a
weaker protection to a woman in the family, than
the restraints of society, and that a woman usually
is indebted for the kindest politeness of life to
those not belonging to her own household. Things
ought not to be so. The man who, because it will
not be resented, inflicts his spleen and bad temper
upon those of his hearth-stone, is a small coward
and a very mean man. Kind words are circulating
mediums between true gentlemen in society; and
nothing can atone for the harsh language and dis-
respectful treatment too often indulged in between
those bound together by God's own ties of blood,
and the still more sacred bonds of conjugal love.

If a man undertakes to become rich, but de-
spises the small and gradual advances by which
wealth is ordinarily accumulated, his expectations
will be the sum of his riches. Accurate and care-
ful detail, the minding of common occasions and
small things, combined with general scope and
vigor, is the secret of all the efficiency and success
in the world.—*Horace Bushnell.*

ALL WELL.

BY H. DONAR.

No seas again shall sever;
No desert intervene;
No deep and flowing river
Shall roll its tide between.

No bleak cliffs upward towering,
Shall bound our eager sight;
No tempest darkly lowering,
Shall wrap us in its night.

Love, and unsevered union
Of soul with those we love,
Nearness and glad communion,
Shall be our joy above.

No dread of wasting sickness,
No thought of ache or pain,
No fretting hours of weakness
Shall mar our peace again.

No death our homes o'ershadowing,
Shall e'er our harps unsring;
For all is life unending,
In presence of our King.

Written for Moore's Rural New-Yorker. WHAT IS LIFE?

WHAT IS IT? have I often asked, when amid the
circles of the gay and thoughtless, listening to
their songs of mirth and plans of future bliss, view-
ing their strife and turmoil, their vanity and pride,
not one thought apparent concerning the life to come.

I asked a cherub child, now seated on a mossy
bank, while at its feet, and on the distant plain, the
fairest flowers of June were peeping forth, and
with rich fragrance filled the light air that kissed
her dimpled cheek. She was one over whose brow
the golden ringlets played in unbidden freedom,
and whose laughing eyes, and cheerful song, in
tell-tale numbers told that grief, nor chill sorrow,
nor dark forebodings of a coming day, had ever
crossed its pathway—What is Life? With looks
half of surprise and doubt, she smiling said,
"naught, surely, but a sunlit plain, strewn with
flowers of beauty, where sweets we like the bee
may sip, and call them all our own."

I turned, and wandered on. Beside a purling
stream, I now met one of earth's fairest ones,
in all the glowing hopes of budding woman-
hood, upon whose cheek the rose of health was
dwelling. Her step was light and elastic as that
of the gentle fawn, free as the air that sweeps the
mountain side. In tones which from her witching
revery seemed to arouse and startle her, I asked,
What, thou joyous one, is Life? "A gentle
stream," she quick replied, "upon whose placid
bosom Earth's fair sons and daughters glide along
into the great ocean of bliss and joy. Our hearts
are cheered by the silver notes of its music, and
that of the sylvan songsters flitting among the
flowery branches that overhang its sparkling
waters, and though sometimes rippled by the
passing breeze, this but gives a pleasing change to
what else might prove a dull monotony."

While yet we spoke, down from the mountain
side came one who had just reached the noonday
of man's brief existence. What is Life? again I
asked. "Life," he answered in hasty numbers, "is
a barren waste, spread here with desert sands,
there with rugged steeps, and rocks, and cliffs—
the seat of disappointed hopes, and vain regrets.
True, bright images of joy and hope, and budding
happiness, like fairy forms, sometimes flit across
our pathway, but phantom-like they vanish in the
grasping, and leave us to lament their fallacy."

Once again, I sought to have the problem solved.
I asked an aged one, upon whose furrowed brow
the storms of four-score winters had spent their
force, tremblingly standing on the shores of Time,
about to bid adieu to all things here. "It is," he
said, "the time given to mortals to do the work of
Him who placed them here, and gave them all the
blessings they enjoy—the time to secure the Pearl
of matchless price—to gain the boon of endless
life—the time to lay up treasures where no thief
can come, nor moth, nor rust corrupt,—the time
to seek those joys which never fade away—it is the
seed-time of eternity. Mind thee well what seed
thou sowest now, and how thy work is done, for
'what thou sowest, that shalt thou also reap.'"

Cleveland, N. Y., 1850.

GERTRUDE GREY.

PSALMS OF DAVID.—The following eloquent ex-
tract is from a late lecture by Henry Giles on the
Psalms of David.

Great has been their power in the world. They
resounded amidst the court of the tabernacle;
they floated through the lofty and solemn space of
the temple; they were sung with glory in the
Halls of Zion; they were sung with sorrow by the
streams of Babylon. And when Israel had passed
away, the harp of David was still awakened in the
Church of Christ. In all the eras and ages of that
church, from the hymn which it first whispered in
an upper chamber, until its anthems filled the
earth, the inspiration of the royal prophet has
enraptured its devotions and ennobled its rituals.
Chorused by the winds of heaven, they have
swelled throughout God's own on the sky and
stars; they have rolled over the broad desert of
Asia, in the matins and vespers of ten thousand
hermits. They have rung through the deep val-
leys of the Alps, in the sobbing voices of the
forlorn Waldenses; through the deeps and caves
of the Scottish Highlands, in the rude chanting of
the Scottish Corenanders; through the woods and
wilds of primitive America, in the heroic hallelu-
jahs of princely pilgrims.

The most faithful pastor in the world was never
able in any degree to approach the Savior, in the
lowliness of his manner and his attention to hum-
ble things.—*Horace Bushnell.*

Q. 187 conscience gives quiet sleep.

THE PUBLIC SCHOOLS OF ROCHESTER.

Under a form of government similar to our own, a perfect system of Common Schools will always be a crowning glory. Within these walls is fostered the spirit that upholds free institutions—without the intelligence and virtue here inculcated the days of the Republic are numbered. Our legislators have had, at least, a partial view of this principle, as nearly all the States have provided permanent school funds to aid in furnishing tuition for the masses, and in many of the cities of the country, the only requisite to the obtaining of a good, practical education is a display of energy and studiousness upon the part of the scholar.—Rochester has not been behind her sister cities in thus furnishing mental aliment for her youth, and her score of District Schools, with upwards of a hundred teachers, speak well for the liberality of the citizens.

Among the noticeable features of the school system in this city, is the change taking place in school buildings. Each year seems to make its mark in this respect—old, rigid, inconvenient tenements, in which scholars were

"Cribbed, cabined and confined."

are giving way to enlarged, elegant, convenient edifices. For this speciality our Educational Board annually devote from \$5,000 to \$10,000, and in a few years we can favorably compare the entirety of the buildings devoted to educational purposes in Rochester with those of any other inland city of the Union.

PUBLIC SCHOOL NO. XIV.

The above illustration fairly represents one (among the first erected of those to which the term "modern" might apply,) of our more prominent school tenements—No. 14, situated on Scio St.—J. R. VOSBURGH, Principal, assisted by Misses M. S. ANTHONY and E. S. DICKSON. It was constructed in 1860, and cost seven thousand dollars. The building is of brick, 68 by 56 feet, two stories in height, and surmounted by a belfry. The ground floor is divided into two rooms, 41 by 33 feet, used as the Primary and Intermediate Departments—the former being under the charge of Misses R. WOOD, I. JORD, and E. MANVEL; the latter cared for by Misses F. A. ALLING, J. F. QUINN and J. F. WILSON. The remaining portion of the lower floor is occupied by a recitation room 10 by 16 feet, halls, wardrobes, &c. The second floor contains the Senior room, 68 by 42 feet, Library, Recitation rooms, &c., and is admirably adapted to the purposes for which it is designed. The average attendance for the last term is stated as follows:—Senior, 144; Intermediate, 111; Primary, 178.

In the Report of the Principal, to the Superintendent of Public Schools, the remark is made:—"It has been a cardinal principle to impress on the minds of our pupils the importance of thoroughness. This maxim has ever been kept before their minds, 'not how much, but how well.'" With such a course, strictly carried out, we wonder not at the popularity which No. 14 has attained, and the meed of praise those directly interested (the parents) are always ready to award the faithful and consistent teachers.

In order to spread a knowledge of School Architecture, we will probably give a few more of our home educational buildings, together with others, that can lay greater claim to fitness for Villages, or Rural Districts.

HOW THE PROFESSOR GOT OUT OF THE WRIM.—A few years ago, Professor —, of Bowdoin College, was overseer of the building of the High School house in Brunswick. In the cellar of the same was a well, walled with brick, whose sides were consequently smooth. One day, being left alone in the building, he went down cellar, and in his haste unconsciously fell into it. Here was a predicament for any one possessing no more immortality than a College Professor; standing in five feet of water—at the bottom of a well sixteen feet deep—at the bottom of a deep cellar—with no soul in hearing distance! After abouting himself hoarse, he be thought himself of a piece of chalk—a remnant of the last recitation—which he applied to the walls, to solve his situation. The statement of the question was—let x equal how I shall get out; y equal depth of water; z equal distance to the water; and by means of his knowledge of Algebra he actually worked himself out, wonderfully showing the power of mathematics.—*Ranger Times.*

EDUCATION IN PENNSYLVANIA.—The annual report of the Superintendent of Common Schools of Pennsylvania, shows that there are 11,231 schools in the State, being an increase of 825 over 1867; that the number of teachers is 13,856, and that the average of salaries of male teachers per month is \$24.25, of females \$17.22.

SCHOOLS OF PHILADELPHIA.—The public schools of Philadelphia require for 1869, \$572,196 for current expenses, and \$146,300 for the erection of new school-houses. The high school has 516 students, all but 14 of whom are females. One normal school has 429 pupils. The total average attendance at all the schools is 56,616.

TEACHERS SHOULD STUDY.

Much has been said and written on both the art and science of teaching. But I apprehend that half of the battle of teaching is won when the teacher comes before his pupils with that freshness which is the result of daily study. It is this more than anything else which gives life and animation to teaching.

The teacher should never make present attainments, in any study, a finality. There is hardly such a thing as a finality to any subject. What have been considered as finalities have given way like gossamer, before investigation.

Teachers should study many authors on every branch which they are called upon to teach. All the better if they review them for the hundredth time; some new thought will be elicited and old ones revived. The teacher will thus go before his school anticipating his pupils' difficulties, and can impart instruction with eloquence, incite attention, awaken thought, and cause the vacant stare to give place to conscious intelligence.

Without study the teacher will soon exhaust his stock of knowledge. He will then wonder at the restlessness of his pupils and the difficulty in managing his school. He has fairly taught himself thread-bare and the keen eyes of his pupils see it. This must be the fate of every teacher who does not study and keep posted.

We place this habit of the teacher of studying in advance the lesson to be taught, in the front rank of qualifications for success. Because a teacher that has this habit is earnest and striving to rise in his profession, and, as a consequence, will improve both himself and his school.

The teacher should not only study for ideas, but for methods of imparting the same, and inciting thought in his pupils. Here is another secret in teaching. Where manner and matter go together in the teacher, success must follow. What is the best method of presenting a subject, should be a constant thought with the teacher. Any one method of conducting a recitation will become dull and monotonous.

In short, the teacher who would discharge the debt which he owes to his profession must be the most studious and industrious of men. If we honor our profession, it will honor us.—*N. Y. Teacher.*

PHYSICAL EDUCATION.

I AGREE heartily with the views of the last month's editor, upon the importance of introducing bodily exercise into the schools, and I approve of all his reasons. If they could be read by every teacher, and by every school-committee man, as often as once a month through the present year, they might produce a very general action; and I know of nothing more likely to have that effect.—My object in writing now, is to suggest the introduction of a set of exercises which may be performed by the children standing by their seats, and which, although less valuable than more active exercises in the open air, may be used as an excellent substitute. They should consist of various more or less rapid movements of the hands and arms.

I will mention a few; and any person who will try them for a while will find their value, and will easily devise others:—1. Place the hands back to back as high over the head as possible, and bring them down rapidly as far on each side as can be done without striking any object. Repeat this six times. 2. Stretch the hands as far forward as possible, palm to palm, and swing them thence horizontally as far back as possible, and repeat. Do the same with the hands back to back. 3. Bring the right hand firmly back to the height of the ear, and strike forward with the clenched fist, but not to the full length of the arm. Do this three times with the right hand, and as many with the left. 4. Strike down three times with the clenched fist of the right hand, then as many times with the left. 5. Make the right clenched fist revolve three times in as large a circle as possible. Do the same with the left. Repeat all the exercises, except the last, with both hands at once.

This will be enough for a beginning. I have tried these exercises for many years, the first thing in the morning, and similar exercises with the lower extremities, to the very manifest advantage of my health and strength.—*Aurous, in Mass. Teacher.*

SCHOOLS IN OHIO.—From the Annual Report of the School Commissioners in Ohio, for the year ending August 31, 1868, it appears that the amount of money received for the benefit of the school system was, \$3,357,078; expenses, \$2,739,887. The total number of white and colored youth in Ohio is 843,327; the number of youth enrolled in the schools during the year was 611,720.

The total number of teachers employed in the State is 20,240. The average wages per month in common schools, for male teachers, is \$27.89; female teachers, \$12.95. In the High Schools the average wages of the males is \$61.81; of the females \$32.82. The number of school-houses heretofore erected was 9,795, and the value of the same \$2,905,395. The number of houses erected in 1867 was 589, of the value of \$391,305. The number of school libraries in the State is 6,437, of the value of \$135,958. The number of books in the libraries is 245,887. The value of school apparatus is \$37,198.

EDUCATIONAL FUND OF ENGLAND.—The whole amount of the vote for public education in Great Britain, for the year 1868, was, in round numbers, £663,000; of which sum £157,000 was expended for building and furnishing schools; \$400,000 in paying various classes of schoolmasters; and £37,000 in defraying the expenses connected with the management of the schools.

ALABAMA STATE SCHOOL FOR THE DEAF AND DUMB.—The Alabama State School for the Deaf and Dumb was opened at Talladega, on the 1st of October last, and placed under the charge of Dr. Jos. H. Johnson. The present appropriation of \$2,500 per annum is sufficient for the education of seventeen deaf mutes; while the census returns show an aggregate of 151 in the State in 1860.

"The only victory that costs no tears," said Napoleon, "is that over ignorance."

WILD, OR CANADA GOOSE.

ANECDOTES OF WILD GEESSE.—NO. I.

It is with feelings of the utmost delicacy, that I prepare the following facts for publication, knowing that by many they will be looked upon as a hoax, and without the reader is acquainted, or wishes to become so, with the habits of wild geese, I will advise him to read no further.

All who have had much experience in life know of incidents which they would not like to see in print with their own signature attached—and why? For the reason that they seem so very improbable the reading public would not believe—and we might suffer for having exposed facts that were never before known, and might not be observed again. But, those who are interested in what my article treats of, if they have ever had like experience, or anything like it, I hope will make it known in a similar manner as myself, and gratify at least one lover and breeder of this peculiar bird.

For ten years a pair of wild geese and their young (most of which I early disposed of) have occupied a pond adjacent to my house, which would always quickly come to the call of my whistle, and many an hour have I spent in their company, studying their habits. In winter, when they were confined in warm quarters, I was particular to feed them punctually, and by playfully talking to them awhile, I could familiarly handle them, and, seemingly, they considered me their friend.

In the spring of 1857 my old gander disappeared mysteriously, and as I did not suppose the old goose would lay without a mate, I borrowed one of a distant neighbor, and put him into the pond with my geese. Much to my disappointment he soon commenced to make love to a female only a year old and finally paired off with her—showing no liking for the old goose, and she as little for him.

The party that obliged me, finding it inconvenient to tend his geese in winter, and ascertaining that I could do it with but little trouble, removed the goose (mate to the gander I had borrowed,) and several of their young into my hands. In the spring of 1858, as soon as the ice commenced to break up, I gave the geese liberty, and they went into the pond together; but what greatly surprised and vexed me was, that the gander would not return to his old consort. With apparent disgust did he seem to view her constant attendance, coquetish bowing and love-making in general, and often did he turn his back upon his former affectionate wife, and with gallantry unsurpassed, with his unsophisticated new one, sail happily away to some secluded nook, where they could enjoy themselves unmolested. Seeing this state of things and knowing I should have no goslings, I wrote my friend how his naughty gander behaved. In reply he advised me, "that as I had kindly wintered his geese it was no more than fair that he should summer mine;" and "that no doubt existed in his mind—if the old gander and goose were back again on their little island, where they had hatched out four broods, they would re-marry and again commence domestic duty."

Accordingly the geese were caught and transported to my friends, where I arrived about noon, and feeling a curiosity to see how they would behave, we concluded to dine before letting them out. As the old pair and their young approached the pond, it was evident they instinctively knew their former home, and on reaching the water they evinced their unbounded pleasure by the maddest antics imaginable, so much so, that we could not but remark and enjoy their mirth. And "now," my friend said, "see if the old pair don't make at once for the island," and true enough they did, but not alone—the last lady-love was with them.

The shadow of polygamy seemingly darkened the vision of the old gander, when about half way to the island, and turning back, he looked, at first on one and then the other, who meantime were bowing their heads and swimming about him juberling like a flock of jay birds, when, (we wished him dead,) with a perfect vengeance he rushed towards his old mate, pushed her the distance of two or three rods, pulling her feathers out and biting with all his strength. Then, hissing, fiend-like, he returned to his mistress, and with the air of a man who has washed his hands of a very disagreeable job, swam for the island, introduced her to its sacred shores, pointed out this thing and that thing of interest, as he led her towards the spot, over which he had kept watch the previous year, while his lady, fatigued, day and night gave her warmth and comfort to the benefit of his forthcoming young.

While we leave this couple so happy let our sympathies return to the old goose who, with downcast head, and plumage all awry, watched the hard-hearted wretch in voice and movement. Sadly the picture came to her of their early happiness—of the time when instead of this young cool, she was the apple of his eye—of the eternal devotion he vowed her when their little ones clipped the shell and he, prouder than earth's crowned king, led them to the water—how, as they grew up companions of the lilies, and alike as beautiful, each day her love grew stronger for her guardian and defender—nor did the doubt of his constancy ever cross her mind.

Here had been the pliant ear and memory to listen and retain his happy pictures of other lands,

which he had visited ere the unkind hand of the hunter pinioned his wing, and he it was that instilled into her soul the joyous hope that time would heal their deformity, and together, on the wings of love, they might journey untired to her fancied land. Such thoughts as these, if my acquaintance with them has taught me rightly, and many others, an instant's space more than sufficed to impress her memory, and as she beheld her truant husband leave their former happy isle and convey the spoiler of her happiness to other familiar places, and felt herself by him unnoticed as a thing that were not, she cried aloud in heart-breaking agony—better than my existence do I love thee and now I know thou carest not for me—on thy head be my suicide, for I die—and, pressing her head under water and reclining on her side and back, with but little perceptible flutter, ere my friend (who cried, "she will drown herself") could enter a ready boat and reach her, life was extinct. Well, we knew she had died of a broken heart; and to be sure nothing ailed her, we made a careful external and internal examination and found all as it should be. What I have related is truth and can be proved, and I consider this incident of constancy and affection worthy of record.

Dedham, Mass., 1859.

The Reviewer.

THE PIONEERS; OR, THE SOURCES OF THE SUSQUEHANNA. A Descriptive Tale. By J. PENNIMORE COOPER. Illustrated from Drawings by F. O. C. DARLEY. New York: W. A. Townsend & Co.—1859. [pp. 505.]

This is the first volume of a new and splendid edition of Cooper's works, now in course of publication—to be followed by a volume each month until the entire series is completed. The re-publication of the works of the foremost of American Novelists in a superior style and enduring form—with fine illustrations, and all the latest improvements and revisions of the author—is highly creditable to the enterprising publishers, and speaks well for the taste of the reading public. The typography and illustrations, as well as the externals of the volume, are faultless, and will commend the edition to every admirer of American Literature. The edition is sold by subscription, at \$1.50 per volume, and the great demand for it already, proves that our people appreciate the taste and enterprise of the publishers in issuing the series in a form so beautiful and enduring. Of the merits of Cooper's Novels it is unnecessary to speak in this connection, for the author has long ranked first among the delineators of American life, scenery and manners. The publishers well remark that "this edition will derive enhanced interest from being illustrated by DARLEY, an artist who, for years, has made the pages of Cooper a congenial study. His drawings, conceived in an spirit and with a breadth worthy of the picturesque pages of his author, have been preserved in all their fidelity by the best engravers in the country." D. M. Dewey is the agent for Rochester and vicinity.

THE LAND AND THE BOOK; OR, BIBLICAL ILLUSTRATIONS drawn from the Manners and Customs of the Holy Land. By W. M. THOMSON, D. D., twenty-five years a Missionary of the A. B. C. F. M. in Syria and Palestine. Maps, Engravings, &c. In two volumes. New York: Harper and Brothers—1859.

This is the most interesting book on Palestine for the general reader that it has ever been our pleasure to peruse. The author has been for twenty-five years a missionary in Palestine and Syria, and consequently is at home in these lands and familiar with what he describes. Indeed, a large part of the work was actually written in full view of the scenes delineated—in the open country—on sea-shore or sacred lake—on hill-side or mountain top—under the olive or the oak, or the "shadnow of a great rock." Some of the recent works on Palestine have been made tedious to the generality of readers by extended critical and exegetical discussions, valuable to the thorough bible student, but useless to the mass of readers, as, unless understood, they only annoy and confuse. Our author has avoided this, and has simply stated what he saw, in the manner and customs of the people in the country, and its ruins, and its vegetation, calculated to throw light upon the scripture, and most admirably has he accomplished the work. The book is written in a pleasant, conversational style, and the reader soon becomes absorbed in its pages, and in spirit accompanies the author in his travels over mountain and vale—to the shepherd's hut and hermit's cave—to the palaces of kings and the temples of the gods—and to places hallowed by the foot-prints of the Redeemer of the world. Sold by D. M. Dewey.

FATHER AND DAUGHTER. A Portrait from the Life. By FREDERICK BRUMER. Translated by MARY HOWITT. Philadelphia: T. B. Peterson & Bros. [pp. 348.]

This is really a recent work by Miss BRUMER—issued from advance sheets of the London edition with remarkable expedition. The publishers affirm that the volume of 348 pages was put in type and stereotyped, the paper for a large edition manufactured, and the work completed and bound ready for sale in forty-eight hours. Though this speed does not add to the intrinsic value of the work it shows that the publishers possess superior facilities and enterprise. Of the volume itself it is only necessary to say it is written in Miss BRUMER's charming and chaste style, presenting natural home scenes and pictures of social life. Sold by Dewey.

EPISODES OF FRENCH HISTORY During the Consulate and the First Empire. By MISS PARSON. New York: Harper & Bros. [pp. 381.]

A PLAIN, well-printed book of about 350 pages, containing 25 episodes or stories, principally of high life, or rather royal life in France, during the First Napoleon, and are instructive as showing in the private life the hidden motives for public measures, and traits of character explaining acts otherwise incongruous. They were collected by the compiler while engaged in writing a royal biography, and are presented to the public as mere episodes, without regard to chronological order. Sold by Dewey.

Written for Moore's Rural New-Yorker. AWAKENING THOUGHT.—A SKETCH.

Ours clear and frosty morning in December, 1854, in one of those picturesque valleys in Western New York, my friend G—and myself were strolling along, commenting on various topics of interest that suggested themselves, when an object in the glittering landscape attracted our attention and drew forth our admiration by its boldness and grandeur. To me it appeared nothing more than a cliff, lofty and majestic. My companion expressed his thoughts in glowing language and striking similes—portraying its beauty and the silent lesson it there taught. Speaking of other things, he said: "I can see beauty in everything around—the crisp snow beneath our feet—the leafless tree by the roadside—the jutting cliff on the hillside, and the sun flooding the vale with his golden light, but reveal the inimitable beauties of nature. FRANK," said he, "there are untold beauties everywhere displayed, if we will but behold them."

A new light dawned on my mind. Can it be, thought I, that the world is indeed so beautiful that he can see fanciful jewels in the frozen rain-drop, or leafless forest, and I, gazing on the same objects, not behold it? Ah! beauty with me, then, was associated with gay colors and brilliant trappings, or some quiet retreat, where the hand of refinement had adorned it with graceful festoons of flowering shrubbery.

We separated—each returned to his vocation in the school-room, in the brown school-house at the foot of the hill. Nature, even in her rough and uncouth aspects, no longer appeared unlovely; for a train of thought had been awakened which was to run parallel with, and almost become part of, my existence. The flinty rock, as we surveyed it and thought of its creation and purpose, its constituent elements and grim face, furnished a field for many thoughts and speculations. The tall "evergreen pine" seemed a thing of grand beauty—for it seemed a type of man as it stood clothed in living green. It was once tiny and pliable as the infant mind; now it stood immovable as an aged Christian clothed in a fadeless armor of beauty.

May we not also liken the leafless oak to the hardened sinner who in youth neglected the means of grace, and sought not the pearl of great price, and now stood shorn of its freshness and beauty, cold, chilling and uninviting, yet sublime in its wreck and decline? * * * * * We went West, to the "land of blooming prairies," and as we roamed in frolicsome glee over the verdant plains, covered with multicolored flowers; we could but exclaim with READ,

"Gentle flowers are springing near me,
Shedding sweetest breath around;
Countless voices rise to cheer me
From the ground,"

Even the humblest flower seemed "a thing of beauty." The tiny, sensitive plant, and the broad lily, vied each in their sphere to make the prospect lovely. Our occupation was teaching, and in line, pleasant weather we walked forth with our youthful charges, pointing out here and there the many varied beauties spread out before us. The widening landscape—the distant grove and the meandering brooklet—were each pointed out to the delighted group, for each one seemed to perceive something new, and unperceived before, in the prospect before her, as objects were likened to some fanciful picture as drawn by the Great Artist.

A few days after one of these rambles, "MARY," came to me,—after she had taken a long walk one fine morning, with a face glowing with delight, exclaiming:—"Oh! such a delightful walk as I have had, everything looked so pretty. The snow looked like a crystal sheet—the frozen rain-drops seemed pendent jewels on the shrubs—the brook seemed to go laughing by, the sun was glorious with its flood of light, and the shrubs, trees, fields and prairies seemed the furniture of one vast palace fitted up for us to enjoy and admire. I am so glad you took us out to walk and told us of the beauties of nature. I've been so happy since. Everything seems so different; so charming and adapted to make us happy if we will but permit it to be so."

I was well repaid for all I had said to guide the youthful mind to a just appreciation of the BEAUTIFUL. Thought had been aroused; MARY saw what she had always seen before, but with very different thoughts and feelings. Nature was seen in its true light,—she gazed upon it with a wondering look, admiring its varied beauties, and with a light heart she resumed her task.

I need not add more; enough has been said to illustrate my theme, and we'll let the thoughtful young reader pause and think how he can best make himself and others happier by a few thoughts, bright and happy, communicated with love and friendship.

Hornby, N. Y., Jan., 1859.

A NOBLE SENTIMENT.—Some true heart has given expression of its generous nature in the following beautiful sentiment:—"Never desert a friend when enemies gather round him; when sickness falls on the heart—when the world is dark and cheerless is the time to try a true friend. They who turn from the scene of distress betray their hypocrisy, and prove that interest only moves them. If you have a friend who loves you and studies your interest and happiness, be sure to sustain him in adversity. Let him feel that his former kindness is appreciated, and that his love is not thrown away. Real fidelity may be rare; but it exists in the heart. Who has not seen and felt its power? They deny its worth who never loved a friend or labored to make a friend happy."

ALL the world cannot pull down a humble man, because God will exalt him; and all the world cannot exalt a proud man, for God will pull him down.

A GRAIN of prudence is worth a pound of craft.

The News Condenser.

- Apples bring \$3 a bushel in Cleveland.
- Mr. Gough, the lectoal lecturer, is lecturing in Edinburgh.
- The United States Mint will not hereafter receive Spanish silver.
- The Ohio officials estimate the population of that state at 2,800,000.
- A German newspaper has been started by German exiles in London.
- An "American Indian Association" has been formed in New York.
- Coal has already been found in no less than four counties in Michigan.
- One hundred negro residents of N. Y. city leave for Africa this spring.
- The Chinese have recently sent home \$316,000 in silver from San Francisco.
- Twenty-one persons are in the Tombs, N. Y. city, charged with capital crime.
- In South Carolina the slave population is 833,000. The white population is 283,000.
- Blue-birds have appeared in the Connecticut Valley. Spring must be near at hand.
- There are 435,378 bushels of grain in store at Buffalo. All but 59,000 bushels is wheat.
- E. A. Hannegan, formerly U. S. Senator from Indiana, died in St. Louis Friday week.
- A move has been made in one of the Western States to abolish grand juries as a nuisance.
- It is stated that over 1,000 families in Buffalo are receiving aid from the overseer of the poor.
- Ohio has 2,735 miles of railroad in operation, the construction of which cost over \$110,000,000.
- The harbor of Greytown is rapidly filling up with sand, and a survey has been determined on.
- Harvard University has a fund of \$1,069,686, nearly all of which is safely and profitably invested.
- A. A. Skillings, a handy little chap, weighing 678 pounds, died in New York on Sunday week.
- In the State Blind Asylum of Iowa, all pupils are received free of charge, except for clothing only.
- Kossuth is said to be in straitened circumstances, he having spent all in pursuit of political objects.
- A State census of Texas, just taken, shows a population of 453,492, against 213,495 in the year 1850.
- Twenty-four men, with forty-horses, left Corunna, Mich., on Monday morning week, for Pike's Peak.
- Another attempt to render steam-engines available for common roads is being made in Patterson, N. J.
- There are three hundred and thirty orphans in the Girard College, Philadelphia, at the present time.
- Louis Napoleon is now said to possess a navy that, in effective strength, is not inferior to that of England.
- An old man named Rozell, aged 106 years the 20th ult., voted at the fourth ward poll, Oswego, on the 1st.
- Seventy fugitive slaves from Missouri passed thro' Grinnell, Iowa, on the 21st ult., on their way to Canada.
- The proposition to call a convention to revise the State Constitution, has failed in the Wisconsin Legislature.
- At the last examination at West Point, fourteen cadets could not stand the tests applied, and were sent home.
- Eighteen communes near Tarbes, France, are now protected from lightning by conductors composed of straw.
- Coal exists in 81 of the counties of Illinois, and over a hundred mines are now worked in 31 different counties.
- The British Government is about to establish a monthly steam postal service between Australia and Panama.
- Out of a lately discovered "guleh" on the Tuolumne, Cal., \$3,000 were taken in one day, and \$4,000 on the next.
- Punch truly says that in the shadow of a small waist may be seen a large doctor's bill and the outside of a coffin.
- An agent of the British Museum has collected in Philadelphia four hundred different biographies of Washington.
- When the District Court opened in Keokuk, Iowa, the other day, eighteen hundred cases were found on the calendar.
- The Auburn Advertiser notices a turkey which weighs 35 pounds, and can pick corn placed seven feet from the floor.
- The Hannibal and St. Joseph Railroad is completed, thus making an unbroken line of railroad from Chicago to Kansas.
- The King of Sweden is in a bad state, it is said. The Emperor of Austria is at this time supposed to be in a worse State yet.
- Hon. Stanley Matthews, of Glendale, Ohio, had three children lying dead in his house one day last week. Cause, scarlet fever.
- It is stated that in Newark, N. J., there are more than 1,500 operatives in the hating business, and nearly \$1,000,000 invested.
- During February, the deposits at the Philadelphia mint were \$161,035, and the coinage 3,167,842 pieces, of the value of \$301,983.
- Wm. Smith O'Brien was received in a becoming manner by the New York Committee of the Irish Societies, on Friday week.
- A statue of Caxton, represented as seated reading roof sheets, is about being erected in the Westminster Palace Hotel, London.
- Lake Erie is so clear of ice that the shipping interest is already beginning to "look up" at Sandusky, Toledo, Cleveland, &c.
- A difference having arisen between Dr. Livingstone and Captain Beedingfold, the latter has abandoned the Zambesi expedition.
- Illinois legislators receive \$1 per day at the present time, being \$7 a week less than their board costs. Short sessions will be the result.
- The potato rot is ascribed to high manuring and consequent undue forcing of the plant, by Mr. Trowedge, of Camden, N. Y.
- The first indications of water in the Artesian bore, Columbus, were observed this week, at a distance of 301 feet from the surface.
- In the British Islands, the work done by machine power is computed by Lord Brougham to equal the labor eight hundred million men.
- The New Orleans papers complain that the bars at mouth of the Mississippi are becoming a more formidable obstruction than ever.
- A boy fell through a hole in the ice at Auburn, was buried 30 feet by the current, came up accidentally thro' other aperture and was rescued.
- A parcel post—for parcels not exceeding two pounds—has been in operation by the Post-Office Department since January 1st.

BY JENNY MARSH PARFRE

She dreamed strangely that night. She was in the overgrown bower and the darkness was most heavy. One star above her, tremulous and doubtful. She felt it was watching her. A little spark shot from the heart of the rose that was planted in the stranger's grave and lit up all about it as the star up in heaven hung over her. The rose

her, and she was sent in disgrace to her chamber. A few hours after the house was alarmed by loud and piercing screams. George was in wild delirium. The next day he proclaimed his strange ravings to his family, and was a relation to the little girl who had been seized with greedy and insatiable satisfaction, hoping to produce again to the effect of ejecting her from beneath their roof. They did not find the letter.

MOORE'S RURAL NEW-YORKER

FOR THE CULTURE OF RURAL LIFE, EXCELSIOR LITERATURE, SCIENCE, ARTS, AND NEWS.

TWO DOLLARS A YEAR.

"PROGRESS AND IMPROVEMENT."

[SINGLE NO. FOUR CENTS.]

VOL. X. NO. 12.]

ROCHESTER, N. Y.,—FOR THE WEEK ENDING SATURDAY, MARCH 19, 1859.

[WHOLE NO. 480.]

MOORE'S RURAL NEW-YORKER, AN ORIGINAL WEEKLY RURAL, LITERARY AND FAMILY NEWSPAPER.

CONDUCTED BY D. D. T. MOORE.
With an Able Corps of Assistants and Contributors.

THE RURAL NEW-YORKER is designed to be unsurpassed in Value, Purity, Usefulness and Variety of Contents, and unique and beautiful in Appearance. Its Conductor devotes his personal attention to the supervision of its various departments, and earnestly labors to render the RURAL an eminently Reliable Guide on all the important Practical, Scientific and other Subjects intimately connected with the business of those whose interests it zealously advocates. It embraces more Agricultural, Horticultural, Scientific, Educational, Literary and News Matter, interspersed with appropriate and beautiful Engravings, than any other journal, rendering it the most complete AGRICULTURAL, LITERARY AND FAMILY NEWSPAPER in America.

INQUIRIES AND NOTES.

Sorghum Growing.

Will you inform me something about raising and cultivating the Chinese Sugar Cane? I live on the line of 44 degrees north latitude. I wish to know whether it has been successfully grown as far north? Also, what kind of soil is best adapted, what quantity of seed to the acre, and where seed can be obtained, and at what price? How much seed in each hill, how far apart in the rows, the proper distance between the hills, and the proper way to cultivate?—A. SUNDHOLM, Hope, Durham Co., C. W., 1859.

I would like to inquire through the RURAL whether it would be advisable or not to plant the Chinese Sugar Cane seed in new ground? Is it best to plant in hills, or drill it?—J. S., Wells Co., Ind., 1859.

CULTIVATORS differ as to the best distance to plant. Some plant in rows, six inches apart in the row, and the rows four feet. Others plant in hills, leaving three or four stalks in each hill, making the hills 1½ feet apart one way, and four feet the other, so as to cultivate one way with a horse.—Still others plant in hills 3½ feet apart, and cultivate both ways. The Sorghum requires soil and culture similar to corn, and those who grow good corn, need not fail in growing Sugar Cane, either as regards soil, climate, or culture. Less than two pounds of seed will plant an acre, and the cost is about 25 cents per pound. It can be obtained of the seedsmen of this city, and we suppose of most persons who deal in seeds.

Water Rains.

I AM anxious to learn all I can about Water Rains, as I have everything on hand to start one, but from some reported failures, from stoppages, I have not yet had courage to set it going. Air is said to get into the chamber, causing the bursting of the pipe, sometimes.—D. J., Oneida Co. N. Y., 1859.

On the matter inquired of by our correspondent, we have the following interesting communication from one who describes the difficulty and the remedy. Another subscriber in Genesee county, who has a ram now in successful operation, after having encountered and overcome several difficulties, promises us a detailed account of his operations. We hope all who have had experience will give us facts that we may lay them before our readers:

Messrs. Eds.:—Having observed in the RURAL of the past year, several inquiries and articles on the subject of raising water, by the ram, I have concluded to present to the RURAL, for publication, some of my experience in the premises. Some three years since, I built a house about thirty rods from a spring and sixty-six feet above it. I depended on raising the water by a ram. Had read a prize essay on the subject by J. J. THOMAS, published in the Transactions of the New York State Agricultural Society. Supposed of course the authority to be good. Soon found the tormented thing to be more of a bore than a ram. The great failing of writers on agricultural implements generally, appears to be to tell all their good qualities, and say nothing of their imperfections. At any rate, it proved to be so in this instance. There was an abundant supply of good water. I took five feet fall, and thirty-three feet of one and one-fourth inch lead pipe for supply pipe. Gave \$16 for an instrument, and used 8-8 lead pipe to convey the water. Dug my ditches deep, and put all together in a workmanlike manner, as I supposed, and set it at work.

I had, in the mean time, learned that they had their faults, and one in particular was that the air chamber would fill with water, when the ram would fail to throw water, and if there was head enough on, would burst somewhere. Mr. THOMAS said

nothing about this. I soon found that mine would fill once in twenty-four hours. I found myself in a fine fix, and was obliged to go thirty rods, plug up my feed pipe and draw off the water in the air chamber every day. This was worse than any I had become acquainted with. It appears they generally run from a week to a month. My ram had run but a few days when the supply-pipe began to burst—when the vent was very small, it would run without filling up, but would soon get so large that it would stop running. After bursting and being mended five or six times, with the same results, in about two years I was obliged to abandon it.

After the ram had lain useless part of the last season, in the month of October, I went to an iron works, and there found a wrought iron pipe of the proper size, and got thirty feet; cost eight and one-half dollars, (the expense in the first place was about fifty dollars.) The iron pipe is what is called gas pipe, and is in pieces about twelve feet long, connected by a socket nut. I laid down this pipe immediately after getting it, and it has run now some four months. The filling up can be obviated by making a vent in the feed-pipe near the ram, but this is an impediment to the run of the ram, especially where the head is not more than two or three feet. Let us hear from all your correspondents, who can throw any light on the subject, their views, as to the best mode of preventing the filling up of the air chamber.—W. R., Moravia, Cayuga Co., N. Y., 1859.

Hungarian Grass.

I wish to find out more concerning Hungarian Grass Seed. One subscriber to your paper says it is a failure in this part of the country. But perhaps he did not have pure seed. The only fear the farmers have here is that the seed would not start soon enough to get ahead of the weeds. What I wish to know is, how long will it be coming up?—and will sprouting the seed do any good? Every farmer in this section is afraid to purchase seed, and some condemn it as a hoax. Now, I should like to sow one acre if I thought it could be relied upon. This acre is a clover sod, but very thin, somewhat rolling, fair to the sun, and has been manured. Which will pay the best, a crop of corn or a crop of Honey Blad Hungarian Grass seed?—W. P. C., Minieink, Orange Co., N. Y., 1859.

In the Hungarian Grass grows as rapidly and as rank here as at the West, it will smother the weeds. From what we know of it we are satisfied it requires a strong, rich, deep soil, and we have no doubt will prove much better adapted to the rich prairies of the West than to the lands of Orange county. Still, it is worthy of trial. Try a little and if it fails the loss will be small and the knowledge gained valuable. The Honey Blade, as it is called by those who have it to soil, is nothing more nor less than the common Hungarian Grass. So we have good reason to believe.

Growing Onions.

Will you, or some of your readers, through the RURAL, give me some information as to the culture of Onions? What kind of soil will they flourish on, whether it should be rich or poor; and, if manure is required, what fertilizers are best? Is guano or horn manure good; and will either effect the destruction of weeds, as sometimes reported? How should the ground be prepared? Should it be laid out, or is it as well on dry soils for the surface to remain level? How early in the spring should the seed be put in the ground, and will the frosts of the last of April and of May affect the plants, if up? How far apart should the drills be, and how thick should the seed be sown? What will it cost per acre to raise and harvest them where the wages of laborers are seventy cents per day? What is the usual produce per acre, and how should they be harvested? How long will they keep sound, if secure from frost in good cellars? Also, when are they ready for market, and what is the usual price per bushel?—A. YOUNG FARMER, Sparta, La. Co., N. Y., 1859.

The onion requires a very rich soil and thorough culture to secure a good crop, and a poor crop will not pay the cost of weeding, &c. The best soil is a good, deep loam, though they will grow on a stiff clay, if it is well pulverized, or even on a very sandy loam, if it is enriched. Hog manure is excellent for growing onions, and in the absence of this, well rotted stable manure should be used.—Use no manure in which you have reason to believe there are many foul seeds. Guano is an admirable manure, nothing better, and hen manure is the next thing to it. These two manures will not destroy weeds, unless used in such quantities as to destroy the crop also, but they are free from the seed of weeds, and therefore when using these you are not sowing a foul crop, as is often the case when using manures from the stable. Make the surface of the soil as fine and smooth as possible, and free from stones. Then sow with a drill or by hand, making the rows just wide enough to hoe conveniently, say twelve or fourteen inches, and the plants four or five inches apart in the rows. Of course the seed cannot be sown very precisely, but this can be regulated in thinning out. Sow the seed as soon as the ground is dry enough to work, which will

usually be in this section the latter part of April. Frost will not injure the onion. The cost of taking care of an acre of onions depends much upon the condition of the soil for cleanliness, and the general management, so that we will not even give a guess there at. The average product of an acre of onions is from 150 to 200 barrels, and we think they never sell for less than \$1 per barrel in New York, and generally for more than double this price. They are now worth about \$8. If well harvested, and kept in a very dry cellar, or in an upper room where they will not freeze hard, they will keep well until warm weather.

THE TEST CHESS EXPERIMENT.

ED. RURAL NEW-YORKER.—Dear Sir: As you have from the first taken a deep interest in this Experiment, and are well acquainted with all the parties, it is due to you to make a brief statement of the case and its result, as reported to the State Agricultural Society by the Committee.

It is not an uncommon opinion among our farmers, that Wheat, sown in the fall, especially in wet situations, will be changed by being winter-killed, or by some unknown cause, into Chess.—Such an opinion is not known to exist, in the wheat-growing countries of England, France, Germany, &c.

In the hope of solving this problem, Col. BENJ. HODGE, of Buffalo, offered to the State Agricultural Society (through the RURAL NEW-YORKER), a premium of one hundred dollars for proof, satisfactory to a Committee appointed by its officers, of such transmutation of Wheat into Chess.

An intelligent and successful Farmer, near Rochester, and of excellent character, (recently deceased,) proposed to the Society to make the proof, and demanded the appointment of the Committee by whom the decision was to be given. In the Summer of 1857, J. J. THOMAS of Union Springs, L. B. LANGWORTHY of Greece, practical agriculturists, and C. DEWEY of the University of Rochester, were selected as the Committee.

On account of the strong opposing views in the farming interest on this subject, the Committee determined to make the experiment as clear and decisive as possible. To prevent all mistake arising from the earth used, they made two conditions:—1st, That the earth should be boiled in water for two hours that any and all seeds in it might be destroyed; and 2d, That the earth should be put into a box or pan of adequate depth and size, that the wheat sown might be isolated. The Farmer accepted these conditions, and the Committee agreed to follow his directions.

To make the trial more satisfactory, four pans of the prepared earth or soil were taken, one by each of the Committee, and the other by the Farmer himself. The experiments were thus made at a distance of several miles from each other.

The wheat was sown or planted in September, part in the unshelled heads and part in the seed alone, both furnished by the Farmer.

The course of vegetation had no peculiarity; but the wheat plants were crushed down to the earth several times in the autumn, according to the Farmer's directions, and in the spring again, by loosening the earth to break in at the roots, the whole being exposed to the action of all the elements from the sowing of the seed to the maturity of the plants in July, 1858.

One result appeared in each of the four experiments:—Wheat, and only Wheat, was grown. The Committee sent me their written result, and the Farmer, while viewing my twenty-five heads of wheat only, stated the complete failure of his own experiment to produce any Chess.

The experiment seems to have been perfectly conducted on the principles proposed by the Farmer. The result will confirm those who believe that Chess always vegetates from its own seed in the earth, and from nothing else, on the principle declared of old, "The earth brought forth grass, and herb yielding fruit after his kind."

In a previous experiment, in 1856-7, the same Farmer, without any precautions to destroy all seeds in the earth used, sowed his wheat, and found Chess growing with his wheat. On tracing each Chess-plant into the earth by carefully removing the soil, he found each one growing distinctly by itself as if springing from separate seed, that is, no root of Chess grew united to the roots of the Wheat, or the roots of Wheat growing from or into those of Chess. Several gentlemen aided in this tracing of the roots, and all adopted the same conclusion.

C. DEWEY.

NOTE.—It has been said that Winter Oats and Barley are also converted into Chess. One of the Committee, Mr. LANGWORTHY, tried the same experiment in the same careful way on Oats and Barley, and with the same result. He raised only Oats and Barley, with no appearance of Chess or any other plant. Let the seed be pure, and the soil destitute of the seeds of Chess, then the farmer may not expect to find any Chess in his crop.
Rochester, March, 1859.

DESIGN FOR A CORN HOUSE.

Messrs. Eds.:—In the RURAL of January 15th, H. B. H. asks for the plan of a Corn House that will be sure fire against rats and mice, and so constructed as to thoroughly cure newly husked corn. Inclosed I send you a sketch of the "Elevation" of one, with a granary, that suits me. It will admit of almost any required reduction or extension in size. It is 24 by 18 feet, posts 14 feet, which extend two feet below the floor, and rest on stone supports eight inches high, and sunk into the ground three feet. The studs, 2 feet apart, are set 1½ inches inside of face of the sills and posts, with strips of plank 2 by 4, notches cut in them in the form of a right-angled triangle, the base 1½ inches deep, the hypotenuse 5½ inches long, the perpendicular parallel with the face of the plank, one immediately above the other, nailed on the sides with the back corners of the notches even with the face of the studs. Clapboards, 6 inches wide, are nailed on the notches, with the lower edge extending ½ inch below the notch, and the upper edge of the clapboard in the next notch below; thus leaving a space of one inch between the two clapboards which admits plenty of air, and at the same time prevents the rain from blowing in upon the corn. The bins are 8 feet wide, extending both sides of the building—the floor does not extend under the bins—the bottom of the bins are formed of strips one inch thick and three inches wide, set edgewise, one inch apart. The doors should be hung with strap hinges—so that they can be taken off in the fall, and doors made of slats hung in their places, so as to admit of a free circulation of air through the building. The floor overhead is 1½ feet below the top of the plates, and the entrance to the upper story through the floor directly over the window, by means of a movable ladder.

The granary is in the center of the building, and is 6 feet wide by 18 feet long, with two partitions dividing it into three bins. It rises 2 feet above the upper floor, and extends down to within 6 feet of the lower floor. The grain is drawn up with a tackle hitched directly over the entrance to the upper story, emptied into the granary and is taken out by means of a slide at the bottom, where you want a movable pair of steps, 4 feet high, with the board on the top one foot wide. The entrance steps should be made and hung so that the door cannot be shut when they are down, but must be turned up into the building in order to close it thus avoiding the possibility of leaving it down for mice to run up. There should be a tin fender, 6 inches in width, nailed around each post, close to the sill, projecting downwards.

H. B. H.

Clinton, N. Y., 1859.

GROUND PLAN.

A, Granary; B, Store-room.

Messrs. Eds.:—Having noticed a call for a plan of a Corn House in the RURAL of January 15th, I send the following, which, perhaps, may meet the wants of some of your numerous subscribers, if not those of H. B. H. Considering, however, that H. B. H. is one of the few that believe in the saying of a certain writer, that "What is worth doing at all is worth doing well," we will commence by laying a good stone wall in lime mortar, (which will not be a good harbor for rats and mice,) and

on this wall place sills of sound, hard wood, with a rabbit of an inch and a half depth, in order to admit plank 1½ inches thick. (The plank should be hard wood.) Over this may be used clapboards, or (what is more fashionable now days,) boards up and down, battenning the cracks. The floor may be laid with good, sound hemlock boards, 1 inch thick, jointed and laid double. It should be coiled with well-seasoned hemlock boards, matched and well put together. The height between lower and upper floors 6½ feet—the same above the second floor to the plates. The granary, A, may be cut up into bins, to suit the taste of the owner. The store-room, B, will be found very convenient for barrels and boxes, for keeping fall fruit, &c. A small box store would be of some service in the drying process, especially in damp weather.

SECOND PLAN.

C, C, Corn-cribs; H, Hall.

The plan of the second floor gives you a crib, C, the whole length of the building upon one side, and on the other, is a crib, C, part way, leaving sufficient room to go up and down stairs. At one end of the alley we have a door of sufficient size to admit of large boxes of corn, which may be drawn up by means of a pulley in the ridge above. At the opposite end a large window for light, and also for a draught of air. At the figure 3, in the alley, should be a screen fixed in the floor coarse enough to let shelled corn through; over this may be placed the corn-sheller. The corn, after being shelled, passes through the screen into a conductor, (made tunnel-shape,) which empties it in a large bin below, leaving the cobs above. The front of the cribs should be made of slats in order to let in air. The corn may be taken from small doors, near the bottom of the cribs.

If this plan for a Corn House does not meet the wants of any of the farmers of Old Monroe, perhaps some other will. If not, I would recommend them to move right on in the good old way. They will then keep on good terms with the rats, mice, squirrels, &c.

A. SUBSCRIBER.

Cadiz, Cattaraugus Co., N. Y., 1859.

EDS. RURAL:—In your issue of January 15th, H. B. H. asks for a plan of a Corn House. We have a cheap and convenient corn crib here, which was first introduced in this vicinity by J. W. STOCKING, of Barre. It is "sure fire against rats and mice," and gives general satisfaction. As I am not able to give any drawings, I will endeavor to describe the crib as plain as possible.

A crib, to hold about 1,000 bushels of ears, should be 12 feet wide and 24 feet long. It should stand on oak or cedar posts set 2 feet in the ground, and at least 2 feet above the surface at the highest part of the ground. The posts should be tapered towards the top so that a tin pan may be put on, bottom up, and fit snug. There should be eight posts—three under each side and one under the middle of each end sill. Frame the sills as for any other building of the same size, with a sufficient number of sleepers to make the floor firm. The floor may be made of plank, or inch boards laid double. The rest of the frame may be made of 3 by 4 scantling. A bent is made by framing the rafters on the top

of the post or side pieces, which may be done by making a gain in the rafter one inch deep, and a similar one at the top of the post, locking them together and nailing, or by a mortise in the rafter and tenon on the top of the post, framing and nailing the rafters at the top in the usual manner, and the beam is ready to put up. The posts should be 7½ feet high from the floor, and framed so as to lean out, one foot on each side, making the building 2 feet wider at the eaves than the bottom. The posts should be 3 feet apart from center to center. Nail narrow boards on the rafters for collar beams, to keep the building from spreading and to nail the top of the scantling to for the inside of the cribs. The inside posts should stand perpendicular, 3 feet from the outside at the bottom, which will make a crib on each side 24 feet long, 3 feet wide at the bottom and 4 feet wide at the top, leaving an alley in the middle 6 feet wide. Board up the sides with narrow stuff. If the boards are 6 inches wide, leave half an inch space between the boards—if 6 inches wide, leave three-fourths of an inch space. Board the ends up and down, using narrow boards and leaving spaces at the ends of the cribs. Use narrow boards on the inside of the cribs also. The eaves should project over so as to keep out driving rain.

From 8 to 10 feet of the back end of the alley may be made into a bin to put shelled corn into—the front boards made to slip in between two cleats so they can be put in or taken out as occasion requires. In the full the alley may be used the whole length to put corn in before it is sorted, and be a good place to sort in. In the spring the corn may be shelled and prepared for market under the same roof, and, by using a hand sheller, it may be done in bad weather and stored in the bin so that it is ready whenever wanted to use or sell.

Care should be taken that nothing is left standing or leaning against the crib for rats or mice to run up on, also to prevent weeds growing up within reach of the crib.

Now, I think the inquiry of H. B. H. is answered as far as a Corn House is concerned—a granary should be a separate building, for the simple reason that a crib should be made open, and a granary tight. I may have something more to say in relation to a granary another time.

Orleans Co., N. Y., 1852.

NATIVE CATTLE.

There is weight in the remarks of Mr. J. W. Proctor, in the *RURAL* of Feb. 12th, and for one I am inclined to consider our native cattle much more valuable for our climate and our agriculture, than many seem to admit them to be. I doubt not that improvement results from crossing the native with the blooded animal; but which race is most improved, is a hard matter for me to determine, as the offspring is not unfrequently superior to either parent.

In one way blooded cattle are indeed a blessing—they require better care than the native—more tender treatment—hence, have a tendency to make their producers better farmers, leading them also to read the papers, to learn what is said against their favorite blooded stock.

In our knowledge of cattle-buying, for fattening purposes or the city markets, we have never seen any difference made in favor of any blood, or breed, or race, for these specialties, attention only being paid to size and form. If it is a fact that some other breed is decidedly better to take on flesh than the native, or infinitely superior to them for milk—the one laying on a greater value of flesh from a given amount of food; the other producing more butter on the same keeping in a given time—we should know it. The keepers of these animals should make their announcements with facts and figures.

Scores of animals are sold at high prices, solely on account of their pedigree. What is the object of the farmer buying them? Why, to grow cattle for market—not New York city—but to supply the demand for blooded cattle. It is a paying business, but displace the native, and let the *Ayrshires* or *Durhams* alone be raised, and we should have just as many and as forcible arguments for crossing the prevailing or blooded stock with the native, to improve it, as we now have the other way.

The facts are, we have got a good hardy stock of animals now; fattening in summer on what we cannot afford to gather, and standing the winter finely in the lee of last year's badly piled straw stacks. I doubt if we should gain by exchanging them for any one breed in Christendom, unless in changing stock we changed farmers.

The truth is, the workman is known by his chips—the loafer by his habits—and the good farmer by his practice. When a farmer is ready, willing, and competent to take charge of a herd of improved cattle, if he cannot buy them he can raise them to his liking, and that without depending entirely upon the masculine and feminine planets of the Herd-Book Constellation.

What course could be adopted better calculated to utterly exterminate a race of cattle than that pursued by our cattle breeders since the settlement of this country—especially here at the West. The female is depended upon almost universally to perpetuate the species. Males are seldom kept more than two years, as after that time they are likely to be unwell, hence our entire stock of cattle, without one exception in a hundred, are the offspring of an undeveloped male. What other race would have borne such a test as this so well?

The advantages derived from crossing natives with improved breeds are very great, but we shall consider the natives the base, or foundation, to work upon in all our operations, esteeming the improved native superior to the full blood animal for practical purposes.

Amboy, Ill., 1852.

BEANS FOR STEEP. Having read in the *RURAL* the account of your Danish subscriber in regard to feeding beans, I thought I would reply about six weeks since I commenced feeding my steers of about one hundred head about twelve quarts per day, and they are thriving very nicely. I am firm in the belief that the above stated amount of beans is equal to one bushel of corn. Will some of your subscribers please send a great deal of a corn meal and long pen point and pen for feeding, about twenty hogs, the expenses, &c. A. S. S. RICH, Rome, N. Y., 1852.

"WILL KEEPING SHEEP PAY?"

EDS. *RURAL*:—Having noticed the statements of several gentlemen taking the affirmative of this question, I take pleasure in furnishing my testimony, which is not in the least exaggerated, although stronger than that of others.

The profits of sheep husbandry are varied very much by circumstances, i. e., climate, soil, and manner of treatment; but especially are they varied by the breed of sheep which is kept. My experience with sheep teaches me that the New Leicester-shire breed is the most profitable for our latitude, and that the cheapest mode of keeping any flock, is to provide them with good shelter, and to feed them sufficiently high to maintain an even, good condition, throughout the year.

In November, 1856, I obtained in Canada, seven Leicester-shire ewes and one ram. The following season (57) I sold from them as follows:

Lambs and Wool to the amount of.....	\$145 65
In 1858 do. do.....	99 85
Have on hand eight lambs and three yearlings.....	275 00
	\$520 50

Average income per sheep each year

To those who may remark that I put the price of my lambs too high, I would say that I have sold lambs of this stock for forty dollars each, and have refused thirty dollars for a lamb now in my possession.

G. M. PECK.

East Bethany, N. Y., 1852.

Messrs. EDS.:—Noticing the responses on this important subject, in the *RURAL*, and looking over my memorandum, I thought I would relate a little of my experience in sheep-keeping. I think it will pay. I wintered fifteen ewes last winter, on hay alone, which sheared 5½ pounds of wool per head, which I sold for 26 cents per pound. These ewes brought me 22 lambs—one of them having two lambs, seemed to have a decided preference for one, and a total disregard for the other, which I did not notice till it was too late to save him, but I raised 21 fine lambs—for which I have been offered \$4 each. This result is very satisfactory to me, of course, but I did not think worthy of newspaper record until I saw the statements of Messrs. WURTZMANN, TABER and GRAVES, whose average yield is \$4.02½, \$7.00, and \$5.10, respectively. Now, for the figures in my experiment:—Eighty pounds of wool sold at 36 cents, is \$28.80. Twenty-one lambs not sold, (and I do not mean to sell them at the offer of \$4.00 per head,) is \$84.00, making the product of the fifteen sheep \$112.80, or an average yield of \$7.52 per head. My sheep are supposed to be nearly full blood Merino—can't say whether Spanish or French.

Wm. I. KIR.

Macedon, N. Y., 1852.

A MISSOURI EPISTLE.

EDS. *RURAL*:—A few items, from this section, may not be destitute of interest to some of your readers, especially those whose limited means, youth, and enterprise conspire to turn their thoughts Westward. I am too recently from the Valley of the Genesee to be very enthusiastic in my opinion of the West, but there are some advantages too palpable to be overlooked.

The geographical position of this State, its fertile soil, mild and healthy climate, and exhaustless mineral deposits, combine to furnish the elements of wealth in great abundance, affording a promising field for the investment of labor, and capital. I speak of the farming interest as being most interesting to you. A ready market, and remunerating prices are furnished in this city. The range of choice of crops is extended by the great staples hemp, tobacco, and the grape, which can hardly be cultivated successfully in a latitude above 40°.

The difference between seven months foddering, and four, is a very important advantage to the stock-raiser.

The soil of Missouri is well adapted to all kinds of grain and fruits. I daily see apples in market, that would be thought extra fine in Rochester.

The broken country in the south, is said to present the same characteristics as the wine districts of Europe.

A very great inducement to a poor man, is the cheapness of lands. Prices range from 1½ cents, under the Graduation act, up to any sum fancy or speculation may determine, but quality and price have no connexion.

Times are called hard, but nothing to be compared with what is experienced in other States.—Business in this city is quite dull at present, compared to what it was two months since. Prospects for a person seeking a salaried situation are very poor—no one should come in search of such until the business season opens.

R. E. McMAHON.

St. Louis, Mo., Jan., 1852.

ANOTHER POTATO EXPERIMENT.

EDS. *RURAL*:—In reply to an inquiry by W., in your paper of Feb. 12th, I am happy to state my experience has been very different from his. In the spring of 1856, I sowed some seed, taken from bolls of door-yard potatoes, but being sown too thick, afterwards transplanted some of the plants, from which I obtained my nicest potatoes, the largest being slightly more than two inches in diameter,—many, however, were quite small. These were planted the next spring, producing at least twenty varieties, distinguishable from the others, each plant appearing to have produced a different kind. Only three of the varieties giving promise of any real improvement, I planted the whole the ensuing spring, (1858), and was not disappointed in digging to find that but three varieties had met my expectations, and these I am carefully preserving for another trial. In their appearance they are entirely distinct—one much resembling the door-yard bolls, from which it sprung, except being lighter colored inside and out,—another a longish potato, of a reddish-yellow skin, very white and mealy when cooked,—the other is round and white, with a red, sunken eye, and very nice for the table. They were exempt from the rot, with which old varieties, planted by their side, were considerably affected. I have about eight bushels of these three varieties, and should my next experiment prove as successful as I have reason to hope, you will again hear from me.

S. S. S. DEER.

Etos, Tompkins Co., N. Y., 1852.

CHEESE-MAKING.

LAST September "A Subscriber" made some inquiries about cheese-making, and I have waited for some of our experienced cheese-makers to send on the desired information, but, as they do not, I will answer some of his questions.

The *Rennet*.—I do not save the curd in the rennets, and to avoid having much in them, I put the calf away from the cow about twelve hours before killing; there will then be but little curd, what there is, take out carefully and throw away. Do not wash the inside of the rennets, but salt well and stretch on a stretched stick, then hang them up to dry where it will not be too hot for them. It is generally believed that rennets a year old make milder cheese than those of less age.

To Prepare the *Rennet*, take ten gallons of water about milk-warm, put in ten rennets, add a little salt to keep them sweet, soak about two days, rub them well a number of times while soaking to get out the strength, then take them out, salt and dry again for future use. Strain the liquor into a tub or jar, put in a little more salt than will dissolve; take a small bag and put in four ozs. of cloves; four ozs. of cinnamon; a handful of sage, and four or five lemons, cut into with a knife, tie up and drop into the liquor. Stir before dipping out each time, and keep in a cool place. Put enough rennet into the milk to have it ready to cut up in thirty or forty minutes, the milk to be from 84 to 88 degrees heat when set.

Cheese Cutter.—It makes but little difference what kind of cutter is used, provided it has a smooth and rather sharp edge—wire cutters have been used generally about here. A four-bladed knife, just coming into use, is said to work well—with any kind we have to stir the curd with the hand while scalding to keep it from setting and adhering.

For heating milk or whey I use a dairy stove and tin heater. After the whey is sufficiently heated, dip it on to the curd gradually—be from fifteen to twenty minutes raising the heat to 100 or 105 degrees. No particular length of time can be given for scalding. When hard enough it will squeak between your teeth when chewed.

Before salting, drain well. When I intend to take the cheese to market from, three to six weeks old, I put a teaspoon, or six and a half ounces of salt to twenty pounds of cheese—when to be kept through the summer, the same quantity of salt to seventeen pounds. Keep the curd fine in the sink. Press about twenty-four hours, turning twice during the time. As to the amount of weight for pressing, it makes but little difference—if the cheese is worked fine and cooked enough, there will be no trouble in getting out the whey. The above rules are intended for summer cheese. For spring or hay cheese, when the weather is cold, the milk must be about 90° when set, but scald from 94° to 98°, and, if you wish to cure quick for market, salt light—a cup full to 25 or 28 pounds.

Newport, Herkimer Co., N. Y.

GEO. GRAVES.

HEATING WATER FOR SCALDING HOGS.

Messrs. EDS.:—In a late issue of the *RURAL* a friend in Illinois gives his method of heating water for scalding hogs. His plan may be an improvement over the old system of heating rocks for that purpose, but here, in Buckeyeedom, where we raise and kill hogs for amusement, we have discovered a better way, and as the *RURAL* is a medium of communication, I will just give my plan. I, too, substitute metal in the place of rock, but I have it in a different shape from that of our Illinois friend. His cast-iron, I presume, is solid, mine is hollow, of an oblong form, holding about 50 gallons, with cap screwed on, making a snug steam boiler, neatly set in a furnace. From this boiler there is a pipe of vulcanized rubber, into a box or tub—mine is a kind of vat made of very heavy plank, two feet deep, two feet wide, and six feet long—in which I prepare my pig feed, throw my corn meal, pumpkins, potatoes, &c., and by means of the steam cook it into a mush; and, believe me, the pigs are fond of it. That it agrees with them is evidenced by their thrift. When my pigs get to be respectable porkers, and butchering-day comes, I fill this vat sufficiently full of water, and by the application of steam, raise it to scalding heat—no handling or dipping of hot water. Here you have all the facilities for scalding of a regular slaughter-house. After my hogs are neatly dressed and cut up, I take the top off my steamer, and I have as fine a kettle as need be for rendering lard, &c., and all at a moderate expense.

Beechville, Ohio, 1852.

A. DOUGLASS.

CHEAP AND GOOD BAROMETER.

Messrs. EDS.:—In the *RURAL* of the 5th inst., I notice that Wm. SHAW says "a truthful and cheap barometer may be made by taking a clean glass bottle and putting in it a small quantity of finely pulverized alum. Then fill up the bottle with spirits of wine. The liquid will be clear in fine weather and rily in foul."

I would say, that the undissolved gum in a camphor bottle and some other substances, will act in a similar manner. I once purchased some aniseed oil, and filled the vial in which it was, with spirits; but it did not hold enough to cut it all. In foul weather it was generally cloudy, and in fine it was clear. I thought it was quite as good an indicator of the weather as the camphor bottle. Now, will Mr. SHAW, or some other person, tell us why these substances are "riled" at times, and then, again, are perfectly clear? They certainly seem to be disturbed in foul weather more than at other times,—and, according to my observation for the last three or four years, indicate the weather quite accurately. I don't remember of ever seeing the camphor bottle muddy-looking, except in cloudy or stormy weather. I have sometimes thought it was nearly as useful as a mercurial barometer to persons unskilled in the use of one. Let us hear from the wiser ones on the subject.

Earlville, N. Y., 1852.

CORRESPONDENTS will please let "patience have its perfect work"—the many favors received will find place in *RURAL* columns just as speedily as space permits.

Rural Spirit of the Press.

Truths for Farmers.

A recent number of the *Country Gentleman* contains an article addressed to farmers, by JOHN JOURNIXON, Esq., one of the most successful agriculturists in the State, that presents some facts which are deserving of special consideration. After speaking of the exhausting process of over-cropping, by which much of the land has been so impoverished as to scarcely pay the cost of tillage, he proceeds as follows:

"Since I can recollect, the farming in England and Scotland was conducted with far less intelligence than it ever was in this country since I have lived here. Then their rents were a mere trifle. It needed little enterprise or intelligence to raise it; but as population increased, rents increased rapidly, and farmers had to use their brains as well as their hands, to pay their rents and their yearly increasing taxes. Sixty years ago, if their cattle could rise with the help of man, when grass was about coming, they considered them fairly wintered; but every time that their rents were raised, they reduced their stock of cattle and sheep, and kept those they had so much better; and as the rents still advanced, they commenced the turnip husbandry, collecting everything that would make manure, and finally imported bones from the continent, where the farmers were less provident, and even bones were exported from this country to help to fertilize the fields of Great Britain.

Sixty years ago the farmers in Great Britain sowed seven to eight bushels of oats to the acre, and reaped twenty—sowed five or six of wheat, and reaped fifteen. Now they sow about four of oats, and reap from forty to eighty—they sow about three of wheat, and raise from twenty-five to fifty. Manure—nothing but manure has made the change. No cultivation will make either good crops of grain or grass, if the material is not in the land to make it. Now we have got to follow their course, or else do much worse, for it must be evident to every thinking farmer, that the farming community has far less capital in their broad acres than they had thirty years ago; and it would have been much better in the land with the mass, than where it now is. I don't pretend to say that all farmers have so reduced their land, but I do say a very large majority have, and I advise them to pause, think what they are doing, and what will be the consequence if they continue the same system of farming for the next thirty years. Now, for the remedy. Cultivate far less land; manure highly; keep the stock, whether sheep or cattle, far better. I will have thirty tons of oil-cake fed out, since the 20th of last November, by the 15th of May, besides corn and buckwheat not a little. Every farmer must ultimately feed better, to make more and better manure."

Manure is Money.

In a recent article under the above caption, the editor of the *Connecticut Homestead* remarks:—"We are becoming daily more impressed with the belief that prices of farm produce are to be very high next fall and winter. We have had some talk within six months on the question, whether or no Connecticut produces food enough for her population. It is idle to argue the point—she does not. Our markets are supplied from the West, and if prices rise high there, they will here, of course. Therefore the higher they are and more we raise, the two-fold gain to the State is increased in a great ratio. No man doubts that with better culture, the corn crop, of this county for instance, might be doubled, to the detriment of no other crop, not even tobacco. * * * We believe that our way to wealth lies in supplying this hungry market here at our very doors; aye, literally, at our doors, for the buyers will take almost anything we have to sell, and come after it, too.

"We have had experience enough, all of us, to know that to make crops we must use manure; that to use manure we must either have a bank vault to draw upon, or we must make manure; and that to make manure the chief thing is stock, and the next thing is care of their excrements.—Now, in order to keep stock, we must make provision for them of hay, grain, corn-fodder, roots, millet, or something of the kind. In order to have the stock to make the manure to feed the crops to supply the market, we must spare the calves. For we hold that the manure of neat stock is the one indispensable article of the kind, the universal manure of the farmer. Horse, hog, hen manure are each good, and worth more in some circumstances; but on the farm, and for all uses, nothing can compare with that of neat stock.

"Let us urge farmers to plan to raise this year more corn, and more roots, and more stock. This can be done on almost every farm in Connecticut—we are serious—it is true. Plow up a quantity of your sward land, and you can raise more corn. Sow corn for fodder, broadcast or in drills, or Hungarian grass, or Egyptian millet, and you will have dry fodder according to your utmost need. Sow sugar beets, carrots or ruta bagas, and you will not only supply yourself with a hay-saving crop, but one for which there is always a ready market."

Preserving Butter.

The *New Hampshire Jour. of Agriculture* says the farmers in the parish of Unda, county of Aberdeen, Scotland, practice the following method for curing their butter, which has obtained for it a great superiority over that of their neighbors:—Take two quarts of the best common salt, one ounce of sugar, and one ounce of saltpetre; take one ounce of this composition for one pound of butter; work it well into the mass, and close it up for use. The butter cured with this mixture appears of a rich and marvellous consistence, and fine color, and never acquires a brittle hardness, nor tastes salty. Dr. Anderson says:—"I have ate butter cured with the above composition that had been kept three years, and it was as sweet as at first." But it must be noted that butter thus cured requires to stand three weeks or a month before it is used. If it is sooner opened, the salts are not sufficiently blended with it, and sometimes the coolness of the butter will be perceived, which totally disappears afterwards. The above is worthy the attention of every dairy woman.

Agricultural Miscellany.

THE MONROE CO. AG. SOCIETY is to hold its next Annual Horse Show on the 4th of July, and the general Fall Exhibition on the 25th, 26th and 28th of September.

NEWMAN STATION WANTED.—"A Subscriber" at Clinton, N. Y., wishes to know where he can find a full bred Norman stallion for purchase or hire. We cannot say. Had he given his name any reader having one could have written him on the subject.

A GOOD "NATIVE" COW.—A subscriber at Fairport, in this Co. (who ought to have authenticated the statement by giving his real name,) writes us that he proposed to his wife to set the milk of his native cow, (of medium size) for one week, and churn the cream. The result was 15 lbs. and 10 oz. of butter. The cow is fed on dry hay, though her milk, after skimming, is given her to drink. He adds that there are many cows in the vicinity that would sell for more money, on account of being grade or full-blood Durhams, but questioning whether they will produce enough more butter on same kind of feed, to warrant the difference in price.

LARGE BEEHIVE.—Lee and Dead Weight.—The *Tribune* has the noted pair of fat beavers, exhibited at the Fair by JAS. FAIRBANK, of Berlin, Conn. The beaver and gave the live and dead weight as follows:—One weighed 29½ pounds, made 1.95 pounds of best 315 points rough tallow, 117 pounds of lard. This shows a net weight of over 6 pounds per hundred live weight. New York estimation, and over 85 pounds Boston estimation. The other never weighed, net, 20.0 pounds.—These beavers were aged 4 years 6 months, and 4 years 10 months, full blood Durhams, raised by C. V. Shells. A steaky, fed ten months by Mr. Fairbank, 4 pecks of corn meal, 4 pecks of bran, and hay as much as they would eat.

THE NEXT ILLINOIS STATE FAIR is to be held at Freeport. The premium list amounts to \$16,000. The premium of \$3,000 is reserved for Steam Plows—\$1,000 for best, and \$2,000 for the 2d best—to be awarded by the Executive Committee, together with Scientific, Engineers and Machinery. The trial of Steam Plows to take place at the Fair at Freeport, which is to open Sept. 6th.

FARMERS' CLUB, EAST MAINE, (Broomfield Co., N. Y.) writes that this Association—of which A. H. GREENE, Esq., is President, and ROBERT HOON, Secretary, was formed last fall, and has had regular meetings through the winter, for discussions, which have been highly interesting to all. As Spring opens, the members, whose motto is "Always Ready," commence practicing what they have preached, and the advances they have made will not only be felt at home, but will be seen by travelers.

THE TOWN SOCIETY of Glen, Wayne Co., N. Y., held its annual meeting at Clyde, on the 12th inst. Officers elected:—President—OSCAR WENZ; Vice Pres.—OLIVER STRATTON; Secy.—JOS. WALSH; Treas.—THOS. PLUMTREE; Librarian—MOSES MUNN; Directors (five 3 years)—BENJ. WOOD and M. DAYTON. This Society is organized under the "General Law," has surplus funds on hand, a good library of appropriate reading, and appointed the 10th of Sept. as time to hold a Fair at Clyde—with flattering prospects of "A Success."

A UNION AG. SOCIETY RE-ORGANIZED.—At a meeting of the Union Ag. Society, held in West Winfield, March 8th, it was resolved to re-organize—that the Society comprise the towns of Winfield, Columbia, and Littlefield, in Herkimer Co., Plainfield and Richfield in Otsego Co., and Bridgewater, in Oneida Co.—and that it be called the "Winfield Union Ag. Society, and Philanthropic Club." After adopting the old Constitution, the following officers were chosen:—President—NEWTON WILCOX; Vice President—A. L. FISH; Secretary—J. A. MORGAN; Treasurer—Hiram Brown; Directors—O. Babcock, Bridgewater; J. D. Eaton, Columbia; Anson Rider, Littlefield; William Brown, Plainfield; Alonzo Vashburg, Richfield; Jonathan Jones, Winfield; Town Secretaries—J. B. TUCKERMAN, Bridgewater; Philip Wilber, Columbia; C. D. Faulkner, Littlefield; S. A. Chapman, Plainfield; Stiles Gray, Esq., Richfield; Roswell Morgan, Winfield. It was resolved that the Annual Fair be located in Winfield, with permanent fixtures for five years, if suitable grounds can be obtained. After passing resolutions relative to public discussions—providing for advertising animals or articles offered by members for sale or exchange, (by recording in the books of Town Secretaries, &c.)—and offering to the town which shall furnish the greatest number of members, a Banner to float over the show grounds on the day of the Fair, the Society adjourned. These proceedings indicate a desire to achieve decided "Progress and Improvement."

"TERRA-CULTURE"—Is "Professor" still Rumpant?—There's little use of killing some humpers, for, after being effectually buried in one locality, they will "turn up" and flourish and fleece community a thousand miles distant. The *RURAL* and other Ag. journals years ago exposed the fallacious theory of "Prof." Comstock—the man who has been waiting so long for an ungrateful Republic to give him a million of dollars or less to disclose the mysteries of terra-culture—yet there are places in this "widely-extended country" where he "still lives," temporarily, and depletes the purses of the lovers of the marvelous. His "last appearance" was in the "Old Dominion," as we infer from a slip cut from a local paper and kindly sent us by a friend at Fairfax C. H., Va. In this slip the "Prof." is severe on the "learned Agricultural Editors of the North"—as indeed he well may be, for they have pretty effectually spiked his swindling swivel wherever their journals circulate. The *RURAL* had the misfortune to open the warfare on terra-culture, and hence itsirate "Professor" is particularly "down" on "Mr. Moore." He can't forget that the whole "secret" and wonderful "mystery" was first given in the *RURAL*—not that "Mr. Moore" fearlessly exposed his subsequent forgery and falsehoods. But if he lied then, he now proves himself the father of liars, for the statements made relative to us, in the slip aforesaid, are utterly false and ridiculous. For instance, in reply to the charge that he forged our signature and placed it at the head of a list of sixty editors endorsing his theory, he says that "Mr. Moore's agent signed Moore's name," etc. Now, this is sheer "gammon"—for neither Moore, nor any agent of his, ever signed anything endorsing terra-culture. And the assertion that Moore "offered him \$50 to write an article on the practice of terra-culture for his paper" is equally false and absurd, for we never offered him a penny, or even suggested the thing. On the contrary, we refused to publish what he desired on the subject, though he offered us the gold for such services! Thus, instead of our offering him, the offer was from him—which, according to our notion, is a "white horse of another color." But we forgive the hallucinated "Professor," and not only that, we purpose to "return good for evil" by giving his portrait in the *RURAL* in a week or two—a double view, as seen by him and also by the public. As to his theory, that is proved to be an egregious "sell," yet we may perhaps, in connection with the portrait, again "disclose the disclosures" for the benefit of our Virginia and other distant readers.

SPRING AND SPRING WORK.

Spring weather is fairly with us. To-day (March 14th) the air is mild and balmy, and the thermometer marks 60°. Snow Drops, in warm situations, have been in flower for about ten days. The *Orocus* are just beginning to show their golden flowers, and are doing a good deal to make the garden look gay and spring-like. The *Cloth of Gold* is a gem, on account of its earliness, and rich, golden color, relieved by a beautiful dark stripe. Many persons destroy the effect of the *Orocus* and other early spring flowers, by neglecting to clear up their gardens until late in the season. With the walks all littered over, their edges ragged and overgrown with grass, and everything laying round in confusion, the pleasure that would be afforded by these bright harbingers of spring is lost.

The *Robins* made their appearance, we are told, about the 8th, but we first saw them on the 11th, and *Bluebirds* on the 12th.

The *Hot-Bed*, for the making and management of which we gave full directions in the last two numbers, should be attended to at once. Those who are not disposed to undertake the care of a *Hot-Bed*, can start celery, tomato and other plants for transplanting, as well as annual flowers, and also raise a few early radishes, lettuce, &c., in a *Cold Frame*, made as directed for a *Hot-Bed* frame, but without manure. This forms a kind of small green house, and will be found very useful with but little expense or labor.

Readers in want of good Flower and Vegetable Seeds will do well to notice the liberal offers made on page 99. A little effort will enable any one to secure a fine collection of seeds, and at the same time do his neighbors a great good.

CIRCULATION OF SAP.

EDS. RURAL:—In yours of the 19th of Feb., L. B. MANLY inquires concerning the circulation of sap in trees, &c. I will offer a few remarks that possibly may afford him and others some information upon this interesting subject. If an acorn, and so with other seed, is planted an inch or so beneath the surface of the soil, and the other conditions favorable to germination follow, in a few days, the leaves and stem will shoot upwards into the air, and the root strike downward, into the soil. The opposite directions taken by the root and the stem, are controlled, and directed by laws as certain and fixed as are those that govern the movements of the planets.

For a season, the root, blade, leaves, &c., are fed by the decomposing ingredients of the parent seed. But sooner or later, this food is used up, and the young plant must draw from the soil and the atmosphere its food and means of growth. By this time the roots have been endowed with the property of absorbing the water of the soil and transporting it through the pores of the woody structure of the plant to the leaves, and at the same time, the leaves have acquired the power of taking in the carbonic acid of the air, decomposing it, and returning the carbon to build up its woody, or carbonaceous structure.

The spongy terminations of the roots of plants are covered with a thin membrane, and they possess, through this membrane, the power of drawing or sucking up the water of the soil, and of forcing it through the minute pores of the tree to its topmost leaves, and some of the trees in California are more than 350 feet high. The water absorbed by the roots holds in solution, in very minute quantities, the various earthy ingredients found in the ash of burned plants. In the leaves of the tree, or plant, a very large portion of the water, (crude sap taken up by the roots) is evaporated through the pores of the leaves, and the condensed or true sap, descends between the bark and wood of trees, and forms the new layer or annular ring of the tree.

We can exactly imitate the ascent of the water from the soil, through the pores of the tree to its topmost leaves, or in other words, cause water to voluntarily "run up hill." Still the cause of the ascent of the sap is not the more clear that we can imitate it by an artificial experiment.

Some years since, Dornocner fitted up a cheap instrument, which enabled him to pretty nearly comply with all the conditions regulating the ascent of sap in trees, &c. The conditions attending the rise of the sap in trees, I will attempt to describe; as also the instrument with which we can so readily imitate the ascent of the sap, or water, from the soil to the extremity of every green branch and twig, bud and leaf of the tallest tree.

The soil contains water; the roots of plants penetrate the soil, in various directions, and to various depths; and the ends of the roots are covered with a film-like, or membranous envelop, which, as already stated, possesses the power of absorbing the water of the soil. The plant contains sap, holding in solution mineral and other substances, so that its specific gravity is greater than that of the water in the soil. The roots, body and branches of the tree are filled with minute tubes or pores through which the sap passes from the roots to the leaves.

The instrument imitating the above conditions, was as follows:—I took a tabulated cupping glass, holding half a gill or more; over the bottom of this was tied, drumhead-like, a piece of thin bladder; in the opening of the cup at the top inserted a cork with a hole; into this I inserted a small glass tube about sixteen inches long, precisely like the tube of a thermometer. The cupping-glass was filled with water sweetened with molasses, and placed in a vessel containing clear water; the water in the cupping-glass and the vessel were of the same level. The sweetened water in the cupping-glass being of greater specific gravity than that of the water in the vessel, represented the sap in the plant; that in the vessel, the water in the soil; the bladder over the bottom of the

BEURRE SUPERFIN PEAR.

For some time we have been aware that this most excellent pear, of which we now present our readers a fine engraving, was not appreciated by fruit growers, and that not half its merits were recorded in the fruit books. It was with the greatest pleasure that we observed this opinion corroborated by all those who spoke on the subject at the last meeting of the American Pomological Society, when this excellent pear was unanimously recommended for general cultivation, both on the pear and the quince, the President declaring that it was "one of the best in the catalogue—there might be an equal, but could be no superior."

The tree is beautiful in appearance, an excellent grower, and great bearer. Our engraving shows

only a medium sized specimen, and it often grows to a very large size. Skin yellow, slightly shaded with crimson on the sunny side, and partially covered with russet, and thickly sprinkled with minute dots. Stalk stout, from three-fourths to an inch in length, inserted without depression by a fleshy enlargement. Calyx closed, in an abrupt, small basin. Flesh exceedingly juicy, buttery, melting, with a brisk, vinous, or sub-acid flavor. Ripe all of October.

In the Report of the Massachusetts Pomological Committee, Dr. EDWIN WIGHT, the Secretary, says the *Beurre Superfin* is "of the first quality, but not yet a prolific bearer." Our observation in regard to its bearing qualities is the reverse of this.

sary, but, in my opinion, detrimental. Then again, the ease with which most swamps can be flowed during fall, winter and spring, gives the cultivator an advantage over weeds, which, on dry land, are not only more annoying, but can only be kept in check by a persevering use of the hoe or some equivalent. To accomplish this, one has only to close the outlets of his drains in fall as soon as the crop is gathered, and let them remain closed until the return of warm weather in the spring—a course which I would recommend wherever it is practicable. When this can be done, very little, if any, weeding or hoeing will be needed.

MODE OF CULTURE.—Having drained the land as already intimated, those portions on which the water formerly remained most of the year, will usually be sufficiently clean for the immediate introduction of the plant. That part covered with a thick sod, I pare off, and throw the sods into heaps for decomposition,—the result of which forms an excellent manurial preparation for fruit trees. In the clean surface thus exposed, I make shallow parallel trenches eighteen inches or two feet apart, and in the trenches place my vines varying from one to eight feet in length. A slight covering every six or eight inches, completes the work of transplanting. At each point so covered, roots will be formed, and new vines will shoot off. Set in such soil, no loss from drouth need be feared.—In two or three years they will cover the ground. Being an evergreen, the month of May is a very good time, if not the best, for transplanting. If set in the fall, having no time to root, they are liable to be thrown out by frosts.

PROLIFIC QUALITIES.—My variety, the *Low Land Bell*, is an annual bearer, and will produce fruit the same year in which the plants are set. From a few rods of ground set last May, I last fall gathered a half bushel, for some of which I received the first premium at our last State Agricultural Fair. Some of the fruit which I send you is from the half bushel above mentioned. In four years my crop has increased from seven to sixty bushels. Considering that the price of this fruit per bushel is rarely less than \$3, and is frequently as high as \$4.50, is there not here an incentive to effort on the part of all who may possess swamps of the character herein intimated? A few dollars expended on these waste, unsightly places, will make them the most profitable portions of their farms. Drain them and transplant to cranberries, and you will make the desert in summer "blossom as the rose," and in autumn wear the crimson of a desert which kings, as well as all good housewives may well covet.

Caton, Steuben Co., N. Y., 1859.

GRAFTING THE GRAPE.—Can you, or any of your readers, inform me, from actual experience, whether it is any benefit to graft buds into short pieces of root, as would have to be used to propagating pots? Also whether the grape has ever been grafted with any degree of success? The subject was discussed in our State Convention, and one gentleman claimed he had tried it with good success; another stated he had tried it, and in no instance knew them to adhere, and considered it of no practical benefit.—H., Forestville, Ct.

LITTLE, we think, is gained by grafting in the propagation of grapes in pots, as most native varieties start very freely from single eyes. Old vines can be successfully grafted, after growth is commenced, and shoots made from eight to twelve inches in length. If done earlier the stock will bleed, and prevent union. Graft in the ordinary way, by splitting the stock, being careful that the bark of the scion comes in contact with that of the stock.

THE "ALLEN RASPBERRY."

"A pretty sort of country this," said TRAGUE, just after landing, "that a gentleman can't say and do what he pleases, without such a patter about his ears, and a threat of the bilboes"—said "Jasper." Bad enough, friend ALLEN; but then you go it too strong—neck and heels, and body, and all. Fie-fie, my friend, how can you let your temper so get the better of sober truth. For myself, I hoped you had reformed, and left off these tricks.

"O, wad some power the giffie gie us,
To see ourselves as others see us."

Didn't get them of Mr. SOTHAM! "Never had a Raspberry plant of W. H. SOTHAM." Bad memory, Mr. ALLEN. I know, so far as observation permitted—which has always been abundant—as also your admissions in fruit talks—you never had a Raspberry plant within the past ten years, other than your present lot from Mr. SOTHAM's ground. Why, my good friend, had you a Raspberry—even an odd one, the welkin would have rung its presence—the *Horticulturalist* would have chronicled it many times—the "coterie" would have seen it, and heard of it, too. Now, this is too much like that water and milk story to heed further—a mere *lappus lingua*. Your usual abuse under such circumstances is to be expected, any other course would be an exception, not often recurring.

"Never saw my plants in bearing!" True, sir, I never did; neither have you, I fancy, more than a few odd fruits. When I last saw your plants, which was at your especial request, to determine whether or no they were not the "Hudson River Antwerp," you made an estimate that they would yield 80 quarts per row. Did they yield the thirty quarts? No, sir. You stated they had failed to fruit from some cause!!!

Now, sir, the simple statement I made in the RURAL, as to their origin, was truthful in every respect, and I simply desired that it should retain its own proper name, hoping my friend and neighbor would thank me for refreshing his memory in a matter so necessary to the public weal. Desirous of learning from Mr. SOTHAM under what name he got them, he writes,—"I obtained the Red Cane Raspberry of which you speak, and some of which I gave to Mr. ALLEN, of Mr. ELLIOTT, of Cleveland. Mr. ELLIOTT will tell you from whence the Raspberry sprang, as he wrote me at the time, but I have forgotten." On writing Mr. ELLIOTT, he says,—"The Raspberry sent to Mr. SOTHAM is the 'Falses Red Antwerp,' long cultivated by the market gardeners of Cleveland, and I presume is the same as the 'Allen Raspberry.' It is a good old sort; nothing new, and can be bought at Cleveland in any quantity at \$15 to \$20 per thousand." So much, Messrs. Editors, for the "Allen Raspberry." *Mayna est Veritas, et praevalabit.*

Longsight Place, March 6, 1859. W. R. CORROCK.

HARDY FRUIT TREES.

EDS. RURAL:—Having noticed in your paper several inquiries for fruit trees that are hardy at the West, I would say that I have lived here nearly twenty years, and having made the subject of fruit culture a special study, feel qualified to speak of some varieties at least. I consider the *English Golden Russet* the best apple for a Western orchard, being the best for form, thriftiness, and hardihood of tree, and quality of fruit. The fruit requires to be barreled, otherwise it will wilt. The following sorts I consider good fruit, and the trees are perfectly hardy:

Summer—Carolina June, Sops of Wine.

Autumn—Autumn Strawberry, Fameuse, Bailey Sweet, Pound Sweeting.

Winter—Barnesfordshire Pearmain, Yellow Bellflower, Tolman Sweet, Rawles Janet, Winesap, Red Romanite, Cayuga Red Streak or Twenty Ounce, and Perry Russet. [Rawles Janet and Red Romanite will keep a year.]

Tender—Fall Pippin, Newton Pippin, Spitzenberg, White Winter Pearmain, and Willow Twig, have all winter-killed in my orchard. Golden Sweet, Rambo, Hocking and Domine are all good fruit and good bearers, but were injured by the hard winters.

Plums and Improved Cherries have been a total failure, as far as my acquaintance extends. I have a *Flemish Beauty* pear tree, (standard,) set out in 1851, that appears to have passed the hard winters without injury. Two or three others were killed.

If any one can tell how to kill the *Dark Lice* where they cover large trees, I hope they will do so. Delavan, Wis., 1859. HORACE LA BAR.

LOCUST AND HONSE CHESTNUT SEEDS.—Will you, or some of your subscribers, please inform me through the RURAL, how Locust Seeds are to be treated previous to sowing, the best mode for sowing and cultivating, and the time of year when they should be sown? Also, how Horses Chestnuts are to be prepared for planting, and when and how they should be planted? I have been told that locust seeds must be scalded, or they will not grow, and I know of no source from which so reliable information can be obtained as through your invaluable paper, which is thought to be the "no plus" of perfection by subscribers in this place. By answering the above you will oblige more than one besides the writer.—A. B. MASON, Skykerville, N. Y., 1859.

LOCUST seeds should be scalded before planting, to soften the hard covering. Pour boiling water upon them, and allow them to soak for at least twenty-four hours. Or, it would be better to pour merely scalding water upon them, and allow it to cool, repeating the operation at least three times during one or two days. Then sow in a mellow, well prepared soil. Horses Chestnuts should be planted in the fall, or kept in sand until spring. Plant in good, mellow soil, and cover about two inches deep.

GRAPE GROWERS' ASSOCIATION OF HAMMONDS-PORT.—The Annual Meeting of this Association was held on the 1st inst., and the following gentlemen were elected officers for the ensuing year:—President—HENRY L. LARROWE; Vice President—E. P. SMITH; Recording Secretary and Treasurer—T. M. YOUNGLOVE; Corresponding Secretary—A. Y. BAKER. The next meeting and exhibition is to be held in October next. We will in our next, give some extracts from the proceedings of the Association, showing the doings of its members in the cultivation of the grape.

YANKEE BROWN BREAD, PIES, &c.

EDS. RURAL:—Being much interested in your column of "Domestic Economy," I have concluded to offer a few recipes, hoping they will be acceptable:

TO DRY PUMPKIN FOR WINTER USE.—Stew the pumpkin as for common use, grease tin pie plates and spread it one inch thick and set it where it will dry without burning. When partly dried can turn it on the plates. When dry put away as other dried fruit. When you wish to use it put it in cold water and let it gradually heat. When soft it is ready for use.

PUMPKIN PIE.—Three quarts of milk; 3 table-spoonfuls of pumpkin; 8 of flour; 1 of ginger and 4 egg. Mix the pumpkin, flour and eggs before adding the milk. Sweeten to your taste. We prefer molasses. This is sufficient for six pies.

SWEET POTATO PIE.—This is similar to pumpkin pie. The potato should be washed clean, boiled, peeled, and mashed fine, or sifted. Three eggs for six pies. Sweeten with sugar and season with cinnamon—baked with one crust.

YANKEE BROWN BREAD.—Mother sends the following recipe:—For two good sized loaves, take 4 pints or large bowls of corn meal, pour on boiling water till well scalded. When cool, add one pint of yeast—mix it with two bowls of rye flour, or unbolled wheat. When light, bake in a slow oven three or four hours. A little molasses improves it.—A COUNTRY GIRL, Warren Co., Ohio, 1859.

SODA BISCUIT, SODA CREAM CAKE, &c.

SODA BISCUIT.—To 1 quart flour, add 1 teaspoonful soda; 2 of cream tartar; a piece of butter the size of an egg; sweet and sour milk enough to wet it, and a little salt.

SODA CREAM CAKE.—Three eggs; 1 cup sugar; 1 of sweet rich cream; 1 teaspoonful of cream tartar; $\frac{1}{4}$ of soda; beat well together.

SPONGE CAKE.—Three eggs; 1 cup sugar; 1 of flour; 1 teaspoonful cream tartar; dissolve $\frac{1}{2}$ teaspoon of saleratus in a tablespoonful of hot water; add to the cake; stir briskly; bake quick.

AN INQUIRY.—Will some of the friends of the RURAL be kind enough to inform me of a remedy to slacken cords, which are contracted by rheumatism; also, the best way of obtaining oil out of Sun-Flower seed, and oblige—A FARMER'S DAUGHTER, Chemung Valley, N. Y., 1859.

LEMON PIE.—Herewith you have a recipe for such a pie as hardly a reader of the RURAL ever tasted—though numbered by tens of thousands. For two, take the grated peel of one lemon and the juice of two; 2 tablespoonfuls cream tartar; 2 of melted butter; the yolks of 4 eggs; 8 spoonfuls of sugar. Bake until well done. The white of 4 eggs, and 4 spoonfuls of sugar beaten to a stiff froth and spread over the pie. Bake for three minutes.—E. W., Massachusetts, 1859.

ICE CREAM.—Will some of the RURAL readers please give a recipe for making Ice Cream, as many of them reside at the east where they have their ice-houses, and no doubt enjoy that luxury to their heart's content. My husband has just finished an ice-house, and I intend to try the comfort of it next summer. I should be glad if some of my sisters would give me the desired information.—E. Y. E., Licking, Ohio, 1859.

POP CORN PUDDING.—One quart of milk; 1 cup sugar; 4 eggs; 1 quart pop corn; flavor with nutmeg or cinnamon—a little salt. Line your pudding dish with a paste prepared as for soda biscuit, pour in the above ingredients, place a few bits of butter on the top—bake nearly an hour in a moderate oven, stir it occasionally till it begins to thicken.—C. M. M., Rochester, N. Y., 1859.

A GOOD SALVE.—I send you a first-rate recipe for a salve that is good for cuts, burns, or any sore where there is any inflammation.—Three ounces of sweet oil; 2 of linseed oil; 2 of red lead. Simmer to a dark brown—to be made in new tin.—J. S. T., Scriba, N. Y., 1859.

COLORING STRAW, OR LEOPARD BONNETS.—Will some of the numerous lady readers of the RURAL, please give me a good recipe for coloring straw or leopard bonnets lead-color or brown?—B., King's Ferry, N. Y., 1859.

NEVER pour hot water into a glass tumbler, or any glass vessel with a round bottom; for the heat of the water will cause the bottom of the glass to expand, while the sides, which are not heated, retain their former dimensions. If the heat be sufficiently great, the bottom will be forced from the sides, and a crack or flaw will surround that part of the glass by which the sides are united to the bottom. If the glass be previously washed with a little warm water, so that the whole is gradually heated, and therefore gradually expanded, then the hot water may be poured in without danger. Who has not known practically that very hot water will break a glass tumbler? Now we learn the reason, or philosophy of it.

TO ENTIRELY CLEAR OUT THE RED ANT.—Wash your shelves down clean, and while damp, rub fine salt on them quite thick, and let it remain on for a time, and they will disappear.

If your flat irons are rough, rub them well with fine salt, and it will make them smooth.

If you are buying a carpet for durability, you must choose small figures.

A bit of soap rubbed on the hinge of doors will prevent their creaking.

"TWO YEARS OLD."

BY EVELYN J. JOHNSON.

In every nook or corner shy,
His regular eye is sure to peep,
And grandma's pocket he will try
To fathom, be it e'er so deep.
He pulls the buttons off my dress,
And then says "Look!" My pretty boy!
When I might avoid, I pause to bless
Thy upturned face so full of joy.

His father's hat he loves to wear,
And, hiding half his tiny head,
A glow of beauty, rich and rare,
Upon that old black hat is shed.
For 'neath its brim so dark and deep,
His dimpled face, all bright with bloom,
Peeps out, as rosy vapors peep
Sometime from clouds of wintry gloom.

He'll slyly pull his brother's hair,
Or steal their toys, and run to me,
But when they gather round in prayer,
He, too, will bend his little knee:
And, though he scarce can speak a word,
There's worship in his speaking eye,
And Roser's prayer I know is heard
When he looks up to God's blue sky.

Written for Moore's Rural New-Yorker.

Plain Talks to American Women.—No. 6.

BY MRS. M. P. A. CROZIER.

ONE of the more prominent evils with which the mother has to contend, is the natural selfishness of the human heart. It is exhibited in a very early stage of childhood, when the little one, just tottering around the floor, claims all the toys for itself, and refuses to give them up to a companion. And this leads us to say, that, in our opinion, no child should ever be brought up alone. Accustomed to have everything to itself, it will almost certainly retain the selfishness of its nature. If Heaven has given you but one, seek out from among the orphaned and destitute, some other child to be a brother or sister to it, educate them together and alike, be a mother indeed to the motherless, and God will bless you for it—will bless you in the enlarged sympathies of your own offspring.

Selfishness is an evil of such magnitude that no pains should be spared to eradicate it. It is, indeed, one of the corner-stones of the temple of sin. Dig up this and the edifice falls. The religion of Jesus Christ is the only effectual lever for the accomplishment of this work. But what is selfishness? Is it simply self-love? No, for this is laudable. Self-love begets self-respect, and a person who has no respect for himself, will fail to secure that of others. It is idolizing self—loving self more than others. The commandment of supreme love to God, and the golden rule, aim deadly blows at the root of this idolatry, and the earlier these can be impressed upon the mind of childhood, the more complete will be the uprooting of the principle from its nature, the more delightful will be the home of its unfolding, and the more effectual all correct systems of physical and mental culture.

Very early, and in various ways, may be taught to children the practice of the law of kindness.—"When MARY LUNDIS DUNCAN was in her fourth year, her little brother struck her in a fit of anger. She instantly turned the other cheek and said, mildly, 'there, Cousin.' The uplifted hand was dropped, and when the child was asked who taught her to do that, she replied, 'that she heard papa read it one morning out of the Bible at prayer-time.'"

There, at that family altar, was implanted in that child's mind so effectually the principle of love, that it is probable her whole life was influenced by it. We often too little realize the influence of this principle, and perhaps in consequence fail so thoroughly to impress it upon the hearts of our children as we would otherwise do. We fail to drink in a full draught from the well-spring which our Saviour caused to gush forth into the world, all sweet with its life-giving elements,—the dark spirit too often broods over our spirits, tempting us to remember injuries, and revenge them, rather than practice that blessed lesson of forgiveness taught us by Christ, and most forcibly illustrated by Him, when upon the cross he prayed for his enemies, "Father, forgive them, for they know not what they do." There is a sentiment of LACON'S upon revenge, worth remembering. He says, "There is a difference between a debt of revenge and every other debt. By paying our other debts we are equal with all mankind; but in refusing to pay a debt of revenge, we are superior."

"A gentleman who had filled many high stations in public life, with honor to himself and advantage to the nation, once went to Sir EARDLEY WILMOT in great anger at a real injury that he had received from a person high in the political world, which he was considering how to resent in the most effectual manner. After relating the particulars to Sir EARDLEY, he asked if he did not think it would be right to resent it. 'Yes,' said Sir EARDLEY, 'it would be right to be angry to resent it, but it would be silly to forget it.' This, the gentleman declared had such an instantaneous effect upon him, that he came away quite another man, and in temper entirely altered from that to which he went. 'That was a noble reply, like an apple of gold in a picture of silver, and blessed was its effect.'"

"A gentleman once sent his servant to JOHN REED, Esq., of Rye, requesting him never to set a foot upon his ground. He sent this reply:—'If it please your master to walk upon my grounds he shall be very welcome; but if he please to come to my house, he shall be still more welcome.' By thus heaping coals of fire upon his head, he melted him down into love and tenderness, and made him his cordial friend."

A sweet little story is told of a child who had early learned the lesson to "overcome evil with good."

"A very little girl who often read her bible gave proof that she understood her obligation to obey its precepts. One day she came to her mother, much pleased, to show her some fruit which had been given to her. The mother said the friend was very kind and had given her a great many.—'Yes,' said the child, 'very indeed; and she gave me more than these, but I have given some away.' The mother inquired to whom she had given them; when she answered, 'I gave them to a girl who pushes me off the path, and makes faces at me.'—On being asked why she gave them to her, she replied, 'Because I thought it would make her know that I wish to be kind to her, and she will not, perhaps, be rude and unkind to me again.'"

Such examples are worth treasuring in the mind and being often repeated to children. It would be well for every mother to have at command a fund of anecdote illustrative of various moral principles, that she may the more forcibly impress them upon their plastic souls.

In connection with this subject, we would allude to that of general benevolence. In an age when covetousness has set up an idol in nearly every heart, how vastly important that an opposite principle be nourished in those fresh souls born to exercise hereafter an influence upon society! In an age when it would seem that the tears of woe which God is bottling up would almost be enough to overwhelm a nation of oppressors—when the mingled sighs and groans that enter into the ears of the Lord of Sabaoth would form a fitting requiem over the destruction of a world of wickedness, how needful that the blessed angel of Charity be welcomed into the heart of childhood, and with her pitying, consoling influence reach forth thence her hand to pour the Balm of Gilead upon the wounds of sorrow, and lift humanity from degradation! Teach, then, the little one, that the great lesson of life is *love*—that to make others happy, should be one great aim of its being—that the "pure and undefiled religion" of Jesus inculcates not only a spotlessness of purity, but an active benevolence. "Visit the fatherless and widows in affliction!" "Love mercy!" "Relieve the oppressed!" "Deal bread to the hungry!" "Bring the poor that are cast out to thy house!" "Undo the heavy burdens!" "When thou seest the naked—cover him!" These are some of the duties of Christians, and the principles upon which they rest should be taught to children. Encourage them to do good as they have opportunity; not to wait for occasions to do great things, but to relieve little sorrows—to dry up single tears—to speak kind words—to be ready to lend a helping hand whenever needed—to divide their enjoyments with others, dropping pennies into the poor child's hat plucking flowers for those who have them not, carrying comfort to the sick—in short, everywhere they may, to light up human hearts with the rays of happiness.

Teach them especially to *deny themselves* for the sake of doing good to others. It is an easy thing for a child to bestow a penny which it has not earned, to give when it has a plenty left for itself; but lead it to feel the blessedness of *self-denial*.—Let the pure blessing of God upon the charitable flow into its soul through this channel, would you see dethroned the idol of self, and an acceptable worship ascending from its altar to the throne of God.

FASHIONABLE WOMEN.

FASHION kills more women than toil and sorrow. Obedience to fashion is a greater transgression of the laws of woman's nature, a greater injury to her physical and mental constitution, than the hardships of poverty and neglect. The slave-woman at her tasks will live and grow old, and see two or three generations of her mistresses fade and pass away. The washerwoman, with scarce a ray of hope to cheer her in her toils, will live to see her fashionable sisters all die around her. The kitchen-maid is hearty and strong, when her lady has to be nursed like a sick baby. It is a sad truth that fashion-pampered women are almost worthless for all the good ends of human life.—They have but little force of character; they have still less power of moral will, and quite as little physical energy. They live for no great purpose in life—they accomplish no worthy ends. They are only doll-forms in the hands of milliners and servants, to be dressed and fed to order. They dress nobody; they feed nobody; they instruct nobody; they bless nobody, and save nobody. They write no books; they set no rich examples of virtue and womanly life. If they rear children, servants and nurses do all, save to conceive and give them birth. And when reared, what are they?—What do they ever amount to, but weaker scions of the old stock? Who ever heard of a fashionable woman's child exhibiting any virtue and power of mind for which it became eminent? Read the biographies of our great and good men and women. Not one of them had a fashionable mother. They nearly all sprang from strong-minded women, who had about as little to do with fashion as with the changing clouds.

THE WIFE.—It is astonishing to see how well a man may live on a small income, who has a handy and industrious wife. Some men live and make a far better appearance on six or eight dollars a week, than others do on fifteen or eighteen dollars. The man does his part well, but his wife is good for nothing. She will even upbraid her husband for not living in as good a style as his neighbor, while the fault is entirely her own. His neighbor has a neat, capable and industrious wife, and that makes the difference. His wife, on the other hand, is a whirlpool, into which a great many silver cups might be thrown, and the appearance of the water would remain unchanged. No Nicholas, the diver, is there to restore the wasted treasure. It is only an insult for such a woman to talk to her husband about her love and devotion.

THEY attempt to govern by loud speaking, stamping, thumping upon desks, or using an unnecessary amount of words, is vain. Subjection to wholesome laws, properly administered, is as much a part of essential education, as the knowledge acquired from books and teachers.

EVERY shooteth at others and wounds herself.

THE OLD BARN.

BY CLARA AUGUSTA.

RICKETY, old, and CRAZY,
Shingleless, lacking some doors;
Bad in the upper story,
Wanting boards in the floors;
Beams strung thick with cobwebs,
Ridge-pole yellow and gray,
Hanging in helpless impotence
Over the mows of hay.

How the winds tore around it—
Winds of a stormy day—
Scattering the fragrant hay-seed,
Whisking the straws away;
Streaming in at the crannies,
Spreading the clover smell,
Changing the dark old granary
Into a flowery dell.

Oh, how I loved the shadows
That clung to the silent roof,
Day-dreams wove with the quiet
Many a glittering woe!
I climbed to the highest rafter,
Watched the swallows at play,
Admired the knots in the boarding,
And rolled in billows of hay!

Palace of king couldn't match it!
The Vatican loses its charm
When placed in my memory's balance
Beside of the gray old barn!
Splendor, wealth, may not charm us,
Association is all—
We love the loved our childhood
Better than marble-floored hall!

I sat for hours in the summer
On the threshold so gray,
And saw the cows to the pasture
Take their lazy-paced way:
The lambs, snow-white as the daisies,
Frolicked from hill to lawn—
Or fell asleep in the shadow
Made by the "clever" old barn.

I've roved o'er the Southern country,
Stood in Mosques of the East,
Galloped the Western prairies,
Gathered contentment, at least;
And I'd rather scent the clover,
Piled in the barn's roomy mows,
Than sit in breath of the highlands
Poured from Appennine brows!

Farmington, N. H., 1899.

THE HILLS.

Written for Moore's Rural New-Yorker.

I love the hills. I say *love*, because my feelings in regard to hills are best expressed by that word. What I feel is not admiration merely, or veneration, or a selfish attachment. It is more than any or all of these. It is *love*, and I attach more significance to the word than does the young lady who says,—"Oh! I do *love* boiled cabbage!" I confess that I look down, figuratively and literally, upon plains and valleys, and have a horror of swamps and ravines. Prairies do very well in the summer, but if they are destitute of trees the wind is apt to have full sweep, and I don't know what will take the poetry out of one quicker than to ride over a Western prairie, facing a northeast wind on a "raw, rheumatic day." When the thermometer gets below zero, your admiration of the scenery is apt to go down with the mercury, and you shrink back into your coat, like a turtle into its shell, and appreciate the sublime about as much as does that testudinous insect. Then, a level country that is covered with woods is apt to be interspersed with marshes, misma and mosquito-breeding swamps, and although a distinguished President of a Western College once said to a class in Rhetoric, that few scenes are as impressive as an extensive forest, I must substitute the word *oppressive* as the expression of my feelings. A monotonous waste of "Bolts of dusky pine-land
And gusty leagues of plain," appears to me like SHAKESPEARE'S definition of life, "stale, flat, and unprofitable." Valleys depend for their very existence on the hills that inclose them, and I shall not notice them.

As I intend to say the best things about hills that occur to me, I will here remark that in all times past the inhabitants of hilly countries have been noted for a more ardent attachment to their homes than their lowland brethren. "The brave and peaceful Swiss," of whom every school-boy has heard, have attained a world-wide celebrity, on account of the tenacity with which they cling to the sides of their not very productive, but much-loved hills.

Quite a spirited engagement once took place in the upper part of Greece, between the inhabitants of that hilly peninsula and a number of warlike people, who, not liking their own flat country, were out on a predatory excursion. History has informed us that the odds in favor of the Spartans were in the proportion of 20,000 to 299. "Auld Scotia" too, not a very level land, we believe, has been loved by others than the "monarch peasant" who prayed that,

"How'er crowns and coronets be rent,
A virtuous populace may rise the while,
And stand a wall of fire around their much-loved Isle."

And, to conclude our references, we will only call to mind that it was on a promontory, which we take to be an elevation of land, that OBARON sat

"And heard a mermaid, on a dolphin's back,
Uttering such dulcet and harmonious breath,
That the rude sea grew civil at her song;
And certain stars shot madly from their spheres
To hear the sea-maid's music."

Now, there are different kinds of hills. In regard to the emotions that they produce in an appreciative mind, they may be classed as

Sublime hills—where rocks are piled on rocks in wild confusion—"where diisy precipices frown—where mountain torrents roar and tumble down, plunging into romantic chasms with ceaseless tur-

moil seething" from whence the silver mists arise and *calmly float* toward heaven, as with the proud consciousness of having freed themselves from the demon that was forever dragging them down, where crags beetling and bare, with weird and fantastic forms, have a wild grandeur all their own—where peaks, that point towards heaven, are crowned with mists of which the sunlight makes a glorious halo, and through which, in the glimmering moonlight, they seem like gaunt spectres, gloomy and grand.

Beautiful hills—with wavy outlines and sunny slopes where every knoll is a jeweled diadem, whose gems are violets, anemones and dew-bespangled moss—where waves of perfect melody are ever floating onward and upward, made up of the sweet chording of joyous birds, the hum of the insect world, the murmuring of leafy boughs, and the liquid music of hidden brooks.

And, finally—*plain matter-of-fact hills*, whose chief merit lies in the fertility of their soil and whose importance is in proportion to their crop-bearing qualities.

Now, the subscriber is a farmer who depends for his necessary food and wearing apparel, &c., literally upon the "sweat of his brow," consequently he can't get along with the *agreeable* alone,—the *useful* also is of some importance. But I believe in letting them stand together as they did in the old Spelling Book "*utile et dulci*."

Those hills rock-ribbed and "ancient as the sun," are not entirely my favorites,—but those that are of more recent date—that have had their sharp edges rounded off and their ribs covered with, not exactly fat, but some not-azotized substances that can easily be converted into fat. Then, as a general thing, hills don't need draining, they can be worked sooner in the spring, and they contain *more land to the acre*. But above all, they are healthier, the air is more bracing, the summer breezes are cooler and more pure, and, where the view is fine, the mind expands and sooner looks

"From Nature up to Nature's God."

If I have not said anything yet worth the paper, ink and time I have used, I must stop now, and I finish with a somewhat lengthy quotation, which I quote because "SHAKESPEARE" is not found in every farmer's library. The words are those of a king, and they show in what light the "myriad minded" regarded the humble occupation of a shepherd.

"O, God! methinks it were a happy life
To be no better than a homely swain;
To sit upon a hill, as I do now,
To carve out dials, quaintly, point by point,
Thereby to see the minutes how they run,
How many make the hours full, complete,
How many hours bring about the day,
How many days will finish up the year,
How many years a mortal man may live.
When this is known, then to divide the times:
So many hours must I tend my flock;
So many hours must I take my rest;
So many hours must I contemplate;
So many hours must I sport myself—
So minutes, hours, days, weeks, months and years
Would bring white hairs into a quiet grave.
Ah, what a life were this! how sweet! how lovely!
Gives not the hawthorn bush a sweeter shade
To shepherds, looking on their silly sheep,
Than doth a rich embroidered canopy
To kings that fear their subjects' treachery?
O, yes, it doth; a thousand fold it doth,
And to conclude—the shepherd's homely curds,
His cold, thin drink out of his leather bottle,
His wonted sleep under a fresh tree's shade,
Is far beyond a prince's delicate's,
His viands sparkling in a golden cup,
His body couched in a curious bed,
When care, mistrust, and treason wait on him."

Grove Hill, N. Y., 1899. A—Y G—Y.

LOVE OF APPROBATION.—The greatest enemy that we have to combat in the education of children, is self-love, and to this enemy we cannot give attention too early. Our business is to weaken it, and we must be careful not to strengthen it by indiscriminate praise. Frequent praise encourages pride, induces a child to value herself as a superior to her companions, and renders her unable to bear any reproach or objection, however mild. We should be cautious, even in the expression of affection, not to lead children to suppose that we are constantly occupied with them. Timid children may be encouraged by praise, but it must be judiciously bestowed, and for their good conduct, not for personal graces. Above all things, it is necessary to inspire them with a love of truth; to teach them to practice it at their own expense; and to impress upon their minds that there is nothing so truly great as the frank acknowledgment—"I am wrong."—*Madame de Lamplert*.

EDUCATION.—Thewald thought it very unfair to influence a child's mind by inculcating any opinion before it should have come to years of discretion, and be able to choose for itself. I showed him my garden, and told him it was my botanic garden.—"How so?" said he, "it is covered with weeds." "O," I replied, "that is because it has not yet come to its age of discretion and choice. The weeds, you see, have taken the liberty to grow, and I thought it unfair in me to prejudice the soil in favor of roses and strawberries."—*Coleridge*.

SELF-REFORM.—If a man would reform the world, let him begin the work in his own body. How can he hope to purify others while his own breath is tainted? No other can begin the work for him. He must bring the physical into subjection to the spiritual of his own nature by his own effort. He must ascend into the frosty air of purity himself before he can beckon others to follow him. If he remain at the foot of the eminence, he can only act the part of a guide-board which points out the way, never leading up to it.—*Life Illustrated*.

At five years of age the father begins to rub the mother out of his child; at ten the school-master rubs out the father; at twenty the college rubs out the school-master; at twenty-five the world rubs out all his predecessors, and gives us a new education, till we are old enough and wise enough to take reason and religion for a pastor, when we employ the rest of our lives in unlearning what we had previously learned.

BETTER try all things and find all empty, than to try nothing, and leave life a blank.

THE DOVE OF PEACE.

Written for Moore's Rural New-Yorker.

Woe didst thou come, O Dove of Peace,
From that far off better land,
Where flowing waters of life ne'er cease
On Eternity's golden strand?

As angels open'd the pearly gates
When the righteous Judge went in,
Who told the tale of a dreared fate
Thrown around this world of sin?

In pitying haste, from those regions fair,
Didst thou hie to rescue man,
For gulfs of guilt, full of dark despair,
Thine unscathed wings could span.

The glorious task was ere long complete;
The immortal guest had flown
On wings of Love to the Mercy Seat
Where Redemption reigns alone.

When stormy billows on Gallilee
Beat around the brow of Faith,
The Dove of Peace hover'd o'er the sea,
And a calm stole o'er its path.

Though hoary heads of the created wave
Bow around the voyage of life,
Its gentle form has a power that saves
From the storm-king's mighty strife.

When mortals tread on the verge of time;
When a spirit wings its way
Through Beulah's land, with a trust sublime,
To a bright eternal day.

The holy Dove that in Jordan's fount
Was the Saviour's brightest gem,
Doat bear on high to the sacred mount
E'en a star for His diadem.

Piffard, N. Y., 1899. JANE E. H.

PERVERTED INQUISITIVENESS.

If it is not necessary for a soldier to fully understand all the plans of his commander to faithfully discharge his duty, how much less is it necessary for man to know the secret counsels of Deity, to fulfill his mission? There is a tendency in the human heart to pry into all the secrets of the incomprehensible Sovereign of the Universe, which, if known, would not be for his advantage, while those truths which are essential to his development are either entirely neglected, or only receive a hasty, partial examination. By indulging this tendency, man first becomes a Sceptic and then an Atheist; for what Deity has been pleased to place beyond the grasp of the human intellect, man seeks in vain to comprehend. It leads him to reject as false, what he cannot understand. It conceals the fact that reason has her prescribed limits, and that her sun never affords her light beyond those bounds. Now, he no sooner sits down to examine the *inspired volume* than he meets many truths beyond the sphere of *reason*. This destroys the beauty of the work in his eyes, and its Divine origin is denied. He next turns his attention toward creation; but the same difficulties meet him in Nature. In vain he attempts to grasp something beyond the simple fact. Pursuing his course a little further, he tries to dive into the nature of Deity. Here all is mystery. Not a single ray of light breaks the surrounding darkness. He reels and stumbles at every step. Disgusted with the result, he ceases his efforts, declaring that there is no God, simply because he cannot comprehend His nature. In this way he is led even to deny the existence of self, declaring that deluded man has an existence only in fancy.

Now, it is a part of man's work to overcome this tendency to meddle with what does not belong to him. He has a right—yes, it is his duty—to resist what is *contrary* to his reason; but he must not interfere with what is beyond his reach. The sphere of reason in Revelation is to ascertain the authenticity of the work. If man has evidence that it came from Deity sufficient to create *belief*, he is to receive it, notwithstanding it contains some things which he cannot understand. What is above the comprehension of reason, he receives as true on the testimony of the Author. The sphere of reason in the material world is with the *qualities* of matter—in the world of mind, with its *energies*. Reason deals not with *essences*, but with *attributes*. A man cannot believe what he sees is *contrary* to his reason; but he can believe, on proper testimony, what he cannot understand. A blade of grass grows, and man believes the fact on the testimony of his senses; yet he fails to comprehend it. Man thinks, desires, and wills, and believes the fact on the testimony of consciousness; but he cannot understand *how* this can be. Deity spoke the rolling spheres into existence, and those bright intelligences that surround His throne, and man, the crowning glory of creation, and we receive the fact on the declaration of Deity Himself; yet we fail to comprehend that fact. On the same testimony we receive other truths, such as—God being just and yet saving one who has trampled His law under his feet—one God mysteriously existing in three persons—the eternal bliss, or the eternal torment of the immortal soul. In relation to such truths, reason does not say they cannot be; but merely, *I cannot fully understand them*. Now, she can say the same in regard to other truths, such as the existence of Deity, the immortality of man, his dependence on Deity, and his accountability to Him,—truths which she will not hesitate for a single moment to admit. That Sceptic never lived who could prove to you that a single declaration of Revelation was *contrary* to reason. Press him closely, and you will wring from him this confession:—*I cannot understand, therefore I will not believe*. To take this position is to assume the place of Deity, since it claims that everything is false which is not within the comprehension of the human mind, and unlimited comprehension is an attribute that belongs only to Deity. —S.—S.

Evil men speak as they wish rather than what they know.

THE TRAVELER.

LETTERS FROM A HUNGARIAN.

NUMBER FIVE.

Pesth—National Museum—Curiosities—Observance of Sunday—Political state of Hungary.

DEAR FRIEND MOORE:—In my last I gave you a description of some of the things I saw in the capital of Hungary—Pesth. As regards "curiosities," there are not, indeed, many of them in this city—still, what few there are, I determined to visit the second day of my sojourn. First I bent my way to the National Museum, the greatest in Hungary. This is a magnificent edifice, containing nine large halls of antiquities, fourteen halls of zoological, botanical, and mineralogical specimens, and a picture gallery consisting of about two hundred and fifty paintings, mostly contributed by German and Italian artists. To him who has seen the picture galleries of Paris, Berlin, &c., the present collection will present nothing new or particularly excellent, except it be the splendid portraits of Hungarian kings and patriots, whose peculiar features, and strong, muscular frames inspire one with awe and reverence. On the other hand, the collection of antiquities must be especially interesting to the antiquary as well as to the student of history. Here we have a vast number of coins, (12,000 silver,) domestic utensils, instruments of peace and war, statues of marble and bronze, most of which belong to the period when Rome's legions overran Pannonia (the ancient name of Hungary,) and to the time when these again were expelled by the fierce Huns under the warlike Attila. Among the many curiosities here collected there was one around which many visitors crowded—viz., the cane of the celebrated Nelson, it having been but recently (Aug., 1858) presented to the museum. The way in which this cane got hither, was described to me by my cicerone.—In the year 1798, after the naval fight off Abukir, Nelson with his own hand cut off a stick from a wild fig-tree, and used the same on his subsequently staying at Vienna. There the naval hero met with the Hungarian count, Peter Szapary, who carried a Bengal cane with a big golden head.—Nelson was so well pleased with the latter, that he thought it fit to transgress the command "Thou shalt not covet," and desired the same as a present. In return the Hungarian Count received the above-mentioned cane from Abukir. After passing through several hands, the cane was finally presented to the museum by Count Bela Szechenyi. The head of this interesting memento is covered with silver plate containing the inscription:—"Ce bâton a été coupé par l'Admiral Nelson à Abukir après la fameuse bataille." Thus the national museum of Hungary preserves a memorial of the greatest admiral of England!

Like most German cities, Pesth also contains a vast public promenade, called the *Stadiondchen* (city-forest) which, on Sundays, is all alive with vehicles and pedestrians. A large pond with two islands adds to the enjoyment of the people. Bands of music resound in all the public squares and gardens, inviting the public to the various beer and wine saloons. Wine, being an article with which Nature amply supplies the Hungarians, almost supplants here the use of water. And no wonder, for you can obtain a quart of good, pure wine for six kreuzers, (about half a dime,) which in America would bring just ten times that price.—Still, though wine is daily used in almost every family—among the lower classes it often takes the place of coffee at breakfast—little or no drunkenness is seen. For, in the first place, it is used in moderate quantities at a time, and is not adulterated with alcoholic drinks, and then the people are so accustomed to it. To their honor, however, be it said, the fairer sex, so long as they remain in their virginity, rigidly refrain from the use of this spirituous beverage; and even after entering into the matrimonial state they take it but moderately.

My incidentally mentioning wine, has led me to digress from the subject proper—the observance of Sunday. Not only are the public walks thrown open to amusement during the day, but in the evening, as on all other days, concerts are given, operas are performed, plays are acted on the stage, and in the wine shops, whither the lower classes resort, the cymbal and the fiddle strike up the lively national airs of the Magyars, causing the feet of young and old, male and female, involuntarily to keep time in a regular dance. But even business is, to a great extent, allowed on Sunday. Not merely apothecaries, but all grocers may keep open all day except from 9 to 12 o'clock, during which time mass is performed at church. The market also—which in Hungary (as in all Germany) is a large open square—is filled with country women exhibiting for sale fruits, vegetables, fowls, fish, &c.—till 9 A. M. Above all, those who sell tobacco and cigars have the greatest privilege to break the Sabbath—nay more, the law itself compels them to do so. For no one is allowed to trade with tobacco, unless by special permission from the public authorities, but this privilege can only be obtained on condition that the tobacco shop shall be open at all hours from morning till night, (excepting, of course, the above-named three hours on Sunday.) Such is the observance of the Sabbath in this country. One might have supposed that the Austrian Concordat with the Pope would have a different effect on the religious observances of the country,—but that compact had a political object in view; it was to unite Church and State in reducing the nation to a more thorough political subjection.

Though the people are thus at liberty to enjoy themselves on Sunday in whatever way they please, they dare not, nevertheless, talk as they please.—Almost every fifth man you meet is a member of the police or the Imperial army. These officers watch your every movement, and listen to your very words; and were it him, from whose lips some suspicious thought falls on the ear of a policeman.

Without a moment's warning he will lead the suspected man to the head of the police, to be there summarily sentenced to several years' close confinement. Such a case actually occurred a few days before my arrival, where a man, having in a political discussion, uttered an epithet calculated to criticize the existing order of things, was suddenly snatched from his wife and children in Pesth, and transported to Transylvania, where he must now spend three years in prison. Such plenary authority is vested in the Austrian police. People of common sense, therefore, like the public press, generally refrain altogether from talking about politics—particularly home-politics. Nevertheless my friend with whom I was walking kept asking me all the time about our American Institutions, and comparing them with those of Austria. But every now and then he looked about to see if no spy was at our heels. How muzzled are the mouths of the people here! Hungary, compared with its present political state, was formerly a free land; the Emperor of Austria being only their protector, for which the Hungarians annually contributed a certain amount to the general expenses of Government. They had their own parliament, their own national militia, their own peculiar laws and institutions. Now they are deprived of all these, and are obliged to pay just five times as much as before, for the support of armies and the enrichment of the royal house of Hapsburg. Every young man, unless he has successfully passed the several examinations within the course of eight years in the *Gymnasium*, (collegiate school, preparatory to the University,) is obliged to perform military service eight years, so that when he arrives at the age when every good Jew or Gentile should be in the bonds of hymen, he is almost penniless. As a general thing, the soldiers of one province are sent to those of another. Thus, for example, the "white-coats" of Austria proper, and Bohemia, hovever Hungary, while the brave hussars and other Magyars are distributed over Bohemia and Moravia. Thus are the different national elements made to watch one another, and subdue every possible outbreak.

More about the political state of Hungary, its educational institutions, &c., in my next, when I will take the kind reader along to *Buda*, the well fortified city opposite Pesth, and to *Fered*, the most frequented water-cure of Hungary. Two letters more from Vienna and Prague, and your readers will no more be troubled about Austrian affairs, by your present correspondent. SIMON TOSKA.

The Reviewer.

TRAVEL AND DISCOVERIES IN NORTH AND CENTRAL AFRICA. Being a Journal of an Expedition undertaken under the auspices of H. B. M.'s Government, in the years 1849–1855. By HENRY BARTH, Ph.D. D. C. L., Fellow of the Royal Geographical and Asiatic Societies, &c., &c. In three volumes. New York: Harper & Brothers.

THE Physical Geography of Africa is in some respects distinct and peculiar. It has very few islands, a sea coast very little indented, a large amount of low, hot and marshy deltas, and an enormous range of sandy desert lying between the Atlas chain and the unexplored table land and mountainous region in the interior. Its inhabitants partake of the peculiarities of the country, and present wide contrasts in form, color and mental characteristics. The desert on the north, and the unhealthy deltas of the rivers on the eastern and western coasts, with the ranges of mountains running east and west across the southern portion, with rainless wastes intervening, have proved barriers which European and American enterprise have not as yet been able to overcome. Within the last two years considerable additions have been made to our knowledge of Africa. The great works of LIVINGSTONE and BARTH have added to our actual information more than has been accumulated for many years previous. Dr. LIVINGSTONE's work has been widely read, and has given us an acquaintance with a line across the southern portion of Africa never before explored by an European. The expedition now in progress under him may be expected to develop results of scientific interest much more valuable than are furnished by his book of travels, now before the public. The publication of the great work of Dr. BARTH, named at the head of this article, has just been completed by the HARPERs. It is in three large volumes, filled with minute and valuable information upon the whole vast region which he traversed. His line of exploration extended over about twenty-five degrees of latitude and twenty degrees of longitude. Commencing at Tunis he reached a point south within about three hundred miles of the Bight of Benue, while he explored east and west from Lake Tsad to Timbuctu. The main results of Dr. BARTH's labors may be summed up as follows:—He has thrown new light upon the character and extent of the Roman occupancy in Africa, by exploring monuments hitherto imperfectly, or not at all known. He has given detailed observations of the climate and physical geography of the Sahara, beautifully illustrated by drawings. He has thrown new and valuable light upon the manners, history and languages of the great Berber or Amazigh family, having traced them by physical descriptions and vocabularies from the Mediterranean to the heart of Negroland, far south of the great desert. These vocabularies have been examined by Prof. NEWMAN, the most intelligent Berber scholar in Europe, and shown to belong radically to one family from the Mediterranean to their extreme southern limit, where they are lost in the true negro type of language and people. He has given most valuable knowledge, from his own observation and native sources, regarding the political changes, history and organization of the native tribes, especially of the late encroachments of the Fellatah, under the influence of their partial Mohammedanism, upon the Pagan tribes. He has given a general idea of the Geology of the country, and also of its Botanical and Agricultural products. It contains more valuable and available knowledge for the Historian, Geographer, Statesman and Ethnologist than any book of African travels in the English Language. Taken in connection with the small work of Mr. BOWEN, it will give a very complete idea of Africa from the Gulf of Guinea to Tunis. Africa contains, by far, more large cities, and elements of agricultural and commercial greatness, than Central Asia. When, by means of steamers, Europeans shall be able to pass rapidly through the low, unhealthy region of the coast, and the suppression of the slave trade shall give opportunity for legitimate commerce, the agricultural resources of Africa will be developed, civilization will take the place of barbarism, and a new day will dawn on this land of darkness. The value of a really good book, like this of Dr. BARTH's, in bringing about this result, cannot be overestimated. We are glad that so many of our colored people are looking toward the land of their origin as a field for their enterprise. The establishment of cotton and sugar culture, and the opening up of these rich countries to legitimate commerce, is an object worthy

the attention of the economist and philanthropist. Sold in Rochester by D. M. DEWEY.

THE ROTASCOPE.—No. II.

BY TOBIAS WITMER.

In our previous article we showed that when the wheel A, (fig. 1,) is put in very rapid motion, by force applied through a cord wound round the axle, X, as in spinning a top, and the axis is placed in a horizontal position, all the particles moving in a vertical plane, a, b, some other force must be applied to bring the axis out of that position, and put it into another position; and that other force must be adequate to the force given in the rotary direction, before it can effect that object. But some of the particles, as d, are much nearer the axis than a and b, and consequently have not the same centrifugal force, while gravitation acts upon all the particles with equal force at all times, and a kind of compensating effect is thus produced, which causes the wheel to sink, gradually, as its velocity diminishes.

FIGURE 1.

We will now examine the question, Why does the wheel, with its frame, or ring, B, rotate around the stand, the point y, describing the dotted line, figure 1?

Suppose we give the wheel A, (fig. 2,) a motion in the direction indicated by the arrows, with a velocity that will move the particle B, at the rate of 16½ feet per second. The force given it would tend to carry it to C in one second of time, while gravitation would tend to bring it to D, in the same time. But the particle acted upon by these two forces would take the direction B E, as a resultant, and would arrive at E in one second of time. But cohesion, (that power which binds matter together in a mass,) prevents it from taking that immediate direction, and the force is inevitably applied to move the centre, x, in a direction parallel to B, E.

FIGURE 2.

To demonstrate this more clearly, let us follow the particle B around until it has arrived at B1. The force applied will act exactly equal to, and in a direction exactly opposite to the line of gravitation, and no resultant is produced; but the particle, considered independent of cohesion, will remain at rest; because two equal forces, acting in opposite directions on a body, leave that body at rest.

Now let us follow the particle on in its course, (for

its relation to the other particles of the wheel leave it no rest, but on, on it must go,) until it reaches B2, when it will be impelled by the two forces, in the same direction, and if independent of the other particles, would go 321.6 feet in one second of time, in the direction B2 F.

FIGURE 3.

Let us now bring a number of these resultants before the eye at a glance. Fig. 3 represents eight particles, all moving at the rate of 16 1/2 feet per second by the force applied. Gravitation acts upon each, as before shown; and the resultants of all are shown, and their direction indicated so plainly by the diagonals, that no one can fail of comprehending the principle. But mark the particle C! It has come to a "dead set," as shown at B1, fig. 2; and I think no one can fail to see the tendency of each particle shaping its course to make C, (or some point in that vicinity,) a new center. That is: having got things all in motion, a "motion is made" to move the centre of gravitation from I somewhere into the vicinity of C. Observe that the resultant of B, is nearly at a right angle with that of F, which favors the object thus to be obtained. Hence, when we place the Gyroscope upon the stand before us, (see fig. 1,) having given the wheel motion so that the upper side at b (fig. 1,) moves toward us, and the under side at a moves from us, if the

FIGURE 4.

left hand "ear," D, be placed on the stand, the rotation of y will be from us, as shown by the arrows on the dotted line; and vice versa. And if each end of the axis were to rest upon a movable car, (fig. 4,) the whole would be propelled forward in the line A, B.

The same idea may be conveyed by imagining a weight to be suspended from each of the particles a and b, while the wheel was revolving as before; a horizontal movement in the line A, B, would be the result. The same idea may be conveyed by imagining a weight to be suspended from each of the points a and b, the whole still revolving as before, that is, equal to 16 1/2 feet per second, and the weight W also equal to that force: these two forces acting in opposite directions, would keep a at rest; while the weight P, acting in the direction with the force, would tend to throw b around a as a centre. Hence a revolving body, as A, fig. 2, having its axis in a horizontal position, will have its axis propelled forward in a line oblique to the line of gravitation, and hence the rotary motion of the Rotascope around the stand, fig. 1. In our next we will endeavor to account for the acceleration of that rotary motion around the stand.

Williamsville, N. Y., Feb., 1859.

CORRECTIONS.—By some inadvertence several errors crept into the previous article of Mr. WITMER on this subject, and he places himself properly before RURAL readers thus:—"By some carelessness of your engraver, a great blunder is made to appear in my article, No. 1, on the Rotascope, which, if any one takes pains to read, will give a very unfavorable impression. I took care to give the figure, or diagram, plain, lettering it correctly, showing a, at the bottom, and b at the top of the wheel, to indicate the vertical plane in which the wheel revolves around its axis, and not around the stand, as your printer would have me say. These letters were to have been given in lower case Italic, so as not to confound them with the Roman capitals, which indicate parts of the machine.—T. W.

PAPER-MAKING.—In the United States there are 750 paper mills in active operation. They produce 270,000,000 pounds of paper, which, at an average of ten cents per pound, would be worth \$27,000,000. As it requires about a pound and one-half of rags to make one pound of paper, there are consumed by these mills 400,000,000 lbs. of rags in a single year. If we estimate the rags to cost four cents per pound, there would be a profit of \$11,000,000 in this branch of manufacturing.

About a century ago, an Englishman named Jonas Hanway, on his return from travels in the East, appeared in the streets of London on a rainy day, with a queer notion imported from China, in the shape of an umbrella. It was the first seen in England, and probably in Europe, and aroused such indignation that he was soon surrounded by a furious mob, who pelted him with mud for daring to screen his head and person from the rain.

Be not affronted at a jest. If one throw salt at thee, thou wilt receive no harm unless thou hast sore places.

YOUNG RURALIST.

MATHEMATICAL FACTS, AGAIN.

MESSES. EDS.—I have no objections to mathematical or any other science being made as simple and as practical as possible, but, in our search after simplicity, let us be careful that we do not throw aside the fundamental truths upon which science depends.

It is now several years since Euclid said that there was no royal road to knowledge, and these simplifiers of science furnish an every-day demonstration of the proposition. We have had (I am sorry to say,) several examples of this style of demonstration in the "YOUNG RURALIST" column, and having never appeared on that stage, I propose to quarrel a little with some of "OURNERS" statements in the RURAL of February 19.

"OURNERS" rule for finding the area of a circle is good; but his statement, that the circumference is 3.1416 times the diameter, is not exactly true, and hence his rule will not get the exact area of the circle. If "OURNERS" wants any reasoning on this subject, he will find it in the 5th book of *Davies' Legendre*, or any other Geometry. His "practical illustration" proves nothing; for the circumference of a circle consists of an infinite number of points, and the parallelogram he describes could not have straight lines for its upper and lower bases, unless the "pasteboard circle" could be divided into an infinite number of sectors—a feat which not even "OURNERS" can accomplish at present. In the figure which he has drawn to illustrate his article, even if the sides be called straight lines, its altitude is not equal to half the diameter of the circle, for the altitude of a parallelogram is the perpendicular distance between its bases, which is not the semi-diameter in the figure, although it would be if we could imagine the circle infinitely divided. Since "OURNERS" practical illustration" depends for its value on our power to conceive of the infinite, we are not so well off in his "royal road" as in the usual path—another reason why "you should never take a by-way instead of a highway." I leave the rest of "OURNERS" letter for those whom he calls on to answer it. VERITAS.

HOW TO BECOME A GOOD FARMER.

EDS. RURAL:—Being a reader of your valuable paper, and one that considers it indispensable to the prosperity of a young farmer, I wish to make the inquiry through its pages, of some of your experienced contributors, *How to become a good and profitable farmer?* In looking around among my brother farmers, I see a vast difference in their practice of farming. Some have their stock all housed, and looking as if they had eaten all the grain that the farmer could produce, with the best of care; the fences all up; buildings all in order; in fact, a place for everything, and everything in its place. Others, have their stock all out of doors, (the sheep in particular,) wallowing in the mud and water for their food, or tied up by the horns in some filthy stable, with half enough to eat; fences dilapidated, with plenty of burdocks and briars; buildings out of order; wagons, sleighs, plows, drags, drills, horse-rakes, wintered out in the fields where last used, or piled up by the side of the barn or fences. But, in some cases both of these kinds of farmers raise good crops.

Now, if some experienced farmer will inform me, through the RURAL, which is the best and most profitable course to pursue, I will hereafter tell him of my success. YOUNG FARMER.

Perry, N. Y., 1859.

"THERE IS NO SUCH WORD AS FAIL."

THIS sentence should be deeply impressed upon the hearts of the young. He who will not strike boldly in the battle of life, and conquer the opposing foe, must sink sooner or later into the slough of despond, and be forgotten by the on-marching army, whose lips are singing the psalm of victory. It were better for that one that he had never been born. Life is not a rose-laden path for carpet-knights to tread. No; its ways are rugged, and it is the brave in heart only, that, fearlessly accepting its challenges, doing battle as they move along, wins the goal. He who sets out with fear and trembling, dreading to meet foes seen and unseen, succumbs ere he has commenced the journey; but he who boldly adventures the path, whether it leads to gloomy abysses or up giddy ascents, over morasses, through night-like forests, or into regions of perpetual snow, holding aloft his banner inscribed with the daring motto "There is no such word as Fail!" is victor in every fight. His heart beats quick, his eye brightens and his strong arm is nerved for battle when danger approaches. No thought has he of retreat—onward, onward he marches, driving his enemies before him! What cares he for these—was he not made to do or die? He will be victorious. Nothing shall deter him.—He knows no such word as fail. Whatever he resolves on must be accomplished! He cannot succumb, though the world should press upon him. Death, rather, and he conquers! The hero of the field, he wears the laurel crown! It is only when Age overtakes him, palsy his arm, and stealing his strength of purpose, that he "wraps the drape of his couch about him, and lies down to pleasant dreams." Even then he is but subdued, not conquered. His task has been faithfully accomplished. His end is blessed! Young man and young woman, if you would succeed in life, strike from your vocabulary the stumbling-block to success—the word fail.—*The Elevator.*

A PROPER secrecy is the only mystery of able men; mystery is the only secrecy of weak and cunning ones.

Prosperity gathers smiles; while adversity scatters them.

- The new State of Oregon contains 155,000 square miles.
- The net amount in the Treasury, subject to draft, is \$4,000,000.
- The Feejee Islands have been placed under British protection.
- Mr Everett has paid \$60,893 into the Mount Vernon Fund.
- The mammoth steamer, Great Eastern will soon be ready for sea.
- Large bodies of excellent coal have been discovered in Kansas.
- The army in Utah costs this country nearly \$5,000,000 per annum.
- California contains half a million people, and San Francisco 70,000.
- "Who is President to-day?" is the usual salutation among Mexicans.
- There was 41 majority in the House against an increase of postage.
- Half the three cent pieces in circulation are undoubtedly counterfeit.
- The Treasurer of Dubuque Co., Iowa, is a defaulter in the sum of \$108,000.
- Ex-Gov Denver has resigned his post as Commissioner of Indian Affairs.
- The New Mexico Legislature has passed a law for protection of slave property.
- The Governor of Maine has appointed Thursday, April 21, as a public Fast Day.
- Gov. Banks has appointed the 7th of April for the annual Fast Day in Massachusetts.
- A mulatto named Wries, is obtaining great celebrity at Paris, for the cure of cancers.
- Two policemen have been arrested in New York city, charged with highway robbery.
- The first shad of the season was caught in the Pascale, on Wednesday week, near Belleville.
- The population of the United States increases one million a year, or two thousand every day.
- The only bar to the complete opening of navigation of the lakes, is now in the straits of Mackinac.
- Messrs. Richard Challen and Wm Smith O'Brien have been attending the debates in Washington.
- The Jackson Monument on the New Orleans battle ground is now 79 feet high, at a cost \$30,000.
- Several men have been digging for gold on Crooked Creek, a few miles northwest of Macon, Mich.
- A "Ragged Newsboys' School" has been in successful operation in Pittsburg for some months past.
- There are 560,000 books in the British Museum, 100,000 of which were published in the United States.
- Small-pox is raging very fatally at the Cape of Good Hope, and nearly two thousand have died by it.
- The good people of Berkshire, Mass., had ninety-nine days of uninterrupted good sleighing this winter.
- The Rev. Mr. Spurgeon has abandoned his contemplated trip to America, certainly for the present year.
- The inhabitants of Paris, in February, were indulging in roses and lilacs, and open carriage drives to the Bois.
- Seven persons died in February, whose united ages amounted to 700 years. Four of them were negroes.
- The last leaf of the first edition of "Hamlet" has been discovered in Dublin, by Mr. W. Rooney, book-seller.
- Large quantities of tea seeds are on their way from the East to the Commissioner of Patents, Washington.
- This time last year there were 1,264,000 bushels of wheat in store in Chicago. Now there are but 611,000 bushels.
- A double girl—two heads, four arms, four legs, attached to one trunk—was born last week at Huntsville, Alabama.
- The press on which Gen. Greene printed the dispatches of the army, has lately been discovered in Pen-ton, S. C.
- At this time Generals Henningeen, Wheat, and some eight or ten others of the filibusters are in Washington city.
- A German naturalist has described six hundred species of flies, which he has collected within a district of ten miles.
- A new post-office called Mend's Creek, has been established in Steuben Co., N. Y., and William Winsor appointed P. M.
- Orr, of South Carolina, Stephens, of Georgia, and Leitch, of Va., closed their Congressional career with the recent term.
- Buffalo is said to be seventeen miles nearer Baltimore than it is to New York, since the direct railway has been completed.
- A "Bearded Ball" was recently given at Chicago, which no gentleman was admitted without some honorary honor to his face.
- The decaying body of a child, three or four years old, was found at a paper mill in Girford, Me., in a bundle of rags from abroad.
- At Orange, N. Y., last week, a woman killed her child, four years old, because it was not taken from her by the owner of the Post.
- Dr Gen. Abbott, formerly a resident of this State, and recently American Vice Consul at Cairo, Egypt, died in Alexandria, in January.
- There is a rumor that Kossuth, under the name of Burke, has arrived at Genoa, with the idea of participating in the Italian agitation.
- There are now three hundred patients in the Indian Hospital for the Insane—the largest number that ever been within its walls.
- Green turtle soup is now made at Key West, and would fetch a price all over the world. It is said fair to become a great article of trade.
- The battle sword of Gen. Putnam, which was at Bunker Hill, was presented to the Connecticut Historical Society a few days since.
- The Abend-Zeitung says that a brother-in-law of Gen. Grant, the Prussian Minister at Washington, is expected earlier in N. Y. city.
- It is proposed to shorten the voyage from California over 100 miles by cutting the Bay of San Francisco Gulf of San by a ship canal.
- Three men, engineers, fireman and brakeman, were killed by the explosion of a locomotive on the Steubenville and Indiana Railroad, on the 1st inst.
- The police of New York are stopping street beggars. The excuse is that the cheap boarding houses are in want of supply of cold victuals.
- A great number of accidents have

O, happy hearts! to Him who stills
The ravens when they cry,
And makes the lily 'neath the hills
So glorious to the eye—
The trusting patriarch prays to bless
His labors with increase;
Such ways are "ways of pleasantness,"
And all such "paths are peace."

BY KATH CAMERON.

The unwonted task brought back many reminiscences of those long vanished years, and tears glistened in her eyes as she thought of the many changes Time had wrought in those she loved, but she murmured, "What hath sadness like the change that in ourselves we find?" In that hour she realized how an apparently trivial fault

"*Way! Ellen!*" He has time for no more, — GEORGE MORTON has followed him, and he exclaims, — "*Ha! CHARLEY, as lover-like as ever—hasn't the honey moon set yet?*" and then he is duly presented to Mr. THORNTON who, under the pleasing

With an Able Corps of Assistants and Contributors.

TERMS IN ADVANCE:

TWO DOLLARS A YEAR—\$1 for six months. To Clubs and Agents as follows:—Three Copies one year, for \$3; Six, and one free to club agent, for \$10; Ten, and one free, for \$15; Fifteen, and one free, for \$22; Twenty, and one free, for \$29; Thirty-two, and two free, for \$44 (or Thirty for \$37.50) and any greater number at same rate—only \$1.35 per copy—with an extra copy for every Ten Subscribers over Thirty. Clubs ordered in different Post-offices, if desired. As we print American papers on paper sent to the British Provinces, our Canadian agents and friends must add 12½ cents per copy to the club rates of the RURAL. The lowest price of carriage to Europe, &c., is \$2.50—including postage.

THE POSTAGE OF THE RURAL IN ONLY 4 CENTS PER QUARTER TO ALL PARTS OF THE UNITED STATES, AND TO ALL OTHER STATES IF PAID QUARTERS IN ADVANCE AT THE POST-OFFICE WHERE RECEIVED.

All communications, and business letters, should be addressed to D. D. T. MOORE, Rochester, N. Y.

THE POTATO—EARLY VARIETIES.

Will you please inform me of an early potato that is of better quality than the *Early June*—as early, if possible, and more prolific? That old variety is poor, I think hardly worth growing.—A LOVER OF GOOD POTATOES, Lockport, N. Y., 1859.

We will most cheerfully give our experience, and it is as valuable, and no more so than that of any farmer, who has paid particular attention to the subject. In addition to this, however, we have been in search of a valuable early potato for some time, and in our investigations have learned that it is somewhat difficult to find a potato that will unite early ripening with other good qualities.

Early June is well known, and we certainly need a better early potato than this. It is not of good quality, is not a good yielder, and in its usefulness consists its principal merit.

Early Manly.—This is a potato we first found growing here some eight or ten years ago. It was cultivated by only one or two of our best market gardeners, who were quite choice of their seed, showing, we thought, a little desire to monopolize its cultivation. It is a round, white potato, as small, or perhaps a little smaller than the *Early June*, will ripen several weeks before that variety, and is the earliest potato we know anything about. It will be entirely ripe, and the tops dying by the time the *June* is called "fit to dig," which we know is a long time before it ripens. The quality of this potato is good; it is dry and every way desirable, but the yield is small. It is an excellent sort for the market gardener, and will enable him to carry early potatoes to market while they will bring a high price—the quantity with him being not so much of an object as earliness. They are also good for the amateur gardener and for the farmer, to grow for family use. Every one who has a garden should aim to have green peas and ripe potatoes on the table by the 25th of June. In eight weeks after planting they will become fully ripe, so that the tops will die. Of its origin we can learn nothing reliable.

The Mountain June.—This potato we like for an early sort much better than the *Early June*. It does not mature as soon by two or three weeks, but it is of large size, gives a better crop, is drier, and of better quality every way. If planted the same day as that variety, it can be dug as soon, and though not matured, will be found as good, and we think better, and the portion that remains to ripen will be found much superior, besides giving a much larger crop. This, we think, is one of the most valuable of the early sort.

As the time for planting is rapidly approaching, we hope those who are possessed of facts not generally known, will communicate them at once. On this subject we are all in pursuit of knowledge.

THE PRINCE ALBERT.

EDS. RURAL:—I noticed in your issue of March 12th that B. STEPHENS, a produce dealer in New York, comes out rather strong against *Prince Albert* potatoes, pronouncing them a failure, and saying that they do not sell well in the market, or cook dry. Having had some experience in raising and consuming this valuable potato, and also having read the experience of other individuals who have raised them since their first introduction, I am prepared to say that the strictures of this produce dealer are, in a great measure, unwarranted. I am, after one season's trial of this variety, under the most unfavorable circumstances, so much pleased with them that I shall plant largely of them the present season.

son. Last year I raised from one barrel of seed, on ground where the water killed out a great many of them, over one hundred bushels of the finest potatoes that it has ever been my pleasure to look upon, and all perfectly sound, while those of five other varieties, in the same field, rotted very badly. We find them a good potato either boiled or baked, and I am sure that they have every quality about them to make them one of the most valuable potatoes in market.—M. L. PARKER, Lyndonville, Orleans Co., N. Y., 1859.

From the above it will be seen there is a great difference of opinion as to the *Prince Albert*. Not having cultivated this sort, we cannot give an opinion, but we quote from the circular of Messrs. Dink & Farnen, Commission Merchants of New York:—"The *Prince Albert* is an English Seedling, introduced into Massachusetts a few years ago. The seed has been eagerly sought for each season since its introduction at very high prices. It is oblong shaped, a little flattened, with the stem end often elongated, entirely white, with very few eyes, which lie upon the surface, scarcely indenting the thin smooth skin; being one of the most beautiful potatoes ever grown.

It matures a little later than the *Mercer*, grows to a large size, yields largely, and has never rotted. When it grows to medium size, under favorable circumstances, it is a good table potato, and some times has proved excellent, but as a general rule, though good flavored, it does not cook so dry and light as the *Peach Blows* or *Buckeyes*, and the stem end is frequently soggy.

Its handsome appearance, large yield, good quality, and freedom from disease will probably insure its extensive culture, especially among prudent farmers who prefer not to risk their entire crop upon one or two varieties."

This variety has not been cultivated here, that we can learn, but we will try it the present season.

THE BECKEY.

Will you oblige a subscriber by stating through the *RURAL* the quality of the *Buckeye* potato and its productiveness? Also, if it can be obtained in the vicinity of Rochester? I am fond of good potatoes, and ask for information as to the best kinds in your market early and late. I have been informed that the *Buckeye* potato is cultivated quite extensively in the vicinity of Rochester, and is spoken of very highly as being of a good kind and good quality.—F. FAIRCHILD, Onondaga Co., N. Y., 1859.

Our correspondent will find most of his queries answered in the above, and in an article on the same subject in the *RURAL* of the 12th inst. From what is said of the *Buckeye* at the East, and our knowledge of it here, we have thought there must be two varieties called by that name. With us it is quite an early potato—nearly as early as *Early June*, quite as early as *Mountain June*, a large, dry potato, of fair quality, productive, and never known to rot. Seed can be obtained of the potato-growers in the vicinity of this city. We have no seeds or plants of any kind for sale, but are willing to aid our friends abroad in procuring anything valuable that they may desire, when we can do so without too great a tax upon our time.

Spring Management of Cattle.

In treating upon this topic, a correspondent of the *Ohio Farmer* writes:—"I have about come to the conclusion that it is unwise and unprofitable to permit cattle to escape the confinement of the cattle-yard until about the middle of April. If grass comes forward unusually early, they may be turned into pasture at an earlier date. I do not claim that those who have large herds of cattle, and extensive grazing lands well established in grass, will always find it the most convenient, and the most economic course. Those, however, who follow a mixed system of husbandry, raising horses, cattle and hogs, and who cultivate most of the grains and grasses, will find the following advantages from the mode of springing which I suggest:

"1. The early grass will become better established, and it will therefore yield more abundantly, and better sustain the stock during the grazing season. 2. The fields and pasture lands will not be injured in productiveness, and in facility of cultivation, by being compactly trampled in the wet weather of early spring. 3. Cattle retained on their regular dry food, in the cattle stables and in the yard, will do quite as well as those permitted to roam over the farm, and to obtain an occasional and meagre bite of immature grass. They acquire a disinclination of dry forage, while they cannot obtain a sufficient amount of green. 4. Let this mode of spring management of stock be adopted, and farmers will more carefully husband their straw, and other rough food. Wide-spreading straw piles, which now disfigure fields, and which encumber and frequently interfere with the cultivation of much good land, will no longer be found upon the premises of the prudent, economical and pains-taking farmer. 5. The last, and most important advantage, resulting from this mode of managing cattle, is this: the manure made and preserved will be increased four fold."

DAIRY FARM OF HON. ZADOCK PRATT—PERSPECTIVE VIEW.

Above we present a sketch of the Dairy Farm of Hon. ZADOCK PRATT, situated on Schoharie Kill, (creek,) in the northwest portion of Greene Co., thirty-six miles west of the Hudson river. This farm contains 365 acres; forty acres, lying on the creek, is of fine, alluvial soil; the remainder loam and gravel, upon the slope of the mountains, (Catskill,) facing the east. Originally this land was mostly covered with hemlock, and is known throughout that region as "hemlock land."

Whole number pounds of butter 6,500, or 130 lbs. from each cow. Average amount per day 26 39 61 lbs., or 5 22 61 oz. for each cow. The number of pounds of milk to make one pound of butter is about 29 1-5, or nearly twenty quarts.

Whole number pounds of pork 4,627; made from each cow 92 1/2 lbs., which was sold for \$6 56. No. of pounds of butter from each cow 130, for which was received \$30 95. Total receipts from each cow \$37 61.

five bushels of rye, corn, oats, and buckwheat, ground together, to each cow, the last of the winter and forepart of spring. I would here remark, that, although this has been a wet and good season for grass, it has been hardly an average one for butter.

We have also raised a fair crop of rye, oats, buckwheat and millet; about one-half a crop of potatoes, sound but small, and a fair crop of hay; but a total failure of carrots, by reason of poor seed.

PLAN OF BUILDINGS.

REFERENCES.—A, A, Barn Yard. 1, 1, Sheds and Pig Pens. 2, Horse and Wagon House. 3, Barn 30x40, with elevated Entrance in left, and stabling in Rearment. 4, D-or Yard. 5, Wash and Wood House. 6, Milk House, with cement bottom. 7, Dwelling Farm House, convenient, commodious, and well arranged. 8, Water Arrangement. 9, Granary. 10, Corn House. 11, Water to Yard and Pens. 12, Buttermilk to Pig Pens. Four and one-half miles stone wall.

No. of Lots.—CONTENTS.—1, 11 acres; 2, 10; 3, 17; 4, 30 1/2; 5, 14; 6 and 7, 40; 8, 7 1/2; 9, 6; 10, 11; 11, 203.

The main business of the farm is the manufacture of butter. To a proper understanding of the mode of operation, the amount of labor performed, and of business transacted, we copy Mr. PRATT'S report, for 1857, to the N. Y. State Ag. Society, as follows:

SYNOPSIS OF FARM ACCOUNT.
By 6,500 lbs. of butter, sold at 28 to 27 cents \$1,547 64
By 4,627 lbs. of pork, sold at 6 1/2 to 8 cents \$2,818 10
Total \$4,365 74
To paid for labor (consisting of the farmer and his wife, and the most of the time two girls, one man, and a boy,) and other incidental expenses \$715 50
To interest on capital invested, (the farm and stock being estimated as \$10,000) 700 00
Net Income \$460 30
The whole number pounds of milk from April 1st to Dec. 1st, eight months, was 254,726, or at 8 pounds per gallon, will be 31,842 gallons. For each cow 5,094 12 25 lbs., or 626 81-100 gallons.—Average quantity per day 1,644 lbs., or 150 1/2 gallons; average quantity per day for each cow 20 44-10 lbs., or 2 61-100 gallons. Greatest quantity per day for each cow 26 39-10 lbs., or about 2 1/2 gallons.

DIAGRAM OF ABOVE FARM.

The butter was churned in ordinary barrel-dash churns, by water-power—the cream alone being churned, which we think better than churning the milk and cream together. After churning, the butter is thoroughly worked in the ordinary manner, and one ounce of Ashton's fine salt to the pound worked through it, and when hard, packed in white oak firkins, and kept in a cool, dry place. And be it remembered, to the credit of my farmer and his wife, not a pound of poor butter was made. The milk-house is attached to the farm-house, built of wood, lathed and plastered; has a cemented floor, and well ventilated. The milk is set on racks, in tin pans, three to four quarts in each, requiring over 500 pans.

We have good, pure, cold spring water (which is very essential in making good butter,) brought in logs into the churn-room, adjoining the milk-room. The buttermilk is run in logs under ground about eight rods, to the pigsty. The water from the churn-wheel is conducted under ground eight or ten rods, to a trough (which has never been known to freeze over) in the barn-yard, serving the double purpose of churning and watering the stock. A few of my cows are Devon, the balance are native mixed breed; they are stabled with slide stanchions, and fed on hay and straw, adding about

SCALE, FOUR INCHES TO THE MILE.

Now, as to my hogs, I will observe, they are a mixed native white breed, contented when full; when fat and clean, very handsome. Success here, as in all other branches of business, results from attending to this one motto, "Mind your own business."

Many readers of the *RURAL* (who are differently situated,) may view the foregoing schedule of the business of Mr. PRATT'S farm with the feeling that the "day of small things" still remains to be numbered among terrestrial objects. Such, however, should remember that the great bulk of the land comprising this estate is composed of a mountain range, and that a considerable part of the surface cannot be cultivated. The Viewing Committee of the State Ag. Society report "a portion of the upland on which brush had started up, was burned over and sown with maple, beech, and locust seed, hickory and black walnut, planted, and all are now growing finely. Shade and forest trees are thus propagated to advantage. . . . Taking the whole farm together, we were very much gratified with the good judgment that had devised the plan which had resulted in securing so many conveniences, and in obtaining so favorable a return from its cultivation." Our engravings will give a faint idea of the topography, and Dairy farmers

can estimate for themselves how much better, under all the disadvantages exhibited, their balance-sheet of the year's transactions could be made to appear. An honorary diploma of the N. Y. Ag. Society was awarded Mr. PAART for his report.

A NEW SORT OF FLOW SUGGESTED.

EDS. RURAL:—On a large proportion of land in our State, deep plowing for corn is not advantageous. Experience, and the well known fact that the roots of corn are always found near the surface, demonstrate it. The peculiar nature of corn evidently requires contact with warm soil, as well as warm air. In a rich, deep-tilled soil, corn will grow very well, especially in a very hot, dry summer, but even under such circumstances it invariably is backward and feeble in all the fore part of the season. The reason for this must be apparent to every farmer. The turning up a subsoil, which, to say the least, has been but partially under the influence of solar heat, and consequently being in a cold, sour and ungenial state, is quite a sufficient explanation. Still, on many accounts, it is desirable, and, in fact, indispensable, to till deep.

These facts have suggested to me, whether a plow could not be constructed so as to invert, say five inches in depth of the top soil, and at the same time turn up the subsoil four inches more, without turning it up,—(the depth, of course to be varied by circumstances.) Such an operation would, in my humble opinion, give us all the advantages of deep tillage, without its disadvantages. It would conduct the superabundant water away from the corn roots, and retain it until needed. Furthermore, the corn being planted in warm, surface soil, its germination and early growth would be much more vigorous and healthy than if it had to struggle for its very existence in a cold, hard subsoil.

It may be said that all these advantages might be obtained by the present mode of subsoiling, but it should be borne in mind that the great majority of farmers have but one team, and even when that is not the case, very few, in the spring of the year, would consent to spend the time and money in subsoiling their corn ground.

I cannot see any insuperable difficulty in constructing such a plow, and am very confident that it would prove a desideratum in the culture of corn, and, consequently, have an extensive sale. I, therefore, hope that some good mechanic will undertake it.

Trumansburg, N. Y., 1859.

REMARKS.—On general principles, our opinion is that the soil cannot be broken up and stirred too deep—especially if a hard and retentive kind—both for disposing of an excessive fall of water, and to allow the roots to penetrate in search of moisture in seasons of drought. That deep plowing, by inverting the furrow and turning up a deep, cold, unmanured subsoil, is detrimental to corn and all surface-rooted vegetation the first year, there can be no doubt. On a second plowing, the manured portion, or rotted sward, would be intermixed and brought to the surface, and within the reach of the young plant, and ever after prove a beneficial process.

The old method of subsoiling involves a great outlay of power and time, and we see no difficulty in constructing a plow on the plan of our correspondent that would perform both operations at one process, for which a three-horse team would probably be required to reach the depth of twelve inches, except in case of hard-pans.

In our climate, we have no time to spare in maturing the corn crop, and it is important that the young plant, before it has gained strength, and age, and extended roots, to search to distances or depths for nutriment, should have a warm, genial and rich soil to put it ahead in its early stages,—or it will be a poor and languishing crop,—and a raw, unmanured and unincorporated subsoil does not contain the required nutriment for that contingency. We have noticed some extraordinary developments of vegetable growth on the raw soils thrown out of ditches and swales, but they were alluvial, not original pre-Adamitic drift.

BLACK TOOTH IN SWINE.

MESSRS. EDS.:—Perusing the copies of the RURAL received, I observed many little matters highly amusing to me as only a young settler on this side of the Atlantic. Having had twenty years experience in farming in England, I pretend to know something of farming generally, but from some of the articles in your valuable journal I fear I may fairly set myself down as a complete novice as far as farming is concerned in Yankee land. I could discuss several points I perceive put forward, but as the numbers in which they appear are no very late date, and being a stranger to America and its newspapers I think it more prudent for the present to say but little further than to refer to an inquiry signed J. B. WILSON, Ridgeway, N. Y., desiring to know "what the matter with his pig." I beg to state for Mr. Wilson's information, as well as for others whose stock is similarly affected, that his pigs have had what is commonly called, or known to be "Black Tooth." I have been troubled with the same thing but have never lost any.—When first they begin coughing, catch them and it will be found their teeth are perfectly black, take a pair of tweezers and break them off—give them some sulphur, say one ounce to each pig, twice a week for a fortnight. Feed them with food containing the least possible heating properties for a short time, and all will be well. This disease seldom appears in pigs in the Old Country, and the only way I can account for its being so prevalent here, is the inferior breed of the animal. I am breeding nothing but pure Berkshire's and in these nothing of the kind appears.

Zorra Lodge, Woodstock, C. W., 1859.

G. R.

SEEKING TO COVER.—In the RURAL of Feb. 12th, I observe that in seeking to clover after wheat, you advise to sow this month. March. My experience for a few years has confirmed me in the opinion that it is better to defer sowing till the middle of April. Last Spring, clover sown about the first of April, in this vicinity, was much of it killed by severe freezing the last of the month.—The best seeded pieces I have ever seen, were sown in the month of May.—S. Fayetteville, Ohio, Co., N. Y., 1859.

PLANS FOR CORN HOUSES.

EDS. RURAL:—The Midge threatens the entire destruction of our staple crop—Wheat—and as we must raise something instead, the question naturally arises, what shall that "something" be? I answer that, on many farms, Corn can be raised to advantage and profit, both to land and pocket. Corn, here, is seldom lower than fifty cents, and frequently as high as one dollar per bushel. We have been raising from four to eight hundred bushels of corn in the ear, yearly, and have always thrown it on floors to dry; but have lost more or less by so doing; and as it is our intention to raise more corn and less wheat, we will require a better arrangement for storing and safe keeping. In view thereof I propose the following diagram, in which there are three things to be considered, a Corn Crib sufficient to hold 2,000 bushels of corn in the ear—a granary, and a room for storing farm implements and machinery. The size of the building is 30 by 42 feet, with 10 feet posts. A, is the Corn Crib,

8 by 42, and placed on the south side of the building so as to have the advantage of the sun and wind, and is inclosed with upright slats two inches wide, one and a quarter inches apart. B, is Storage Room for farm implements, and C is the granary, 12 by 21 feet, in the sides of which may be placed ventilators, covered over with a wire screen so as to prevent rats and mice getting in. D, D, passage-way, 12 feet wide. The floor should be tight—the building standing two or three feet above the ground, and at a proper distance from other buildings to avoid danger in case of fire. Perhaps the foregoing plan may be of use to your correspondent, H. B. H., of North Rush, N. Y., as well as many others. SUBSCRIBER'S SON, Ontario, C. W., 1859.

EDS. RURAL:—I have a Corn House which I find very convenient—after using it a summer and winter—a plan of which I submit for your North Rush Inquirer. It is 16 feet in width, 30 in length, and 14 feet in height. The second floor is ten feet from the bottom of the sills. In one end is a granary, 10 by 16 feet; a, a, Crib, one 20 feet long, the other two feet shorter at the bottom, and 10 feet shorter

at the top, in consequence of stairs leading to the chamber over this Crib. Both of the Crib's are three feet wide; B, Threshing Floor, 10 by 20 feet; C, a, C, Bins; c, c, Granary, double boarded on the outside to make it tight. Crib's boarded on the outside with boards four inches in width, and half an inch apart. The second floor is boarded tight all around. There are windows in each end of the chamber, and one window in the granary. I spread soft corn on the second floor, and open both windows to let the air circulate through. My house is the same width at bottom and top. Should corn be very damp at husking, I would so fix the cribs that I could lay boards once in two or three feet, that the corn would not press so tight together. This can be done by placing pieces of plank across the cribs and laying boards on them. To make all secure from rats and mice, set the corn-house on posts 2 1/2 feet high, and around each post put a piece of zinc, a foot in width, close to the sills. Hume, N. Y., 1859. J. B. SAFFR.

P. S.—Crib's boarded on the inside, lengthwise, to studs extending from lower to upper floor. Should your Inquirer wish to raise corn by wholesale, he must build his Corn House in proportion to his fields. J. D. S.

MESSRS. EDS.:—In a late issue of the RURAL, H. B. H. asks for a plan for a Corn House. I will give him mine. Build your house the dimensions

you require—18 by 24 feet is a good size. The one I constructed after above plan is only 12 by 16 feet, 10 feet high; the door on one end one side of the middle; in the same end the other side of the middle, about two feet from the corner, is a good-sized window, in the other end opposite of this is another window. Between these windows is the crib for corn. The windows are to be covered outside with wire cloth to keep out the mice. Care should be taken to make the whole structure vermin proof. Remove the sash in dry weather, and let the air circulate. If there comes a driving storm, close them. If it becomes very cold while the corn is damp, as in the fall of 1857, put in a stove, and dry it by artificial heat. The other portion of the house can be used for other grain. McDonough, N. Y., 1859. H.

CHINESE SUGAR CANE MILLS.

MESSRS. EDS.:—As the cultivation of the Chinese Sugar Cane is creating a good deal of interest, we are naturally inquiring for the best methods of grinding, boiling and manufacturing. In regard to mills, undoubtedly an iron mill is the best, but being quite expensive it is beyond the reach of many who may desire to have a mill of their own. Now, if a wooden mill can be constructed which will do nearly as good business as the iron mill, and, at the same time, cost but about one-third as much, the wooden mill will pay. But there are several objections to the wooden mills, and one is, they do not grind fast enough. Another, they leave too much juice in the cane. Another, still, they wear out too soon. Now, if these objections can be obviated, it may still pay to use the wooden mill.

With your leave, I will give a description of a mill I have been building this winter, in which I think the difficulties I have mentioned will be overcome. The plan of the mill is pretty much after the old-fashioned cider-mills, which were in vogue in York State thirty years ago, except that I have three rollers instead of two, running perpendicularly. The planks for the frame are 5 inches thick and 30 inches wide. In order to get sufficient motion I have one roller, (the driver,) 23 1/2 inches diameter, and the other two each 14 inches diameter, coupled together by cogs in all the rollers. The whole length of the rollers is 21 inches. The cogs occupy a space of four inches, with two inches space above them to receive an iron band, and 15 inches below for grinding. They are painted and laid away to season till next fall, at which time they are to be covered with boiler iron, about one-tenth of an inch in thickness, which will prevent them from being saturated with juice, and also will make their surface so hard that nearly all the juice may be expressed from the cane.

To keep the juice away from the journals, the lower shoulders of the rollers are turned concave, three-fourths of an inch in depth, then a piece of board three-fourths of an inch thick is to be cut out (one for each roller) of the same diameter of the roller, with a hole through the centre just large enough to admit the journal, then shaved off to an edge, from the centre hole to the outside circumference, so as to make it convex and of the proper shape to fit into the concavity of the rollers. These pieces are to be nailed down (convex upward) upon the upper surface of the lower plank of the frame around the holes which receive the journals, then a sheet of zinc or boiler iron, with holes cut out to let the journals through, is to be nailed down over the whole. A channel is to be cut around the outside of the rollers so that the juice may be let off at any point desired.

To prevent the journals from wearing out, and also to make them run easy, they are to be banded with bands made of an old sawmill-saw with a boxing of the same material for them to run on.—The journals of the small rollers are to be seven inches diameter—those of the large one nine inches for the lower journal, and eleven inches for the upper. The rollers are to be keyed up with a heavy wedge going through the planks of the frame, edge-wise, above and below, pressing the small one towards the large one. The lower ends of the end planks of the frame are to be framed into bed-timbers, or sills, twenty inches square, and eight feet long. The sweep is to be made so as to attach one horse to each end, or two horses to one end. The upper surface of the lower plank will be three and a half feet high. The frame will be keyed together with wedges, going through the tenons, so as to make it perfectly strong. I estimate the expense of such a mill at about thirty dollars. Gatesburgh, Cal. Co., Mich., 1859. S. W. SWADLER.

Inquiries and Answers.

HYFLOCK AND WHITE CEDAR.—I would like to inquire through the RURAL the comparative value of Hyflock and White Cedar for posts? Will some one who has tested the matter give the result of their experience, and oblige a subscriber?—D. K. S. Wegatchie, St. Lawrence Co., N. Y., 1859.

KEEPING HENS IN CITIES.—Will your correspondent, H. J. E., who keeps hens in a city and makes it pay, tell us what kind of hens he keeps, and what he feeds them on?—N. H. Union Springs, Cayuga Co., N. Y.

STABLE FLOORS.—Will some of the many readers of your valuable paper have the goodness to inform me what is the best material for constructing horse stable and pig-pen floors? Also, if any of your readers have had any experience in stable floors constructed of cobble stones, laid in sand, the result?—A. B. South (Calro), N. Y., 1859.

SAWDUST AS AN ABSORBENT.—Is sawdust, pine, spruce, and hemlock a good absorbent of manures, to be used for bedding in stables? Is not such resinous timber an injury to the soil, if not to the manure?—J. H. Glens Falls, N. Y., 1859.

We do not believe the resinous matter in pine sawdust would injure the manure. It certainly would save the liquid part, which is generally wasted, and in this condition the sawdust would soon rot. Pine sawdust is about worth its weight of straw, in furnishing nitrogen to the soil, about 250 lbs. being as good as 100 lbs. of fair barn-yard manure. Still, we must acknowledge that we have seen it applied to pine lands with bad effect. The scrapings from pine woods, too, composed principally of leaves, we have used with very unsatisfactory results. Will not some of our readers give us information on this subject.

THE HORSE POWER, THRESHING, &c., of Messrs. O. WESTINGHOUSE & Co., above represented, are classed among the best machines of the kind obtainable, and worthy the attention of our readers. For description, price, &c., of these and other valuable machines manufactured by Messrs. W. & Co., see their advertisement in this paper.

Rural Spirit of the Press.

Hen Manure for Corn.

ONE of the correspondents of the Country Gentleman gives the following account of an experiment with hen manure as a fertilizer:—"On cleaning out my hen-house last spring I had more than a wagon load of clean hen manure. I drew this into my barn intending to drop it on the hills of corn as soon as the corn made its appearance. I planted one acre on the first of May, but after that the weather became so unfavorable that it was the end of May and beginning of June before I got through planting. Long before this the manure began to heat at such a rate that I had to unload it on the barn floor, and on going into the barn in a few days after, the effluvia from the escaping ammonia was so powerful that I was glad to escape from the barn. Having some plaster on hand I mixed it thoroughly with the manure, spreading the latter thinly over the floor and bruising and chopping it very fine. It was then thrown into a heap and remained on the floor until the corn was ready for it, and there was no further perceptible escape of ammonia. With this I top-dressed all my corn, eleven acres, and had a barrel left over for other purposes. So well satisfied am I with the result, that for the future I intend to prepare my hen manure in the same way and apply it to the same crop. I mixed enough plaster with it to make it dry and quite inoffensive to handle. I can speak of this from experience, as I dropped it over four acres myself. Now, here is a manure equal in value, I doubt not, to the average of imported guano, which every farmer can manufacture for himself, for every farmer keeps fowls. But he must have a suitable building for them, and not allow them to roost all about his premises and even in trees, wasting that valuable manure, as is too often the case. So highly do I esteem this manure that I make it my duty every night to see that all my fowls are within their proper house."

Liquid Manures.

THE Massachusetts Society for the Promotion of Agriculture offered a premium of one hundred and fifty dollars for the best Essay on the Preparation and Application of Manures, and on competition the prize was awarded to Dr. JOSEPH REYNOLDS, of Concord. The following brief extract, treating on Liquid Manures, we find in the New England Farmer:—"The saving and use of liquid manures is deserving of more attention than it has yet received in this country. It is easy so to arrange the stalls of cattle, as to receive their urine into troughs under the floor, and to convey it into a cistern in the cellar, or outside of the barn. This may be pumped into a water-cart, to which a sprinkler is attached, similar to those used in watering the streets. If it is pumped in through a strainer, the sprinkler does not become clogged, and it may be rapidly conveyed to the field, and distributed as a top-dressing, upon grass or grain, with immediate effect. When the soil is not deficient in carbonaceous elements, there can probably be no better top dressing applied. It is not as permanent in its effects as the solid excrement, but more immediate, and it may be applied twice a year upon grass, with less expense of labor than one dressing of solid manure. The cost of the necessary apparatus for saving and distributing it is small. As a top-dressing for a field where turnips are to be grown, it is very excellent. As a top-dressing in the spring, or during the summer, for pasture lands, it is perhaps superior to any dressing that can be applied. If the undiluted urine is thought too strong, it may be easily diluted in the field, if water is at hand."

Scab or Itch on Sheep.

DR. DADD says upon the management of this disease in the Am. Veterinary Journal:—"Scab, itch, crysipelas, &c., all come under the head of cutaneous diseases, and require nearly the same general treatment. The following compound may be depended on as a safe and efficient remedy in either of the above diseases:—Two ounces sulphur, one ounce powdered saffron, Honey, sufficient to amalgamate the above. Dose, a tablespoonful every morning. To prevent the sheep from rubbing themselves, apply one gill pyroligneous acid, one quart water. Mix, and wet the parts with a sponge. Whenever the scab makes its appearance, the whole flock should be examined, and every one having the least abrasion or eruption of the skin should be put under medical treatment. In most cases, itch is the result of infection. A single sheep infected with it is sufficient to infect a whole flock. If a few applications of the pyroligneous wash, aided by the medicine, are not sufficient to remove the malady, then recourse must be had to the following:—Half a pint fir balsam, one ounce sulphur. Mix, and anoint the sores daily."

Lampas in Horses.

DR. T. WEBB, V. S., in a communication to the Ohio Farmer, speaks of lampas as being, in general, not a disease in itself, but the effect of another disease. "Should the bars of the mouth," he says, "present a red and tumid appearance, and appear bulging, and upon a level with the surface of the nippers, this is ascribable to congestion of blood, and albuminous infiltration into the cellular membrane, which attaches the bars to the hard palate. This may cause some difficulty in mastication, but, as a general thing, the cause of loss of appetite will be found elsewhere. Whatever may be the origin, the cause does not lie in the palate, nor is it removed by the barbarous operation of burning out. The best practice is to feed on bran meshes for a time, give cooling drinks, and the horse will soon cast his hay and corn with avidity."

TO PREVENT OVER-REACHING.—In the RURAL of Feb. 26th, I find an inquiry, if there is any remedy to prevent horses from clicking their hind shoes against their fore ones. I must say, after ten years experience in shoeing horses, that the reverse of the proposed method is the best I have ever tried. My way is to shoe the fore feet with short or low toes and high heels, the hind feet with high toes and low heel—this enables the horse to raise his fore foot over a low toe before he can raise his hind foot over a high toe, and this method also increases the speed of the horse.—N. Putney, Steuben Co., N. Y., March, 1859.

Agricultural Miscellany.

MARKET FAIRS.—Progress.—One of the most encouraging signs of progress among our farmers, by organized effort, is the inauguration of Fairs for the Sale and Exchange of domestic animals, farm products, &c. Market Fairs have long been in vogue, and highly beneficial, in England, and it is singular that an "institution" of so much apparent importance should still be a desideratum in most parts of this country. We are glad to perceive by their action, however, that American farmers are becoming convinced that, though new here, Market Fairs are a good thing. Fairs of this kind are to be held the present Spring in various parts of the country—New England, this State, the West, and Canada—and we predict their successful inauguration and popularity within the ensuing twelvemonth.

It affords us pleasure to announce in this connection, that the farmers of several sections of Western New York are agitating the subject of Market Fairs, and organizing associations. The citizens of North Bloomfield (Ontario Co.) and vicinity, (including farmers from Mendon, Monroe Co., and Lima, Liv. Co.) held a meeting on the 13th inst., and organized a Society called "The No. Bloomfield Agricultural and Mechanical Exchange." The object, as we are advised by a communication now before us, is "to alleviate the embarrassments under which the Farmers and Mechanics are now laboring, and to facilitate the disposing of their stock, produce, &c., satisfactorily. It proposes to adopt a regular system, by appointing certain times when the Farmers, Mechanics, &c., can meet for the sale and exchange of property, thus saving time and expense. For instance, Mr. A. desires a team to commence his spring work, but cannot procure one readily, not knowing where to purchase,—while Mr. B., not two miles from Mr. A. has a team to sell, but cannot dispose of it for want of a purchaser. And so it is in other departments. This system would also facilitate the business of buying cattle or horses for market, as the drover could make his purchases in one day, instead of spending ten or twelve in accomplishing the object. Laboring men can also meet their employers to hire for the season, accounts can be settled, debts paid, and many other kinds of business done." The officers of the Exchange Association are as follows:—President—ALEX. MARTIN, Treasurer—Benj. Boner, Secy.—John Wood, Directors—John Ideon, Richard Peck, D. H. Alberson, and Martin R. Pierce, of Lima; Curtis C. Gates, Alfred Gates, and Jasper C. Peck, of West Bloomfield; Lewis Johnson and Lyman White, of Mendon. The first Fair and Exchange is to be held at Finch's Grove, in the village of No. Bloomfield, on Thursday next, April 7th.

Would it not be well for our County and Town Ag. Societies to establish Market or Exchange Fairs on the European plan? Societies having permanent grounds, &c., could try the experiment this Spring, without much expense. A small tariff on actual sales would cover the expense. Think of it, Gentlemen Officers, and decide whether action in the premises would not prove advantageous to members and community.

A CATTLE BREEDERS' CONVENTION is proposed to be held at Hartford, Ct., on Tuesday next, April 5th. The call is signed by several prominent breeders of Connecticut and Massachusetts, and says:—"It is a matter sufficiently patent to need no argument, that the breeders of thorough-bred stock labor under manifold disadvantages, for the lack of better personal acquaintance with each other, and need to make common stock of their knowledge and experience in stock-breeding, and to adopt some system by which, so far as possible, all purchasing animals as thorough-breds, may be able to rely thoroughly on the purity of their blood and the correctness of their pedigrees,—a system which will prevent animals of impure blood or suspected pedigrees from competing with thorough-breds at our County and State Fairs, as is now often the case. For these, and various reasons besides, ultimately affecting the whole cattle interest, we invite all interested in the breeding of thorough-bred or pure-blood neat cattle, to meet us at a convention, for mutual benefit."

THE MASS. SOCIETY for the Promotion of Agriculture offer a premium of \$200 for the best abstracted farm in that State, of not less than forty acres, taking into consideration cultivation, farm buildings, breeding, and selection, and keeping of stock. Farms devoted to market gardening will not be admitted to competition. Notice of intention to compete must be given to the Secretary on or before the 1st of April, accompanied with an entrance fee of \$10. A written statement, verified by oath, is to be given of the management of competing farms, to commence on the 1st of April next, and extend through the year following.

MAPLE SUGAR IN PENNSYLVANIA.—The Somerset, Pa., Whig remarks:—"The season thus far has been very propitious for our maple sugar manufacturers. More sugar has been made the present season, at this date, than in any previous one. We hear of several farmers who have already more than four thousand pounds. There are no means of exactly ascertaining the amount of this article annually produced in Somerset county, but we think five hundred thousand pounds would fall below the mark—more than is manufactured in any other county in the Union."

TO CLEANSE MAPLE SIRUP.—A Rural reader, G. C. BERNIER, informs us that Maple Sirup can be freed from all impurities by covering the holes in a common steamer with a double thickness of flannel—the flannel to be moistened in water previous to use. Any tin pan (if the sides are sound) can be readily pressed into service by punching a few good-sized holes in the bottom. With this simple apparatus, Mr. B. has taken the skimmings and filtered therefrom the choicest and cleanest sirup.

LONGEVITY OF THE HORSE.—Royal Morgan, owned by JOHN GREGORY, of Northfield, Vt., died recently by getting cast in his stall, at the age of 38. He was exhibited at the Vermont State Fair last September, and attracted much attention. He seemed perfectly well up to the day of his death, and was the oldest horse known. A Binghamton (N. Y.) paper records the death of a horse aged 87 years. He had been owned by Mr. FRANKLIN WHITNEY for 24 years.

POTATOES FOR SEED.—S. B. W., and others who have recently written us for information as to where, and at what prices, the Peachblow, Buckeye, Prince Albert and other varieties of potatoes can be obtained, are referred to advertisements in this paper. DREW & FRENCH, a reliable New York firm, advertise several varieties.

THE SEASON is very forward—a month in advance of last spring in many sections of the Union. Though we have had a severe storm during the past week—rain, snow and very high winds—the weather is again spring-like, with indications of a very early and favorable season for farm operations. Every cultivator should don his armor, and "put things to rights" on his premises, and otherwise prepare to prosecute the Spring campaign vigorously.

L. D. SCOTT, of Milan, Ohio, has our thanks for a liberal supply of Jerusalem Artichokes, Vegetable Seeds, &c., such as he advertises in this week's RURAL.

HORTICULTURAL

NATIVE GRAPES.

We yield to none in the interest we feel in the new varieties of native grapes. Some of those already before the public claiming favor, and others that are not now known, even by name, will, we have no doubt, prove exceedingly valuable. The care and skill now directed to this subject, by so many, in all parts of the country, will we are satisfied, produce results over which the lovers of fine fruits will have cause to rejoice. Still, we feel it our duty to give a word of caution, as many seem to be getting a little wild on this question, and are not unwilling to advise the entire abandonment of our old and well-proved sorts, while everything new is described in the most glowing terms, and often, we fear, without proper care.

In our present number will be found articles on this subject from those who are raising new grapes. One variety, it will be seen, is represented as "excellent—a hort within itself," and a seedling from this "infinitely superior" to the parent. Such descriptions we think are calculated to deceive. In describing grapes the Isabella, well grown and ripened, should be taken as the standard, and to it all others should be compared as to earliness, hardiness, and quality. Then the descriptions, if correctly given, would be valuable. We do not accuse any one of deceiving intentionally, but we have often received wrong impressions of fruit from descriptions furnished us, and were only undeceived when we had a fair opportunity to examine the fruit. People are apt to think a little too highly of what they raise, and their descriptions must be taken with due allowance for this failing. A year ago last Autumn, when about leaving for New York, we were requested by a gentleman to call on Thompson & Son, the celebrated restaurant keepers and fruit dealers on Broadway, and ascertain if he could sell to them a quantity of fine fruit. We described the fruit, when these gentlemen plainly told us they could place no reliance upon descriptions of fruit, and would never purchase or engage to purchase until they saw specimens. Gentlemen they stated would call to dispose of grapes, pears, and other fruit, and on examining specimens in the store would declare what they had equal, if not superior, but on bringing their fruit and making the comparison, they themselves would be utterly astonished at the utter inferiority of their specimens.

A gentleman of Beaverville, Canada West, wrote us a short time since about grapes, and requested a private letter. He stated that he could ripen Isabellas thoroughly—as well as they could be ripened anywhere in the United States. He was about planting grapes on several acres, had written to various individuals for information, and one recommended the Northern Muscadine, another Concord, another Hartford Prohific, but no one recommended the Isabella, while an editor of an agricultural paper in Oneida County advised him not to plant a single Isabella. Our advice was to plant the Isabella for the main crop, and to plant a few of each of the most promising of the new kinds. Where the Isabella will ripen we have yet no proof that any other variety will equal it as a profitable market grape.

We have been very much censured for expressing opinions similar to these, and because we would not applaud everything new, and believe all the glowing descriptions of interested parties. A letter now before us, written in no amiable mood, says, "you will gain nothing by this course." Well, if we gain nothing by stating what we believe to be the truth, and guarding the interests of our readers, we have no hope of gaining anything in any way.

GRAPE GROWING AT HAMMONDSPORT.

At the Annual Meeting of the Grape Growers' Association, held at Hammondsport, Steuben Co., N. Y., on March 1st, 1889, the President, Hon. I. L. Larnow, reported the proceedings of the Association for the last year, from which we glean the following facts:

"The breadth of land set to the vine the past season was about twenty-five acres in and near this village, which was mostly set to roots, but of an inferior quality. About four acres were set with cuttings, which have done about as well as the roots. All made a fine growth. I understand there will be thirty to forty acres set this spring by different individuals in this immediate vicinity, which, together with what is already growing, will number some seventy acres within two miles of this village. Two small vineyards of one-half acre each, three years old from the setting, bore last year, and the two produced about \$500 worth of wine and grapes; the Isabella selling readily at 12¢, cents, and the Catawba at 15 cents per pound. The most from the Catawba sells readily at \$2 per gallon, and if properly treated, I have no doubt will make excellent wine.

"The grapes now cultivated here are mostly Isabella and Catawba, although other varieties are being introduced. The Association procured, last spring, the Rebecca, Union Village, and the Carter or To Kalon, all of which grew finely last summer, and each one will afford some cuttings for distribution among the several members."

The Treasurer reported the receipts and expenses for the past year, which, unlike most Societies, showed a balance on hand, although not large.

GRAFTING WAX.—Please inform me through the Rural how to make Grafting Wax, the ingredients, and how to proportion them?—R. McC., Knoxville, Tenn.

GRAFTING WAX is made of beeswax, resin, and tallow, melted together. It is generally made of about equal parts, though some prefer a little more than one-third tallow, while others think less than an equal part still better.

EARLY SPRING FLOWERS—THE SNOW DROP.

The first flowers of Spring, the earliest harbingers of that delightful season of buds and blossoms is the little Snow Drop. It first feels the influence of the warm spring sun, and the present season, about the first of March, its modest little white flowers gladdened the hearts of the lovers of nature's floral beauties. There is nothing striking or particularly attractive in these flowers, and should they bloom when the garden is gay with more ambitious rivals it would be eclipsed and unnoticed; but its time is well chosen, and it flourishes without a rival—often bearing its delicate blossoms above the snows of early spring, undaunted by cold and frosts and storms. Of these flowers there are two varieties, the double and single, of both of which we give engravings, drawn from specimens picked on the 11th inst. The earliest of the *Crocuses* are now in flower, and by another week we shall have specimens of the later and more brilliant varieties. The weather has been such for a week past as to check vegetation, and on Friday

evening, the 18th, commenced one of the worst snow, rain and wind storms we have had for a long time, extending over Western New York and Canada West. As the season advances we shall give notes of plants, shrubs, &c., as they flower, with original illustrations.

STANDARD, AS APPLIED TO PEAR TREES.

Mr. Moore:—Permit me to inquire through your model paper, the propriety of calling pear trees, growing on their own stocks, *Standards*, in contradistinction to those grafted on the quince as *Dwarfs*.

It has but lately come into vogue in that sense, and seems to be badly chosen, conveying no idea of the real meaning. At the Fruit Growers' Convention, in the pear discussion, it was used as common as though it was a proper and legitimate significant of that production.

The term *Standard* was originally used by nurserymen, only to designate such trees as were not for sale; but to be left for bearing—to test new fruits, or procure scions.

The word *Standard*, as used and correctly applied by fruit growers and amateurs, is a tree growing without support—not trained to a wall or trellis—a tree reserved when removing nurseries, or cutting from parks or forests; they are *standards*, because allowed to stand.

Now, there ought to be a better and more significant term, to designate a tree growing on its own stock, to those dwarfed, altered, emasculated, if that is not an improper term. The word *entire* or *natural*, would be a much more correct and expressive designation, and consonant with the objects of language, to express the idea to be conveyed.

A MEMBER OF THE F. G. Soc.

REMARKS.—We will not discuss the question of the origin of the word *standard*, as applied to fruit trees, but we know that for many years—as long as we remember anything about trees—the word *standard* has been used to designate trees grown with a clean stem or trunk, four or five feet high, and upwards. The term has not been used in this sense only by practical men, but in all books on the subject, as will be seen by reference to London, and other authors. Trees branching within two or three feet of the ground have been usually called *half standards*. These terms were used to distinguish trees grown in this way from those trained in pyramidal or espalier form. Trees *dwarfed*, either by root-pruning or grafting, have always been simply called *dwarfs*, and have usually been grown as pyramids, though sometimes as espaliers, and in Europe are trained in many fanciful forms. When grown with a clean stem for several feet they have been called *dwarf standards*. Perhaps better and more expressive terms might be selected, but we do not know that confusion or misunderstanding results from the use of those we now have. The proposition to call a tree grafted on its own roots *natural*, would make the matter worse than it now is, for this is a term used to designate a tree that has never been grafted—a seedling tree or fruit.

RAISING IMPROVED GRAPES FROM SEED.

Messrs. Editors:—It undoubtedly must afford every lover of wholesome and delicious fruit, much pleasure to notice that so much attention is being paid to the production and dissemination of new and improved varieties of the Grape; and if it is pleasing to know that such improved varieties are being, and still can be produced, it must, we think, be gratifying to all who would wish to aid in this pleasing and beneficent enterprise, to know that they have a basis, permanent and inevitable as the laws of nature, to build their future hopes upon. And there is, most assuredly, certain laws and principles to be observed, in order to improve upon any variety of the vegetable kingdom, as truly as there are laws and principles to be obeyed, if we would make improvements in the breed, of our cattle, or our horses. We might just as soon expect a brood of Cochon China chickens from a nest of Bantam's eggs, as to expect grapes like the *Black Hamburgh*, to be borne from seedling vines of the Concord, unless the pollen from the flower of the one variety, shall, by some means or other, have been deposited upon the pistil of the other. And, on the other hand the prospect of a cross breed, approaching to the flavor and size of the *Hamburgh* with the hardiness, and earliness of the Concord, might be calculated upon, I think, if proper means were taken to secure the impregnation of the one variety of the grape with the other.

But, Mr. Editor, not to occupy more of your valuable space, than the importance of the subject seems to demand, I will, with your permission, proceed to state as briefly as possible, my own mode of procedure, and at some future time give you the result of my labor.

First, Select a good healthy vine, of some perfectly hardy and very early variety, and in order to get it to flower at the same time as the best foreign varieties (which are of necessity kept under glass) inclose it with a temporary glass frame.

Second, Thin out the bunches of the foreign variety which you wish to use as the male parent, just as soon as they open their flowers; then, with a camel hair pencil, dust the pollen of the foreign variety, upon the pistil of the hardy native; and the work is done.

It will of course be advisable to prune and cultivate your vine well all summer, gather the fruit when well ripe, and save the seed until the following spring. If the dusting with the pencil is too delicate and tedious, and it is wished to test a great number of seedlings, holding the bunches of the foreign variety directly over the other, and gently shaking it, or hanging the bunches up and leaving the work to the wind and the insects might, perhaps, answer the purpose, and save considerable time. C. ANNOLD.

Paris, C. W., 1889.

NEW HARDY GRAPES.

EDS. RURAL:—In furnishing information concerning new grapes, I propose to begin at the beginning, by giving a brief history of the *Franklin* Grape, it being the parent of my first "batch" of Seedlings. This Grape I found growing at Meadville, Pa., and have traced it to its origin. The original vine was discovered by Dr. DAN'L BEMAS, when about six inches high, while attending a celebration at the ruins of an old French fort at Franklin, Pa., many years ago. This vine is now in a flourishing condition, and bears good crops when others fail. The bunches are of medium size, black, with a blue bloom; berries round, about half an inch diameter, ripening about the first of September.

I have always esteemed it a good grape, all things considered, but I do not profess to be a connoisseur in such matters. J. B. GARNER, Esq., of Columbia, Penn., who is extensively known as among the leading horticulturists of the country, has this grape in bearing. His opinion of it I give in his own words, taken from his correspondence:—"I prize it highly—my earliest grape this season, 1888. This *Franklin*, I think, has all the desirable qualities of a good grape, and were it of larger size, would certainly be hard to beat. There is no mistaking its native origin. Its earliness is in its favor, it is sweet, and I think will be one of the best for wine. If your *America* is superior in size, it will be a great acquisition, truly, but I have my doubts whether you can improve much on its quality. I may add, the *Clinton* is sour, the *Franklin* sweet." The vine and fruit closely resemble the *Clinton*;—bunches more compact, and berries much sweeter. From the seeds of this grape I raised about a hundred plants, a part of which came into bearing in 1887, and nearly all the rest in 1888. Beside these I had some raised from seed of a copper-colored grape from the Alleghany hills. There are several varieties of blue and copper-colored grapes found growing wild along the Alleghany, and hills of its tributary streams, and it is from some one of these that the *Franklin* was produced, I suppose. It is worthy of note, that some of the seedlings of the copper-colored grape, produced black grapes,—but I find this stretching beyond what I had intended. Randolph, Pa., March, 1889. O. T. HOBBS.

Messrs. Editors:—In a recent number of your paper I noticed an article from Mr. HOBBS, of Randolph, Crawford Co., Pa., wherein he jocularly remarks that when it comes to raising seedling American grapes, that you must count him in. He did not tell you that he has been in (like myself) over head and ears, for some years already. Nor that he has already seedlings of merit. His is a thoroughly American project, and his greatest success has been from a native grape found in the forest somewhere, (the *Franklin*), which is a host within itself. I have eaten it, and pronounce it excellent—a strong grower, good bearer, and as hardy and free from disease as anything could be. My vine bore a few bunches last season; and I admired its foliage exceedingly. From this *Franklin* he has a number of seedlings, one of which (and I dare not give it a name,) will take our grape fanciers by surprise when it comes out—it is infinitely superior to the *Franklin*, and will rank high among the best American grapes. SAMUEL MILLER.

Caladale, Lebanon Co., Pa., 1889.

REMARKS.—If one-half that is said of the new seedling grapes is true, in a few years we shall have the most delicious fruit the world ever saw or tasted, in the greatest variety and abundance.—Be a little careful in your descriptions, gentlemen,—don't spread it on too thick.

The rush of Horticultural Advertisements prevents our giving the usual variety in this department. The new grapes have almost monopolized the remaining space.

New Horticultural Advertisements.

THE EARLY NORTHERN MUSCADINE—A SHAKER SEEDLING.

This GRAPE, of which the above is a fac simile of the cluster, ripens 15th of September, light amber color, medium size, delicious flavor,—many say unsurpassed.

This excellent Grape the subscribers affirm ripens nearly one month earlier than the Isabella in the same latitude, is perfectly hardy for our Northern Climate, a sure and constant bearer, and, if properly and judiciously pruned, bears enormously; not subject to mildew, slightly fibrous in pulp, and has often been pronounced by competent judges superior, in its season, to the Isabella or Catawba, in the season, either as a table or wine grape. Its character is peculiarly that of a summer fruit; and wine made from it, simply with the addition of sugar, has often been pronounced by hundreds superior to the best Sicilian light wines which it somewhat resembles.

A correspondent (Prof. J. P. KENTLAND, M. D., Cleveland Medical College,) of the Ohio Farmer, of Cleveland, Ohio, Nov. 7, 1887, makes the following remarks:—"During the last three weeks we have amused ourselves in treating perhaps a hundred individuals to specimens of the Northern Muscadine, Catawba, Diana, Clinton, Isabella, and Winslow's Seedling. Four out of five of these persons have decided the Northern Muscadine to be the best grape in that list."

The subscribers affirm that 25 years trial of this Grape, in connection with about 40 other varieties of our best modern foreign and domestic Grapes, give the Muscadine a largely superior margin of profit.

9,000 PLANTS LINNÆUS RUABARD.

LAWTON BLACKBERRIES PLANTS. The original variety, 100 plants free, how to obtain—free of charge. Cultivate them. Address: WM. LAWTON, New Rochelle, N. Y.

STOCKS.—100,000 French Quince Stocks, 10,000 M. Dutch Cherry Stocks.

RECEIPTS.—N. Y. State, all sizes from 2 to 6 feet Scotch Pine, Austrian Pine, Silver Fir, Chinese Arbor Vitae, Blue Spruce, White Spruce, Redwood Fir, and the usual variety of Pear, Apple and Cherry—Standard and Dwarf. 481-51.

FRUIT TREES FOR SALE CHEAP.—Being under obligations to clear about 20 acres of nursery ground, containing a large quantity of Apple, Pear, Cherry, Plum, Peach, and Ornamental Trees, and various other articles in the Nursery line, all good and healthy stock, I will sell at very low rates, in quantities, to dealers. Apply at my residence, on James St., one mile east of Syracuse, or by letter.

481-51. Commodore H. M. RANNEY, Syracuse, N. Y.

FLOWER SEEDS BY MAIL. Our Catalogue of choice and rare seeds for 1889, 1¢ per copy. Prices list of nearly 500 THOUSAND VARIETIES OF FLOWER SEEDS, and also a list of

FORTY COLLECTIONS BY MAIL, together with a descriptive list of all the most desirable Vegetables in cultivation, including many new and rare varieties, and an illustrated Treatise on Grasses—with practical directions for their cultivation—will be forwarded free to all applicants. Orders solicited.

481-51. Address: ALLEN & McLEWAIN, Seedsmen and Florists, Springfield, Mass.

WILSON'S ALBANY SEEDLING.—THE BEST and most profitable Market Strawberry. Yields 150 to 200 bushels per acre. Genuine Plants of this superior variety for sale, in large or small quantities. Price, \$10 a thousand—\$1.50 a hundred, or \$1 per 100—\$2.50 for 50, or 16 for \$1.

New Rochelle (or Lawton) Blackberry canes, \$10 for 100—\$2 for 50—\$3 for 25—\$3 per dozen.

All plants ordered, carefully boxed and delivered in Albany, without extra charge.

Orders accompanied by cash promptly attended to. WM. RICHARDSON, 96 South Pearl Street, Albany, N. Y.

LAWTON OR NEW ROCHELLE BLACKBERRIES. The undersigned, Agents for Messrs. Geo. Seaton & Co., and other Nurserymen of position and reputation, offer the above remarkable Plants at the following very low range of prices:

One Thousand Plants \$80 Fifty Plants \$15 One Hundred Plants 10 One Dozen Plants 1.00

Good Plants for setting, of a second size, will be sold for \$60 per 1,000 Plants, or \$5 per 100 Plants. Warranted genuine. Pamphlets descriptive of origin, history, characteristics and culture sent on receipt of six cents.

Produce Commissioner W. C. DREW & FLEMING, We refer to Hon. HONORABLE GARDNER, New York.

LAWTON BLACKBERRIES, &c. PRICES REDUCED.

LAWTON BLACKBERRIES warranted genuine, good plants, \$10 per 100, \$20 per 1,000 packed.

Austrian Pine and Norway Spruce, 1 foot, Scotch Fir 2 1/2 inches, all 1 year transplanted, \$20 per 1,000, \$110 for 1,000. All other leading sorts \$1 per 100.

Chinensis—Dukes, Morello's Hearts and Blanches from bud, extra fine, \$15 per 100. Dwarf Cherries, 1 yr. fine, principally Duke, \$15 per 100. Rebecca Grape Vines, 1 yr. fine, principally Duke, \$15 per 100. Noughton Gooseberry, strong plants, \$10 per 100. Catawba Grape Vines, 1 year, selected, \$10 per 100. Marshall Rose Stocks, strong, \$10 per 100. 1 yr. imported Pear stocks, \$10 per 100. Arizona Quince stocks, with all the cuttings, \$10 per 100. Hybrid Perpetual Roses, \$10 per 100. All other Nursery stock equally low. Send a stamp and get a Catalogue. A. FAHNESTOCK & SONS, Toledo, Ohio, 1889.

In short, its merits only need to be known to be appreciated, however much it may have been demerited by pomologists entirely unacquainted with its quality. It has taken the premium at several Fairs in the United States, and has never, to our knowledge, been condemned by those who have raised the genuine kind, and tested it fresh from the vine, or when properly kept—though it is not a long keeping variety, and in this respect is like all our choicest summer fruit.

The best recommendation for this Grape is that all who have raised the genuine Northern Muscadine, speak well of it, while it is constantly sought after where best known in preference to all other varieties notwithstanding some pomologists unacquainted with it have decided against it, for reasons best known to others than the subscribers. Multitudes of spurious varieties have been sold for this Grape.

Price, from one to three dollars per root, according to age and size. Any person ordering 12 vines will receive one vine gratis. Circulars with colored representation of this fine Grape sent to all applicants enclosing one three cent P. O. stamp.

We also have a new native Gooseberry, "Mountain Seedling of Lebanon," not excelled in flavor; berry medium size, often large, smooth, never milky or bluish, very prolific, and pronounced by our leading Horticulturists, excellent, and a great acquisition to our new varieties of this shrub. Price of roots, 25 cents to \$1.00 each. Discounted to the trade.

All orders shall receive prompt attention. Address: JESSE LEWIS, D. C. BRAINARD, Agents.

New Lebanon, Col. Co., N. Y., Shaker Box.

MR. DAN'S NEW SEEDLING PEARS. Mr. Hovey & Co., No. 7 Merchants Row, Boston. Have the great pleasure in forming their friends and cultivators of the Pear, that they are now prepared to offer for sale, a new Seedling Pear raised by Mr. E. DANA, of Ilex, 1000 M. Dutch Cherry Stocks, etc. also such attention the past few years. The frequent exhibition of these Pears before the Massachusetts Horticultural Society, and the trial of the fruit, has called forth the highest praise from all who have had an opportunity to taste them.

THESE SEEDLING PEARS are selected from several thousand seedlings, containing a different period, and all of them are now ready to offer them for sale in April next, by subscription, to be delivered as soon as a sufficient number of subscribers are obtained—not less than two hundred—of which date.

Having purchased the entire stock of these Pears at a high price, we are now prepared to offer them for sale in April next, by subscription, to be delivered as soon as a sufficient number of subscribers are obtained—not less than two hundred—of which date.

TERMS OF SUBSCRIPTION. Dana's Hovey (No. 10) handsome trees, two years old, on 1 year stock, \$1 each. Nurserymen and dealers in trees, purchasing a dozen or more, will be allowed the usual discount to the trade.

For a full description, EXHIBITION, ADVERTISEMENTS, and ADDRESS, send 10¢ in stamps, or 10¢ per cent with the usual discount to the trade. No money need be recorded.

A full description of these Pears, and a list of subscribers, will be sent to all applicants on receipt of 10¢ in stamps.

NURSERY.—Partner and Capital wanted in a well established Nursery. Address Box 115, Syracuse, N. Y.

REMOVAL! SHEPPARD'S FORWARDING and Commission HORTICULTURAL, NURSERY & SEED AGENCY. NO. 23 FULTON STREET, NEW YORK.

(Formerly 131 Front Street.) The only establishment in the United States giving special attention to the foreign and domestic interests of Horticulturists, Seedsmen, Florists, &c., affording facilities for the importation, exportation, buying or selling of anything pertaining to these departments, not to be secured elsewhere.

FOR SALE. Apple Seed, Osage Orange Seed, Gunny Cloth for packing, Pear Stocks, &c.

TO ARRIVE EARLY IN THE SPRING FROM EUROPE, Dwarf and Standard Pear and Apple Stocks, Roses, &c., &c. Anytime and everything required for Garden, Nursery, or other purposes, at the lowest Market prices. Address: WM. P. HILLARD, Box 273 P. O.

THE HOOKER STRAWBERRY.—THE BEST YET INTRODUCED.—The attention of Amateurs and Growers for market is again called to this Strawberry.

This Strawberry is a new variety, and is the only one of the kind that has been introduced into this country since the year 1840.

It is a rich dark crimson color, and is the most productive as any other variety. It is also the earliest, and is the only one of the kind that has been introduced into this country since the year 1840.

It is the only variety that has received the unanimous vote of the Fruit Growers Society for general cultivation.

Plants in any quantity desired may be obtained pure from the grounds where it originated. Pack ages are put up to go safely to any part of the Union, by mail or express.

Price, \$2 per 100—\$15 per 1,000. Order for Spring Planting, if only a few for trial, of H. E. HOOKER & SONS, Commercial Nurseries, Rock Hill, S. C.

CHERRY TREES.—Standard and Dwarf of 1st and 2nd sorts, two years old and strong. For sale cheap. Geneva, N. Y., 1889. T. C. MAXWELL & BROS.

PRESENTIMENT.

BY CAROLINE A. HOWARD.

I am dying, I am dying! Ere the roses come again,
This morn'g heart, low lying, shall no more complain.
All its suffering and sighing, all this weary load of
pain,
Shall be hushed within the earth to rest,
As an infant on its mother's breast.

When twilight shades are gathering softly over all,
I sit beside the window and watch the elm-tree fall,
As their pendant branches gently sweep the garden wall,
And I think how few the days must be
Like the leaves are waving over me.

At night upon my bed, within my silent room,
I lie and watch the ghostly shapes, from out the dark-
ness loom,
The flaring of the dim night-lamp makes visible the
gloom,
And slowly, surely runs the sand
In the hour-glass upon the stand.

This morn'g some early violet was kindly brought to me,
The first fruits of the spring and beautiful to see,
Fresh with dew from heaven from the upland lee.
O mother, when I'm gone I'd have
Sweet violets grow upon my grave.

And you will plant some roses, too, dear mother, will
you not?
With these wild flowers above my head to mark the
quiet spot—
I would not that my resting place should be too soon
forgot.

The busy world thinks not of those
Who've left its turmoil for repose.

The summer flowers will fade, the autumn leaves will
fall,
And rustle on the garden path, and bleak and dreary
fall,
And winter's robe will veil the earth, as with a snowy
pall.

Then Spring once more in bloom shall reign,
And Winter will be heard again.

Dear mother, tell him that I said I'd wait for him in
heaven,
And if to ransom souls above the privilege be given
To guard the loved, then Death has not our true affec-
tion given.

Through life we'll wander side by side,
A bridegroom and his spirit-bride,
Dedham, Mass., 1853.

TIME'S LITERATURE.

The traveler, who wanders in foreign climes,
peruses "Time's Literature" with appreciative ad-
miration of the harmony and clearness of its sen-
tences, whether written upon the faded marble
columns of an old palatial hall, or gleaming with
beautiful freshness in the "ivy green," which
mantles crumbling ruins. Messages equally as
eloquent and significant as those which are read
by the traveler, are penned upon Life's pages
everywhere about us; but "our eyes we have
closed that we may not see," and the warning re-
mains unheeded.

A lady is arranging her toilette before a mirror;
her form is fully rounded into womanhood and a
conscious pride of those charms, which she right-
ly deems perfected, causes her to inspect more
closely each lineament of the beautiful counte-
nance that smiles back to her from the mirror's
polished surface. But why that sudden start!—
Surely a silver line gleams among those dark tress-
es! With trembling fingers she pushes back the
heavy brows from her brow—there is no chance
for deception now, that shining hair gleams out like
a streamlet winding through dark valleys. Listen
to her soliloquy:—"Old age is approaching!—
which way shall I fly! There is only a grave be-
tween us, and I fear to unlock my life's flower-
encircled door, with the iron key of Death,—but I
will banish these dark forebodings; the blossoms
of my youth have not faded yet!" The tumultuous
thrillings of her soul are stifled by these sooth-
ing words, and with anxious care she obliterate
the warning line that Time had written for her
serious perusal. A sigh of relief escapes her now.
The door of her heart has shut out an unwelcome
guest, and she drowns the muffled sound of fretting
footsteps, with a gay ditty which Pleasure
sings.

"Wisdom says come to me,
This trouble comes to-morrow."

The great life drama is strikingly illustrated in
the evening seasons when twilight is the veil. These
dimmed manuscripts are covered with startling
truths from the same eloquent Author who pens
touching inscriptions, which hollow-voiced winds
chant over graves. We love to read the sweet
poetry of Spring, for it tells us of golden sunshine,
silvery bird-notes, and balmy zephyrs that fan
the dew-drops from the flowers, and rock open
their velvet leaves for the sun-light to kiss. Life
is just such a volume—golden prophecies of coming
bliss shine down to us from the gorgeously stained
windows of the future, and the maiden bears the
far-off chiming of marriage bells. Her path is green,
and the freshness of early morning is upon the
young and tender herbage. With a light step she
goes on her way, keeping time to the excellent
music of the little Hope-bird, which her heart is
charming with fondness. God grant that the
songster may not drop and die before womanhood
is reached! But often this Life-poetry wears
sadness in its strain. It tells how the May-frosts
of Ambition sometimes blight youth's blossoms,
and when the summer is here, the sky becomes
obscured with a dark pall of clouds, a mighty
wind sweeps by waiking a requiem for the hopes
it buries. But saddest of all, "rain" we perceive
glows in the East, and the clouds roll back as if
in awe of this holy sign from God's land. Tremendous
consequences of Error are bitter fruits that the
sorrowing recipient must sooner or later gather.

for "that ye sow, ye shall also reap." But a mer-
ciful Providence has ordered that these "bitter
fruits" should produce seeds of holiness, and His
benevolent hand scatters them in the heart's waste
places, where they spring up and bear blossoms of
immortality. When thick darkness broods over
us, God parts the clouds and shows us pleasant
interludes of blue sky smiling from between them,
like the plumes of angel's wings, and blessed light
comes flying to us, bearing Hope and Joy upon its
flame-tipped pinions.

The Autumn of Life is the closing poem in this
Volume of Time—some of those who have read it,
tell me that it is a plaintive requiem "mourning
over follies past;" others say, that the prophecies
of heavenly treasure are rich and glorious—golden
fruits of self-denial await them in Eternity, and
"stars are set in the crown of their rejoicing."
Happy is that man who thus interprets Time's
Message to him.

Michigan, March, 1853.

YOUTH'S DREAMINGS.

There are many and brightly colored—intangible,
yet to our eager spirits, a fore-shadowing of the
surely "Coming," and we stand under the flushing
skies of life's dawn, looking out from the fair land,
whose spring tides keep time with our heart-throbs,
to the Future, whose warriors we are yet to be—
in whose days and hours we are to find, or the
alchemy of our hopes failing, not to find the cul-
mination of our yearnings and the reality of our
dreams.

Strong in an enthusiasm that all after years will
fail to waken—fair with a purity of purpose and
an unselfish aim, that the world will not give us
to "possess in peace"—are the dreams of coming
life that our youth knows—dreams that break up
at first the calmness of childhood's pleasures,
startling with their intensity, and half-mystifying
by the glimpses of awakening power which they
reveal, yet growing in a little time to be compan-
ions for all attitude, giving through their prompt-
ings, and our sole title of possession, balm for
many a thorn thrust.

May-time clouds float between us and their
brightness many times; clouds that send us
to the gate of the Future with questionings of
their reality, doubts, perchance, of their power to
work out the aim we have given them, and fears of
the world-influence, that must reach them ere
that aim can be accomplished, yet, at the last,
when they drop, dead, faded, and useless out of our
hearts, the pain seems to come so suddenly, so
bitingly, that in our blindness and despair we for-
get that

"Only through the dismal rack
Of clouds, our eyes can bear the sun,
Only the broken shapes give back
A thousand shapes instead of one."

Yet this we may know, that never a thought, or
dream, or yearning, died out of our hearts thro'
lack of sustenance, or dearth of appreciation,
when God had further mission for it—when the
end and aim which He saw from the beginning,
was unaccomplished.

This is true of our mortal lives, why not, then,
of the lives of our hopes and aspirations?

Hearts go outward to the future,
Dreaming of the days to come,
Wondering what of love or treasure
In its folds of mist may sleep;
But in crowns that press the forehead,
Thorns are set that pierce the brain
And in world-praise there's no sweetness
Shutting out the gall of pain.

Charlotte Centre, N. Y., 1859. E. C. LANE.

A Gleaner. Mrs. DeGrove, Mrs. Johnson, and
a large number of other women in New York, have
formed a club, which is devoted to the discussion
of all the topics that concern or affect the domestic
and social relations of life. The organization is
national. Auxiliaries are to be formed in all parts
of the land. The club in New York holds regular
monthly meetings. The subjects to be discussed
are those that pertain to domestic cookery, the
wardrobe, the laundry, household utensils and ma-
chinery, house furnishing, warming and lighting,
household expenses and economies, domestic
family hygiene, the management and education of
children, the difficulties encountered, and the re-
forms needed, &c.

To SPEND A DAY. 1. Be always telling her
how pretty she is. 2. Instill into her mind a proper
love of fine dress. 3. Accustom her to so much
pleasure that she is not happy at home. 4. Allow
her to read nothing but novels. 5. Teach her all
the accomplishments, but none of the utilities of
life. 6. Keep her in the darkest ignorance of the
mysteries of housekeeping. 7. Initiate her into the
principle that it is vulgar to do anything for her-
self. 8. To strengthen the latter belief, let her have
a lady's maid. 9. And lastly, having given her
such an education, marry her to a mustachioed
bachelor, who is a clerk on a salary of \$250 a year.

"DEAR MOTHER," said a delicate little girl, "I
have broken your china vase!"
"Well, you are a naughty, careless, troublesome
little thing,—go up stairs until I send for you."
And this was a Christian mother's answer to the
tearful little culprit, who had struggled with and
conquered the temptation to tell a falsehood to
screen a fault. With a disappointed, disheartened
look, the child obeyed; and in that moment was
crushed in her little heart the sweet flower of truth,
perhaps never to be revived to life! Oh! what
were a thousand vases in comparison!

WOMAN should be acquainted that no beauty
has any charm but the inward one of the mind;
and that a gracefulness in manner is much more
engaging than that of person; that modesty and
meekness are the true and lasting ornaments;
for she that bath those is qualified as she ought to
be for the management of a family, for the educa-
tion of children, for the affection of her husband,
and submitting to a prudent way of living. These
only are the charms that render wives amiable,
and give them the best title to men's respect.

It is better to be of the number of those who
need relief, than of those who want heart to give it.

VOICES OF NIGHT.

I am never alone, though no form is around me,
To carol with sweetest tone,
Though the earth is now slumbered to dreams and to rest,
And each weary head on the pillow is pressed,
Yet the spirit is never alone.

There are voices of night, that are sweeter than song,
That awaken sweet thoughts of delight—
For we hear then the songs of the long-ago,
And the accents of joy that once gladdened us so—
For the Memory-bells chime at night.

And the low plaintive voices of loved ones long dead
Come to us on the still night air,
Now the ivory laugh of a merry child,
Now the tones of a brother, so mournfully mild,
Now the words of a fond mother's prayer.

Oh! they all sweetly sing in the bowers of the heart,
Though they long have been buried to sight,
And their music is sweet as the murmuring sea,
Or the sea-shell's song when it whispers to me
In the lone, solemn hours of the night.

Then sing on, gentle voices, so sweet to the soul,
For ye tell of a land of delight!

When the spirit is weary and longeth for rest,
Then ye call, "Come away to the Home of the blest,"
Oh! sing on, gentle voices, of night
Canaan's N. Y., 1859. L. A. T.

Choice Miscellany.

BYGONES.—No. II.

My Brother.

My spirit bowed and my heart yielded to my
noble brother, so gifted and good. He was a proud
and purified nature, scorning evil, and loathing
the corruptions which seem the native element of
most young men. Despairing the tricks and com-
binations of speculation and trade, he was entirely
worthy of the loving admiration which I bestowed
upon him. Like the polished marble which eschews
all stain or tarnish, there seemed an "alchemy"
about his high heart, which transmuted all that it
touched to goodness. He was loved by the good,
and his consistency and modesty admired by the
evil. His mind was versatile, coming with the
"grand masters," or fluttering with the dreamy
rhythms—marching with steady step along the
obscure pages of science, and reveling in the "sub-
lime varieties" often taught in the "fictions of
genius." He could enjoy investigating the occult
mysteries of chemistry, or handle the surgeon's
knife, and, with equal ease, comprehend and ex-
ecute the harmonies of intricate music or the gentle
touch of the simple home-ditty. He would swell
with the pompous sentences of the Johnsonian
period, trip with the light measures of ELIZA CONK,
or delight in the quaint fancies of TERNSTROM.
He could discourse gravely with silver-haired seniors,
gambol upon the green with little children, or
join in sportive repartees with those of his own age.
He stood among men, a man—not a mere echo
shouting popular thought. His philosophic mind,
joined to quick apprehension and a high-toned
physical nature, impelled him to think beyond the
present, and plan for future generations. He had
a strong, positive existence, an intense vitality, yet
tempered and purified by the higher power of that
beautiful, ideal life, which ever attains greatness
and goodness. He, who measures his aims by the
extent of the seemingly actual and possible, must
ever grovel and plod. What the world within
makes feasible, God, in his goodness, gives us
power to accomplish.

My brother was the light of the household. Viva-
cious, yet sedate, sprightly yet grave, liberal to
others, yet fastidious with himself, standing with
a grand thought, then toying like a child, it is no
marvel that his lightest look or word away my
soul, as the stronger ever unwittingly move the
weaker. As he grew older and assumed that com-
manding tone which an independent thinker always
feels when measuring himself with the copying
world, I came to distrust myself, and feel that he
had absorbed the talent and responsibility, together
with the family honors. I was assured that he
would redeem the name from obscurity, and I had
no ambition, save to amble along within range of
him from whom I could not be separated. What
need that I should struggle for that intellectual
supremacy of which I had dreamed, when I found
myself vanquished at the outset, and rejoicing at
my defeat. With what pride did I accept his es-
cort in the public assembly, or listen to the persua-
sive eloquence of his tuneful voice. I gloried in
his masculine beauty, and placed implicit confi-
dence in his untainted manhood. His was no code
of manners and morals to vary with the occasion—
his straight-forward eye never flinched, and his
frank brow never clouded with that shade of decep-
tion and double-dealing which finds shape and
vent in what is vulgarly called "playing smart." He
ever preserved a demeanor tinged with the most
delicate respect toward the opposite sex, whether
its representatives were garbed in home-
spun or silk. Garrulous age and despised servile
bold held as strong a claim upon his honor as
beauty or refinement. He was truly one among
the thousand who bear the image of men, yet sell
their birth-right with almost every breath. But
alas, the light burned out—the star gleamed, and
was gone. The night came when he died,—dark
with storm and black with the tempest. It is pain-
ful to think that when goodness matures,—that
when the nobler qualities so early concentrate and
ripen, it is only that we may be bereft. The loved
and the lost!—their memory is a perpetual solace
and an unending regret.

L. A. T.

The curious student of human nature should be
very careful whilst observing vice, as it is exhib-
ited in others, that he does not himself come too
near the influence of its deleterious sphere, and
thus suffer his moral vision to be obscured by the
murky vapors which envelop it.

THE FLIGHT OF TIME.

He sat and read. A book with silver clasps,
All gorgeous with illuminating lines
Of gold and crimson lay upon a frame
Before him. 'Twas a volume of old time.

The last while grain
Fell through, and, with the tremulous hand of age,
The old astrologer reversed the glass.—WILLIS.

Time moments that have passed are gone forever,
and their record with them—graven as with the
point of a diamond. Oh, Time, when thou wert
passing no ceased not to urge thy flight—but we
cannot now recall thee—our entreaties and sup-
plications would be in vain—our pleadings would
be unheeded—thou art deaf to the calls of man.—
Had we placed a true value upon thee when
present, as now when thou art gone, what a change
might have been perceived in us,—with what
cautiousness would we have reversed the glass
that told

"The allotted number shed,
Another hour of life has fled."

But when thou wast present with us, thou wert
a weariness, a heavy burthen. The cares and re-
sponsibilities of the present pressed heavily upon
us, and thy worth was not felt. Now the diamonds
of India are poor beside thee, could we but bring
thee to our embrace once more and make thee a
double blessing to man. Could we

"But invert its frame,
And all its powers return the same."

Precious, hallowed moments. Numerous are thy
aspects of Time—like the spring-time of life, joy
and sorrow, we urge thee on that maturer years
may seek out some device by which to enjoy more
of pleasure with thee. Thy visage varies like an
April sky—now sunshine, now tears, now sending
forth the ray of hope, then the pall of sadness
overshadows thy face. We look on thee from the
couch of death when the grim monster is beckon-
ing us away—then art thou beautiful, art lovely,
aye, lovely beyond rubies—nothing is to be com-
pared to thy worth and beauty. Each moment is
an age more treasured than the gold of Ophir—
Systems on systems could not buy thee—nay, could
we but possess thee all else would we give in ex-
change. On the near approach of anticipated plea-
sures thou draggest thyself wearily, a moment
seems an age, O, father Time, thy pace is slow—
very slow—thou seemed not to move at all. Thy
tread is with firmness and solemnity. Dost thou
delight only in grief—dost thou array thyself in
beauty only at the portals of eternity—only when
we are on the threshold stepping in? We vanish
from thy presence and fade away as the dews of
evening before the rays of the morning sun. The
past is only left as an evidence of our departure.—
There is with thee, oh, Time, no sympathy for
man, he is thy sport and jest. Thy march is ever
on, even when the last sigh trembles on the lip of
beauty, and loveliness, and the last faint glow dies
on the cheek of innocence and purity. And when
the mighty who made the earth to tremble rise up,
thy flight is over on—on till eternity. There we
outstrip thee, Time. Eternity, that vast and un-
bounded ocean, is ours, while this vain world is
thy dwelling for ages yet to come.

Pluvanna, N. Y., 1859. H. A. WHITTENBERG.

A LITTLE SUN AND BRIGHT AIR.

YESTERDAY MORNING, just as the clock was on the
stroke of nine, the sun looked out from behind a
parted cloud a moment, and smiled on the muddy
world. The tarnished lettering of old signs was
re-gilded, dark window panes glittered like plates
of mica, the tips of lightning rods showed their sil-
ver, and human faces brightened like so many sun-
dials in a cloudless noon.

Along the old carpet lay a streak of sunshine,
beautiful as the golden way to the Celestial Gate,
and the faded woollen "Morning-glories" looked
fresh and new, as if "three-plies" could feel the
touch of spring-like budding violets.

It touched the Art Association's group of "Sat-
urday Night," as it hung against the wall, with a
glory the artist never meant. The morning sun
melted the level rays that streamed through the
window looking towards the west, and touched like
magic wands the locks of age and the brows of
beauty. Even the little tierrier beneath the table
seemed to wink at us with one bright eye, and the
distaff's flaxen cloud that surmounted the little
wheel, to grow whiter in the light.

The painted face of a pensive young woman that
has looked at us for five years without uttering a
word, lighted up for an instant and blessed us with
a cheerful smile. But before we had time to look
once more, the woven flowers had faded back again
to their old dull estate, the reading of the good book
on "Saturday Night" went on by the lessening
light of a setting sun, and the silent maiden re-
lapsed into her October-tinted meditation.

That ray of sunshine flashed out like an untried
sworn when the battle begins, only to be with-
drawn, and wrapped in a blanket, like a foundling
at a Water Cure. It is cheerful to know that the
sun shines somewhere; that though it rains here,
it does not rain all over the world. Not more than
a mile or two away, in the gloomiest day, the sun
is unshorn of a single beam; valleys of diamonds,
cliffs of silver, crags of gold, and plains of crimson
are all a blaze in its glory; we are not any day more
than a minute's flight with a swallow's wing from
the clearest sunshine. But, alas! we are on the
wrong side of the clouds.—B. F. Taylor.

THE SUNKY SIDE.—Dr. Johnson used to say that
a habit of looking at the best side of every event
is far better than a thousand pounds a year.—
Bishop Hall quaintly remarks:—"For every bad
there might be a worse, and when one breaks his
leg let him be thankful it was not his neck!" When
Fenelon's library was on fire, "God be praised,"
he exclaimed, "that it is not the dwelling of some
poor man!" This is the true spirit of submission
—one of the most beautiful traits that can possess
the human heart.

LIFE runs not smoothly at all seasons, even with
the happiest; but after a long course, the rocks
subside, the views widen, and it flows on more
equally at the end.—Landon.

HYMN FOR SABBATH MORNING.

BY D. SCHWABER—1731.

Light of light enlighten me,
Now anew the day is dawning;
Sun of Grace! the shadows flee—
Brighten thou my Sabbath morn'g.

With thy joyous sunshine blest,
Happy is my day of rest!
Fount of all our joy and peace,
To thy living waters lead me;
Thou from earth my soul release,
And with grace and mercy feed me;

Bless thy word that it may prove
Rich in fruits that thou dost love.
Kindle thou the sacrifice
That upon my lips is lying;
Clear the shadows from my eyes,
That from every error flying,
No struggle fire within me glow
That thine altar doth not know.

Let me, with my heart, to-day,
Holy, holy, hallowing,
Bapt awhile from earth away,
All my soul to thee upspringing,
Have a foretaste truly given
How they worship thee in heaven.

Rest in me and I in thee:
Build a Paradise within me;
O, reveal thyself to me,
Blessed love who died to win me!
Fed by that exhaustless urn,
Pure and bright my lamp shall burn.

Hence all care, all vanity,
For the day to God is holy;
Come, thou glorious Majesty,
Deign to fill this temple lowly;
Naught to-day my soul shall move,
Simply trusting in thy love!

"FOR HE CARETH FOR YOU."

SWEETEN the strains of the Æolian harp to
the heart, bruised and broken with sorrows that
earthly sympathy cannot measure, nor human
power remove, is the divine assurance that one for
whom no burden is too heavy, careth for us, and
upon Him it is our privilege to cast all our care.—
It matters not what that care may be—whether too
trifling to enlist the world's sympathy, or so great
no human line can fathom its depths—whether a
present or a prospective woe, from which the spirit
recoils, the promise is an unlimited one—"casting
all your care upon Him, for He careth for you."—
The grief that may not be spoken—the sorrow that
we cannot, if we would, portray—the anguish,
whose outward revealing costs us only censure and
unpitying scorn—here meets a sympathy adequate
to its feelings; commensurate to all our needs,
and so unlike finite compassion, that it judges not
by the seeming, but by the actual amount of suffer-
ing endured.

Nor is He, who thus offers us support, Himself a
stranger to sorrow. We usually find it vain to
seek for sympathy in affliction from one who never
knew anything by experience of its bitterness.—
But Jesus was "a Man of Sorrows, and acquainted
with grief."

"He knows what sore temptations mean,
For He has felt the same."
He knows the full meaning of that word, care—
And yet He invites us to cast it all upon Him, as-
suring us that "He careth for us." No system of
reason or philosophy—no religion but the Christ-
ian—ever afforded a support like this. Such a
disposal of care—so casting it upon another that it
shall cease to prey upon ourselves, is a privilege
known only to the humble disciple of Christ.

And yet how small a proportion of His professed
people have so learned to use this privilege in all
its fullness and adaptation to their needs, that they
carry no load of solicitude and care! How few but
have some burden of anxiety, which they cannot
trust the SAVIOR to carry for them! Yet how
sweetly might Christians honor their Divine Help-
er, did they but evince to the world, that it was
theirs, by daily experience, to know the blessed-
ness of casting all their care upon Him who careth
for them.

Sherburne, N. Y., 1859. LINA LEE.

HOPE FOR THE VILEST.—Never call a man a lost
man until he is buried in a hopeless grave. No
man is lost upon whom any influence can be ex-
erted; no man is lost to whom the offers of the
gospel may be brought. It is but a few weeks
since I sat by the side of one of the purest and
loveliest of females, who once was degraded, but
who is now at the head of a family, highly respect-
ed and beloved. We are never to be discouraged.
There is no man or woman so vile but God may
bring them washed and saved to his kingdom.—
Dr. Tyng.

"LEADING MEN."—It is customary to speak of
sundry men in the Church of Christ, as "leading
men;" i. e., they go before others, and make and
second the motions which others vote for. It
should not be forgotten, however, that a man in a
Christian Church, who really deserves the name of
a "leading man," serves the Church. He moves
and goes in the right direction; and determines
others in that direction. As BAXTER well remarks,
"Church greatness consists in being greatly service-
able."

GOD IN LITTLE THINGS.—Many think that God
takes no thought for anything less than a star or a
mountain, and is unmindful of the little things of
life; but when I go abroad, the first thing which I
see in the grass beneath my feet, and, nestling in
that, flowers smaller yet, and, lower still, the mos-
sies with their meekness glow with beauty. And if
I reach the microscope, glow with beauty. And if
God so cares for "the grass of the field, which to-
day is, and to-morrow is cast into the oven," shall
he not much more care for the minutest things of
your life, "O ye of little faith?"—Becher.

Written for Moore's Rural New-Yorker.
OUR SCHOOL LAWS.

EDITORIAL:—Within the last few months, much has been said in your valuable paper, about the recent change in the School Laws. Some of your correspondents have lauded it to the skies, seeming to believe that all the improprieties in our schools would vanish, and the schools would become examples of perfection under the new mode of superintendence; while others have zealously condemned the new law as impolitic, unjust and wasteful of the public money. I believe the new mode of management is far the best, but I do not think the chief fault in our schools can be charged to any particular feature in the School Law.

Our State has altered and improved its laws, established a Normal School to educate its teachers, made ample appropriations, and seemingly left but little to be done to place a good practical education within the reach of every child in the State. But the best laws will be useless, unless they are properly executed. It is impossible to legislate idle children into good scholars—careless boys and girls, into thorough-going teachers—or poorly managed schools into fountains of knowledge, from which will emanate rivers of intellectual improvement. Our Legislature may alter, and improve its school laws, as long as improvement is possible; but if public opinion does not favor their execution, we shall still have poor, inefficient teachers, worse than useless schools, and ignorant masses among our scholars.

The simple reason why our schools are not what they ought to be, is because public opinion has decided that they shall be just what they are. Our people are not awake to the great importance of a thorough education. Men will willingly admit that education is necessary; but, if we may judge by their actions, many deem it a matter of but little importance. They are prompt in trade, and other matters of business—willing to spend their time and means to advance their pecuniary interests—even when there is but a slight hope of success—but if they have to pay a few dollars for the education of the immortal minds of even their own children, we too often hear them complain of hard laws and high taxes, seeming to think their money has been wrested from them by the tyrannical hands of a selfish public.

It is sometimes said that the teacher makes the school—it might be as truly said, that public opinion makes the teacher; for if the public will accept none but thoroughly qualified teachers, others will be excluded from this responsible office. On the other hand, if teachers do not receive that appreciation and reward which their services deserve, the most talented and energetic will leave teaching for some business more properly rewarding their exertions. The difference between a good and poor teacher does not seem to be duly appreciated. School officers are about as apt to engage a poor teacher as a good one, if the former will teach a little cheaper. If we can draw our conclusions from appearances, it would be a dangerous undertaking for a district to pay a few dollars more than they were in the habit of paying, in order to get a good teacher; but if the minds of half the children should be made forever dull and inactive, by the mismanagement of a poor teacher, it would be a trifling matter. It is right that men should be very profuse with their money when they are satisfying their own appetites—ruining themselves by useless indulgence—but they must use it very sparingly when they are buying intellectual improvement—the inestimable treasures of knowledge, and storing their gettings in the heads of their children. Such senseless logic as this has ruled our country far too long. It is time that people were awake to their true interests—that parents were energetic and liberal in educational matters—that well educated and thorough-going men were appointed Commissioners—and that none were allowed to teach except those who would inspire in the minds of their pupils an intense longing after knowledge, and an unflinching perseverance. Then we might expect to see the bright rays of the sun of intellectual progress shine upon every mind, driving away the dark clouds of ignorance, and arousing every soul to noble and fearless action.

North Lawrence, N. Y., 1859

Written for Moore's Rural New-Yorker.
PUNCTUALITY.

This trait of character is one of the most prominent in all such persons as are called "lucky," or successful in their undertakings—whether it be in honorable attainments in science and morals, or in the more paltry things of earth—riches and popular approbation.
